PRINTED IN THE UNITED STATES OF AMERICA

Jonathan Edwards' "Narrative of Surprising Conversions," from Clarence H. Faust and Thomas H. Johnson (eds.), *Jonathan Edwards, Representative Selections, with Introduction, Bibliography, and Notes*. American Writers Series Edition. Copyright, 1935, by American Book Co.

Benjamin Franklin's *Autobiography*, from Frank Luther Mott and Chester E. Jorgenson (eds.), *Benjamin Franklin, Representative Selections, with Introduction, Bibliography, and Notes*. American Writers Series Edition. Copyright, 1936, by American Book Co.

Selections from *The Journals of Ralph Waldo Emerson*. Edited by Edward Waldo Emerson and Waldo Emerson Forbes. Copyright, 1909-14, by Houghton Mifflin Co.

Selections from *Journal of Henry David Thoreau*. Edited by Bradford Torrey. Walden Edition. Copyright, 1906, by Houghton Mifflin Co.

## PREFACE

*Masters of American Literature* has grown out of the increasing conviction of the editors over a period of years that the most effective way to teach American literature to undergraduates is to concentrate on the authors and works of greatest significance. After teaching the usual "shot-gun" course, with a scattering of the ammunition in all directions, they have observed the quickening of interest in their classes when their students read and discussed a single author until they had gained more than a superficial acquaintance with his life, his personality, his thought, and the quality of his literary productions.

One of the better conventional texts in the field has no less than eighty-two authors in one volume, and nearly as many in the second volume. Miscellanies of this type with a sampling of twice as many authors are not rare. The editors believe that a course in American literature should teach more than a list of names and titles. Accordingly, they have limited these volumes to a few authors of major importance. Moreover, they have endeavored to represent a wide range of an author's works, and to print "wholes" rather than "snippets." Occasionally deletions have had to be made, but usually in such cases bracketed notations provide a synopsis of the omitted portions of the text, thus maintaining the continuity.

This anthology is devoted to "masters," but not exclusively to "masterpieces." By a "master" is meant an author not only expert in his craftsmanship but also one who has made a significant contribution to the cultural and literary history of his period. Cotton Mather and Jonathan Edwards have been included, for example, not merely because of their powers of expression but also because of their intellectual pre-eminence in their day. A number of other non-

professional writers, like Thomas Jefferson, Abraham Lincoln, and Woodrow Wilson would have been included if space had permitted.

The editors have attempted to provide adequate factual and critical introductions. Perhaps not all teachers and critics will agree with some of their interpretations, but they have guarded as best they could against eccentricity and minority opinions, meanwhile following, so far as possible, the leading authorities in the field. The introductory essays are intended to provide essential background information for the student, and to free class time for fruitful examination of primary texts and still leave room for the instructor to supplement these essays with his own lectures. The editors have tried to avoid over-annotation, while giving sufficient information in the footnotes to save the student the time and annoyance of constantly leafing through dictionaries of allusion, biography, mythology, quotation, etc. The bibliographies have been selected with great care, and are up-to-date. At the end of each selection, the date of composition (if known) is printed on the left; the date of publication on the right. Unless indicated otherwise, the text is always that of the accepted or last edition receiving the author's final revision or authorization.

This anthology represents the joint labor and judgment of the two editors; but Mr. Pochmann has assumed the main responsibility for the first volume, and Mr. Allen for the second. Both editors have been constantly assisted by the College Department of The Macmillan Company. Professor Oscar Cargill has given valuable criticism of the manuscript. Mr. Arthur Zeiger has generously assisted Mr. Allen in proofreading and verifying bibliographical details.

H.A.P. and G.W.A.

## TABLE OF CONTENTS

<i>Introduction</i>	1	From Dogwood Papers	126
Points of View	1	No. v (From Monday May 21 to Monday May 28, 1722)	126
The Puritan Background	5	No. vii (From Monday June 18 to Monday June 25, 1722)	127
Puritan Literary Theory	10	From Articles of Belief and Acts of Religion	129
Colonial Writings	12	A Witch Trial at Mount Holly	130
The Eighteenth Century: Revolt and Reorganization	14	The Speech of Polly Baker	131
Literary Nationalism and the Rise of Romanticism	19	To Peter Collinson	132
		The Way to Wealth	132
<i>Cotton Mather (1663-1728)</i>	29	An Edict by the King of Prussia	137
SELECTED MATHER BIBLIOGRAPHY	32	Rules by Which a Great Empire May Be Reduced to a Small One	139
Selections from the Diary of Cotton Mather	33	To William Franklin	143
From Magnalia Christi Americana	39	To William Strahan	144
A General Introduction	39	To Joseph Priestley	144
Book II, Chapter I. The Life of William Bradford	44	To a Friend in England	144
Book II, Chapter IV. The Life of John Winthrop	44	The Sale of the Hessians	145
From Manductio ad Ministerium	48	Model of a Letter of Recommendation	146
	57	The Ephemera	146
		The Whistle	147
<i>Jonathan Edwards (1703-1758)</i>	60	An Economical Project	148
SELECTED EDWARDS BIBLIOGRAPHY	66	To Samuel Mather	150
The Flying Spider	66	To Thomas Paine	151
The Soul	69	On the Slave-Trade	151
From Of Being	70	<i>Thomas Paine (1737-1809)</i>	154
From Notes on the Mind	70	SELECTED PAINE BIBLIOGRAPHY	160
From Diary	71	From Common Sense	160
Sarah Pierrepont	73	Introduction	160
Nature	73	I. On the Origin and Design of Government in General	160
Narrative of Surprising Conversions	74	II. Of Monarchy and Hereditary Succession	163
From Sinners in the Hands of an Angry God	79	III. Thoughts on the Present State of American Affairs	167
From Freedom of the Will	81	IV. Of the Present Ability of America	175
Part I, Section v. Concerning the Notion of Liberty, and of Moral Agency	81	From The Crisis, Number I	179
Part II, Section I. [Inconsistency of Arminianism]	82	From The Rights of Man	183
To the Trustees of the College of New Jersey	84	From Part I. [On the Nature and Origin of Rights]	183
<i>Benjamin Franklin (1706-1790)</i>	87	From The Age of Reason	187
SELECTED FRANKLIN BIBLIOGRAPHY	96	From First Part [Dedication], [Credo]	187
From The Autobiography	96		

[Chapter II. Of Missions and Revelations]	188	<i>James Fenimore Cooper (1789-1851)</i>	229
[Chapter III. Concerning the Character of Jesus Christ and His History]	189	SELECTED COOPER BIBLIOGRAPHY	235
[Chapter IX. In What the True Revelation Consists]	190	Preface to <i>The Spy</i>	235
[Chapter X. Concerning God, and the Lights Cast on His Existence and Attributes by the Bible]	190	Preface to <i>The Pioneers</i>	238
[Chapter XI. Of the Theology of the Christians, and the True Theology]	192	From <i>Notions of the Americans</i>	240
		From Letter XXIII [On Learning and Literature]	240
		From A Letter to His Countrymen	244
		From <i>The American Democrat</i>	250
		An Aristocrat and a Democrat	250
		On the American Press	251
		Conclusion	254
<i>Philip Freneau (1752-1832)</i>	195	Preface to <i>The Leatherstocking Tales</i>	255
SELECTED FRENEAU BIBLIOGRAPHY	199	From <i>The Deerslayer</i> [Deerslayer's Escape]	257
<i>The Power of Fancy</i>	199	Chapter XXVII	257
<i>The Prayer of Orpheus</i>	201	Chapter XXVIII	265
<i>From The American Village</i>	202	Chapter XXIX	272
<i>Letter to James Madison, November 22, 1772</i>	203	Chapter XXX	277
<i>From The Pictures of Columbus, The Genoese</i>	204		
Picture XVII. Columbus in Chains	204	<i>William Cullen Bryant (1794-1878)</i>	285
Picture XVIII. Columbus at Valladolid	204	SELECTED BRYANT BIBLIOGRAPHY	289
<i>A Political Litany</i>	205	From <i>The Embargo</i>	290
<i>The Northern Soldier</i>	205	<i>Thanatopsis</i>	292
<i>From The Beauties of Santa Cruz</i>	206	<i>The Yellow Violet</i>	293
<i>From The House of Night</i>	207	Inscription for the Entrance to a Wood	294
<i>On the Memorable Victory of Paul Jones</i>	213	"I Cannot Forget with What Fervid Devotion"	294
<i>From The British Prison Ship</i>	215	To a Waterfowl	295
Canto II. <i>The Prison Ship</i>	215	Green River	295
<i>To the Memory of the Brave Americans</i>	217	"Oh Fairest of the Rural Maids"	296
<i>To Lord Cornwallis</i>	218	A Winter Piece	296
<i>The Vanity of Existence</i>	218	Hymn to Death	298
<i>The Dying Indian: Tomo-Chequi</i>	218	The West Wind	300
<i>The Hurricane</i>	219	The Indian Girl's Lament	300
<i>The Wild Honey Suckle</i>	220	"I Broke the Spell That Held Me Long"	301
<i>The Indian Burying Ground</i>	220	An Indian at the Burial-Place of His Fathers	301
<i>To an Author</i>	221	Monument Mountain	302
<i>On Mr. Paine's Rights of Man</i>	221	The Murdered Traveller	303
<i>To My Book</i>	222	Mutation	304
<i>To Shylock Ap-Shenkin</i>	222	November	304
<i>On the Anniversary of the Storming of the Bastille</i>	223	A Forest Hymn	304
<i>Ode [God Save the Rights of Man!]</i>	223	Lines on Revisiting the Country	306
<i>The Creek Indian In Philadelphia [Tomo-Chequi's Soliloquy]</i>	224	The African Chief	306
<i>Stanzas . . . on General Washington</i>	225	The Death of the Flowers	307
<i>On a Honey Bee</i>	226	The Past	308
<i>To a Caty-Did</i>	227	To a Fringed Gentian	308
<i>On the Universality and Other Attributes of the God of Nature</i>	227	Song of Marion's Men	309
<i>On the Uniformity and Perfection of Nature</i>	228	The Prairies	309
<i>On the Religion of Nature</i>	228	The Battle-Field	311

The Antiquity of Freedom	312	<i>Nathaniel Hawthorne (1804-1864)</i>	413
"Oh Mother of a Mighty Race"	313	SELECTED HAWTHORNE BIBLIOGRAPHY	419
Robert of Lincoln	313	From American Note-Books	420
The Poet	314	From Twice-Told Tales	431
The Death of Lincoln	315	Preface (Edition of 1851)	431
The Flood of Years	315	Sights from a Steeple	433
From Review of Solymán Brown, An Essay on American Poetry	317	From Mosses from an Old Manse	436
From Lectures on Poetry	322	Young Goodman Brown	436
Lecture I. On the Nature of Poetry	322	From Twice-Told Tales	443
From The Right of Workmen to Strike	327	Wakefield	443
Freedom of Speech	328	'The Gray Champion	447
		The Minister's Black Veil	451
<i>Washington Irving (1783-1859)</i>	330	The Wedding Knell	457
SELECTED IRVING BIBLIOGRAPHY	335	Fancy's Show Box	461
From Letters of Jonathan Oldstyle, Gent., Letter III	336	From Mosses from an Old Manse	
From Salmagundi	338	The Birthmark	464
From No. I. Saturday, January 24, 1807	338	The Celestial Railroad	472
From No. VII. Saturday, April 4, 1807	339	Earth's Holocaust	480
From No. XIII. Friday, August 14, 1807	343	Rappaccini's Daughter	490
From Diedrich Knickerbocker's History of New York	347	From The Snow-Image and Other Tales	504
The Author's Apology	347	Ethan Brand	
From Book III	348	<i>Edgar Allan Poe (1809-1849)</i>	512
Chapter I	348	SELECTED POE BIBLIOGRAPHY	518
Chapter IV	352	MS. Found in a Bottle	519
From Book IV	354	Berenice	524
Chapter I	354	Ligeia	528
Chapter II	356	The Fall of the House of Usher	536
Chapter III	357	A Descent into the Maelström	545
Chapter IV	358	Elconora	553
Chapter VII	360	The Masque of the Red Death	556
Chapter VIII	361	The Tell-Tale Heart	559
From The Sketch Book	363	The Purloined Letter	561
The Author's Account of Himself	363	The Cask of Amontillado	571
Rip Van Winkle	364	Tamertane	574
English Writers on America	372	Song	577
Rural Life in England	376	Dreams	577
The Legend of Sleepy Hollow	379	A Dream within a Dream	578
From Braccbridge Hall	393	"The Happiest Day, the Happiest Hour"	578
The Author	393	The Lake: To —	578
The Stout Gentleman	395	Sonnet—To Science	579
From Tales of a Traveller	400	Romance	579
To the Reader	400	Song from Al Aaraaf	579
Adventure of the German Student	401	Alone	580
From The Alhambra	404	To Helen	581
Legend of the Arabian Astrologer	404	Israfel	581
		The City in the Sea	582
		The Sleeper	582

Lenore	583	The Warden of the Cinque Ports	652
The Coliseum	584	My Lost Youth	652
To One in Paradise	584	The Children's Hour	653
Dream-Land	585	Paul Revere's Ride	654
The Raven	586	The Birds of Killingworth	656
Ulalume—A Ballad	588	Hawthorne	659
The Bells	589	Divina Commedia	659
To My Mother	591	The Broken Oar	661
For Annie	591	Killed at the Ford	661
Annabel Lee	592	Chaucer	661
Eldorado	593	Shakespeare	662
Ballads and Other Poems	593	Milton	662

*Masters of* AMERICAN LITERATURE

## INTRODUCTION

### POINTS OF VIEW

The study of American letters as a mere adjunct of British literature and the view of American culture as of an exclusively Anglo-American tradition, closely identified with the literary climate of New England, are falling before a wider and larger concept of the literature of the United States as the product of many racial and cultural strains. For upwards of two centuries Boston and Cambridge held a position of primacy, and the conventional history treated American literature as the peculiar province of New England, with the result that these earlier studies read strikingly like histories of Harvard College, together with biographical and critical sketches of some eminent literary persons educated therein. Scant attention was given to the cavalier tradition of the South as exemplified by the Carters, Lees, and Byrds of Virginia during the seventeenth and eighteenth centuries, to the literary coteries in Baltimore, Richmond, and Charleston during the nineteenth, or, for that matter, to the dissenting groups in Puritan New England herself; while the evaluation of so-called "foreign" (that is to say, non-English) strains or influences in American literary culture was entirely neglected until recently. Today it is well enough understood that the American melting pot was only partially effective, that immigrants were not immediately transformed by the processes of transplantation into a uniformly "American" product, but that large groups of them in widely scattered areas, after being subjected to American acculturation for generations, still maintain important elements of cultural unity and racial, if not national, solidarity.

The influences from abroad—ethnic as well as cultural—are numerous and various; they are both ancient and modern, including the classical tradition of Athens and Rome as well as the social philosophy of modern Russia; nor are they exclusively European in origin, for Americans have derived influential cultural accessions also from Asia and from Africa, from Canada, and from the Latin-American countries.

The barest beginnings have been made by way of

analyzing and evaluating these so-called "foreign" elements in the total literary productivity of the United States, but we are beginning to take cognizance of the influences which French-American and German-American elements exerted during the nineteenth century on the reading and writing habits and on the general literary climate of the nation; while the cultural cohesiveness and literary articulation among groups like the Dutch in Pennsylvania, the Yiddish in New York City, and the Scandinavian groups in the Midwest are such as to make untenable the idea that American literature is solely English in origin. Perhaps nowhere in America today are there so many so-called average citizens trying to express themselves in verse, story, or play—in book, magazine, newspaper column, or radio program—as there are among the Germans of Pennsylvania, who have developed in recent years a collective point of view that bespeaks a unified culture. It is no mere accident that twice within the past decade Pennsylvania-Dutch plays have crashed Broadway. Similarly, the achievements of the Yiddish Art Theatre of New York are not the result of any sporadic or artificial stimulation, but rather an expression of the folk consciousness and cultural aspirations of some two million Jews of that locality. Finally, we may consider as symptomatic of emigrant strains in the Midwest the works of Ole Rolvaag, whose novels preach the doctrine that emigrants from Europe "must not come empty-handed to the banquet, nor must they vanish without trace into the maelstrom" of that tremendous folk movement which Parrington called the "Great Adventure in American Civilization." No other American book presents as good a picture as does *Giants in the Earth* of the interplay of European tradition and American environment, by way of suggesting the wealth of human potentialities brought to America by the immigrants who passed annually through Ellis Island to scatter throughout the length and breadth of the land, bequeathing a rich human legacy to the wealth of American resources with which the land is naturally blessed.

Among the numerous problems that confront the student of American literature, one of the most in-

sistent is the question of what makes American literature American. By what factors or stages did it become so? It will become apparent to the student before he proceeds very far that American writings began very early to develop certain uniquely American characteristics. Somewhere, somehow, between the seventeenth-century historians and theologians and the twentieth-century poets and novelists, there was created a distinctively American literature—still possessed of some foreign ingredients but nevertheless distinctively American.

Each student will want to make his own analysis and evaluation, in the process of which he will adopt one or a combination of several points of view. He may, after the example of Vernon Louis Parrington, who viewed American literature as an essentially native phenomenon in which the forces of liberalism oppose those of conservatism, relate all that he reads to this clash of opposing forces. Second, he may find his frame of reference in what Howard Mumford Jones calls the three fundamental impulses that animate American culture: (1) the cosmopolitan spirit, (2) the spirit of the frontier, and (3) the bourgeois or middle-class spirit. Third, he may regard his problem as one that Oscar Cargill has called Ideodynamic, in which Ideas are viewed as "on the March" and "in Conflict." Or he may, following the pattern of Norman Foerster, find in the aforementioned interplay of foreign importations and native conditioning four broad factors: (1) Puritanism, (2) romanticism, (3) realism, and (4) the frontier spirit. But whatever approach he adopts, he will inevitably come back to the basic fact that American literature is the product of the interplay of two basic forces—a foreign tradition and a native environment. It may well be that the beginning student will find the four-fold plan of Professor Foerster most readily adaptable to his immediate purpose. As he proceeds in his study, he will find that no plan yet proposed is entirely adequate for the explanation of a literary culture as complex as ours. Meanwhile the four factors—the Puritan tradition, the romantic revolt, the realistic impulse, and the frontier spirit—will be sufficiently comprehensive to serve many useful purposes.

The first of these four—the Puritan tradition—was transplanted bodily. Early Puritanism, whether we think of it as a theological doctrine or as a general attitude toward life, was, and remained for a long time, basically European; but in submitting to American conditioning, it became increasingly less puritanic as it felt, with ever-increasing insistency, the effects of the romantic, the realistic, and the frontier impulses. The romantic spirit was partially of foreign,

partially of native, origin. We admit as much when we speak of Bryant as the American Wordsworth, of Cooper as the American Scott, of Longfellow as the American Tennyson, and so forth for most of the major nineteenth-century exponents of romanticism. These identifications, however superficial, are nonetheless indicative of the debt which Irving owed to Addison, Poe to Coleridge, or of the kinship we discover between the wit of Holmes and that of the Queen Anne writers. When, after the Civil War, the romantic spirit fell before the onslaughts of the disciples of realism, the latter still drew a large measure of inspiration from European sources. One recalls that both Henry James and William Dean Howells freely acknowledged their debts to European realists, and that contemporary naturalists have done no less.

While Puritanism, romanticism, and realism were motivated in varying degrees by European traditions, a more distinctively native impulse, called (for want of a better term) the frontier spirit, was exerting an influence of ever-increasing force upon the American literary consciousness. In so far as this impulse expressed itself in terms of the physical and natural, it began to work upon the earliest immigrants, and the Pilgrim fathers no less than Captain John Smith felt it on stepping ashore. The new land and its products, the forests and rivers and mountains, the wild animals and the Indians exerted molding influences upon the social, economic, and cultural life of the colonists in very real ways. This first phase of the frontier influence upon the European immigrant in America is discernible as much in John Smith's observations as a traveler and explorer of the Atlantic coastal region as in his account of the Pocahontas-Powhatan affair. Similarly, historians like Bradford, Winthrop, and Cotton Mather were acutely conscious of their conditioning by life in a new land, and diarists like Colonel William Byrd and Sarah Kemble Knight left interesting written accounts of frontier society. Crèvecoeur specifically had in mind these effects when, in answer to the question, "What is an American?" he wrote:

He is either an European, or the descendant of an European, hence that strange mixture of blood, which you will find in no other country. I could point out to you a family whose grandfather was an Englishman, whose wife was Dutch, whose son married a French woman, and whose present four sons have now four wives of different nations. He is an American, who, leaving behind him all his ancient prejudices and manners, receives new ones from the new mode of life he has embraced, the new government he obeys, and the new rank he holds. He becomes

an American by being received in the broad lap of our great *Alma Mater*. Here individuals of all nations are melted into a new race of men, whose labours and posterity will one day cause great changes in the world. . . . The American is a new man, who acts upon new principles; he must therefore entertain new ideas, and form new opinions. . . . This is an American.

Crèvecoeur wrote of a new man who had come into being during the years that led to the Revolution of 1776. This American had become self-reliant, individualistic, independent, and self-assertive. He began by questioning authority alike of church and state; and gradually absolutism, whether theocratic or purely political, fell before the critical rationalism, on the grounds of which this new man based his attack. Deistic rationalism, as an assertion of the right and ability of the individual to deal directly with his God on his own terms, without intervention of church or state, broke the power of the Puritan theocracy. And by 1776, the same spirit of individualism, adapted to the demands of democratic republicanism, declared political dependence upon England at an end. By this time the spirit bred of the frontier had joined hands with romantic ideas derived from Isaac Newton, John Locke, and Jean Jacques Rousseau, and the rise of Unitarian principles in religion and of independent republicanism in politics went forward jointly under the auspices of ideas engendered by the American frontier and others derived from European liberal thought.

During the nineteenth century a form of literary romanticism, as exemplified by the major writers from Irving to Whitman, enjoyed a remarkable efflorescence. At once in revolt against the stern moralism of the Puritanic dispensation and prophetic of the realism of the future, the spirit of the American frontier supplied the chief motivation by which the nationalization of American letters progressed. Thus Emerson, while still powerfully moved in his moral idealism by his Puritan heritage, espoused (in *Nature*, *The American Scholar*, *Self-Reliance*, and others of his works) a doctrine of humanistic self-reliance in conjunction with a distinctively American literary nationalism, and warned his contemporaries that no amount of Shakespearizing would produce another Shakespeare. In his essay on "The Poet," he argued that even Milton and Homer were inadequate as models—that "Milton is too literary and Homer too literal and historical." The American poet, he went on to say, must express the American ideal, in terms of what is immediate and indigenous, while sloughing off the distant and the exotic.

Our logrolling, our stumps and their politics, our fisheries, our negroes, and Indians, our boats and our repudiations, the wrath of rogues and the pusillanimity of honest men, the northern trade, the southern planting, the western clearing, Oregon and Texas, are yet unsung.

"America," he concluded, "is a poem," and by way of prophecy he added, "It will not wait long for metres."

Thus wrote Emerson in 1844. In 1855, Whitman printed the first edition of *Leaves of Grass* as if in answer to the call put forth eleven years earlier by Emerson, who hailed the book as signaling "the beginning of a great career" and the institution of a new and more hopeful era in American literary culture.

Since Whitman's day much has happened to give the methods of the scientist and the findings of the realist a compelling urgency. As the known universe submitted to the processes of the laboratory and observatory, science failed to confirm the faith of the romanticists that nature is vitally concerned with man and his values, and that man is the crowning work of creation. The industrialization and urbanization of a later day and the attendant complexities of life gave rise to a clash of classes and interests, of social stresses and economic strains, that turned a later generation of realists to doubt the large Whitmanesque faith in the future of America. The reservoir of the frontier that had seemed inexhaustible in Whitman's day seemed to them to have run dry; and science, instead of fulfilling its proper purposes of aiding man in his aspirations, seemed to them leagued with the forces of economic determinism to grind him underfoot. Thence arose the strident forms of social criticism manifest in so much of modern realistic and naturalistic writing. The machine age with its manifold social implications, the advance of technology with its indifference to purely human considerations, the rise of Freudian and behaviorist psychologies with their emphasis upon "libidos" and "automatisms," the artificially manipulated financial booms and succeeding economic depressions, the interposition of world-shaking wars with their attendant wholesale dislocations—all conspired to cast doubt upon the humanitarian assumptions and idealistic aspirations of the romantic age. For many, man came to be merely the by-product of vast natural processes—a helpless automaton, controlled by cosmic forces either indifferent or hostile to human hopes and desires. The scientist's telescope, searching Heaven, found nothing but Matter, subject to the same laws that govern matter here on the earth. The realist, concerning himself with material things

—with things as they are—and adopting the painstaking methods of the scientist in drawing his “cross-sections of life”—his pictures of “reality” or “actuality”—found himself becoming (consciously or unconsciously) receptive to the philosophy of scientific determinism, or naturalism. Hence mechanistic materialism came, in writers like Frank Norris or Theodore Dreiser, to be a force vitally affecting their entire outlook on life. But, however responsive writers like Dreiser and Steinbeck have been to these deterministic philosophies, they are often also equally alive to the purely human demands in a contemporary and complex world. It is by no means unusual, therefore, to find underneath this overlay of scientific determinism a fierce spirit of human protest against this bleakly determined universe and a castigation of an order that produces maladjustments leading only to frustration, despair, and tragedy. But whatever the philosophic assumptions or the premeditated techniques of the contemporary writer, he is motivated very largely by the immediacy of the issues in a manner to make many modern books signally alive, compelling, and American. The exotic, the feudalistic, the “unrealistic” or dreamily romantic have been banished.

In the threefold progression of American literature from Puritanism through romanticism to realism, the frontier spirit has exerted an influence of steadily growing vitality and force. For the earliest generations of immigrants to America, bringing a full-blown literary tradition to a new land, the frontier served as little more than a background or backdrop for their writings. This “scenic” concept of America, in terms of the physical and natural features of the land, still chiefly motivated Cooper’s *Leatherstocking* tales; it partially inspired Irving’s *Knickerbocker* stories, Parkman’s histories, and Mark Twain’s stories of boy life in Missouri or of the scenes sketched in *Roughing It*; it continues vital in our folk literature, in local-color fiction, and in what passes currently for the literature of regionalism.

But as early as the mid-eighteenth century, the frontier spirit began to express itself forcibly in terms of the ideas which a frontier society developed; and these ideas are reflected no less in the religious and political revolutions of the eighteenth century than in the vibrant spirit of literary nationalism that animated American writers from Freneau to Whitman.

Early in the nineteenth century the frontier began a rapid movement westward, and there followed a succession of frontiers, geographical and ideological. As successive waves of scouts, pioneers, and settlers pushed from the Atlantic to the Pacific, mountain

ranges, valleys, and deserts alike were crossed and conquered. The spirit of *Leatherstocking* was transmuted into that of Andrew Jackson; the Daniel Boone of one generation became the pioneer of the next who went “a-westering” in a prairie schooner; and so successions of frontiersmen, including adventurers, traders, trappers, hunters, ranchers, farmers, lumbermen, prospectors, and miners followed until, by the end of the century, the frontier was gone. But its influence lived on. The rugged individualism, independence, self-assertiveness, expansive optimism, vibrant energy, confident resourcefulness, boundless vitality, and what passes among Europeans as “American brawn, brag, and ‘know-how’”—all of them traits of frontier character—still operate. The tall tale of the West that infuses so much of American humor is no less a part of it than the demand for bigger and faster automobiles and more of them. The stories of Bret Harte and of Hamlin Garland, the novels of Willa Cather and of Ole Rolvaag, the poetry of Joaquin Miller and of Robinson Jeffers alike are imbued with it. Realism especially has found the West congenial. Long before the physical frontier vanished, the spirit it had fostered reversed its direction and headed eastward, producing what Vernon Louis Parrington called the “Backwash of the Frontier,” until New York and even Boston and Hartford felt its impact. And today, a half-century after the “passing of the frontier,” we hear more and more about new frontiers—economic, social, scientific, educational, and, most recently, international. This American spirit has become an effervescence in the blood that is loath to admit a possible future when there shall be no new frontiers to conquer.

In short, American culture is not exclusively one thing or another, but an amalgamation of many ingredients that must be viewed in relation to each other. Aside from the accident by which the language of the Pilgrim fathers became the dominant (though by no means exclusive) language of Americans, their chief claim to primacy in America is owing to the fact that they came to these shores relatively earlier than did the Germans, the Norwegians, the Italians, or the Poles. American literary culture is like a large tapestry woven of many threads, exhibiting an intricate pattern of variegated colors; and the critical student who is ambitious to approach the study of it from anything more than a parochial point of view must disabuse his mind of the idea that American literature is an exclusively Anglo-American phenomenon, the product of a peculiarly English tradition that does not in fact exist.

## THE PURITAN BACKGROUND

As a matter of fact, even during the seventeenth century, while the Puritans were establishing themselves and their institutions and laying the groundwork for what was to become the basically English tradition of letters in America, they found themselves in contact and sometimes in conflict with the French to the north and west of them, with the Spaniards to the south and southwest, and with the Dutch and Swedes almost in their midst. How they overcame these rival nationalities is a long and involved story that belongs properly to history. Their success was owing in large measure to the permanence of their colonial establishments, aided markedly by the stability of their linguistic and literary traditions. For it is a noteworthy fact that the early Puritans came to stay, and to that end either brought with them a full complement of cultural and institutional heritages or set promptly to work establishing them. For example, lacking an institution for the training of their clergy and for the preservation of the humanistic tradition of education and learning to which they had become accustomed in the old country, the Massachusetts Bay colonists, six years after their arrival, established Harvard College for "the advancement and education of youth in all manner of good literature, Artes, and Sciences." It may be observed, in passing, that the proportion of university-trained men in America has never been higher than it was among the first generation of Puritans. A printing press came next, and in 1640 there was issued by the newly established press in Cambridge the first book published in what is today the United States—*The Bay Psalm Book*. Seven years later they passed the Act of 1647 requiring every town of one hundred families or more to provide free common and grammar school instruction, and Connecticut instituted a similar law in 1650. These are but a few of the countless expedients adopted by the early Puritans in their desire to build in the new world another England that should be, except for such modifications as their religion prescribed, as much like the Renaissance England they had left as they could make it.

Indeed, the uniqueness and singularity of the American Puritan have been overstressed. He was not the gaunt, black-clothed, steeple-crowned kill-joy bent on proscribing all the pleasures of life that he is represented to be in the cartoons; he led no crusade against alcoholic beverages; and he was not oblivious to art, beauty, and the satisfactions of gracious living. The architecture of Puritan buildings, the superb

lines of their household furniture, and the simple beauty of their pewter and silverware betoken a lively though not ornate or florid aesthetic sense. To be sure, the Puritan preachers fulminated against drunkenness, but they poured no confiscated liquor into the gutters. It was not the drink itself but the abuse of it that Increase Mather warned against in his sermon, *Wo to Drunkards* (1673):

Drink is in its self a good creature of God, and to be received with thankfulness, but the abuse of drink is from Satan; the wine is from God, but the Drunkard is from the Devil.

Actually, wine flowed freely even at such pious ceremonies as the ordination of ministers; nor were other forms of merry-making banned. For example, at the ordination of Jonathan Edwards his father caused a dance to be held in honor of the occasion; while Cotton Mather recommended musical training, especially choral singing, at the same time that he held dancing schools to be a necessary part of a full-bodied system of education. The Puritans' concern, like that of other religious folk, was lest music, dancing, and riotous merriment interfere with Christian observances and duties or lead to licentiousness.

Similarly, the conventional view of the Puritans as harsh, self-centered, and unemotional, as without love for their families or their fellow men, has to be revised in the light of evidence regarding their daily lives as we find it in the letters, diaries, biographies, and histories of the period. It may be presumed that the rigorous exigencies of a frontier existence often bred a harshness not unlike that which Hamlin Garland described in delineating human relations on the great plains while the West was being won. What is more, the rigidity of the Puritan creed often dominated the softer traits of affection and compliance, substituting sometimes a desolate sanctity in the home. But oftener the tenderness of duty, the sense of subordination, the competence of training, and the repose of a clear conscience gave to the Puritan home an atmosphere of serene and equitable joy.

Nor were the Puritans devoid of the spirit of benevolence and charity. To be sure, they had little of the modern spirit of organized alms-giving or wholesale humanitarianism; yet even Cotton Mather, by whose time the originally fine fervor and spiritual idealism of seventeenth-century Puritanism had undergone a certain hardening process, professed a spirit of Christian charity and found no satisfaction so "ravishing" as "relieving the distresses of a poor miserable neighbor" or redressing "the miseries under

which mankind is generally languishing." And it is to be recalled that his *Essays To Do Good* were acknowledged by Franklin as the primary inspiration behind his own many-sided humanitarian projects. There was a society in which each man was expected to contribute his full share toward the common goal of establishing religious, political, and social security. Practical or realistic, and endeavoring to promote frugality and self-reliance, they often exercised the strength of will to withhold the "wicked dollar" that Emerson, of a more humanitarian-minded generation, often wished he could muster. Promiscuous almsgiving, they feared, would destroy personal initiative and eventually promote general indigence; but there is no evidence that worthy cases of need among the Puritans went unheeded any more than they do today.

The more we arrive at the facts, the more do we realize that the Puritans of the seventeenth century lived a fairly normal, everyday kind of life, not occupied mainly with marching to meeting, shooting unfriendly Indians by the way, or burning witches. It is a well-established fact that they burned no witches, though they hanged some. While their poor victims were therefore no less dead, the difference in method of execution is noteworthy. Moreover, it is to be remembered that many educated people the world over believed in witchcraft, and that while thirty-four were executed in New England, "half a million" suffered martyrdom in Europe. The Mathers, often singled out as chiefly responsible for the Salem witchcraft delusions, once they saw the thing getting out of control, did as much as anybody toward bringing the tragedies to an abrupt end by counseling moderation and pointing to the inadequacy of the evidence on which the accused were condemned. Professor G. L. Kittredge, after an exhaustive inquiry into the matter, concludes that there was nothing in the tenets of New Englanders by which witchcraft can be ascribed to something peculiar to the religious opinions or the theology of the Puritans.

Thus many of the peculiar and extreme notions which have become attached to Puritanism in the popular fancy fall away as the facts become known, as do also many of the so-called differences by which Puritans are sometimes distinguished from Anglicans and Protestants generally. Actually, they were about ninety per cent in agreement with contemporary Protestants on all social, intellectual, and religious questions. The remaining ten per cent, however, on which there was dispute, made all the difference to them, so much so that they chose to leave their native land for the privilege of starting anew, albeit in a

wild country, and of carrying forward their intent of purifying or perfecting the doctrine of the Church of England.

Puritanism had a long history in Europe before it migrated to America. Its origins go back to the protests of Luther and beyond to Wyclif, but more immediately to the break between the Church of England and the Pope of Rome. In seventeenth-century America, Puritanism was nothing more than an extension of the doctrine of reform—the idea that the Reformation remained incomplete, that more abuses remained to be corrected, that the movement for purification should continue until the Church of England should be restored to the "purity" of the Church as originally instituted by Christ. While the Anglicans in general remained content with what was known as the "Elizabethan Settlement" of the Church, the Puritans wanted to proceed with reforms, though there was much difference of opinion among them regarding the means to be employed or the precise ends to be sought. In the main, however, they agreed on certain cardinal points, derived from the institutional theological system of Calvin. These included (1) a supreme triune God as the absolute Creator and Determiner of all things, as infinitely supreme as man is abjectly low; (2) the Holy Scripture as the exclusive revelation of God; (3) man's fall from original righteousness through willful disobedience, hence his loss of all ability of will to do any spiritual good, hence his total depravity and the imputation of Adam's guilt to all his posterity; (4) the "high mystery" of Election and Predestination, by which, through the mediation of Christ, the mercy of God is manifest toward the elect, chosen by His Almighty power of determining them to that which is good, whence it follows that the elect can neither totally nor finally fall from grace, just as the damned cannot attain it; and (5) salvation as dependent upon an inner consciousness of being of the elect, not at all upon outward "good works," although "good works done in obedience to God's commandments are evidences of a true and lively faith."

This last doctrine, which the modern student finds especially puzzling, is explained fully by Cotton Mather in his *Magnalia Christi Americana* (1702), in which he reproduced the Puritan "Confession of Faith" drawn up in 1680. He explains that corrupt man cannot of himself initiate anything good; hence his best works merit neither pardon for his sins nor eternal life. Since through Adam's fall, every man but the elect is damned to eternal torment, it is the duty of everyone to give all diligence to make his

calling and election sure by ascertaining introspectively whether his acts are agreeable and in harmony with God's will as revealed in Scripture, for the promise of Christ and salvation by Him are revealed only in and by the word of God. But aside from this outward revelation of the Gospel, there is necessary also an inward conviction—the “effectual and irresistible work of the Holy Ghost upon the whole soul for the producing in man a spiritual life,” which may be recognized as something akin to the Quaker conscience and Inner Light. Recognizing the fact that man wages “a continual and irreconcilable war, the flesh lusting against the spirit, and the spirit against the flesh,” the Puritan was impelled (1) toward individualistic introspection and diligent soul-searching and (2) toward an eager poring over the will of God as revealed in the Bible.

To the latter end, sound learning, especially linguistic scholarship, was a requisite, for it was well enough understood by the early Puritans that certain passages in the Bible seemed equivocal if taken by themselves or if unchecked against the linguistic transformations which the Bible had undergone at the hands of its numerous translators. “All things in scripture,” so they declared officially in 1680, “are not alike plain in themselves, nor alike clear to all. . . . Where there is a question about the true and full sense of any scripture (which is not manifold but one) it must be searched and known by other places that speak more clearly.” Inevitably they deferred to the best educated among them, the university-trained clergy, to resolve these questions pertaining to God's will and law; and if anything had been wanting to elevate their respect for their ministers, the resulting growth in their power and influence would have supplied it. For the early Puritans, learned and unlearned alike, came to America for the purpose of establishing there God's ideal state of society. Since they were loyal Englishmen, the English common law was for them the basis of most social and political appointments; but on points not covered by the common law, especially in matters of church government, they zealously searched God's will, *i. e.*, the Bible, for guidance. Accordingly they established a theocracy, in which the government, as the agent of the King, operated under English law, and as the agent of religion, under divine law—which necessarily meant, according to the interpretation of and under the direction of its religious leaders. These leaders proceeded with admirable strategy to charter and incorporate the several settlements under the proper terms, taking care so to restrict the suffrage by religious qualifications as not

to let the power slip from their hands into those of non-church members. To all “right-thinking” Puritans the unity of the church and state was axiomatic for the simple reason that it seemed impossible to them to separate man's spiritual from his earthly estate.

Yet from the first there were dissenting voices, not only from men like the Anglican Thomas Morton of unsavory, worldly reputation at Merry Mount, but also from individuals in their midst, and Governor Winthrop of the Massachusetts Bay Colony found it necessary to defend himself and his policies in court as early as 1645. However, it is worth observing that after securing an acquittal of the charge that he had exceeded his proper authority, he did not let the opportunity slip to inform all and sundry that he intended to enforce the unity of church and state as founded on the principles of morality according to God's word:

Concerning liberty, I observe a great mistake in the country about that. There is a twofold liberty, natural (I mean as our nature is now corrupt) and civil or federal. The first is common to man with beasts and other creatures. . . . This liberty is incompatible and inconsistent with authority, and cannot endure the least restraint of the most just authority. The exercise and maintaining this liberty makes men grow more evil, and in turn to be worse than brute beasts. . . . The other kind of liberty I call civil or federal, it may also be termed moral . . . it is the liberty to do that which is good, just, and honest.

And he went on in a manner to leave no doubt in the minds of his auditors that the determination of what is “good, just, and honest” rested with their betters, *i. e.*, the magistrates, supported and instructed by the learned ministry. Liberty thus defined supplied the foundation for the Puritan insistence upon religious conformity, for there was no doubt in their minds that theirs was the only true and pure religion, and it seemed equally clear to them that they could not willingly countenance people's mistakenly following false religions. Professor Perry Miller puts the matter in the following terms:

The government of Massachusetts, and of Connecticut as well, was a dictatorship and never pretended to be anything else; it was a dictatorship, not of a single tyrant, or of an economic class, or of a political faction, but of the holy and regenerate. Those who did not hold with the ideals entertained by the righteous, or who believed God had preached other principles, or who desired that in religious belief, morality, and ecclesiastical preferences all men should be left at liberty to do as they wished—such persons had every liberty, as Nathaniel Ward said, to stay away from New England. If they did come, they were expected to keep their opinions to themselves; if they discussed them

in public or attempted to act upon them, they were exiled; if they persisted in returning, they were cast out again; if they still came back, as did four Quakers, they were hanged on Boston Common. And from the Puritan point of view, it was good riddance.

But this doctrine early came under the attack of Roger Williams, who argued, in a series of pamphlets which he exchanged with John Cotton, for religious toleration and what this principle implied, namely, the separation of church and state. He was banished for his pains. Anne Hutchinson maintained the heretical Antinomian doctrine that she could commune directly with God, that she required no clerical intermediary; and she went on to imply that she was prepared to follow the promptings of the voice within against all the precepts of the Bible, the churches, the voice of reason, the findings of the Biblical scholars, or the combined authority of priest and magistrate in Massachusetts Bay. The magistrates and ministers were not slow to recognize in her doctrine of immediate communion a form of heresy that would quickly destroy their authority and ultimately topple the entire theocratic structure to the ground. Summarily banished, she joined Roger Williams in Rhode Island. Thomas Hooker left peaceably with the larger part of his congregation for Connecticut, where he was free to institute a government which combined church and state less strictly and enjoined religious conformity less severely than was mandatory in Massachusetts.

In 1639 Governor Winthrop admitted the fact in his *Journal* that "the people long desired a body of laws, and thought their condition very unsafe while so much power rested in the discretion of magistrates." What Winthrop did not go on to say is that his setting-up of the first board of Assistants had instituted an oligarchy, with full powers, legislative, executive, and judicial. While the freemen early won the right to elect Deputies to the General Court, they lost their fight against the assumed power of the Assistants to veto the acts of the Deputies, and the Assistants continued to hold the preponderance of political power as long as the General Court merely passed occasional acts and resolutions, leaving the Assistants (as magistrates and judges) to declare the law in all civil and criminal cases and to fix the penalty. The magistrates held (and the logic of the freemen could not gainsay it) that in a Bible Commonwealth the law was God's law as revealed in Scripture; but it became a matter of common observation that the magistrates were clever at finding in the Bible what they wished to find. By 1634 already there was a good deal of agitation among the

Deputies, as the representative body, for the adoption of a published set of laws, wherein every man might read his rights and duties, as well as the penalties for disobedience, thus substituting a government by laws for a government by men. For under the old dispensation, by which the magistrate handed down his decision by right of magisterial discretion, he was free to indulge his personal desire or whim, if he could find a Biblical text to bear him out. It seemed safer to have the laws down in black and white so that there might be no mistaking the terms. There followed a series of agitations that led to the adoption of a written code in 1641 and the Township Act of 1647. The latter is especially significant because by it the General Court gave to non-freemen who were of age, and who took an oath of fidelity to Massachusetts Bay, the right to serve on juries, to be elected selectmen of towns, and what was most important, to vote on all local matters, such as the assessment of taxes, the distribution of lands, the laying-out of highways, the ordering of schools, and the herding of cattle. This act, says Professor Samuel E. Morison, was "the entering wedge of democracy in Massachusetts; it gave manhood suffrage in the towns, and opened to non-church members the town-meeting, the most important school of self-government in New England if not in the United States." A still more liberal *Book of the General Lawes and Libertys* was adopted in 1648, and so there followed acts and concessions until toward the end of the century the power of the theocratic oligarchy was seriously damaged.

Many causes contributed to the break-up of the old order. The complexion of the colonies was changing from agrarian simplicity to commercial complexity. Worldly prosperity, founded on the fisheries, the carrying trade, and commerce in rum and slaves, distracted men's attention from religious concern and theological speculation to an ever-increasing attendance upon worldly affairs, while the new royal charter of 1691 struck the power of the clergy a crippling blow by replacing religious tests with property qualifications for suffrage. The theocrats, endeavoring vainly to bolster their position, attempted to arrest the processes of the new order by piling up laws and making new proscriptions, at the same time that they sought to suppress criticism. It fell to the lot chiefly of Increase and Cotton Mather to try to halt the processes of the changing world in New England. Though they labored indefatigably and prodigiously, their best efforts were not good enough, and Increase Mather's removal from the presidency of Harvard College in 1701 and his famous son's failure to

secure the appointment for himself signaled the fall of the theocratic state.

Harvard College had become infected with rationalism and wanted no more traffic with the Mathers or with the policy they represented. The orthodox therefore established Yale in 1701, and there, at least through the pulpit-thumping career of "pope" Dwight (terminated by his death in 1817), Calvinism sought to hold its embattled position. A few years after the overthrow of the Mather regime at Harvard, John Wise's *Vindication of the Government of New England Churches* (1717) boldly developed the idea of "the law of Nature" as "the dictates of right reason," and went on to declare that as the people "have a power, every man in his natural state, so upon a combination they can and do bequeath this power unto others, and settle it according as their united discretion shall determine," whence it follows that when the entrusted power is abused, "that power returns to the people again, as to its natural source." From this point onward it was by the most natural progression of ideas that rational principles in religion and the democratic doctrine of natural human rights instead of theocratic ideas in politics should develop. This evolution of radical thought can be traced from Wise's *Vindication*, through such treatises as John Barnard's *Throne Established by Righteousness* (1734) and Jonathan Mayhew's *Discourse Concerning Unlimited Submission* (1750), to the religious and political pronouncements of Thomas Paine and Thomas Jefferson, as incorporated in the Declaration of Independence and put into practice in the American Revolution.

No man or set of men are wholly responsible for the decline of the Puritan theocracy. To be sure, its later defenders often played into the hands of the disciples of rational theology and representative democracy by adopting short-sighted policies and foolish stratagems, or, as in the case of Jonathan Edwards' *Freedom of the Will* (1754), by hammering home their position so heavily-handedly that they defeated their own purposes. But below and behind all this hacking at authority and absolutism lay a deeper cause that would doubtless have asserted itself whatever the men or the times. The spirit of the Reformation, of which Puritanism was born, carried within itself, at least as far as the Puritan theocracy in America was concerned, the germs that were calculated to achieve its undoing. The two intellectual principles enunciated by the Reformation—"the rightful duty of free inquiry" and "the priesthood of all believers"—were always available to be turned against a theological order that threatened to curb

free inquiry or to interpose itself between man and his God. The first of these principles led to liberty; the second, to equality. Both became fecund toward the end of the seventeenth century, and during the eighteenth they became explicit in the growth of Unitarianism in theology and of democratic republicanism in politics.

However, before this twofold revolt was finally consummated, Puritanism had dominated life in New England for upwards of a century. During this time American institutions were in process of formation, and not unnaturally they took on, during this vital period of incubation, a distinctively puritanic stamp which long survived the so-called Puritan age of American civilization.

Two kinds of Puritanism are to be distinguished. One, written with the capital P, has reference to a Calvinistic theology and a theocratic polity that passed as the eighteenth century wore on. The other, written with the small p, insinuated itself into the common life of the people in innumerable, subtle ways. It remains a potent factor today—none more potent. This element of our national heritage, sometimes termed the puritan tradition, as distinguished from historical or theological Puritanism, is less easily defined than the other, partly because Puritanism itself, from which it stems, was of several kinds—seldom quite the same thing at different times or in different places. Even if it had flowed from a single, consistent source, the puritan tradition became mixed up with or influenced by others of the cultural traditions that make up American civilization, so that it is not always clear what is owing to the puritan or to some other strain. For example, we have seen the elements of sobriety, reticence, reserve, self-reliance, discipline, and moral integrity identified with the puritan heritage. Yet sobriety was also a virtue practiced by the Quakers. Self-reliance in the practical affairs of life was bred of the Puritan way of life, but it was no less a trait fostered among all kinds of people on the frontier, whether along the Atlantic seaboard during the seventeenth century, on the mountain ranges during the eighteenth, or on the great plains of the West during the nineteenth. Religious fervor, spiritual faith, and what has been called the "practical idealism" of the Puritans are sometimes designated as marks by which the puritan tradition manifests itself among Americans of later generations. But here again we could point to French Huguenots, Pennsylvania-German Quietists, and Dutch Reformed who have traditionally cultivated the same traits. Nevertheless, among all the various racial, national, or religious groups that went

into the making of America, the English Puritans were the earliest and most firmly entrenched, and their cultural influence became the most pervasive. Moreover, the special characteristics developed among groups like the Dutch Reformed, Scotch Presbyterians, or French Huguenots were usually less antipathetic than complementary to the spirit of puritanism, so that they may, for practical purposes, be considered part and parcel of the same impulse. At all events, the listing of such traits of character as moral earnestness, sobriety, reticence, reserve, self-discipline, integrity, practical idealism, godliness, and other-worldliness as we are accustomed to think of them in connection with the puritan spirit is to give them a kind of cumulative cogency that may be helpful to the student in identifying what in Bryant and Emerson or in Emily Dickinson and Robert Frost is owing to this abiding inheritance from our religious-minded forebears.

Yet care must be exercised not to take at face value some of the ready identifications commonly made today between current ideas or attitudes and the spirit of puritanism. Thus, what we know as "fundamentalism," while it may derive in part from the puritan tradition after undergoing the transmutations of time and place, shows also admixtures from other forces and impulses, and is certainly no pure derivative. The Puritans would have been entirely antipathetic to the doctrine that the literal interpretation of Scripture must be maintained in spite of and against all reason, learning, and scientific demonstration. They would not have accepted as valid the evidences of "getting religion" nor approved of the revivalist orgies as these are promoted by the camp meeting; "hitting the sawdust trail" would have seemed abominable to them. Religion with the Puritans was a very serious, complex, and highly intellectual affair, for which they trained their clergy with the same care that our age devotes to the training of its scientific specialists. Again, though they espoused doctrines of practical and Christian humanism, they would have remonstrated against all recent attempts to "humanize" religion—to smooth over hard doctrines, to find easy ways to Heaven, and to introduce sweetness and light at the expense of sound logic and hard-headed realism. Nor would they have taken kindly to such modern efforts as we have witnessed to bring Christ down to earth by making him "The First Great Humanitarian" in the Rotarian sense of the word, or invoking his endorsement of some political party or social doctrine. On the other hand, there are contemporary traits of mind and character that the Puritans would have approved: the sober spirit

which still invests a large element of the American populace, the sense of decency and sobriety among common folk, the spirit of keeping the Sabbath, the simple honesty that makes the average man's word as good as his bond, the high moral idealism of an Emerson or the renunciation of an Emily Dickinson, the deferring of immediate sensual pleasure or worldly gain for the more lasting spiritual satisfactions of duty earnestly heeded and labor honestly performed. And these traits, among others, are evidences of the continuance of the puritan tradition in American life.

#### PURITAN LITERARY THEORY

Aside from this intangible influence that is still very much alive, the Puritans left a written record that is more precise in that it leaves whoever reads himself into it definitely affected, one way or another. The Puritans wrote much, and, on the whole, well. While they had little interest in the cultivation of letters as letters, no generation since them has taken writing more seriously. They were engaged in what they considered the most momentous experiment made during the Christian era to institute God's kingdom on earth, and accordingly they felt divinely impelled to make a full record of the experiment so that men, then and later, might read and go on to do likewise, by building upon the foundations which they were busy laying. They wrote always from conviction, usually with fervor, and often with inspiration—oftener than we realize, because of the difference between their and our concepts of what constitutes inspiration.

They had their own ideas about writing, choosing a simple, direct method of expression in favor of circumlocution or flowery imagery. A Mather's conception of good literature might not coincide with our understanding of the term, but it included a knowledge of the poetry, drama, and history of the ancients and the ability to write a prose sentence that said what the author meant. While great scholars like John Cotton were tempted, as other scholars have been, to affect "florid strains" and a "pompous eloquence," Cotton Mather rated it to his grandfather's credit that he relished "the *Words of Wisdom*" above "the *Wisdom of Words*." The Puritan minister was carefully trained in rhetoric and pulpit eloquence, but the "high style" characteristic of Anglican preaching during the early seventeenth century was in disrepute among them. In 1642, for example, John Cotton disparaged "affecting carnal eloquence" in the pulpit, on the ground that "swelling words of humane wisdom make mens preaching

seeme to Christ (as it were) a blubber-lipt Ministry"; while a contemporary put it succinctly by saying, "Gods Altar needs not our pollishings" Yet they were not foolishly extreme in this matter of attending to "Conscience rather than Eloquence, fidelity rather than poetry," for as Michael Wigglesworth put it, "Eloquence gives new luster and bewty, new strength new vigour, new life unto truth . . . 'tis a fit bait to catch the will and affections"; and Jonathan Mitchell stated their position very well when he said, "Great Truths to dress in Meeter, Becomes a Preacher," adding—

No Cost too great, no Care too curious is  
To set forth Truth, and win mens Souls to bliss.

Even historians like Bradford and Winthrop sometimes sought to enliven the monotony of their historical prose accounts by breaking into verse, though it usually turned out to be verse of no very high order, by either their own or our standards.

The Puritan writer's chief concern was not with poetic flights of the imagination but with "plainnesse and perspicuity, both of matter and manner of expression," so that what he said would not "dazzle, but direct the apprehension of the meanest . . . and make a hard point easy and familiar in explication." For the very serious and very practical matter in hand, he knew very well that the cultivation of a "studied simplicity" was the proper style, and that one honest, straightforward prose tract was worth a hundred poetical effusions. For the common man distrusted fiction and symbolic figures, and wanted none of them; and the more cultivated, while freely acknowledging the poet's high calling, feared the danger that lay in the magic spell of poetry—feared that it "might tempt men away from truth to fable." Not that the Puritans did not write verse. We are only beginning to discover how much, as considerable masses of manuscripts come to light. But most of it was verse, like Michael Wigglesworth's *Day of Doom*, designed to lead men in the right way to Heaven. Whether casting their words into poetic meters or prose rhythms, the Puritan writers found the chief inspiration for their writing, as for their thinking, in the Great Book, which was the Be-all and the End-all of wisdom. Fortunately it happened that their model was one of the great masterpieces of English literature, the King James version of the Bible. They found in it not only a book of religious instruction but also a rich repository of history (sacred and secular), including colorful stories of "intrigue and adventure, primitive folklore and scandalous anecdote, proverbial wisdom, lyric poetry, and tender

romance." Quite naturally, when they wrote, their figures and illustrations were drawn from Biblical stories of the kings and prophets as often as from ancient history and classical mythology. This being so, we can understand why their style of writing should fall, consciously or unconsciously, into the Biblical cadences and rhythms that distinguish so much of their poetry and prose.

Still, compared with the full-bodied, myriad-colored richness of English Renaissance literature, Puritan writings seem didactic, bookish, narrow, and indifferent to beauty as we conceive beauty. But it is to be remembered that if their works were didactic, they were so because of the Puritans' overpowering desire to live in harmony with God's will; they were passionately in earnest about spiritual realities; and in their writings they sought, by every means known to their rhetoric, to stimulate in their readers or hearers the elementary and absorbing passion of curiosity concerning spiritual self-preservation. If they seem bookish, it is because they respected the divine truth contained in the Bible, and because they sought accurately to transmit that truth to their readers. The preface to the *Bay Psalm Book* (1640) contains an illuminating statement (well worth careful scrutiny) by the translators, Richard Mather, John Eliot, and Thomas Welde, the first two of whom were graduates of Oxford and Cambridge, respectively:

If . . . the verses are not alwayes so smooth and elegant as some may desire or expect; let them consider that God's Altar needs not our pollishings: Ex. 20. for wee have respected rather the plaine translation, then to smooth our verses with sweetnes of any paraphrase, and soe have attended Conscience rather then Elegance, fidelity rather then poetry, in translating the hebrew words into english language, and Davids poetry into english meetre . . .

Educated and cultivated men as the translators were, they did not mangle the beautiful King James version of the Psalms because they were ignorant or because they lacked good taste; they did it deliberately: to make a true translation they consciously sought to make it literal. If, in the process, they lost some or all of the beauty of the Renaissance rendition, the loss, they felt, was infinitely compensated for by the gain in truth. For the Bible represented divine truth above the need or the possibility of garnishment—truth which no mere physical or verbal beauty could enhance. The truth and beauty which the Puritan chiefly loved were the truth and beauty of holiness, the result of living in harmony with the will of God as revealed in the Bible. All other forms of beauty were inconsequential. If the Puritans were narrow, it was because their interests were vertical rather than

horizontal; they sought nothing less than moral perfection and spiritual salvation, to which ends all other means and ends were incidental. Thus their literary practice grew out of their literary theory, which, in turn, was a logical development out of their religious theory. Thus, too, their literature developed a consistency of matter and a unity of tone unequalled since in America. As long as the body of their theological theory held together, so long did their style of writing endure. So it came to pass that the Puritan conception of poetry as a means to expressing great truths in exalted moods was not superseded by the urbane appreciation of poetry as a social accomplishment until the eighteenth century was well under way.

#### COLONIAL WRITINGS

Exploration and colonization have always been conducive to the writing of description, history, chronicles, letters-home, memoirs, biography, and autobiography. John Smith had barely landed his colonists at Jamestown in Virginia, in 1607, when he set to writing his *True Relation of Such Occurrences and Accidents of Noate as Hath Hapned in Virginia since the first Planting of the Colony*, published in London the next year. There followed numerous other writings of his, most notable among which were *A Map of Virginia, the Commodities, People, Government and Religion* (1612) and his more comprehensive, autobiographical work, *The True Travels, Adventures, and Observations of Captaine John Smith* (1630). The founding of Plymouth, thirteen years after Jamestown, was equally well documented. Before landing, the colonists framed the Mayflower Compact, by which they bound themselves into "a civil body politick," the precise wording of which Governor William Bradford took care to reproduce in his *History of the Plymouth Plantation*, begun about 1630, but embracing antecedent events in the form of annals, and terminating about 1647. But long before this extensive work was begun, Bradford, Edward Winslow, and others wrote up the experiences of the colonists from November, 1620, to December, 1621, in a document signed "G. Mourt," and hence known as *Mourt's Relation*, published in London in 1622. Similarly Governor John Winthrop began at the beginning in his diary-like history of the Massachusetts Bay Colony. The first entry reads: "Easter Sunday, March 29, 1630. Riding at the Cowes, near the Isle of Wight, in the Arbella, a ship of three hundred and fifty tons," and so he proceeds to chronicle dutifully every event that

seemed worthy of record, until he reached his last entry in 1649, the year of his death.

These represent but a few specimens of a dozen or more early colonial historians, Northern and Southern. The works of Bradford and Winthrop take on a special significance not only because of their authors' prominence in colonial affairs but also because of their intrinsic merits. Bradford's history, for example, tells an unadorned story of adventure and perseverance, of tenacious idealism that triumphed over reverses and privations, in a homely, lucid style of Biblical simplicity, illustrating that artlessness of great art which comes near making it the literary classic of the American seventeenth century. Winthrop's *Journal*, dealing with the affairs of the far more powerful and numerous Massachusetts Bay settlements, reflects an author of relatively greater learning, wealth, and social standing than Bradford. A veritable compendium of information, it makes a record of official acts and of public as well as private affairs, elections and assemblies, births and deaths, wars and harvests, theological controversies and political contests, visible evidences of God's good will or wrath manifested toward men (termed "Divine Providences"), and a thousand other memorabilia or curiosa—all set down in the order of happening, with little respect for sequence or congruity. Yet so wide is the scope and so faithfully does the book portray the spirit of the times, that Noah Webster, its first editor, had some justification for calling it *The History of New England*.

Other writings there were a-plenty—sermons without number and polemical works chiefly touching theological questions, exegetical tracts, descriptions and accounts of the country, reports to the stockholders and managers of the trading company, or pamphlets designed to attract new settlers. Among the more notable controversial writings are Thomas Morton's irreverently satirical attack upon the Puritan ordering of things in his *New English Canaan* (1637) and the exchange, during the forties and early fifties, of a series of pamphlets between Roger Williams and John Cotton concerning religious conformity and theocratic polity. Nathaniel Ward's *Simple Cobbler of Aggawam* of 1647, a notable protest against the doctrine of religious toleration, belongs to the same general category of theological writings, as do most of the titles issuing from the studies of John Cotton (1584-1652), Thomas Hooker (1586-1647), and Thomas Shepard (1605-1652), the three "complete preachers" of the day.

Meanwhile poetry was not neglected altogether—

epigrams, simple ditties, popular saws, broadsides, and occasional verses of many kinds, including commemorative poems and epitaphs, being especially popular. The deaths of notable persons were special occasions tempting the colonial poetasters to essay new heights of rhetorical splendor and untried figurativeness. Some of the metaphysical similes and metaphors in this type of verse are unmatched for being far-fetched and atrocious; not a few show real ingenuity and wit. The most representative as well as popular of New England poems was Michael Wigglesworth's *Day of Doom* (1652), an extensive and fearful picture of the day when the last trumpet shall blow and God will judge saints and sinners according to the inexorable law of Calvin. This eminently edifying poem ran its full jigging length of two hundred and twenty-four eight-line stanzas in the old septenary ballad meter with interlinear rhymes, adorned by plentiful chapter-and-verse references in the margin to Biblical authority to authenticate its inviolable orthodoxy. About the same time there appeared *The Tenth Muse Lately sprung up in America, or Several Poems, compiled with great Variety of Wit and Learning, full of Delight* (London, 1650). These early poems of Anne Bradstreet form the first important body of verse written in America that deserves to be taken seriously as poetry, and the new edition (with additions, including her "contemplations"), which appeared in Boston in 1678, added considerably to her poetic stature. New heights were attained shortly after by Edward Taylor (1645?-1729) in his devotional and meditative verse, modeled upon such "sacred poets" as Herbert, Crashaw, and Quarles; but these remained in a four-hundred-page quarto manuscript until 1937, when their publication first made known the figurative brilliance and homely, native coloring of Taylor's poetry. Since then, much other early Puritan poetry has been found, and some of it has been published; but no poet has yet appeared to challenge seriously the position of Anne Bradstreet and Edward Taylor.

By the middle of the seventeenth century the Mather dynasty—Richard, 1596-1669, Increase, 1639-1723, Cotton, 1663-1728, and Samuel, 1706-1785—had their book factory in smooth running order. Richard, the first of the American Mathers, had to his credit sermons, a catechism, a treatise on justification, public letters on church government, several controversial documents, the preface to the *Bay Psalm Book*, and many of the marvels of metrical transliteration contained in that volume. His

son Increase outdid the father to the extent that an authentic list of his writings runs to well-nigh one hundred and fifty titles. These sweep the entire circuit of themes, sacred and profane, that employed the thoughts of men in those days—divinity, ethics, casuistry, church government, law, English and American politics, history, heresy, prophecy, demonology, angelology, crime, poverty, ignorance, dancing, the Indian question, earthquakes, comets, winds, conflagrations, drunkenness, and the smallpox. Unfortunately, he is better known today for his *Essay for the Recording of Illustrious Providences* (1684) and *Cases of Conscience Concerning Evil Spirits* (1693), in both of which his scholarship and learning suffer from the credulity of his time, rather than for his histories of the Indian wars or his defenses of the political rights of New England.

His son Cotton, in his turn, outdid the father in like proportion, making good the old epitaph composed for the founder of the clan:

Under this stone lies Richard Mather,  
Who had a son greater than his father,  
And eke a grandson greater than either.

Of great learning and even greater industry, he wrote prodigiously. His bibliography exceeds four hundred titles, besides other works left in manuscript at his death. Living at a time when it was still possible to take all learning for one's province, his range of interests was truly universal, and it would be difficult to find a field that he did not touch. His monumental *Magnalia Christi Americana* ("Christ's Great Achievements in America"), begun in 1693, completed four years later, and published in two large volumes in 1702, is justly esteemed his greatest work.

The cumulative tendency toward intellectual intensity and literary productivity noticeable in the Mathers was arrested after the first three generations. Samuel achieved respectable fame as an author and Congregational clergyman, but the fire of the Mathers, finding little fuel during the mid-years of the eighteenth century, burned itself out. The new order considered the Mathers anachronistic.

Meanwhile a long tradition of diary-keeping and journal-writing resulted in a series of noteworthy productions in that kind of composition, beginning with Mrs. Mary Rowlandson's *Narrative of the Captivity* (1682), which she suffered at the hands of the Indians in 1675/6, and Sarah Kemble Knight's *Journal*, containing a sprightly account of her experiences and observations during a journey on horseback

made through the back country from Boston to New York in October, 1704, and the return trip the following March. But the American classics in this type of writing are the work of Samuel Sewall of Boston, Colonel William Byrd of Virginia, and John Woolman the Quaker.

Samuel Sewall (1652-1730) led a full life as a lawyer, judge, capitalist, and village potentate, but found time to write a number of tracts, including *The Selling of Joseph* (1700), an eloquent protest against slavery. However, it is in his *Diary*, covering, with some omissions, the years from 1674 to 1729, though it was not published until 1878-1882, that he wrote most engagingly. Not designed for publication, his *Diary* is written entirely without pretense, and gives an authentic picture of Puritan society and of the Judge himself as the embodiment of the rising Yankeeism of his day, mercenary but kindly, conventional but vigorous, often short-sighted but always solid.

Down at Westover, Virginia, the courtly Colonel William Byrd (1674-1744) wrote, in *The History of the Dividing Line*, a remarkable and witty account of his experiences while surveying the boundary line between North Carolina and Virginia in 1728, and subsequently, *A Journey to the Land of Eden* and *A Progress to the Mines*, both descriptive of trips which he made to his extensive land holdings in western Virginia. But it is in his diary, or *Secret History*, which has been discovered only recently and parts of which still remain in manuscript, that we get the most interesting glimpses into the life of a cultivated Southern planter and man of affairs, and much else besides of equal interest to the student of literature and of history.

Finally, there is the calm record of the quietist, John Woolman (1720-1772), whose itinerant career as a disciple of the benevolent spirit comes to life in the simple words of his *Journal* (1774). Diary-keeping and autobiographical writing did not end here. Indeed, the records of Sewall, Byrd, and Woolman are but the preludes to the journals and notebooks of Emerson and Thoreau, Hawthorne and Longfellow. The motif persisted through Jonathan Edwards' *Personal Narrative* and Crèvecoeur's *Letters from an American Farmer* (1782), many of which have a distinctively personal and autobiographical tone, to come to full-bodied glory in Benjamin Franklin's *Autobiography*, begun in 1771, and left incomplete at his death. But with Franklin, we reach another phase in the development of American civilization and literary culture, concerning which a few words of explanation are in order.

#### THE EIGHTEENTH CENTURY: REVOLT AND REORGANIZATION

As the fine fervor of seventeenth-century Puritanism burned low, the process of secularization grew apace. Growing trade and expanding commerce hastened the movement, and stalwarts like Samuel Sewall, while still vitally concerned about insuring for themselves the benefits accruing to the elect in the future life, were nevertheless careful to put money into their pockets for use in this life. The spirit of middle-class mercantilism, sharp trading and hard bargaining, and a preoccupation with worldly affairs bred a spirit of Yankeeism, a practical, realistic concern with temporal affairs that turned men's minds increasingly away from the spiritual promises of Heaven toward the solid remunerations of earthly competence, security, and position. Meanwhile, the hold of the Church on the people fell in proportion as the clergy lost control. The insistence on the part of the British government from the time of William and Mary onward that toleration be extended to all Protestants, and the substitution of property qualifications for church membership as determining citizenship cut the ground from under the theocrats. Still, the old order might have survived even these crippling blows if the people could have been held in line. But the people fell away fast as they took up the infectious ideas of rationalism as these developed under the auspices of Newtonian conceptions of the universe and the Lockean psychology.

Although Cotton Mather testified proudly in 1728, the year of his death, that he did not know "among all the Pastors of the Two Hundred Churches . . . one Arminian, much less an Arian," he neglected to say that while the pulpit was still relatively pure, the subtle poison of rationalism, under the disguise of Arminianism, was spreading rapidly among the masses. The fundamental tenet of Arminianism was to assert that the elect of God are not pre-chosen, but that a righteous life and good works are sufficient to lead men into the way to salvation. Striking, as this doctrine did, at the very taproot of Calvinism by denying the principle of determinism, while insisting on the free will of man, it went even further in its social implications than in its purely theological applications.

It was an expression of the idea of individual responsibility to God—in short, an extension of Luther's doctrine of the right of individual interpretation of the Scripture, to throw upon the individual the whole responsibility of asserting his free will not only in making his peace with God but also

in negotiating the terms of government on the earth.

In England, rationalism had already passed from Arminianism through a phase of Arianism, which cast doubt upon Christ as a necessary Savior, to Socinianism, which openly denied his divinity altogether—doctrines that ultimately became popular in America in terms of Tom Paine's brand of deism and New England Transcendentalism. Eventually all religious doctrine that rested on faith, including the super-rational, supernatural, and miraculous elements of Christianity as described in the Bible, came under the attack of this critically rational spirit. Wherever English rationalism showed the way, American deism or Unitarianism followed. Even in Cotton Mather's day, incipient rationalism had begun to ask disturbing questions, and Mather himself went to some pains, in *The Christian Philosopher: A Collection of the Best Discoveries of Nature, with Religious Improvements* (1721), to meet the attack of science and reason on their own grounds. By the time of Jonathan Edwards (1703-1758) it had grown aggressive. Dogma was face to face with rationalism; and orthodoxy, definitely on the defensive, was ill-equipped for the impending battle. The man in the street may have known little about the highly technical theological and metaphysical issues involved; but when he came to weigh the assertions of the dogmatic school against those of the rationalists, the latter appeared to have the better of the argument.

The doctrine of total depravity, for instance, seemed not to tally with the daily observations of the common man. In the corrupt world of Augustine or Calvin, the common brutality of the times might have had a reasonable explanation in such a doctrine—namely, that the evils of society originate in the evil hearts of men. But in the village world of New England the doctrine began to lose its social sanction as the honest citizens appraised themselves and their neighbors. Under the spell of a Mather's or an Edwards' Sunday preaching, they may have believed the human heart to be wholly depraved; but in the everyday life of the New England village, dominated as it was by rugged virtues, kindness, and moral integrity, they were led to wonder whether they and their neighbors were indeed vipers and worms, brutally wallowing in sin, hated of God and man. The conviction grew that they were not altogether vicious; and as they pondered this thought, they experienced mounting difficulties in reconciling their Sunday professions with their week-day experience. Although many continued to repeat their familiar church creed, their sanction of the formal

profession of faith was lost as the authority of dogma fell before the voice of experience, reason, and common sense.

Moreover, many of the reading and thinking members of New England society became acquainted with the theories of John Locke, who taught that man, instead of coming into the world freighted with innate or inborn ideas and weighed down by an inherited load of sin, was born with a mind entirely blank. Hence, everything that subsequently entered into man's mind, all his desires, all his acts, were the result of influences upon the human mind after birth. All that man ever learned came to him originally through the five senses—through experience and through the influence upon him of the manifold effects of environment, education, conditioning. If man is born without sin, and becomes a sinner later, it is his environment—earthly institutions and social conventions—that is to be blamed. Thus the idea that "in Adam's fall, we sinned all" became a meaningless one. The natural man, instead of being naturally wicked, is naturally good. This doctrine, supported by the Lockean psychology, received during the eighteenth century an important impetus and support from the ideas emanating from France. Rousseau pictured men as originally and intrinsically good while they dwelt in the original, primitive state of nature, but that they were corrupted through the evils of civilization, which resulted from the perversion of the social contract. This doctrine appealed to men whose daily experience taught them the falseness of traditional dogma. Moreover, Rousseau's ideals of liberty and equality came home with special meaning to men bred in villages and on the frontier. Thus the Rousseauistic glorification of the simple, the primitive, and the natural joined forces with the rationalism of the Newtonian and Lockean tradition to influence the liberalizing trend of American theology, leading, on the one hand, to a romantic concept by which the orderliness of Nature and finally Nature herself become the worshipful objects of man, and reason the proper guide to natural, as opposed to revealed, religion; while, on the other hand, it encouraged opposition to artificial control and traditional authority and thus hastened the American revolution against the governmental absolutism of England.

In a very similar way another cardinal doctrine of Calvinism, that of special election, was discredited. In an aristocratic society it seemed natural to believe that God had set men apart in classes. But as the leveling processes of a democratic land tended to destroy social distinctions, the new individualism un-

dermined the old class psychology. Geographical separation from England favored the development of colonial autonomy and democratic government. Colonial America presents no more consistently straightforward movement than that of self-determinism. As the common man freed himself from political absolutism, he became dissatisfied with theological absolutism; the right to achieve religious salvation is a natural corollary to the right to win social distinction. That one's future lay wholly beyond the reach of one's will, that it rested entirely within the hands of an arbitrary God who gave or withheld salvation at His pleasure, regardless of what the individual might do about it—these were doctrines as utterly at variance with the growing ideals of democracy as was the assumption that Britain had the right to meddle with the internal affairs of citizens in America or arbitrarily to levy taxes and to prescribe rules governing trade.

Indeed, as thinking Americans of the eighteenth century from John Wise, John Barnard, and Jonathan Mayhew to Benjamin Franklin, Tom Paine, and Thomas Jefferson contemplated the issues involved in British sovereignty and absolutism, the divine-rights-of-kings theory, and related principles and theories of state, it became clear that the doctrine of determinism was the crux of their problem, just as the theologians, contemplating the future of the Church, realized that as the decision went for or against determinism, so would the entire metaphysical structure of Calvinism and Puritanism stand or fall.

When the call of distress went out from the churches, and Jonathan Edwards came to the rescue, it was to this problem of a free *versus* a determined will that he directed his mental energies. Edwards' mind, rated by one prominent historian of American philosophy as the finest yet produced in America, focused upon this question, and produced the *magnum opus* of his distinguished career in *The Freedom of the Will* (1754). While he did not prove that the will of man is determined, he demonstrated, by all the laws of logic, that it could not be free, thus leaving no alternative but the conclusion that it must be fixed by the will of God. Starting from the assumptions that he made, and employing the syllogistic method that he adopted, he reached conclusions that seemed irrefutable. But however rigorous his method or unshakable his conclusions, the book failed to achieve its primary purpose of arresting the critically rational tendencies of the age or of re-enthroning God as a sufficient and arbitrary determiner of all things, including the will of man. Logic might be logic, the common people admitted, but they re-

mained unconvinced nevertheless, holding instead with Dr. Samuel Johnson that while all logic and philosophy were against the theory of a free will, all experience and common sense were for it. Edwards made a last-ditch stand for the conservative forces of Puritanism. It proved incapable of arresting (1) the progress of the Newtonian concept of an orderly, systematic universe, governed by immutable natural laws, to the discovery of which the reason was considered a sufficient index; (2) the deistic criticism of revealed religion as distinguished from natural religion; (3) the Unitarian deposition of a personal, triune God for *one* God, synonymous with order, harmony, reason, or moral law; (4) the attendant French romantic doctrines of the natural man and of the state of nature as naturally good; and (5) the corollary doctrine of the inherent natural rights of all men as distinct from the special privileges of the elect, as predetermined by divine ordinance. In drawing lightning from heaven, to demonstrate that it was electricity, Franklin robbed God of much of His awe-inspiring quality among men—lightning was no longer a manifestation of God's wrath, but a perfectly natural phenomenon. The eighteenth-century man, searching for the religious and practical principles that should guide him, became convinced that God worked less by special providences than by general laws, and that His wishes were more readily ascertainable by the simple laws of logic than by the mysterious edicts of revelation. The idea gained ground that God Himself was order and law, Himself subject to His own ordained natural and moral laws.

Thus faith and revelation fell before the attack of reason and nature, and liberal individualism triumphed over theological authoritarianism. The next point of attack was political authority. For, as the seventeenth century was predominantly concerned with theological issues, the eighteenth (especially the latter half) turned with all-absorbing interest to political issues. To contrast Jonathan Edwards with Benjamin Franklin is to illustrate the change that took place in the temper of men's thinking. Edwards failed to save Calvinism, and 1754 signalized the end of the religious era. Franklin, as one of the prime movers behind the establishment of political independence and democratic republicanism, came to be known as the "First American." His success illustrates the triumph of the eighteenth-century temperament over that of the seventeenth—the assertion of natural rights over inherited rights, of Yankeeism over Puritanism, of this-worldliness over other-worldliness.

To be sure, Franklin did not win the victory single-handedly. Behind Franklin there stood more than two centuries during which a tradition of local self-determination had developed. The practice of self-government had evolved during the early seventeenth century among colonists who could not, and would not, send three thousand miles for royal sanction every time some local crisis arose. This long schooling in local self-government and the attendant development of independence of thought and action in a frontier and democratic society had, by the middle of the eighteenth century, bred a spirit of self-reliance and self-assertion among the colonies that would have balked at a Stamp Act and other arbitrary decrees even if they had never heard about the abstract theories of the natural rights of man. As it was, the home-grown tradition of freedom and liberty to arrange their own affairs combined with English and French ideas of political liberalism to raise voices in support of Franklin—men like the Adamses, James Otis and Patrick Henry, John Dickinson and Francis Hopkinson, Tom Paine and Thomas Jefferson. Among them, they produced a literature of political dissent and revolt that often rises above the usual literary level of purely polemical writing.

Soon after independence was won, Hamilton, Madison, and Jay penned *The Federalist* (1787-1788), a series of essays on the proposed Constitution of the United States that not only turned the tide to win its adoption by a majority of the states but demonstrated to the world that "Americans could write prose as well as any English-speaking people in the world."

The chief penman of these papers was Alexander Hamilton (1757-1804). After a brilliant career as pamphleteer and soldier during the Revolutionary War, he took a prominent part during the period between the Peace and the formation of the Union in the government of the states under the Confederation. The loose organization of the Confederation and the attendant dissension, turmoil, and insecurity intensified his advocacy of a strong centralized government. As a member of the Constitutional Convention, he was dissatisfied with the document as drawn, but in the *Federalist* papers he strongly advocated its ratification as the best Constitution possible at the time. A disciple of law and order, he set himself, as first Secretary of the Treasury, to institute principles and procedures to insure regularity, strength, and stability of government. In a series of cogently written reports he advocated (1) the federal assumption of state debts, (2) the refunding of

both national and state debts at par, (3) the levying of an excise tax to provide revenues for the government, (4) the establishment of a bank of the United States, modeled on the national Bank of England, and (5) the imposition of a protective tariff for military self-sufficiency, for the preservation of a home market, for agrarian products, and for the encouragement of American manufacturing. These measures, known as the Hamiltonian system, tended toward the strengthening of the federal government at the expense of state governments and toward the alliance of the government with the moneyed interests. Opposed to these principles were the agrarians, the disciples of state rights, and the more politically and social liberal elements of American society whom Jefferson sought to organize into an effective party of opposition to the Hamiltonians, or Federalists.

Like Tom Paine, Jefferson was the advocate of liberty, natural rights, and the common man; but unlike him, he retained his influence to the end, becoming the visible embodiment of the democratic ideal and the leader of the masses, who elevated him to the presidency of the United States in the faith that he would curb the growth and power of aristocracy and special privilege in the new democracy. A man of extraordinary breadth and versatility, he was alive to all the interests of his time. A Virginia gentleman of culture and attainments, he won distinction as a lawyer, agriculturist, inventor, educator, writer, architect, philologist, scientist, philosopher, economist, historian, sociologist, diplomat, and statesman. During his lifetime he disputed with Hamilton the empire of American political opinion; he was in his time the acknowledged head, as he remains today the perpetual symbol, of the democratic spirit of America.

From the beginning of his legislative career in Virginia he sided with the patriot party and led the protest against British-colonial policies. As lawmaker and later as governor of Virginia (1779-1781), he pushed a broad program of reform, designed to put into practice the broad principles which, in 1776, he incorporated in the Declaration of Independence. His codification and modernization of the laws of Virginia included legislation designed to make impossible the maintenance of a landed aristocracy and an established church. He advocated reforms in education and the establishment of a complete state free-school system, wrote the statute for religious freedom in Virginia, sponsored measures designed to promote economic equality, agitated for the abolition of slavery, and advocated other humanitarian principles.

At the age of thirty-two he became, in June of 1775, the youngest member of the Continental Con-

gress. While he seldom spoke on the floor of Congress, he established himself at once as being always "prompt, frank, explicit, and decisive upon committee and in convention," and within five days of taking his seat, he was chosen, with Benjamin Franklin and John Adams, to draft a reply to Lord North. Next, he was appointed, with John Dickinson, to draw up a *Declaration of the Causes and Necessity of Taking Up Arms*. And when it became apparent that the Congress would soon be debating the momentous resolution—"that these United Colonies are, and of right ought to be, free and independent States; that they are absolved from all allegiance to the British crown; and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved"—young Jefferson, receiving the largest number of votes, was put at the head of a committee to draft the Declaration of Independence. Associated with him were Benjamin Franklin, John Adams, Roger Sherman, and Robert Livingston. The actual writing was done by Jefferson, although corrections were made by Franklin, Adams, and the Congress at large.

During the war years Jefferson devoted himself mainly to the government of Virginia. During 1783-84 he was a delegate to the Congress of the Confederation. From 1784 to 1789 he served as American minister to France, succeeding Franklin, and in 1784 he printed (in Paris, for private distribution) his *Notes on the State of Virginia*. He traveled extensively in Europe, associated with moderate leaders of the French Revolution, and studied the temper of the French people. As a man who declared, "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man," he watched with sympathy the mounting spirit of freedom and republicanism among the French, meanwhile gathering lasting impressions and forming political opinions which his Anglophile, or pro-English, opponents later attacked as Galliophile, or pro-French, and therefore subversive and anarchical.

Returning to America in 1790, and becoming Secretary of State during Washington's first administration, he was alarmed to see that during his absence movements and tendencies had developed which ran counter to the spirit for which the Revolution had been fought. Under the influence of Alexander Hamilton as Secretary of the Treasury, Jefferson saw vast powers being centralized in the federal government and a rising power of aristocracy and privilege developing among those in control. Fearing that the United States was "galloping fast into monarchy," he openly and secretly opposed Hamilton until, at

the meetings of Washington's Cabinet, the two resembled "two cocks in a pit." The feud at length grew even beyond Washington's power to curb, and Jefferson withdrew from the Cabinet in 1793 to organize the people's party of opposition to Hamiltonian Federalism.

Having an implicit faith in the common man, the efficacy of a democracy resting on a free yeomanry, and an economy based on the produce of labor in the earth, Jefferson was a disciple of the Physiocratic school of social economics, emphasizing the principle of *laissez faire* and an agrarian, instead of a capitalistic, economy. He was little concerned about stable government, but was anxious that government should be responsive to the popular will. He denied the right of the past, in terms of tradition, or form, or money, to rule the present. He asserted that government, like all institutions, must accommodate itself to the demands of modernity, lest it become ossified and tyrannical. For the maintenance of good government, he believed that a bit of blood-letting could be very efficacious: "What signify a few lives lost in a century or two? The tree of liberty must be refreshed from time to time, with the blood of patriots and tyrants." He held that a government grown strong and enriched by excessive revenue will only encourage ambition in its administrators in a way eventually to endanger the rights of men. He saw in the capitalistic order of Hamilton a nursery of potential plutocrats, and he remarked acidly that he had never observed "men's honesty to increase with their riches." As he watched Chief Justice John Marshall, who regarded the Supreme Court as an instrument of national unity and of federal power above state rights, handing down decisions and judicial interpretations that nullified the laws passed by Congress, thus giving the judiciary extensive legislative powers, Jefferson repudiated the idea of a strong Supreme Court as necessary for the preservation of justice. What was needed to cure the ills of democracy, he believed, was not more power in high places, but more democracy.

Seeing in the Hamilton program only "Toryism in disguise," ambitious to build a rigorous federal machine by which to establish monarchical absolutism, and thus to override and nullify the democratic will and to destroy the common interests, Jefferson proceeded so well in his organization of the opposition party that by 1796 he narrowly missed defeating John Adams for the presidency. Having received the second highest number of votes, he became Vice-President. Four years later, after a campaign of unequalled bitterness and acrimony, the powers of an

insurgent democracy swept the Federalist party aside, and Thomas Jefferson became the third President of the United States.

During Jefferson's two terms in office (1801-1809) the territorial area of the United States was doubled by the purchase of the Louisiana Territory, the national debt was reduced while taxes were decreased and the internal prosperity of the nation mounted manifold, the Lewis and Clark expedition explored the West, the menace of the Tripolitan pirates was eliminated, and a war with France was honorably averted. He was also responsible for the Non-Importation and Embargo Acts which, though designed to prevent foreign depredations against American industry and commerce, worked disastrous hardships in some quarters of the country. However, he succeeded in keeping his party in power through the administrations of Madison and Monroe, while making himself as thoroughly hated among Federalists as Lincoln was ever despised by Southerners during the Civil War.

In 1809 he retired to private life at Monticello to devote himself to scientific and philanthropic pursuits and to the cultivation of the arts. The sale in 1812 of his library of 10,000 choice volumes to the government resulted in the establishment of the Library of Congress. While opposing the encroachments of governmental power in all other respects, he urged an extension of state powers to provide a system of public education, and he devoted the years from 1814 to 1819 principally to the establishment of the Virginia school system, taking especial interest and pride in the building and establishment of the University of Virginia. He died on July 4, 1825, on the fiftieth anniversary of American Independence. On his tombstone is inscribed the epitaph (found among his papers) attesting his three great services to the cause of freedom and democracy:

Here lies buried  
THOMAS JEFFERSON

Author of the Declaration of Independence,  
of the Statute of Virginia for Religious Freedom,  
and Father of the University of Virginia.

The opposition between Hamiltonian and Jeffersonian, between Federalist and Republican, forces provoked a gigantic struggle that ran its rancorous course throughout the nineties and well beyond. Both parties solicited the ablest and most practiced pens available. In the flood of polemical satire, harangue, and invective which the controversy engendered, many an inexperienced writer learned to

sharpen his wit. The contest produced few significant examples of writing that exhibit a high degree of purely literary excellence, and it diverted a number of men from the gentler pursuit of polite literature into that of controversy. Trumbull and Dwight, for example, could not resist entering the fray on the side of conservatism and Federalism, while Freneau was in the thick of it from the very beginning on the side of Jefferson and republicanism. But once the issues were decided, the air was cleared, and writers with literary inclinations returned to pursue a more distinctively literary vein. The Hartford Wits, for example, resumed their ambitious designs of creating a body of national poetry. All too often this desire to write verse that should be commensurate with the grandeur of the new nation turned out to be ponderous and grandiloquent. Meanwhile Freneau retired to Mount Pleasant, rededicated himself to the poetic muse, and prepared a collected edition of his poems, which won him the title of "First American Poet." As a transitional figure between the Age of Reason and the Romantic Age, he wrote much poetry that still expresses the concepts of eighteenth-century rationalism in the language and conventions of a neo-classical era; but his best work looks forward to the Romantic Age that came to fruition, about the time of his death, under the aegis of poets like Bryant, Poe, Emerson, and Longfellow, and prose writers like Irving and Cooper.

#### LITERARY NATIONALISM AND THE RISE OF ROMANTICISM

As would be expected, the development of political nationalism following the Revolution was attended by a rapidly growing consciousness of literary nationalism, the cumulative tendency of which can be traced throughout the writings of the men who are today accounted the leading spirits of the time. The tendency is notable in the ambitious and concerted efforts of the Hartford Wits to cultivate polite literature. They were often deflected from the course of pure literature by the clash of social forces and conflicting political ideas of the day, but their interminable epics were nevertheless ardently nationalistic attempts to provide their country with a body of epical poetry befitting the birth of a great nation. As the poet of the American Revolution, Philip Freneau devoted much of his time to satire directed against the British, and during the Hamilton-Jefferson debate his productions were heavy with political controversy. But aside from this and his tendency toward rational moralization, he often turned to the purer strain of *belles-lettres*, and with such pieces as "The

Wild Honeysuckle" and his Indian poems earned the title of "Father of American Poetry." Besides these versifiers, there were others who chose the drama and the novel as their media by which to help America to literary maturity.

The drama, formally introduced in 1752 by Lewes Hallam's professional company brought over from London, made its way only slowly against religious and temperamental opposition to playhouses and actors, and the production of original plays in America was retarded not only by the common colonial tendency of depending up the mother country but also by the difficulty that native playwrights experienced in trying to compete with the established European dramatists. The interposition of the long and all-absorbing Revolutionary War years interrupted the progress that had been made; for the Continental Congress, in its efforts to "encourage frugality, economy and industry, and to promote agriculture, arts and manufactures," found it expedient to "discountenance every species of extravagance and dissipation, especially all horse-racing, and all kinds of gaming, cock-fighting, exhibitions of shews, plays, and other expensive diversions and entertainments." Even after the war, restrictions and proscriptions of one sort or another operated to keep acting companies more or less in the status of vagrancy until, toward the end of the century, the construction of the first permanent theatres gave them a home and some professional stability. Even so, plays like *Othello* and *The School for Scandal* had to creep in surreptitiously under the disarming guise of "moral lectures" or "concerts," while the theatres themselves were ingeniously called by such names as "Historic Academy" or "Academy of Music." In Pennsylvania the law prohibiting plays remained in effect until 1787, and the order of the General Court of Massachusetts in 1750 against play acting stood until 1781, after which time it became safe openly to enact plays in moral Boston.

Under such circumstances it is surprising that the first regular American play, in the sense that it was written by an American and produced by a professional acting company, should have been written as early as 1759 and enacted for the first time in 1767. This was *The Prince of Parthia*, a romantic tragedy, rather exotic in theme and derivative in inspiration, by Thomas Godfrey of Philadelphia. The first regular comedy followed in 1787—a play by Royall Tyler, entitled *The Contrast*. Besides being a play of considerable dramatic merit, its contrast of Englishmen and Americans to the advantage of the latter makes it a notable expression of the rising tide

of national literary consciousness of that day. William Dunlap (1766–1839) catered to the same taste in *The Father; or, American Shandyism* (produced in 1788), and his *Andre* (produced in 1798) is a play utilizing events of the Revolutionary period of American history. Talented as a writer and especially as an adapter of plays, Dunlap was also a capable theatre manager. Although he went bankrupt in 1804, he left the American theatre in a position beyond which his successors, generally less capable than he, were enabled to carry on in good style.

The novel encountered many of the same obstacles that the drama had to overcome, and at approximately the same time. Aside from the general cultural lag in America, native novelists had to compete against the better productions of European novelists, whose works, in the absence of international copyright, could be pirated and consequently sold for greater profit than could the native product. But it was the prejudice of the piously moral and realistically frugal-minded populace that was chiefly to be overcome, as well as the wealthier and more influential Tory-minded group of Americans who withheld their support of a native art when, as they argued, they could have better reading by importing their novels from abroad. America, they held, contained no fit material for literary treatment: the country was too young, too raw; the democratic way of life put everything and everyone on a dead level of mediocrity; there were no romantic legends, no age-old superstitions, no "high-life" for the novelist to portray. To be sure, there were the Indians, but, as one critic put it, "a novel describing these miserable barbarians, their squaws and paposes, would not be very interesting." Hence, until the program of literary nationalism got fairly started, some of the earlier novelists felt themselves called upon to apologize for using native characters, scenes, and events.

As would be expected, the first American novels were highly imitative of the novels of Richardson, whose *Pamela* (1740) had set the pattern for the epistolary form, its sentimental motivation, and its stilted and florid elegance of style. The first noteworthy American novel is *The Power of Sympathy* (1789), long ascribed to Sarah Wentworth Morton, but now generally attributed to William Hill Brown. It follows rather precisely the vain sensibility, high-flying sentimentality, and moralizing tendencies of Richardson, involving an attempted seduction, a change of heart, and an eminently satisfying marriage. *Charlotte Temple: a Tale of Truth* (1704) by Susanah Rowson is, like *The Power of Sympathy*, a tale of seduction, but it adds also the theme of desertion,

following which there are dire results for all concerned. It was particularly designed "for the perusal of the young and thoughtful of the fair sex." Its tremendous popularity, indicated by the 161 editions through which the book has gone, was owing largely to its reputation as a true story. All early novelists made a great point of the truth of their stories. Fiction, they knew, was inadmissible and banned. The third notable example of the American novel is Hannah Foster's anonymously published *Coquette* (1797). Epistolary in form, like the others, it is, like them also, reputedly a true story, based on the life of a distant relative of the author, named Eliza Wharton, who was allegedly seduced by Jonathan Edwards' son Pierrepont. Still conventionally moral, it is less sensationally sentimental than its predecessors, and excels them also in character portrayal.

Such was the state of the American novel when Royall Tyler, following his success in the drama with native materials, turned his attention to fiction in *The Algerine Captive* (1797), written in a more realistic tone, using native matter, and pointedly insisting, in the preface, upon a substitution of "home-spun" materials for the supernumerary horrors of the Gothic novels and the moral sentimentality of the school of sensibility. Henry Hugh Brackenridge (1748-1816), the author of several long poems designed to demonstrate the rising glory of America, also wrote a satirical back-country novel, called *Modern Chivalry* (1792-1805), to inculcate principles, manners, and mores consonant with his ideas of a democratic society. Even Charles Brockden Brown (1771-1810) turned aside, for the better half of his novels, from the Gothic and sentimental motifs prescribed by English and Continental models, to work on indigenous materials. And Noah Webster (1758-1843), the "Schoolmaster to America," devoted his linguistic talents to justifying and standardizing the American language as distinct from English precedent. He campaigned for the right of Americans to develop their own linguistic tradition, insisting that "America must be as independent in *literature* as she is in politics, as famous for *arts* as for *arms*." This argument was carried forward by William Ellery Channing in his *Remarks on American Literature* (1830), Emerson's call for literary independence a few years later, Lowell's reinforcement of the same idea, and Whitman's illustration in 1855 of what could be done in that direction.

During the early decades of the nineteenth century the United States of America were experiencing the pangs of growing pains. Expansion came so fast that it left Americans, no less than Europeans, gasp-

ing. Between the adoption of the Constitution in 1789 and the close of the century, three new states—Vermont, Kentucky, and Tennessee—were added to the original thirteen. In 1802 Ohio was admitted to the Union, and the next year the vast Louisiana Territory was acquired. Louisiana became a state in 1812, and during the six years between 1816 and 1821 six more states were incorporated—Indiana, Illinois, Mississippi, Alabama, Maine, and Missouri. The acrid factionalism represented by the Hamiltonian and Jeffersonian parties, while not forgotten, however much transmutation and realignment the parties had undergone, was appreciably toned down as the strength and promise of the new country gained on the imagination of the people. Rivalries and jealousies, hangovers of the old colonial exclusiveness and provincial economy, grew weaker as the idea of state sovereignty faded before the larger conception of a great republic already well on its way to stretch from sea to sea. The opening of the fertile Mississippi Valley vastly enlarged the national agricultural productivity, which, in turn, reacted on trade and manufacturing, not only in the old settled regions but in the new West. Bostonians, recalling that it had required two centuries for their native city to grow from fifty inhabitants to thirty thousand, were amazed to see Cincinnati after a scant half-century of existence, very nearly equal the population of the Hub of the Universe of some one hundred and seventy thousand in 1860. The vision of a Manifest Destiny, to which the Lewis and Clark expedition of 1804-1806 had given a new impetus, became a reality far more quickly than even the most exuberant expansionists had anticipated. Internal canals, railroads and highways, the steamboat, and new inventions like the reaper, the cotton gin, and the telegraph, put to speedy use by an eager, pushing, progressive spirit, helped create a new empire out of the vast West, South, and Southwest. By the thirties, thoughtful men were warning that material growth was outrunning cultural development, that things were in the saddle riding mankind, and that the new nation was fast becoming, in Irving's phrase, the "Land of the Almighty Dollar."

All however, was not given over to quantity. Some there were who stressed quality. The public-school system was extended as fast as the concentration of population permitted, and often liberal appropriations of land were made to support popular education. Educators like Horace Mann and Henry Barnard were beginning to put order into instructional methods. To the thirty colleges existing in 1810, seven permanent institutions were added by 1821.

and before 1830 twelve more were founded. Outmoded curricula were revised, and the advantages of a collegiate education were made more readily available to all classes. Outside the colleges considerable progress was made in the popularization of knowledge. The three hundred printing presses existing in 1800 were more than trebled during the first quarter of the nineteenth century, to supply American readers with approximately thirty per cent of their current books, the others being imported chiefly from England. Despite this large dependence upon Europe, it is estimated that some 50,000 titles of all kinds bearing an American imprint were issued from American presses during the first three decades of the century. Whereas 376 newspapers in 1810 circulated 22,321,000 copies annually, by 1828 some 850 periodicals boasted an annual issue of 68,117,971 copies, thus increasing the copies per person from 3.8 to 13.8. Intellectuals and writers were beginning to find some popular support, and the government notably during the administration of John Quincy Adams, began to advocate governmental support to intellectual interests, although it was long before anything much more substantial was done than to reward literary ability with custom-house positions or diplomatic appointments. Meanwhile institutions like the Massachusetts Historical Society (founded in 1791), the American Academy of Arts in New York (1802), the Boston Athenaeum (1807), the American Antiquarian Society (1812), the Library of Congress (1815), mercantile and apprentices' library associations, museums, and art galleries were being instituted; magazines like the *North American Review*, founded in 1815, exerted a powerful cultural influence; and the popular lyceum, combining entertainment with instruction, was well on its way to success by 1825. By that time Irving had scored a popular success with *Knickerbocker's History of New York* in 1909, while *The Sketch Book* ten years later made him a literary figure of international reputation. Cooper had published *The Spy* in 1821 and *The Pilot* in 1824; *The Pioneers*, the first of the Leatherstocking Tales, had made its appearance the year before. Joseph Rodman Drake's promising poetic career had come to an untimely end by his death in 1820, but Fitz-Greene Halleck's *Fanny* (1819, expanded 1821) was a popular hit, and *Alnwick Castle* followed soon after. Bryant's "Thanatopsis" had appeared as early as 1817, and most of his best-known poems were familiar to many by 1825, when he went to New York City, soon to start his long and distinguished editorial career on the *New York Evening Post*.

American literary culture, it seemed to many, had come of age. Having twice defeated the British in trials at arms, Americans (so thought and said many of the more enthusiastic literary nationalists) would have no difficulty demonstrating their supremacy over effete Europeans if it came to a contest in the arts. This attitude bred a form of provincial bumptiousness and chauvinism which took extreme offense at the criticism and condescension displayed by British observers and travelers. Ill-feeling between Englishmen and Americans had mounted steadily since the days of the Revolution when Dr. Samuel Johnson, while avowing his readiness "to love all mankind, *except an American*," believed and said that Americans were "a race of convicts," who "ought to be thankful for anything . . . short of hanging" that the British chose to allow them. Americans like Charles Brockden Brown could say without fear of being misunderstood, "The cause why the intellectual soil of America is comparatively sterile . . . [is that] we do not cultivate it"; but any such opinions expressed by Englishmen were promptly ascribed to British envy or malice. The long-standing attitude of disdain and resentment expressed in British reviews and travel accounts was fanned to new intensity when America declared war on England at the very height of her struggle against Napoleon. The Americans, in their turn, considered the scurrilous attacks as evidence at once of a desire for revenge and of a wish to belittle everything American in a desperate attempt to stave off reform at home, to check further immigration to America, and to protect British markets against the competition of American enterprise. American charges that characterized British culture as decadently feudal goaded the British into charging Americans with execrable taste, unbounded vulgarity, unlimited bigotry, colossal ignorance, and to characterizing them as slave-flogging, materialistic, gross, undisciplined people, devoid of all elements of greatness. British criticism reached a new high in 1820, when Sidney Smith, writing in the *Edinburgh Review*, charged that "during the thirty or forty years of their independence" the Americans had done "absolutely nothing for the Sciences, for the Arts, for Literature, or even for the statesmanlike studies of Politics or Political Economy." He wound up his tirade saying that he wanted to know—

In all the four quarters of the globe, who reads an American book, or goes to an American play? or looks at an American picture or statue? What does the world yet owe to American physicians or surgeons? What new substance have their chemists discovered? or what old ones have they analyzed? What new constellations have been discovered by

the telescopes of Americans?—what have they done in the mathematics? . . . Finally, under which of the old tyrannical governments of Europe is every sixth man a Slave, whom his fellow-creatures may buy and sell and torture? When these questions are fairly and favourably answered, their laudatory epithets may be allowed.

In his high conceit the Reverend Sidney Smith could not have known (or he would hardly have laid himself open to becoming the laughing stock of later generations of Americans) that at that very moment a young man named Washington Irving was seeing through the press a series of papers called *The Sketch Book*, which not only Englishmen but all men were soon to read. While it may be freely admitted that there are elements of greatness in passages of the Declaration of Independence which men like Sidney Smith were congenitally incapable of appreciating, all Englishmen were prompt to recognize in *The Sketch Book* an account of old England ideally calculated, for both matter and manner, to find a warm place in their affections. William Godwin found in it everywhere "the marks of a mind of the utmost elegance and refinement," though he admitted that he had not been "exactly prepared" to look for those virtues in an American. Irving himself wrote, in the introduction to his next book:

It has been a matter of marvel to my European readers, that a man from the wilds of America should express himself in tolerable English. I was looked upon as something new and strange in literature.

What is fully as important as the excellent quality of Irving's writings is that he was the first man to inject good humor and common sense into the British-American cultural relations of the day. Himself the embodiment of geniality and graciousness, his book contained, besides its idyllic sketches of merry England and his inimitable Knickerbocker stories, an essay entitled "English Writers on America," in which he urged both sides to exercise fairness and forbearance, pointing out that no good could come from a continued literary animosity, fed by accusations and recriminations. Fond as he was of the old-world culture, he was also a patriotic American who did not neglect to tell the British that while they might be right in many of their charges, they were not very wise if they persisted in building up resentment against them among the people of a new nation who had all the good will in the world to be friendly. He reminded the British that while "the present friendship of America might be of little moment" to them, there could be no doubt about the future destiny of the new democracy, while over

England he saw lowering "some shadows of uncertainty." No intellectual giant and little given to worrying himself about public affairs, Irving nevertheless went on to add words strangely prophetic of what has twice happened, within the first half of the twentieth century, when Americans went to the rescue of England.

Should, then, a day of gloom arrive; should these reverses overtake her, from which the proudest empires have not been exempt; she may look back with regret at her infatuation, in repulsing from her side a nation she might have grappled to her bosom, and thus destroying her only chance for real friendship beyond the boundaries of her own dominions.

At the same time he told his own countrymen that the continuation of the quarrel was as senseless as spitting into the wind. American criticisms, he pointed out, never reached their mark because they were never republished in England, and accordingly served no other purpose than to foster a querulous and peevish temper among American writers, making "sour the sweet flow of our early literature." "What," he asked, "have we to do with national prejudices? They are the inveterate diseases of old countries, contracted in rude and ignorant ages, when nations knew little of each other, and looked beyond their own boundaries with distrust and hostility." Instead, he urged Americans freely to acknowledge European leadership in cultural attainments, while keeping England especially before their eyes as "a perpetual volume of reference" from which to derive valuable lessons. Thus, while taking care to "avoid the errors and absurdities which may have crept into the page, we may draw thence golden maxims of practical wisdom, wherewith to strengthen and to embellish our national character."

As the Ambassador of Good Will from the New to the Old World, Irving achieved a notable success in removing a good deal of the rancor and acrimony from the Anglo-American cultural controversy, but the ruffled temperaments of both nations were not calmed at once. English travelers continued to find us boorish in some ways; some of the remarks of Charles Dickens' *American Notes* of 1842 or of Matthew Arnold's *Impressions* of 1888 were hard to swallow. And as late as 1862, when the British-threatened intervention in the Civil War strained relations anew, Lowell complained, in the second series of the *Biglow Papers*, of the British facility "for the minding of other people's business." However, it is worth observing that by this time, although the matter in hand was one of deadly seriousness, Lowell's tone is

that of raillery rather than rancor. Americans had got over carrying chips on their shoulders and daring Europeans to knock them off. As solid artistic accomplishment allayed the discomfiture felt by earlier generations when weighing their achievements against their intentions and public professions, the self-conscious straining to realize at once their full, national, cultural potentialities subsided; the high-tension phase of forcing the artistic impulse passed, the overweening claims of the swaggerer and the braggart disappeared, and a natural efflorescence of American art followed.

Not the least of the causes contributing to this healthy change of attitude was the emergence of an American school of criticism. The most notable among the earlier native critics who judged American productions dispassionately, while criticizing sharply and insisting upon ever-higher standards of literary excellence was Edgar Allan Poe, editor of the *Southern Literary Messenger* in Richmond during the mid-thirties. He declared war on mediocrity, exposed it wherever and whenever he detected it, and deflated many literary personalities and reputations which American self-consciousness and an unacknowledged sense of cultural inferiority had overrated. He exposed imitation and plagiarism and demanded originality of conception and execution. He insisted upon the divorcement of aesthetics and morality and refused to regard as literary such productions as were avowedly didactic. By the time of his death in 1849, other critics were prepared to speak with assurance and authority, and writers and critics alike deferred less and less to foreign opinion and more to their own.

When Thoreau professed to having a greater desire to see Oregon than to visit Europe, and when Whitman disdained the "feudalistic" impulse that he saw expressed in Shakespeare, neither of them was directing any oblique remarks at England. Both were making simple statements of individual preference and of American self-sufficiency. In the further cultural development of America, England and Europe generally came to be relatively unimportant. Having all but come of age, America was deciding for herself, for better or worse, what her literary course should be. Today, knowing that she has nothing to fear from any comparison of her artistic creations with contemporary British productions, the condescending or supercilious comments a Somerset Maugham, for example, may choose to make (if only to show that old John Bull still affects the vacant stare that he cultivated in an earlier day when he could afford to be blunt or insular or insensible to the

feelings of others) create not a ripple in the American reviews; while the raillery of a George Bernard Shaw, however pointed the hit, is hugely enjoyed.

The history of this spirit of literary independence in America is no simple one. Artistic endeavor began exuberantly and boisterously soon after the Treaty of Paris. By 1800 it began to falter and show signs of discouragement, first, at the failure of America actively to support an incipient art, and, second, in the face of foreign criticism. During the first two decades of the new century it passed through an awkward, hobbled stage, uncertain of its own ability, half afraid to exert its own strength in opposition to convention and tradition, at one time deferring reverentially to authority, and at the next kicking fiercely at all restraint. During the twenties it began to get rid of its adolescence and the attendant growing pains, writers like Irving, Cooper, and Bryant showing the way. The thirties saw Emerson established as an essayist and lecturer, Longfellow as a poet, Poe as a poet and short-story writer and, what is more important for the development of the American literary temper, as a critic bent on enforcing high literary standards. By the forties the literary climate was prepared to entertain and accommodate the intellectual and social ferment that stirred men and women during the two decades immediately preceding the Civil War.

The result was what has been termed the American Renaissance of the mid-years of the nineteenth century—not so much a rebirth of what had previously existed in America as a birth, *i.e.*, the American way of producing a renaissance, "by coming to its first maturity and affirming its rightful heritage in the whole expanse of art and culture." We might designate the half-decade from 1850 to 1855 as marking the climax of this efflorescence. During that short period appeared a remarkable procession of books by five American writers then at the height of their powers—Emerson, Hawthorne, Melville, Thoreau, and Whitman. The books are *Representative Men* (1850), *The Scarlet Letter* (1850), *The House of the Seven Gables* (1851), *Moby Dick* (1851), *Pierre* (1852), *Walden* (1854), and *Leaves of Grass* (1855). Together they form a collection so distinguished for imaginative vitality that the whole range of American literature does not exhibit anything approaching it in any period of time twice as long. In searching for causes for this extraordinary flowering of literary art, we may consider the coming to fruition of romanticism, transcendentalism, and humanitarianism as among the major contributory factors.

As has been indicated, the American renaissance

under the guise of literary romanticism may be thought of as coming to a climax during the fifties, just before the dark clouds of the Civil War cast their shadows over America. But it must be borne in mind that this romanticism as a motivating force had a long history, going back to Irving, and beyond. Irving still stood half-way within the neo-classical tradition of the eighteenth century, while, for the other half, he followed in the wake of romanticism as exemplified by the antiquarianism of Scott, the popular lore of Germany, the Arabesque legends of Spain, and the localism of his own Knickerbocker region. By birth and rearing a patrician aristocrat, Cooper, too, retained many of the characteristics of the eighteenth century, but his investiture of the frontier and of Leatherstocking in an aura of myth and romance is a major contribution to the literature of romanticism. Bryant, in spite of his inevitable moralizing and frigid formalism, was the first in America to find the indwelling spirit in flower, stream, and forest, at the same time that he dwelt with romantic reverie and feeling on the themes of mutability, transience, and death. With the generation of Poe, Emerson, Margaret Fuller, Longfellow, Lowell, and Thoreau, the romantic spirit in America came to maturity.

Romanticism in the United States, as elsewhere, drew inspiration from many sources and manifested itself in numerous ways. In Poe's poems and stories, where the emphasis is less upon ideas, or intellectual content, than upon artistry, or literary execution, romanticism had its finest purely literary exemplification in America. Avowing the doctrine that the literary artist confines himself to the province of beauty and the cultivation of taste, he sought to create a poetic "ideality" in terms of mood, tone, impression, and atmosphere that included the singular, the bizarre, the grotesque, and the arabesque, and created a slender but successful body of lyric verse that remains unique and in many respects unrivaled.

On the other side were those who were more profoundly attracted to the ideas, the programs, and the reforms that were identified with romanticism. Their approach to romanticism, too, already had a long history, for it is to be recalled that ideologically the romantic temperament had drawn sustenance from Newton and Locke no less than from Rousseau and Paine. The revolt against theocracy dating back to the early years of the eighteenth century, when John Wise had argued the cause of independency and autonomy of separate church organization to establish the principle of Congregationalism, may be taken as the focal point from which to trace, through the regular processes of descent, a romantic revolt by

which Unitarianism grew out of Congregationalism, and Transcendentalism, in its turn, became the left-wing development of Unitarianism. In very much the same way the principle of political liberalism that fostered the American Revolution was extended, during the early years of our national life, into the political principles of the Jeffersonian party, and eventually into the Jacksonianism of the West. This twofold revolt in theology and in political theory antedated the romantic revolt in literature, while laying the foundations or groundwork that would nurture it, for it drew a large measure of support from both. But it derived also from other quarters—from the Wordsworthian concept of nature and the Coleridgean world of the visionary and the supernatural, from German transcendental thought and from French social theory, from American nationalism and from the spirit of humanitarianism that expressed a wide sympathy for all living things. Romanticism insisted on individualism, democracy, and the worth of the common man. It avowed the will of man to be free, the human heart essentially good, and human perfectibility possible. It glorified the simple, the elemental, and the natural. It sought expression in a liberation of the imagination, relief of the emotions, and freedom and variety of poetic form as a means to securing more adequate self-expression. It emphasized the very near and the far distant, the common and the exotic. It explored personality in terms of the subconscious, the dreamy, and the visionary. It saw each in all, and all in each; the miraculous in the common, and the divine in the human. It abominated scientific analysis, cold logic, and sterile formality; it aimed at color, warmth, sympathy. It extended tremendously the range of matter and form of poetry and gainsaid the traditional laws of restraint, decorum, and verisimilitude. It was for some a religion, for others a philosophy, or a social theory, or a literary creed. For some it was all these at once.

In New England, Transcendentalism became the philosophy and religion of romanticism. As first expounded by Immanuel Kant, Transcendentalism was a rigorously logical criticism of metaphysical method designed to explore the mental faculties of man and to mark the limits and validity of human knowledge. Of this epistemological system, most of the American Transcendentalists understood little and wanted less. But they appropriated the transcendental terminology and the transcendental definition of ideality, rejecting the knowledge of the Understanding as supplied by sensation and logic, meanwhile accepting the Ideas of the Reason, intuitively or immediately conceived. Into American Transcendentalism went portions of

Kant as well as of Plato, of Cousin no less than of Swedenborg, of Schleiermacher no less than of Dr. William Ellery Channing, of Quakerism and of Puritanism—with the result that the ideas of no two Transcendentalists were quite alike. Transcendentalism was liberal enough to include anybody who distrusted Lockean sensationalism and denied the efficacy of the human understanding to satisfy man, while affirming that the Reason, usually intuitively (or morally) interpreted, led directly to philosophical reality or spiritual verity. For many, Transcendentalism was mainly and primarily a form of idealism designed to halt the all-engrossing materialism to which America seemed on the verge of surrendering. They agreed with Emerson, the high priest of New England Transcendentalism, when he complained—

Things are in the saddle,  
And ride mankind;

or when he went on to explain that—

There are two laws discrete,  
Not reconciled.—  
Law of man, and law of thing;  
The last builds town and fleet,  
But it runs wild,  
And doth the man unking.

Let man serve law of man; . . .  
The state may follow as it can.

Emerson put it simply when, in 1842, he sought to explain himself and his associates by saying, "What is popularly called Transcendentalism among us, is Idealism; Idealism as it appears in 1842." Though he sought all his life long to regularize his ideas and to make the several parts of his philosophy cohere, he never added significantly to this first definition. Others commonly referred to New England Transcendentalism as the New Views or the Newness, and let it go at that. Lowell, himself a votary during his earlier years, called it "simply a struggle for fresh air, in which, if the windows could not be opened, there was danger that panes would be broken, though painted with images of Saints and martyrs."

Lowell here hints at an important aspect of the Transcendental movement; for aside from its ideological and religious aspects, it had its practical or (shall we say?) iconoclastic sides. It often opposed the existing order of things and endeavored to reform men and the institutions of men in conformity with its idealistic and humanitarian programs. High thought, Emerson held, was worthless unless translated into action. Accordingly Transcendentalists

organized themselves into clubs, associations, or communities like the Brook Farm Association for Agriculture and Education, and they founded journals of propaganda like the *Dial* and the *Harbinger* to propagate their views. They adopted and practiced a philosophy of "plain living and high thinking" in degrees that sometimes ran to what the man in the street considered idiosyncratic or eccentric. Emerson himself was too much devoted to his doctrine of individualism to participate actively in Brook Farm, which he characterized as "a perpetual picnic, a French Revolution in small, an Age of Reason in a patty-pan." He did not join whole-heartedly in the organized movement for reform; nevertheless he attended the Chardon Street Convention in Boston during 1840. Though he did not speak, he sat on the platform, and studied the faces before him. Hither had come disciples of many kinds, representative of all the forms of religious, philosophical, and social unrest of the time—some of them of the wildest type. Among them, his practiced eye recognized "Madmen, madwomen, men with beards, Dunkers, Muggletonians, Come-outers, Groaners, Agrarians, Seventh-day Baptists, Quakers, Abolitionists, Calvinists, Unitarians, and Philosophers." All came successively to the top to seize their moment, or their hour, wherein to chide or pray or preach or protest. Surely, contemplated Emerson, these were wild and "transcendental" times!

Lowell, too, commenting on the eccentric or comic side of the reform movement associated with Transcendentalism, observed:

Every possible form of intellectual and physical dyspepsia brought forth its gospel. Bran had its prophets, and the presartorial simplicity of Adam its martyrs. . . . Plainness of speech was carried to a pitch that would have taken away the breath of George Fox; and even swearing had its evangelists, who answered a simple inquiry after their health with an elaborate ingenuity of imprecation that might have been honorably mentioned by Marlborough in general orders. Everybody had a mission (with a capital M) to attend to everybody else's business. No brain but had its private maggot, which must have found pitifully short commons sometimes. Not a few impecunious zealots abjured the use of money (unless earned by other people), professing to live on the internal revenues of the spirit. Some had an assurance of instant millennium so soon as hooks and eyes should be substituted for buttons. Communities were established where everything was to be common but common sense. Men renounced their old gods, and hesitated only whether to bestow their furloughed allegiance on Thor or Budh. Conventions were held for every hitherto inconceivable purpose. The belated gift of tongues, as among the Fifth Monarchy men, spread like contagion, rendering its victims incomprehensible to all Christian

men. . . . Many foreign revolutionists out of work added to the general misunderstanding their contribution of broken English in every most ingenious form of fracture. All stood ready at a moment's notice to reform everything but themselves. The general motto was:—

“And we'll *talk* with them, too.  
And take upon 's the mystery of things  
As if we were God's spies.”

These represent some of the ways by which the general quickening of the romantic spirit during the first half of the nineteenth century expressed itself. While this flowering was especially luxuriant in New England (notably among the groups of writing men and women in the vicinity of Boston, Cambridge, and Concord), other sections of the country also felt its effects. Philadelphia, where so many of the stirring events of the Revolution had been enacted, had been among the first to dispute with Boston the literary and intellectual leadership, but after we have named the essentially eighteenth-century figures of Benjamin Franklin and Thomas Paine, Pierre S. Du Pont and Benjamin Rush, Francis Hopkinson, Charles Brockden Brown, and Joseph Dennie, the list of nineteenth-century men grows markedly meager. Meanwhile New York had gathered a notable literary colony, called the Knickerbocker group, including the Irving brothers, Paulding, Brevoort, Verplanck, the Duyckincks, and Cooper. Bryant, editor of the *New York Evening Post* from 1830 to 1876, and Horace Greeley, the reforming editor of the *New York Tribune* from 1841 to 1872, were no less influential, but not strictly speaking members of the group. In the South, there was Charleston, South Carolina, with William Gilmore Simms, Paul Hamilton Hayne, and Henry Timrod taking the leadership; while Virginia boasted men like John Pendleton Kennedy, William Alexander Caruthers, John Esten Cooke, and Edgar Allan Poe. Nor was romanticism in America a peculiarly Anglo-American manifestation. The French of Louisiana developed between 1830 and 1860 an *esprit* of racial and cultural solidarity that expressed itself in the remarkable body of literature with which the names of Gayarré, Testut, Cononge, Dugué, Roquette, and Mme. la Houssaye, among others, are linked. Another considerable literature was produced among the numerous though widely scattered German groups. Much of it dealt with the common themes of immigration, settlement, repatriation, and acculturation, but they also developed their own forms of romanticism, including nostalgia for the old country as well as romantic glorifications of the new home, accounts of their

wanderings forth, which already lay sufficiently in the past to be idealized or embroidered, or romantic tales of adventures on the frontier. Occasionally they produced a professional man of letters like Charles Sealsfield (Carl Postl), who wrote a series of notable American ethnographic novels which seem at once to reflect the literary method and saga-like manner of a Cooper and to foreshadow the scope of a Rolvaag, who belongs to a much later wave of European immigration.

But it was chiefly in New England, among the coteries of Concord and Cambridge, that we see the romantic spirit at its best and fullest development. In his study and on his quiet walks about Concord, Emerson pondered the idealistic thoughts which he incorporated in his lectures, essays, and poems. Nearby was Henry David Thoreau, who could be counted on to test Emerson's theories by putting them into practice. Intent on living life as daintily as one would pluck a flower, but even more bent on living so that it would not be said of him, when he came to die, that he had spent all his time merely preparing to live, Thoreau seemed to make an art of living, even while people stood a little in fear or awe of him. A long stone's throw away was Amos Bronson Alcott, the Orphic Sage, who expounded neo-Platonic mysticism and experimented with educational theories, communal living, and vegetarian diets. Close by, in his little study at the Old Manse, brooded Nathaniel Hawthorne while he plumbed the psychological and moral depths of man in his tales and romances. The mystic Jones Very and the eccentric William Ellery Channing the Younger were in Concord much of the time, and Margaret Fuller, apostrophized by Emerson as the greatest woman of ancient and modern times, though a storm center wherever she appeared, was a frequent visitor. Not many miles away, at Brook Farm, were the Ripleys and two or three score of other spiritually minded individuals bent on working out, on a cooperative basis, a satisfactory combination of spiritual effort and physical labor. George Ripley's fourteen volumes of *Specimens of Foreign Standard Literature* (translations chiefly from German transcendental literature and French eclectic philosophy) provoked a spirited controversy during the forties over the latest form of infidelity currently being proclaimed in such addresses as Emerson's before the Divinity School in Cambridge. The flames were fanned to new heat when Theodore Parker, proceeding on the basis of conclusions derived from German biblical critics, sought to say "a higher word" on the controversy in a pamphlet, in which he tried to segregate the transient from the

permanent elements of Christianity. During the years while Poe gravitated between Baltimore and Richmond, Philadelphia and New York, while Melville in New York pondered the tragedy of the human mind and made a Promethean assault on the inscrutability of the universe in *Moby Dick* and *Pierre*, up to the time when Whitman first sounded his "barbaric yawp over the roofs of the world," the atmosphere in the vicinity of Boston was supercharged with ideas and theories that transformed reasonable men into enthusiasts. Perfectionism and idealism joined hands with humanitarianism to engender a reform movement that included women's rights, universal suffrage, temperance, prohibition, abolition, and many more.

The movement to abolish slavery profoundly stirred individuals like John Brown, William Lloyd Garrison, Harriet Beecher Stowe, and John Greenleaf Whittier from the first. Originally suspect, the movement gradually gained momentum and respect, as Daniel Webster learned to his cost on falling from the position of a New England deity who could do no wrong in 1830 to the inglorious position of "Icha-

bod" in 1850 because he had dared to compromise over the issue of slavery. The abolition agitation provoked the young Lowell, a scion of one of the old, staid families, to go crusading for human rights, redressing wrongs, and overthrowing tyrannies of all kinds. It drove the gentle Alcott into a fine frenzy and the recluse Thoreau to attempt a one-man revolution against the United States government for conducting an unjust war with Mexico in order to extend the boundaries of slavery; and it succeeded in drawing even the Jovian Emerson sufficiently away from his individualistic and humanistic way of life to speak publicly in behalf of John Brown while the latter was under sentence of death as a "new saint awaiting his martyrdom, who, if he shall suffer, will make the gallows glorious like the cross."

Thus the renaissance of the forties and fifties ran full blast into the catastrophic war years, during which the prewar idealisms were tried by fire, and out of which emerged a chastened consciousness, a revaluation of human aspirations, and a reorientation of national destiny that led by slow degrees to the critically realistic temperament of modern America.

## COTTON MATHER (1663-1728)

Although Cotton Mather is today considered a greater man than his father Increase, during his lifetime fate played him a shabby trick by arranging affairs in such a way as to make him stand always a little in the shadow of his illustrious father, whom he outlived by only five years. Increase Mather served as pastor of old North Church in Boston from 1664 to his death, his son having to content himself with the position of teacher, so that on numerous occasions great opportunities passed him by to go to his senior, in a manner seriously to restrict the scope of Cotton's genius if not of his productivity. His father's forced retirement from the presidency of Harvard College in 1701 was a serious blow to Increase, but it was catastrophic for his son, who, at thirty-eight, had still a long life-expectancy. Although he yearned for the post, the trustees of Harvard thrice passed him up to elect men who he had every reason to believe were not his equals in intellectual attainments or pious orthodoxy. By 1723, when Increase Mather went to his well-earned reward, the opportunities which Cotton might have seized triumphantly if they had presented themselves earlier came too late. A generation that wanted none of the father wanted less of his son, and it fell to the unhappy lot of Cotton to preside at the fall of the Mather dynasty which Richard had established and Increase had sought to maintain. Even in death the hand of Increase remained on the son. When, about 1723, the offer of the rectorship of Yale came to Cotton, he felt bound to put aside this tempting offer to go over to the rival of his Alma Mater, which had treated him so shabbily. He chose to remain with his father during his last years, to minister to his beloved congregation in Boston, and to preside in the pulpit which had been for so many years the stronghold of the Mathers.

Destined by birth and motivated by ambition to perpetuate and glorify the orthodoxy of his father and his grandfathers (Richard Mather and John Cotton), Cotton Mather developed the precocity that sent him to Harvard College in 1675 when he was barely twelve, and that enabled him to take his first degree in due course. At eighteen he held a second degree and preached his first sermon; but being

afflicted by a grievous habit of stammering, resolved to give up the ministry for medicine, when a friend suggested that his trouble could be remedied if he would remember always to speak "with a dilated deliberation." He tried it and was cured. At the age of twenty he was ordained, and two years later was formally installed as the associate of his father in the most influential pulpit in America at the time. Here, in ceaseless prosecution of almost incredible labors—ministerial, literary, civic, philanthropic, oratorical, political, scientific, and social—he continued to the end of his sixty-five years of life.

Intensely emotional, introspective, serious-minded, and ascetic, his long "scholar's day" was packed with pastoral duties, study, domestic cares, fasts, and prayers, besides many midnight vigils devoted to soul-searching analyses of his heart and mind, during which he lay on his study floor alternately writhing in agonies over his "vileness" or reveling in spiritual ecstasy in moments of exaltation. Enormously read in many languages, encyclopedically learned, proud, pedantic, fantastic, he labored ceaselessly, preaching thousands of sermons, engaging in time- and energy-consuming public and political affairs, keeping some four hundred fasts, and publishing four hundred and forty-four books and pamphlets, besides leaving a number of extensive works in manuscript at his death. "In a single year," says Moses Coit Tyler, "besides doing all his work as master of a great metropolitan parish, and besides keeping sixty fasts and vigils, he published fourteen books." Small wonder that he wrote over his study door, as a reminder to himself and a warning to his visitors, "Be Short." He kept before him constantly the admonition that the work required by the Lord was great, and that the time to do it was brief. On his deathbed he gave this final charge to his son Samuel, "Remember only this one word—*Fructuosus*." It was the hereditary motto of the Mathers, descriptive of their passion for mighty labor and achievement.

Proud of his birth and heritage and addicted to vanity and an excessive consciousness of his high calling, he was ambitious to achieve sainthood; he was also often intemperate in denouncing his enemies

and all too eager for controversy with those who opposed him. Impulsive, nervously sensitive, and lacking in a sense of proportion in matters that touched his family or his personal pride, he was often dogmatic, dictatorial, overbearing, and querulous.

The record of his prodigiously fruitful life is all the more remarkable because it was made under very trying circumstances. Besides suffering much from poor health, perhaps partly self-induced by his overwrought, introspective, and acutely ascetic nature, he suffered much unhappiness in his private and domestic life. Burdened all his life by financial worries, he buried two of his wives early; his third wife became insane and caused insufferable domestic difficulties; a scapegrace son added special torments; nine of his children died in childhood; and when, in 1728, he himself gave up the ghost, only two of his fifteen children survived him. Yet through it all, he carried on to provide for his time and place the leadership to which he felt his high office called him, ministering to the spiritual wants of his people, endeavoring to educate and guide them in every detail, reproving them for their shortcomings or inspiring them to a greater service of God, and devoting much time and energy to organizing societies and public services among them.

With his father he was chiefly responsible for the overthrow of the hated Governor Andros, the restoration of a charter that had been revoked in 1684, and the appointment of Sir William Phips—revealing accounts of which affairs he subsequently incorporated in his laudatory *Life of Phips* (1692), also included in the *Magnalia Christi Americana* (1702), and in the appreciative life of his father which he published under the title of *Parentator* in 1724. About 1690 the Mathers were riding the crest of the waves of influence and power; but their successes were short-lived. The modified charter which Increase Mather secured did not win general approval in New England, and some of the policies and acts of Governor Phips backfired. The Mathers were blamed, and they suffered a decline in popularity. About the same time the Salem witchcraft troubles came to a head, and again they did not go unscathed. In this matter the mind of the Mathers found a congenial area, accepting with alacrity the challenge to delve into the world of spirits, in which they, along with the rest of the world, had implicit faith. Both took an active part in the trials, and Cotton especially sought to make fundamental inquiries into the problem by taking into his own home one of the bewitched children in order to study the manifestations of witchcraft at first hand. With his father, he distrusted the validity

of accepting "spectral evidence," but allowed his scruples to be overborne. What is more, his interest was less in securing convictions in court than in discovering curative measures, chiefly through prayer and fasting; and when it became evident that witchcraft was getting out of hand, Cotton Mather, more than anybody else concerned in the affair, was responsible for stopping the Salem delusions of 1692. But having participated in the trials, and being congenitally incapable of graciously admitting himself in error or inconsistent, he maneuvered himself into a position of defending the methods and judgments of the magistrates. The acrimonious pamphlet warfare that he carried on with Robert Calef did nothing but harm his cause, himself, and his father; and together they were singled out as chiefly responsible for the miscarriage of justice in Salem, while Samuel Sewall, another of the hanging judges, having the good grace to stand up in public meeting and to acknowledge his mistake, went unscathed. Cotton Mather, self-righteous and orthodox, and convinced that as one of the elect of God he could not have done wrong, never yielded an iota.

A few years later the Overseers of Harvard, responsive to the liberal rationalism to which the College had gone over, invoked an old law by which the president was required to live in Cambridge. Increase Mather, whose church and home were in Boston, was declared ineligible and forced to resign. When the trustees went on to appoint Samuel Willard, another nonresident, thus pointedly blinking the law which had served to rid them of the Mathers, it became clear to them how the wind was blowing. In the western part of the Bay Colony, Solomon Stoddard of Northampton inaugurated policies abhorrent to them; while in Boston itself Elisha Cooke, the one-time associate of Increase Mather in making representations against Andros to King William, turned against them to become the leader of the political opposition. Another blow that was especially hard to bear was the establishment of the Brattle Street Church in Boston under Benjamin Colman in 1699, and the institution in that church of liberal beliefs and practices against which the Mathers had held the line all along. While their power and influence were thus severely curtailed, they remained prominent figures, fighting a courageous though losing battle, but still attaining occasional triumphs, as in their successful scheming to secure the appointment of Joseph Dudley as governor. But once Dudley was in office, he repudiated them and their policies, thus forcing them into new schemes and intrigues to effect his removal.

Shorn of much of his hold on the public by the failure of his father to maintain his political dominance, Cotton turned his abundant energies and versatility more and more into purely intellectual pursuits and to the preparation of his more substantial books. Following his *Memorable Providences, Relating to Witchcraft and Possessions* (1689) and *The Wonders of the Invisible World* (1693), both reflecting the issues that culminated in the sad affair at Salem, he wrote the *Magnalia Christi Americana: Or, the Ecclesiastical History of New England* (1702), a compendium of history, theology, science, politics, diplomacy, and every other subject vitally affecting seventeenth-century America. His *Angel of Bethesda* is a medical manual, and *The Christian Philosopher* (1721) is a summary of the scientific knowledge of the day, in which the facts of science are used to support religion. As an attempt to reconcile religion and science and as an anticipation of the Emersonian dictum that "the religion that is afraid of science dishonors God and commits suicide," it demonstrates the catholicity of Mather's interests and disproves the traditional concept of him as a man whose mind was closed to all innovation. A presentation of the world as well planned, ordered, and beautiful, an enforcement of the idea that to study nature is to realize God's benevolence, and an argument for the idea that man can appreciate his Maker by the exercise of his observation and reason, this book presents ideas well advanced over those espoused by him earlier in his career, and furnished proof that, far from representing a Puritan type of mind that had become "ossified," Cotton Mather was capable of entertaining new ideas and developing intellectually even in his old age.

His *Psalterium Americanum* (1718) is an experiment in translating the Psalms while adapting them to metrical rendition. *Bonifacius: An Essay upon the Good that is to be Devised and Designed* (1710), better known as *Essays to Do Good*, remains one of the classics in that type of ethical writings. Another of his works distinguished for "practical piety" is the *Manductio ad Ministerium. Directions for a Candidate of the Ministry* (1726), a very comprehensive manual or guidebook for young men preparing for the service of the Lord, offering sound advice on social and aesthetic as well as on spiritual and professional matters. It is written "heartily, with real enthusiasm for the subject and with greater directness and simplicity of style" than his other works exhibit. Among the biographies of the 114 men and 20 women that he wrote, *The Life of Phips*, while one of the most entertaining, illustrates some of his great-

est faults as a biographer. It poses, as Professor Kenneth Murdock has observed, the interesting and insoluble question "of how far the book was written to exalt himself and his father and to defend their political tenets, and how far it was designed as a tribute to Sir William Phips." All in all, his *Parentator: Memoirs of Remarkables in the Life and Death of Increase Mather* (1724) is his most satisfactory biography. Despite its obviously favorable picture of his father, it stands in no bad light when compared with English works of the same type produced during the same period.

Besides these books, he kept an elaborate *Diary* (published in volumes VII-VIII of the *Massachusetts Historical Society Collections* for 1911-2), wrote numerous reports of his scientific observations for the Royal Society of London, penned his skillful *Political Fables*, and recorded his extensive biblical learning in the six ponderous folio volumes, entitled *Biblia Americana*, that are still preserved in manuscript by the Massachusetts Historical Society, besides numerous lesser works left in manuscript at his death.

In the *Manductio*, *The Christian Philosopher*, and the *Political Fables*, Mather illustrates the fact that he could write simply and directly, without the pedantry, show of erudition, circumlocution, and allusiveness of the "fantastic school" that overload the style of his biographical and historical writings with the surplusage of a "book-suffocated" mind.

Despite its faults of style and its numerous instances of special pleading, the *Magnalia Christi Americana* remains his most important book and provides his chief claim to a position of prominence as a writer. Ambitious in scope and purpose, its two bulky volumes are divided into seven books: (1) a history of the settlement of New England; (2) "the lives of the governors and magistrates of New England that have been shields unto the churches of New England"; (3) "the lives of sixty famous divines by whose ministry the churches of New England have been planted and continued"; (4) the history of Harvard College and of "some eminent persons educated therein"; (5) "the faith and order of the churches"; (6) "many illustrious discoveries and demonstrations of the Divine Providences in remarkable mercies and judgments"; and (7) "a book of the wars of the Lord," including "the afflictive disturbances which the churches of New England have suffered from their various adversaries," such as the Devil, Separatists, Familists, Antinomians, Arminians, Arians, Socinians, Quakers, clerical impostors, and Indians.

However circumscribed Mather's political and theological influence became during his later years, he continued active in founding organizations for social betterment, including proposals for the education of Negroes and missions to the far corners of the earth. His correspondence in the interest of these public-spirited measures was voluminous, and the names of his foreign correspondents read like a roster of all the learned men of the world, regardless of nationality, language, or distance. He braved unintelligent popular opinion that regarded diseases like the smallpox as a visitation from God, not to be interfered with by scientific or any other earthly measures, by introducing inoculation in Boston, despite threats of personal violence and a bomb hurled through his bedroom window with this note attached: "Cotton Mather, you Dog; Dam you: I'll inoculate you with this, with a Pox to you." In recognition of his learning and scientific attainments, he was elected a Fellow of the Royal Society in 1713, to join the exceedingly small number of Americans similarly honored.

Bookish, but no mere bookworm, instructive and pious but also an engaging conversationalist, Cotton

Mather was more than an ordinary man. A vast reader, he contrived somehow or other to lay his hands on virtually all the significant books of the world. His manner of riding posthaste through an author, penciling as he went along, and reducing the whole substance of a book to two or three sentences, which he transcribed into his book of "Common Places" of "Quotidiana," whence they could be revived at his leisure, was something to behold. It was what enabled the Reverend Joshua Gee, in his sermon on the Death of Cotton Mather, to pay tribute to "the capacity of his mind, the readiness of his wit, the vastness of his reading, the strength of his memory . . . the tenor of his most entertaining and profitable conversation." Few men of his generation, or of later generations, could, with equal justice, say of themselves what he said of himself: "I am able with little study to write in seven languages. I feast myself with the sweets of all sciences which the more polite part of mankind ordinarily pretend to. I am entertained with all kinds of histories, ancient and modern. I am no stranger to the curiosities which, by all sorts of learning, are brought to the curious. These intellectual pleasures are far beyond any sensual ones."

Wendell, Barrett, *Cotton Mather: The Puritan Priest*, New York, 1891, 1926. (Still the most engaging biography of Mather.)

## SELECTIONS FROM THE

*Diary of Cotton Mather*<sup>1</sup>

1681. August 9. This Day, I took my second Degree, proceeding *Master of Arts*.

My Father was *President*, so that from his Hand I received my Degree.

Tis when I am gott almost half, a year, beyond *Eighteen*, in my Age.

And all the Circumstances of my Commencement, were ordered by a very sensibly kind Providence of God.

My Thesis was, *Puncta Hebraica sunt Originis Divinae*.<sup>2</sup>

December 28. This Day, our Church renewed their *Vote* for the Continuance of my public Labours among them; adding that it should bee in order to my Settlement among them as their *Pastor*.

And afterwards, voted mee a *Salary* of 70 lb. *Annunum*.

1683. May 14. I am extremely defective in recording particular Providences, that appear in the conduct of my Life. But indeed I am so shallow, that I cannot easily avoid the Fault of being, either *negligent* on one side, or *superstitious* on other.

However, I will now mention one little Thing of the same kind, that I have seen many in the Course of my Life; and it may bee, t'will do some Friend or other some good, that I should mention it.

<sup>1</sup> First published in 1911-12, as edited by W. C. Ford, in the Massachusetts Historical Society *Collections*, seventh series, vols. VII-VIII. Although many portions of the diary are lost, it affords a remarkably detailed account of Mather's intensely religious life, his far-flung pastoral and charitable ministrations, his literary and scholarly labors, his public as well as his most intimate private affairs, and the theological and political embroilments in which he and his father found themselves involved for the years 1681-1725.

<sup>2</sup> "Hebrew Vowels are of Divine Origin."

I was owner of a Watch, whereof I was very fond, for the Varietie of Motions in it. My Father was desirous of this Watch, and I, in a manner, gave it him, with such Thoughts, I owe him a great deal more than this; and the Observation of the fifth Commandment, never wants a *Recompense*. Quickly after this, there came to mee a Gentlewoman, from whom I had no Reason to expect so much as a Visit, but in her Visit, shee to my surprise, pray'd mee to accept, as a present from her, a Watch; which, was indeed preferable unto that which I had before parted with. I resolved hereupon, to stirr up, *Dutifulness unto Parents*, in my Neighbours, more than ever; and *redeem* the Time, which I was helped thus to *Measure*.

1684. February 9. . . . It has been a frequent Thing with mee, to redeem the *silent*, and otherwise, *thoughtless*, Minutes of my Time, in shaping Thousands of *ejaculatory Prayers* for my Neighbours. And by reciting a Few of them, the Way of my shaping the Rest, may bee conjectured. . . .

Casting my Eye upon,  
The Gentlewoman that  
carved for us.

A Gentlewoman lately  
married.

Ejaculations.  
Lord, carve, of thy Graces  
and Comforts, a rich por-  
tion, unto that Person.

Lord, espouse and marry,  
the Soul of that Person to  
thyself, in a Covenant never  
to be forgotten.

In passing along the *Street*, I have sett myself to *bless* thousands of persons, who never knew that I did it; with *secret Wishes*, after this manner sent  
30 unto Heaven for them.

Upon the Sight of	Ejaculations.
A tall Man.	Lord, give that Man, <i>High Attainments</i> in Christianity: lett him fear God, <i>above many</i> .
A lame Man.	Lord, help that Man, to walk <i>uprightly</i> .
A Negro.	Lord, wash that poor Soul white in the Blood of thy Son.
A Man carrying a Burden.	Lord, help this Man, to carry a <i>burdened Soul</i> , unto his Lord-Redeemer.

1685. May 4. Because my *Ordination* is to be performed the next Week, and because a *Parliament* is this very Day to sitt in *England*, I now plied myself unto the Exercises of a secret FAST before the Lord.

The Lord having assured mee, that all *Controversie* between Him and my Soul, was done away, I solemnly thus renewed and subjected His Covenant and gave up myself unto Him.

May 13 THIS DAY is appointed (*Because Thou, O Lord, art stronger than I, and hast prevailed!*) for my ORDINATION, to the Office of a Pastor over the North Church in Boston.

. . . With a Soul, inexpressibly irradiated from on High, I went into one of the vastest Congregations that has ever been seen in these parts of the World; where I prayed about an Hour and a Quarter, and preached (on Joh. 21. 17.) about an Hour and a three quarters; With such Assistences from Heaven, as exceeded all that my *poor Faith* could have imagined.

In the Afternoon, my Father having prayed and preached (on Act. 13. 2.), the *Ordination* was performed, with a more than ordinary Solemnitie, producing a greater Number of moved Hearts and weeping Eyes, than perhaps have been at any Time here seen together.

My Father, with Mr. Allen and Mr. Willard, the other two Ministers in the Town, imposed *Hands* on mee. My Father gave mee my charge: (which I have transcribed at the Beginning of my Bible): And good old Mr. Eliot gave mee, the right *Hand of Fellowship*.

1686. . . . in the month of March . . . there befell mee, an unexpected Thing, which was the occasion of my being shown unto *Israel*. A poor condemned Malefactor<sup>3</sup> . . . did . . . beg of mee, to

<sup>3</sup> James Morgan, a condemned murderer.

preach a suitable Sermon for him . . . So, in our Congregation at *Boston*, I preached . . . to a vast Concourse of People, with a great Assistance of Heaven, on Isa. 45. 22. . . . Now, it pleased God, that the people, throughout the Country, very greedily desired the Publication of my poor Sermon; and so . . . my mean Sermon came abroad. . . .

The Book sold exceedingly; and I, hope did a World of Good. It is entitled, THE CALL OF THE GOSPEL.

There has been since, a second Edition of the Book, with a Copy of my Discourse with the poor Malefactor walking to his Execution added at the End.

1692. In the Spring of this Year, I preached, on the Lecture, to the Country, a Sermon upon *Temptations*; and now, behold, my poor Country entred quickly into *Temptation*.

The rest of the Summer, was a very doleful Time, unto the whole Country.

The *Divels*, after a most præternatural Manner, by the dreadful Judgment of Heaven took a *bodily Possession*, of many people, in *Salem*, and the adjacent places; and the Houses of the poor People, began to be filled with the horrid Cries of Persons tormented by *evil Spirits*. There seem'd an execrable *Witchcraft*, in the Foundation of this wonderful Affliction, and many Persons, of diverse Characters, were accused, apprehended, prosecuted, upon the *Visions* of the Afflicted.

For my own part, I was alwayes afraid of proceeding to convict and condemn any Person, as a *Confederate* with afflicting Daemons, upon so feeble an Evidence, as a *spectral Representation*. Accordingly, I ever testified against it, both publicly and *privately*; and in my *Letters* to the *Judges*, I particularly, besought them, that they would by no means admitt it; and when a considerable *Assembly of Ministers* gave in their *Advice* about that Matter, I not only concurred with their Advice, but it was I who drew it up.

Nevertheless, on the other side, I saw in most of the *Judges*, a most charming Instance of *Prudence* and *Patience*, and I knew their exemplary *Pietie*, and the Agony of Soul with which they sought the Direction of Heaven; above most other People, whom I generally saw enchanted into a raging, railing, scandalous and unreasonablen Disposition, as the Distress increased upon us: For this Cause tho' I could not

allow the *Principles*, that some of the Judges had espoused, yett I could not but speak honourably of their *Persons*, on all Occasions; and my *Compassion*, upon the Sight of their *Difficulties*, raised by my many Journeyes to *Salem*, the chief Seat of these diabolical Vexations, caused mee yett more to do so. And meerly, as far as I can learn, for this Reason, the mad people thro' the Countrey, under a fascination on their *Spirits*, aequal to what our *Energumens*<sup>4</sup> had on their *Bodies*, reviled mee, as if I had been the Doer of all the hard Things, that were done, in the Prosecution of the *Witchcraft*.

In this *Evil-Time*, I offered, at the beginning, that if the *possessed* People, might bee scattered far asunder, I would singly provide for six of them; and wee would see whether without more bitter methods, *Prayer* with *Fasting* would not putt an End unto these heavy Trials: But my offer (which none of my Revilers, would have been so couragous or so charitable, as to have made) was not accepted.

However, for a great part of the Summer, I did every *Week*, (mostly) spend a Day by myself, in the Exercises of a sacred *FAST*,<sup>5</sup> before the Lord. On these Dayes (whereof I have kept no Record) I cried unto the Lord, not only for my own Preservation, from the Malice and Power of the *evil Angels*, but also, for the *good Issue* of the Calamities wherein Hee had permitted the *evil Angels* to ensnare this miserable Countrey.

1696. *December 20. Lords-Day*. This Day, there being a violent *Storm* arisen, I laid aside the Discourse, which I had prepared for my Congregation and with plentiful Assistences from the Lord Jesus Christ. I discoursed on the Lord Jesus Christ as a *Refuge from the Storms of the Wrath of God*. (My Text was Isa. 25. 4.)

Before the Sermon, as I was praying in the great Congregation, it was very strongly imprinted on my Mind, that I must pray for some of our *sea-faring* Friends, who might at this Instant, bee in Distress, upon our *Coast*. I did so with much *Particularitie* and with a *Particular Faith* for mercy to bee vouchsafed unto some such distressed Neighbours.

<sup>4</sup> People possessed by evil spirits.

<sup>5</sup> From this date onward Mather kept secret fasts and midnight vigils without number, usually dedicating every Friday to these exercises, which approached fanatical proportions in their alternate moments of self-debasement and spiritual ecstasy—often minutely recorded in his diary. From 1692, also, date the increasing difficulties which the Mathers encountered in maintaining their power and that of the Church in New England.

Now, within a few Minutes, after the Prayer was ended, the Congregation heard several great Guns fired, by a vessel in the Bay, wanting *Help*; and Heaven sent that *Help* unto the poor People aboard, that the vessel thro' extreme Dangers, gott safely in.

1697. *January 15*. Being afflicted last Night, with discouraging Thoughts as if unavoidable *Marks*, of the *Divine Displeasure* must overtake my *Family*, for my not appearing with *Vigor* enough to stop the proceedings of the Judges, when the Inextricable Storm from the *Invisible World* assaulted the Countrey, I did this morning, in prayer with my Family, putt my Family into the Merciful Hands of the Lord. And, with Tears, I received Assurance of the Lord, that Marks of His Indignation should not follow my Family, but that having the *Righteousness* of the Lord Jesus Christ pleading for us, *Goodness* and *Mercy* should follow us, and the signal *Salvation* of the Lord.

*January 23*. I attempted, this Day, the Exercises of a secret *FAST* before the Lord. But so extremely cold was the weather, that in a warm Room, on a great Fire, the Juices forced out at the End of short Billets of Wood, by the Heat of the Flame, on which they were laid, yett froze into Ice, at their coming out. This Extremity of the Cold caused mee to desist from the purpose, which I was upon; because I saw it impossible to serve the Lord, without such Distraction, as was inconvenient.

*November 7. Lords-Day*. I took my little daughter, Katy, into my Study; and there I told my Child, that I am to *dy* shortly, and shee must, when I am *Dead*, Remember every Thing, that I said unto her.

I sett before her, the sinful and woful Condition of her *Nature*, and I charg'd her, to *pray in secret Places*, every Day, without ceasing, that God for the Sake of Jesus Christ would give her a *New Heart*, and *pardon* Her Sins, and make her a *Servant* of His.

I gave her to understand, that when I am taken from her, shee must look to meet with more humbling *Afflictions* than shee does, now shee has a careful and a tender *Father* to provide for her; but, if shee would *pray* constantly, God in the Lord Jesus Christ, would bee a *Father* to her, and make all *Afflictions* work together for her Good.

I signified unto her, That the People of God, would much observe how shee carried herself, and that I had written a Book, about, *Ungodly Children*, in the Conclusion whereof I say, that this Book will

bee a terrible Witness against my own Children, if any of them should not bee *Godly*.

At length, with many Tears, both on my Part, and hers, I told my Child, that God had from Heaven assured mee, and the good Angels of God had satisfied mee, *that shee shall bee brought Home unto the Lord Jesus Christ, and bee one of His forever*. I bid her use this, as an Encouragement unto her Supplications unto the Lord, for His Grace. But I therewithal told her, that if shee did not now, in her Childhood seek the Lord, and give herself up unto Him, some dreadful Afflictions must befall her, that so her Father's Faith, may come at its Accomplishments.

I thereupon made the Child kneel down by mee; and I poured out my Cries unto the Lord, that Hee would lay his Hands upon her, and bless her and save her, and make her a *Temple* of His Glory. It will be so; It will be so!

I write this, the more particularly, that the Child may hereafter have the Benefit of reading it.<sup>6</sup>

1698. November 17. Now I feel that there is a *God*, and there is a *Christ*, and there is a *Holy Spirit*, and there are glorious *Angels*, and I am a *Servant* of the Lord, and a *Fellow-Servant* with His *Angels*!

The Execution of the miserable Malefactor, was ordered for to have been the last Week, upon the Lecture of another. I wondered then what would become of my *Particular Faith*, of her condition being so ordered in the Providence of God, that it should furnish mee, with a *special Opportunity* to glorify Him. While I was entirely resigning to the wisdom of Heaven, all such Matters, the *Judges*, wholly without my seeking, altered and allow'd her Execution to fall on the Day of my *Lecture*. The *General Court* then sitting, ordered the Lecture to be held in a larger and stronger House, than that *old one*, where tis usually kept. For my own part, I was weak, and faint, and spent; but I humbly gave myself up to the *Spirit* of my Heavenly Lord and Hee assured mee, that Hee would send His *good Angel* to strengthen mee. The greatest Assembly, ever in this Countrey preach'd unto, was now come together; It may bee four or five thousand Souls. I could not gett unto the *Pulpit*, but by climbing over *Pues* and *Heads*: and there the Spirit of my dearest Lord came upon mee. I preached with a more than ordinary Assistance, and enlarged, and uttered the most awak-

<sup>6</sup> The child was in her ninth year at the time.

ening Things, for near two Hours together. My Strength and Voice failed not; but when it was near failing, a silent Look to Heaven strangely renew'd it. In the whole I found Prayer answered, and Hope extended, and Faith encouraged, and the Lord using mee, the vilest of all that great Assembly, to glorify Him.

Oh! what shall I render to the Lord!

The Sermon, I gave to the Bookseller; and annexed thereunto, an History of *Criminals* executed in this Land, and effectually, an Account of their dying Speeches, and of my own Discourses with them in their last Hours; hoping to warn others against Vice, by an History thus accomodated unto the Purpose. I entitled the Book, *PILLARS OF SALT*.

1699. April 2. A good woman in our Neighbourhood, has languished miserably for diverse Years, and suffered many things of many Physicians, and is nothing bettered, but rather grows worse. Her Husband, apprehending her, not far from Death, prevailed with some Christians, to keep this as a Day of *Prayer* with *Fasting* for her. I spent part of the Forenoon with them; and as I was drawing towards the Close of my *prayer*, I thought with myself, the *Word* should go with *Prayer*. When the Prayer was ended, I called for a Bible, intending to look out some agreeable Scripture, for the present Occasion. And behold, the very first Place, which in the opened Bible, I look'd upon, was that in Mar. 5. 25. *A certain Woman had suffered many Things of many Physicians, and was nothing bettered, but rather grew worse; when shee heard of Jesus, shee came, and touched His Garment: and shee felt in her Body, that shee was healed*. I wondred at the Pertinency of the Place, and preached a Sermon upon it.

The woman, to the surprize of us all, recovered so that shee came abroad into the Congregation, to give Thanks, for the wondrous Works of God.

1700. January 5. I see *Satan* beginning a terrible Shake unto the Churches of *New England*; and the *Innovators*, that have sett up a *new Church in Boston*,<sup>7</sup> (a new one indeed!) have made a *Day of Temptation* among us. The Men are ignorant, arrogant, obstinate, and full of Malice and Slander, and they fill the Land with *Lyes*, in the Misrepresentation whereof, I am a very singular Sufferer.

<sup>7</sup> A reference to the establishment of the Brattle Street Church under Benjamin Colman in 1699—a signal to Mather of the rise to a position of formidable opposition to the old creed of the established churches by the newer forms of rationalistic criticism.

Wherefore I sett apart this Day again, for Prayer in my Study: to cry mightily unto God. . . .

December 28. The Lord has permitted Satan to Raise an extraordinary Storm upon my Father, and myself. All the Rage of Satan, against the Holy Churches of the Lord, falls upon us. First *Calf's* Book, and then *Coleman's*,<sup>8</sup> do sett the People in a mighty Ferment. All the Adversaries of the Churches lay their Heads together, as if by Blasting of us, they hoped utterly to blow up all.

1702. November 14. The awful Circumstances upon me, (and upon the Town,) caused me to ly in the Dust this Day with secret Prayer and Fasting before the Lord.

In this Month, my lovely Consort again declines; and some latent Mischief within her, brings on a Feebleness, that gives us great Apprehensions of a mortal Issue.

Nov. 21. I obtained, I compelled, the Liesure, for another Day of Prayer with Fasting in my Study; 20 to carry my distressed Family unto the Lord.

<sup>8</sup> As if the books of Robert Calef and Benjamin Colman attacking the Mathers as chiefly responsible for the witchcraft delusions were not enough, the Mathers were embittered by the determination of the Harvard Overseers to unseat Increase Mather as President of Harvard College and incensed by the bold affronts offered to them by the Brattle Street Church. For Cotton Mather the troubles were especially aggravated during 1700-02 by losses and crosses at home, including the death of his wife, after a long illness, on December 1, 1702. (See the account of her death below under the date of December, 1702.) Two months later a "well accomplished Gentlewoman," for whom Cotton Mather confessed "a mighty Tenderness," proposed marriage to him and pursued him in a manner to set tongues clacking furiously, until on March 6, 1703, he recorded in his diary, "The Design of Satan, to entangle me in a Match that might have proved ruinous to my Family, or my Ministry, is defeated, by my Resolution totally to reject the Address of the young Gentlewoman to me; which I do, for the sake of the Lord Jesus Christ, whose Name, I see will suffer, if I accept her; and I do it cheerfully, tho' she be so very charming a Person." On March 15, he wrote: "I struck my Knife, into the Heart of my Sacrifice, by a Letter to her Mother." On April 27, he added, "I have the Inconvenience of being a Person, whom the Eye and the Talk of the People is very much upon. My present Circumstances give them Opportunities to invent and report Abundance of disadvantageous Falsehoods, of my being engaged in such and such Courtships, wherein I am really unconcerned. But the Addresses which I have had from the young Gentlewoman so often mentioned in these Papers, and the Discourses thereby, raised among the dissatisfied People, afford the greatest Theme for their mischievous and malicious Lying to turn upon. When all Assaults upon me from that Quarter, have been hitherto unsuccessful, at last, I am unhappily persecuted with Insinuations, that I had proceeded so far in Countenancing the matter, I could not with Honour and Justice now steer clear of it, as I have done." By July 10, however, we read, "God showes me a Gentlewoman within two Houses of my own . . . of Piety and Probity, and a most unspotted Reputation. . . . Her name is Mrs. ELIZABETH HUBBARD." Four days later, he called upon her, and on August 18, they were married by his father. Thus ended one of the most trying periods of Mather's emotional life.

Humiliacons are coming thick upon me!

My Study, is tho' a large, yett a warm chamber, (the hangings whereof, are Boxes with between two and three thousand Books in them;) and we are so circumstanced, that my House, tho' none of the smallest, cannot afford a safe Hospital now for my sick Folks, any where so well as there. So I resigned my Study, for an Hospital to my little Folks, that are falling sick with a loathsome Disease. God sanctified 10 this, to humble me, for my not serving Him as I should have done in my Study; which provokes Him to chase me out of it.

First, my godly Maid, was carried into it; where she lay horribly full of the Small-pox, distracted, and hardly escaping with her Life.

Nov. 24. My Daughter Nanny was taken Sick. She proved full and blind, and very sore of the Dis-temper.

Nov. 27. My son Increase, was taken sick.

He also proved pretty full and blind, and sore; tho' not so bad as his Sister.

The little Creatures keep calling for me so often to pray with them, that I can scarce do it less than ten or a dozen times in a day; besides what I do with my Neighbours.

But the most exquisite of my Trials, was the Condition of my lovely Consort. It now began to be hopeless. . . .

How shall I glorify the Lord, in the Midst of these 30 Distresses and Confusions? Truly, after my sorry Manner, I did sett myself to do it.

I spent much Time with my lovely Consort. I pray'd with her as agreeable as I could. I endeavoured her most consummate Præparation for the heavenly World, by suitable Questions and Proposals. I comforted her, with as lively Discourses upon the Glory of Heaven, whereto she was going as I could make unto her. I disposed her, and myself, all that I could, unto a glorious Resignation.

40 At last, the black Day arrives: Tuesday, the first of December. I had never yett seen such a black Day in all the Time of my Pilgrimage. The Desire of my Eyes is this Day to be taken from me. Her Death is lingring, and painful. All the Forenoon of this Day, she lives in the Pangs of Death; sensible, until the last Minute or two before her final Expiration.

I cannot Remember the Discourses that passed between us. Only, her devout Soul was full of Satisfaction, about her going to a State of Blessedness with

the Lord Jesus Christ, and as far as my Distress would permit me, I studied how to confirm her Satisfaction and Consolation.

This I remember, that a little before she died, I asked her to tell me faithfully, what Fault she had seen in my Conversation, that she would advise me to rectify. She replied (which I wondred at,) that she knew of none, but that God had made what she had observed in my Conversation exceeding serviceable unto her, to bring her much nearer unto Himself.

When I saw to what a Point of Resignation, I was now called of the Lord, I resolved, with His Help therein to glorify Him. So, two hours before my lovely Consort expired, I kneeled by her Bed-Side, and I took into my two Hands, a dear Hand, the dearest in the World. With her then in my Hands, I solemnly and sincerely gave her up unto the Lord; and in token of my real RESIGNATION, I gently putt her out of my Hands, and laid away a most lovely Hand, resolving that I would never touch it any more!

This was the hardest and perhaps the bravest Action, that ever I did. She afterwards told me, *that she sign'd and seal'd my Act of Resignation*. And tho' before that, she call'd me, continually; she after this never asked for me any more.

She continued until near two a clock, in the Afternoon. And the last sensible Word, that she spoke, was to her weeping Father, *Heaven, Heaven will make amends for all*.

1711. May 9. The Colledge at Connecticut,<sup>9</sup> languishes for Want of a President. I have a Gentleman in my Eye, who, I hope, would prove a Blessing to them. And by my Letters to the Government there, I endeavour to recomend him unto such a Station.

December 2. By the gracious Providence of God, it is come to pass, that the religious, ingenious, and sweet-spirited Isaac Watts hath sent me the new Edition of his *Hymns*. . . . I will sing them, and endeavour to bring my Family in Love with them. I would also procure our Booksellers to send for a Number of them; and perswade my well-disposed Neighbours to furnish themselves with them; and in this way promote Picty among them.

December 16. I have gott by me, a pretty large Summ of Money, to be dispersed among the poor. I

<sup>9</sup> Yale, founded 1701, and designed as a safeguard of orthodoxy after Harvard was considered lost to the opposition.

will first cry to the glorious Lord for His Direction I will then look out for Objects of Poetry, both at home and abroad. And I will annex Books of Piety, to accompany the Parcels in the Dispensing of them.

1713. August 3. Perhaps, by sending some agreeable Things, to the Author<sup>10</sup> of *The Spectator*, and, *The Guardian*, there may be brought forward some Services to the best Interests in the Nation.

October 12. This Day, in Ships arriving from London, I receive Letters from the Secretary of the Royal Society, who tells me, that my *Curiosa Americana* being readd before that Society, they were greatly satisfied therewithal, and ordered the Thanks of the Society to be returned unto me; they also signified theyr Desire and Purpose, to admitt me as a Member of their Body. And, he assures me, that at their first lawful Meeting for such Purposes, I shall be made, A FELLOW OF THE ROYAL SOCIETY; Whereof he Expects then to send me the Advice, and some other Entertainments.<sup>11</sup>

1721. May 26. The grievous Calamity of the *Small-Pox* has now entered the Town. The Practice of conveying and suffering the *Small-pox* by *Inoculation*, has never been used in *America*, nor indeed in our Nation. But how many Lives might be saved by it, if it were practised? I will procure a Consult of our Physicians, and lay the matter before them.

June 22. I prepare a little Treatise on the *Small-Pox*; first awakening the Sentiments of *Piety*, which it calls for; and then exhibiting the best medicines and Methods, which the world has yett had for the managing of it; and finally, adding the new Discovery, to prevent it in the way of *Inoculation*. It is possible, that this Essay may save the *Lives*, ycs, and the *Souls* of many People. Shall I give it unto the Booksellers? I am waiting for Direction.

August 1. Full of Distress about *Sammy*; He begs to have his Life saved, by receiving the *Small-Pox*, in the way of *Inoculation*, whereof our Neighbourhood has had no less than ten remarkable Experiments; and if he should after all dy by receiving it in the common Way, how can I answer it? On the other Side, our People, who have Satan remarkably filling their Hearts and their Tongues, will go on

<sup>10</sup> One wonders whether Mather ever submitted any of his writings to Addison.

<sup>11</sup> His actual election to this Society—one of the most highly prized honors ever to come to Cotton Mather—was delayed by some oversight until April 11, 1723, but to all intents and purposes he was a member from 1713 on and was so regarded by the members.

with infinite Prejudices against me and my Ministry, if I suffer this operation upon the Child; and be sure, if he should happen to miscarry under it, my Condition would be insupportable.

His Grandfather advises that I keep the whole Proceeding private, and that I bring the Lad into this Method of Safety.

My god, I know not what to do, but my Eyes are unto Thee!

Aug. 15. My dear Sammy, is now under the Operation and receiving the *Small-Pox* in the way of *Transplantation*. The Success of the Experiment among my Neighbours, as well as abroad in the World, and the urgent Calls of his Grandfather for it, have made me think, that I could not answer it unto God, if I neglected it. At this critical Time, how much is all Piety to be press'd upon the Child!

September 5. Sammy recovering Strength, I must now earnestly putt him on considering, what he shall render to the Lord! . . .

Nibby still dangerously circumstanced.

And Nancy still a dying.

September 6. Nancy still a dying.

September 8. To our surprise, this Day, dear Nancy revives . . .

November 14. What an Occasion, what an Incentive, to have PIETY, more than ever quicken'd and shining in my Family, have I this morning been entertained withall!

My Kinsman, the Minister of Roxbury, being Entertained at my House, that he might there undergo

the *Small-Pox Inoculated*, and so Return to the Service of his Flock, which have the Contagion begun among them;

Towards three a Clock in the Night, as it grew towards Morning of this Day, some unknown Hands, threw a fired Granado into the Chamber where my Kinsman lay, and which uses to be my Lodging-Room. The Weight of the Iron Ball alone, had it fallen upon his Head, would have been enough to have done Part of the Business designed. But the Granado was charged, the upper part with dried Powder, the lower Part with a Mixture of Oil of Turpentine and Powder and what else I know not, in such a Manner, that upon its going off, it must have splitt, and have probably killed the Persons in the Room, and certainly fired the Chamber, and speedily laid the House in Ashes. But, *this Night there stood by me the Angel of the GOD, whose I am and whom I serve*; and the merciful Providence of god my SAVIOUR, so ordered it, that the Granado passing thro' the Window, had by the Iron in the Middle of the Casement, such a Turn given to it, that in falling on the Floor, the fired Wild-fire in the Fuse was violently shaken out upon the Floor, without firing the Granado. When the Granado was taken up, there was found a Paper so tied with String about the Fuse, that it might out-Live the breaking of the Shell, which had these words in it; COTTON MATHER, *You Dog, Dam you: I'l inoculate you with this, with a Pox to you.*

1681-1721

1911-1912

## Magnalia Christi Americana<sup>12</sup>

### A General Introduction

Ἐγὼ δὲ τοῦτο, τῆς τῶν ἐντεῦ ξαμένων ὠφελείας ἕνεκα.  
*Dicam hoc propter utilitatem eorum qui Lecturi sunt hoc opus.* THEODORIT.<sup>13</sup>

§1. I WRITE the Wonders of the CHRISTIAN RELIGION, flying from the Depravations of *Europe*, to the *American Strand*: And, assisted by the Holy Author of that *Religion*, I do, with all Conscience of *Truth*,

<sup>12</sup> The decision to write the *Magnalia* was formed in July, 1693, when Mather wrote in his *Diary*, "And because I foresaw an inexpressible deal of service like to be thereby done for the Church of God, not only here but abroad in Europe, I formed a design to endeavor *The Church History of this Country*. Laying my design before the neighboring ministers, they encouraged it; and accordingly I set myself to cry mightily unto the Lord that if my undertaking herein might be for His glory, He would grant me assistance in it." Begun later in the same

required therein by Him, who is the *Truth* it self, Report the *Wonderful Displays* of His Infinite Power, Wisdom, Goodness, and Faithfulness, wherewith His Divine Providence hath *Irradiated* an *Indian Wilderness*.

I Relate the *Considerable Matters*, that produced and attended the First Settlement of *COLONIES*, which have been Renowned for the Degree of REF-

year, the two-volume history was virtually completed in 1697. It was published, after numerous vexatious delays, in London, in 1702. The text here given follows the first edition.

<sup>13</sup> Both Mather's Latin translation and the original Greek of Theodorit (one of the early Church fathers c. 393-457) mean, "I say this for the benefit of those who are going to read this book."

Generally, notes are supplied only for authors or individuals not readily to be identified by the student.

ORMATION, Professed and Attained by *Evangelical Churches*, erected in those *Ends of the Earth*: And a *Field* being thus prepared, I proceed unto a Relation of the *Considerable Matters* which have been acted thereupon.

I first introduce the *Actors*, that have, in a more exemplary manner served those *Colonies*; and give *Remarkable Occurrences*, in the exemplary *LIVES* of many *Magistrates*, and of more *Ministers*, who so *Lived*, as to leave unto Posterity, *Examples* worthy of 10 *Everlasting Remembrance*.

I add hrcunto, the *Notables* of the only *Protestant University*, that ever shone in that Hemisphere of the *New World*; with particular Instances of *Criolians*,<sup>14</sup> in our *Biography*, provoking the *whole World*, with vertuous Objects of Emulation.

I introduce then, the *Actions* of a more Eminent Importance, that have signalized those *Colonies*; Whether the *Establishments*, directed by their *Synods*; with a Rich Variety of *Synodical* and *Eccle-* 20 *siastical* Determinations; or, the *Disturbances*, with which they have been from all sorts of *Temptations* and *Enemies* Tempestuated; and the *Methods* by which they have still weathered out each *Horrible Tempest*.

And into the midst of these *Actions*, I interpose an entire *Book*, wherein there is, with all possible Veracity, a *Collection* made, of *Memorable Occurrences*, and amazing *Judgments* and *Mercies*, befalling many *particular Persons* among the People of 30 *New-England*.

Let my Readers expect all that I have promised them, in this *Bill of Fare*; and it may be they will find themselves entertained with yet many other Passages, above and beyond their Expectation, deserving likewise a room in *History*: In all which, there will be nothing, but the *Author's* too mean way of preparing so great Entertainments, to Reproach the Invitation.

(Parts 2, 3, and 4, here omitted, recount the failure of the Puritans to effect a continued reformation of the Church of England and their reasons for coming to America, followed by an elaborate discourse on the virtues of history and an enumeration of the most illustrious historians, ancient and modern, sacred and profane.)

§5. Reader! I have done the part of an *Impartial* 40 *Historian*, albeit not without all occasion perhaps, for

<sup>14</sup> An obsolete word for persons born or naturalized in America, but of European race; similar to the modern word "Creole."

the Rule which a worthy Writer, in his *Historica*, gives to every Reader, *Historici Legantur cum Moderatione & venia, & cogitetur fieri non posse ut in omnibus circumstantiis sint Lyncei*.<sup>15</sup> Polybius<sup>16</sup> complains of those *Historians*, who always made either the *Carthaginians* brave, and the *Romans* base, or *è contra*, in all their actions, as their Affection for their own *Party* led them. I have endeavoured, with all good *Conscience*, to decline this writing meerly for a *Party*, or doing like the Dealer in *History*, whom *Lucian*<sup>17</sup> derides, for always calling the Captain of his own *Party* an *Achilles*, but of the adverse *Party* a *Thersites*: Nor have I added unto the just Provocations for the Complaint made by the Baron *Maurier*,<sup>18</sup> That the *greatest part* of *Histories* are but so many *Panegyricks* composed by *Interested Hands*, which *elevate Iniquity to the Heavens*, like *Paterculus*,<sup>19</sup> and like *Machiavel*,<sup>20</sup> who propose *Tiberius Cesar*, and *Cesar Borgia*, as *Examples* fit for *Imitation*, whereas *True History* would have Exhibited them as *Horrid Monsters*—as very *Devils*. 'Tis true, I am not of the Opinion, that one cannot merit the Name of an *Impartial Historian*, except he write bare *Matters of Fact*, without all *Reflection*; for I can tell where to find this given as the Definition of *History*, *Historia est rerum gestarum, cum laude aut vituperatione, Narratio*:<sup>21</sup> And if I am not altogether a *Tacitus*,<sup>22</sup> when *Vertues* or *Vices* occur to be matters of *Reflection*, as well as of *Relation*, I will, for my Vindication, appeal to *Tacitus* himself, whom *Lipsius*<sup>23</sup> calls one of the *Prudentest* (tho' *Tertullian*<sup>24</sup> long before, counts him the *Lyingest*) of them who have *Inriched* the *World* with *History*: He says, *Praecipuum munus Annalium reor, ne virtutes sileantur, utque pravis Dictis, Factisque ex posteritate & Infamia metus sit*.<sup>25</sup> I have not

<sup>15</sup> Historians should be read with moderation and indulgence, and it must be remembered that they cannot always be as keensighted as Lynceus."

<sup>16</sup> Polybius (205?-123 B.C.), Greek historian.

<sup>17</sup> Lucian (120?-200?), Greek satirical author.

<sup>18</sup> Probably Louis Aubrey, Seigneur du Maury (d. 1687), author of several historical works.

<sup>19</sup> Gaius Vellius Paterculus (c. 19 B.C.-A.D. 31), Roman historian.

<sup>20</sup> Niccolò di Bernardo Machiavelli (1469-1527), Florentine statesman and author of *The Prince*.

<sup>21</sup> "History is the story of events, with praise or blame."

<sup>22</sup> Publius Cornelius Tacitus (55?-117?), Roman historian.

<sup>23</sup> Joest Lips or Lipsius (1547-1606), historian and classical scholar.

<sup>24</sup> Tertullian (160?-230), Latin church father.

<sup>25</sup> "I consider it the primary function of history not to let virtues be uncelebrated, and to inspire a fear of that infamy which bad words and deeds will have in the eyes of posterity."

Commended any Person, but when I have really judg'd, not only *That* he *Deserved* it, but also that it would be a Benefit unto Posterity to know, Wherein he deserved it: And my Judgment of *Desert* hath not been *Biassed*, by Persons being in my own particular Judgment of *Disputation*, among the Churches of God. I have been as willing to wear the Name of *Simplicius Verinus*,<sup>26</sup> throughout my whole undertaking, as he that, before me, hath assumed it: Nor am I like Pope *Zachary*, impatient so much as to hear of any *Antipodes*.<sup>27</sup> The Spirit of *Schlusbergius*,<sup>28</sup> who falls foul with Fury and Reproach on all who differ from him; The Spirit of an *Heylin*,<sup>29</sup> who seems to count no Obloquy too hard for a Reformer; and the Spirit of those (*Folio-writers* there are, some of them, in the English Nation!) whom a Noble Historian Stigmatizes, as, *Those Hot-headed, Passionate Bigots, from whom, 'tis enough, if you be of a Religion contrary unto theirs, to be defamed, condemned and pursued with a thousand Calumnies*.<sup>30</sup> I thank Heaven I Hate it with all my Heart. But how can the *Lives* of the *Commendable* be written without *Commending* them? Or, is that Law of History given in one of the eminentest pieces of *Antiquity* we now have in our hands, wholly antiquated, *Maxime proprium est Historiae, Laudem rerum egregie gestarum persequi*?<sup>30</sup> Nor have I, on the other side, forbore to mention many *Censurable* things, even in the Best of my Friends, when the things, in my opinion, were *not Good*; or so bore away for *Placentia*, in the course of our Story, as to pass by *Verona*; <sup>31</sup> but been mindful of the Direction which Polybius gives to the Historian, *It becomes him that writes an History, sometimes to extol Enemies in his Praises, when their praise-worthy Actions bespeak it, and at the same time to reprove the best Friends, when their Deeds appear worthy of reproof; in-as much as History is good for nothing, if Truth*

(which is the very Eye of the Animal) be not in it. Indeed I have thought it my duty upon all accounts, (and if it have proceeded unto the degree of a *Fault*, there is, it may be, something in my *Temper* and *Nature* that has betray'd me therein) to be more sparing and easie, in thus mentioning of *Censurable* things, than in my *other Liberty*: A writer of *Church-History*, should, I know, be like the *builder of the Temple*, one of the *Tribe of Naphthali*; and for this I will also plead my *Polybius* in my Excuse; *It is not the Work of an Historian, to commemorate the Vices and Villanies of Men, so much as their just, their fair, their honest Actions: And the Readers of History get more good by the Objects of their Emulation, than of their Indignation*. Nor do I deny, that tho' I cannot approve the Conduct of *Josephus*,<sup>32</sup> (whom *Jerom* <sup>33</sup> not unjustly nor ineptly calls, *The Greek Livy* <sup>34</sup>) when he left out his *Antiquities*, the Story of the *Golden Calf*, and I don't wonder to find *Chamier*,<sup>35</sup> and *Rivet*,<sup>36</sup> and others, taxing him for his *Partiality* towards his Country-men; yet I have left unmentioned some *Censurable Occurrences* in the Story of our Colonies, as things no less *Unuseful* than *Improper* to be raised out of the Grave, wherein *Oblivion* hath now buried them; lest I should have incurred the *Pasquil* <sup>37</sup> bestowed upon Pope *Urban*, who employing a *Committee* to Rip up the *Old Errors* of his Predecessors, one clap'd a pair of Spurs on the heels of the Statue of *St. Peter*; and a Label from the Statue of *St. Paul* opposite therunto, upon the Bridge, ask'd him, *Whither he was bound*? *St. Peter* answered, *I apprehend some Danger in staying here; I fear they'll call me in Question for denying my Master*. And *St. Paul* replied, *Nay then I had best be gone too, for they'll question me also, for Persecuting the Christians before my Conversion*. Briefly, My Pen shall Reproach none, that can give a Good Word unto any Good Man that is not of their own *Faction*, and shall *Fall out* with none, but those that can *Agree* with no body else, except those of their own *Schism*. If I draw any sort of Men with *Charcoal*, it shall be, because I remember a notable passage of the *Best Queen* that ever was in the World,

<sup>26</sup> Name assumed by Claude Saumaise (Salmasius), 1588–1653, French classical scholar.

<sup>27</sup> A reference to Pope Zacharias, bishop of Rome from 741 to 752, who expelled Virgilius of Salzburg from the Church for maintaining that there was another world below the earth.

<sup>28</sup> Konrad Schlüsselburg (1543–1649), Lutheran theological writer.

<sup>29</sup> Peter Heylin (1600–1662), Anglican divine, defender of Bishop Laud and critic of the Puritans.

<sup>30</sup> "It is of the highest propriety for history to praise fine deeds."

<sup>31</sup> This passage appears to refer to Hasdrubal's delay in striking into the heart of Italy because he stopped to besiege Placentia.

<sup>32</sup> Flavius Josephus (37?–97?), Jewish historian.

<sup>33</sup> Saint Jerome or Hieronymous (340?–420), Latin father of the Church.

<sup>34</sup> Titus Livius (59 B.C.–A.D. 17), Roman historian.

<sup>35</sup> Daniel Chamier (1570?–1621), French Protestant writer.

<sup>36</sup> André Rivet (1573–1651), French Calvinist theologian.

<sup>37</sup> Lampoon or attack.

our late *Queen Mary*:<sup>38</sup> Monsieur *Jurieu*,<sup>39</sup> that he might Justifie the Reformation in *Scotland*, made a very black Representation of our old *Queen Mary*; for which, a certain *Sycophant* would have incensed our *Queen Mary* against that Reverend Person, saying, *Is it not a Shame that this Man, without any Consideration for your Royal Person, should dare to throw such Infamous Calumnies upon a Queen, from whom your Royal Highness is descended?* But that Excellent Princess replied, *No, not at all; Is it not enough that by fulsome Praises great Persons be lull'd asleep all their Lives; But must Flattery accompany them to their very Graves? How should they fear the Judgment of Posterity, if Historians be not allowed to speak the Truth after their Death?* But whether I do my self Commend, or whether I give my Reader an opportunity to Censure, I am careful above all things to do it with Truth; and as I have considered the words of *Plato*, *Deum indigne & graviter ferre, cum quis ei similem hoc est, virtute praestantem, vituperet, aut laudet contrarium*:<sup>40</sup> So I have had the Ninth Commandment of a greater Law-giver than *Plato*, to preserve my care of Truth from first to last. If any Mistake have been any where committed, it will be found meerly *Circumstantial*, and wholly *Involuntary*; and let it be remembered, that tho' no *Historian* ever merited better than the Incomparable *Thuanus*,<sup>41</sup> yet learned Men have said of his Work, what they never shall truly say of ours, that it contains *multa falsissima & indigna*.<sup>42</sup> I find<sup>30</sup> *Erasmus*<sup>43</sup> himself mistaking One Man for Two, when writing of the Ancients. And even our own English Writers too are often mistaken, and in Matters of a very late Importance, as *Baker*,<sup>44</sup> and *Heylin*,<sup>45</sup> and *Fuller*,<sup>46</sup> (professed Historians) tell us, that *Richard Sutton*, a single Man, founded the *Charter-House*; whereas his Name was *Thomas*, and he was a married Man. I think I can Recite such Mistakes, it may be, *Sans* Number occurring in the

most credible Writers; yet I hope I shall commit none such. But altho' I thus challenge, as my due, the Character of an *Impartial*, I doubt I may not challenge *That* of an *Elegant Historian*. I cannot say, whether the *Style*, wherein this *Church-History* is written, will please the Modern *Criticks*; But if I seem to have used ἀπλουστάτη συντάξει γραφῆς,<sup>47</sup> a Simple, Submiss, Humble *Style*, 'tis the same that *Eusebius*<sup>48</sup> affirms to have been used by *Hegesippus*,<sup>49</sup> who, as far as we understand, was the first Author (after *Luke*) that ever composed an entire Body of *Ecclesiastical History*, which he divided into *Five Books*, and Entitled ὑπομνήματα τῶν ἐκκλησιαστικῶν πράξεων.<sup>50</sup>

Whereas others, it may be, will reckon the *Style* Embellished with too much of *Ornament*, by the multiplied References to other and former Concerns, closely couch'd, for the Observation of the *Attentive*, in almost every Paragraph; but I must confess, that I am of his mind who said, *Sicuti sal modice cibis aspersus Condit, & gratiam saporis addit, ita si paulum Antiquitatis admiscueris, Oratio fit venustior*.<sup>51</sup> And I have seldom seen that Way of Writing faulted, but by those, who, for a certain odd Reason, sometimes find fault, *That the Grapes are not ripe*. These *Embellishments* (of which yet I only *Veniam pro laude peto*)<sup>52</sup> are not the peurile Spoils of *Polyanthes*'s;<sup>53</sup> but I should have asserted to be the choice *Flowers* as most that occur in Ancient and Modern Writings, almost unavoidably putting themselves into the Authors Hand, while about his Work, if those words of *Ambrose*<sup>54</sup> had not a little frightened me, as well as they did *Baronius*,<sup>55</sup> *Unumquemque Fallunt sua scripta*.<sup>56</sup> I observe that Learned Men have been terrified by the Reproaches of *Pedantry*, which littler Smatterers at Reading and Learning have, by their *Quoting Humours* brought upon themselves, that, for to avoid all Approaches towards that which those Feeble Creatures have gone to

<sup>38</sup> "Our late Queen Mary," wife of William III, died in 1694.

<sup>39</sup> Pierre Jurieu (1637-1713), French Protestant theologian and controversialist.

<sup>40</sup> "To God it is an unworthy and serious offense to abuse anyone who is like him in virtue, or to praise the opposite."

<sup>41</sup> Jacques Auguste de Thou (1553-1617), French historian and poet.

<sup>42</sup> "Much that is very false and unworthy."

<sup>43</sup> Desiderius Erasmus (1466?-1536), Dutch scholar.

<sup>44</sup> Sir Richard Baker (1568?-1645), an English chronicler.

<sup>45</sup> Peter Heylin (1600-1662), English clergyman and controversialist.

<sup>46</sup> Thomas Fuller (1608-1661), English preacher and historian.

<sup>47</sup> "The simplest style of writing."

<sup>48</sup> Pamphili Eusebius (260?-340?), ecclesiastical historian.

<sup>49</sup> Hegesippus, Athenian orator, a contemporary of Demosthenes.

<sup>50</sup> "Memorials of ecclesiastical transactions."

<sup>51</sup> "Just as salt discreetly spread over food seasons it and improves its flavor, so the mixture of some archaisms makes the style more charming."

<sup>52</sup> "I ask pardon for this praise."

<sup>53</sup> That is, a collection, or anthology, of choice quotations.

<sup>54</sup> Saint Ambrose (340?-397), Bishop of Milan.

<sup>56</sup> "Everyone misjudges his own writings."

imitate, the best way of Writing has been injuriously deserted. But what shall we say? The Best Way of Writing, under Heaven, shall be the Worst, when Erasmus his Monosyllable Tyrant<sup>57</sup> will have it so! And if I should have resign'd my self wholly to the Judgment of others, What way of Writing to have taken, the Story of the two Statues made by Policletus<sup>58</sup> tells me, what may have been the Issue: He contrived one of them according to the Rules that best pleased himself, and the other according to the Fancy of every one that look'd upon his Work: The former was afterwards Applauded by all, and the latter Derided by those very Persons who had given their Directions for it. As for such Unaccuracies as the Critical may discover, *Opere in longo*,<sup>59</sup> I appeal to the Courteous, for a favourable Construction of them; and certainly they will be favourably Judged of, when there is considered the Variety of my other Employments, which have kept me in continual Hurries, I had almost said, like those of the Ninth Sphere,<sup>60</sup> for the few Months in which this Work had been Digesting. It was a thing well thought, by the wise Designers of Chelsey-Colledge,<sup>61</sup> wherein able Historians were one sort of Persons to be maintained; That the Romanists do in one Point condemn the Protestants; for among the Romanists, they don't burden their Professors with any Parochial Incumbrances; but among the Protestants, the very same Individual Man must Preach, Catechize, Administer the Sacraments, Visit<sup>30</sup> the Afflicted, and manage all the parts of Church-Discipline; and if any Books for the Service of Religion, be written, Persons thus extremely incumbered must be the Writers, Now, of all the Churches under Heaven, there are none that expect so much Variety of Service from their Pastors, as those of New-England; and of all the Churches in New-England, there are none that require more than those of Boston, the Metropolis of the English America; whereof one is, by the Lord Jesus Christ, committed<sup>40</sup> unto the Care of the unworthy Hand, by which this History is compiled. Reader, Give me leave humbly to mention, with him in Tully, *Antequam de Re, Pauca de Me!*<sup>62</sup> Constant Sermons, usually more than once, and perhaps three or four times, in a Week, and all the other Duties of a Pastoral Watchfulness, a very large Flock has all this while demanded of me; wherein, if I had been furnished with as many Heads as a Typhoeus, as many Eyes as an Argos, and as many Hands as a Briareus, I might have had Work enough to have employ'd them all; nor hath my Station left me free from Obligations to spend very much time in the Evangelical Service of others also. It would have been a great Sin in me, to have Omitted, or Abated, my Just Cares, to fulfil my Ministry in these things, and in a manner Give my self wholly to them. All the time I have had for my Church-History, hath been perhaps only, or chiefly, that, which I might have taken else for less profitable Recreations; and it hath all been done by Snatches. My Reader will not find me the Person intended in his Littany, when he says, *Libera me ab homine unius Negotis*:<sup>63</sup> Nor have I spent Thirty Years in shaping this my History, as Diodorus Siculus<sup>64</sup> did for his, [and yet both Bodinus<sup>65</sup> and Sigonius<sup>66</sup> complain of the Σφαλματα<sup>67</sup> attending it.] But I wish I could have enjoy'd entirely for this Work, one quarter of the little more than Two Years which have roll'd away since I began it; whereas I have been forced sometimes wholly to throw by the Work whole Months together, and then resume it, but by a stolen hour or two in a day, not without some hazard of incurring the Title which Coryat<sup>68</sup> put upon his History of his Travels, *Crudities hastily gobbled up in five Months*. Protogenes<sup>69</sup> being seven Years in drawing a picture, Appeles<sup>70</sup> upon the sight of it, said, *The Grace of the Work was much allay'd by the length of the Time*. Whatever else there may have been to take off the Grace of the Work, now in the Readers hands, (whereof the Pictures of Great

<sup>57</sup> This appears to be a reference to William Lambarde's writing in *Perambulation of Kent* (1570). "Our speech at this day (for the most part) consisteth of words of one sillable. Which thing Erasmus observing, merily in his Ecclesiast, compareth the English toong to a Dogs barking, that soundeth nothing else, but Baw, waw, waw, in Monosillable."

<sup>58</sup> Polyclethus (fl. 430 B.C.), Greek sculptor.

<sup>59</sup> "In an extensive work."

<sup>60</sup> The ninth, so-called "Crystalline Sphere," or "Primum Mobile," of the Ptolemaic system, whose spinning kept the other eight spheres in rotation and created the "music of the spheres."

<sup>61</sup> King James's College, Chelsea, founded in 1609.

<sup>62</sup> "Before proceeding to the subject, a little about myself."

<sup>63</sup> "Deliver me from the man of only one interest."

<sup>64</sup> Diodorus Siculus, Roman historian contemporary with Caesar and Augustus.

<sup>65</sup> Bodinus (b. 1530), French historian.

<sup>66</sup> Charles Sigonius (1524-1585), Italian writer and philologist.

<sup>67</sup> "Errors."

<sup>68</sup> Thomas Coryat or Coryate (1577-1617), English traveler and author of *Coryate's Crudities*.

<sup>69</sup> Protogenes, Greek painter of the third century.

<sup>70</sup> Appeles, Greek painter, fl. c. 330 B.C.

and Good Men make a considerable part) I am sure there hath not been the *length of the Time* to do it. Our English Martyrologer,<sup>71</sup> counted it a sufficient *Apology*, for what Meanness might be found in the first Edition of his *Acts and Monuments*, that it was *hastily rashed up in about fourteen Months*: And I may Apologize for this Collection of our *Acts and Monuments*, that I should have been glad, in the little more than *Two Years* which have run out, since I enter'd upon it, if I could have had one half of *About fourteen Months* to have entirely devoted thereunto. But besides the *Time*, which the *Daily Services* of my own first, and then many other Churches, have necessarily call'd for, I have lost abundance of precious *Time*, thro' the feeble and broken State of my *Health*, which hath unfitted me for *Hard Study*; I can do nothing to purpose at *Lucubrations*. And yet, in this *Time* also of the two or three Years last past, I have not been excused from the further Diversion of *Publishing* 20 (tho' not so many as they say *Mercurius Trismegistus* did, yet) more than a *Score* of other Books, upon a copious Variety of other Subjects, besides the composing of several more, that are not yet published. . . .

[Mather proceeds, in the remaining portion of this section, to describe the huge compendium of Biblical learning, entitled *Biblia Americana*, which he has compiled. It has never been published. The six folio volumes of manuscript are today in the possession of the Massachusetts Historical Society. In the sixth section of the *Magnalia* he returns to the trials and tribulations of a writer in a frontier society, ending with the following passage equally revelatory of himself and his generation.] 30

§6. . . . However, All these things, and an hundred more such things which I think of, are very small Discouragements for such a Service as I have here endeavoured. I foresee a Recompence, which will abundantly swallow up all Discouragements! It may be *Strato* the Philosopher counted himself well recompensed for his Labours when *Ptolomy* bestow'd fourscore Talents on him. It may be *Archimelus* the 40 Poet counted himself well recompensed, when *Hiero* sent him a thousand Bushels of Wheat for one little Epigram: And *Saleius* the Poet might count himself well recompensed, when *Vespasian* sent him twelve thousand and five hundred *Philippicks*; and *Oppian* the Poet might count himself well recompensed, when *Caracalla* sent him a piece of Gold for every

<sup>71</sup> John Fox or Foxe (1516–1587), English church historian, author of *Acts and Monuments* . . . (1563).

Line which he had inscribed unto him. As I live in a Country where such Recompences never were in fashion; it hath no Preferments for me, and I shall count that I am well Rewarded in it, if I can escape without being heavily Reproached, Censured and Condemned, for what I have done: So I thank the Lord, I should exceedingly Scorn all such mean Considerations, I seek not out for Benefactors, to whom these Labours may be Dedicated: There is ONE to whom all is due! From Him I shall have a Recompence: And what Recompence? The Recompence, whereof I do, with inexpressible Joy, assure my self, is this, *That these my poor Labours will certainly serve the Churches and Interests of the Lord Jesus Christ*. . . .

Unto thee, therefore, O thou Son of God, and King of Heaven, and Lord of all things, whom all the Glorious Angels of Light, unspeakably love to Glorifie; I humbly offer up a poor History of Churches, which own thee alone for their Head, and Prince, and Law-giver; Churches which thou hast purchas'd with thy own Blood, and with wonderful Dispensations of thy Providence hitherto protected and preserved; and of a People which thou didst Form for thy self, to shew forth thy Praises. I bless thy great Name, for thy inclining of me to, and carrying of me through, the Work of this History: I pray thee to sprinkle the Book of this History with thy Blood, and make it acceptable and profitable unto thy Churches, and serve thy Truths and Ways among thy People, by that which thou hast here prepared; for 'tis THOU that hast prepar'd it for them. Amen.

*Quid sum? Nil. Quis sum? Nullus. Sed Gratia CHRISTI, Quod sum, quod Vivo, quodque Laboro, facit.*<sup>72</sup>

#### BOOK II, CHAPTER I

Galcacius Secundus.<sup>73</sup> *The Life of WILLIAM BRADFORD, Esq; Governour of PLYMOUTH Colony.*

*Omnium Somnos, illius vigilantia defendit, omnium otium illius Labor, omnium Delitias illius Industria, omnium vacationem illius occupatio.*<sup>74</sup>

<sup>72</sup> "What am I? Nothing. Who am I? No one. But the Grace of Christ makes me what I am, my life, and what I do."

<sup>73</sup> "The second helmet wearer,"—second, in view of the fact that John Carver had served as governor during the first year of the colony. Upon his death, Bradford was elected.

<sup>74</sup> "His watchfulness secures the sleep of all; his toil, the rest of all; his industry, the pleasures of all; and his diligence, the leisure of all."

§2.<sup>75</sup> Among those Devout People was our *William Bradford*, who was Born Anno 1588 in an obscure Village call'd *Ansterfield*,<sup>76</sup> where the People were as unacquainted with the Bible, as the Jews do seem to have been with *part* of it in the Days of *Josiah*; a most Ignorant and Licentious People, and like unto their Priest. Here, and in some other Places, he had a Comfortable Inheritance left him of his Honest Parents, who died while he was yet a Child, and cast him on the Education, first of his Grand Parents, and then of his Uncles, who devoted him, like his Ancestors, unto the Affairs of Husbandry. Soon a long Sickness kept him, as he would afterwards thankfully say, from the Vanities of Youth, and made him the fitter for what he was afterwards to undergo. When he was about a Dozen Years Old, the Reading of the Scriptures began to cause great Impressions upon him; and those Impressions were much assisted and improved, when he came to enjoy Mr. *Richard Clifton's* Illuminating Ministry, not far 20 from his Abode; he was then also further befriended, by being brought into the Company and Fellowship of such as were then called Professors; though the Young Man that brought him into it, did after become a Prophane and Wicked Apostate. Nor could the Wrath of his Uncles, nor the Scoff of his Neighbours now turn'd upon him, as one of the Puritans, divert him from his Pious Inclinations.

§3. At last beholding how fearfully the Evangelical and Apostolical Church-Form, whereinto the 30 Churches of the Primitive Times were cast by the good Spirit of God, had been Deformed by the Apostacy of the Succeeding Times; and what little Progress the Reformation had yet made in many Parts of Christendom towards its Recovery, he set himself by Reading, by Discourse, by Prayer, to learn whether it was not his Duty to withdraw from the Communion of the Parish-Assemblies, and engage with some Society of the Faithful, that should keep close unto the Written Word of God, as the Rule 40 of their Worship. And after many Distresses of Mind concerning it, he took up a very Deliberate and Understanding Resolution of doing so; which Resolution he cheerfully Prosecuted, although the provoked Rage of his Friends tried all the ways imaginable to

reclaim him from it, unto all whom his Answer was, *Were I like to endanger my Life, or consume my Estate by any ungodly Courses, your Counsels to me were very seasonable: But you know that I have been Diligent and Provident in my Calling, and not only desirous to augment what I have, but also to enjoy it in your Company; to part from which will be as great a Cross as can befall me. Nevertheless, to keep a good Conscience, and walk in such a Way as God has prescribed in his Word, is a thing which I must prefer before you all, and above Life it self. Wherefore, since 'tis for a good Cause that I am like to suffer the Disasters which you lay before me, you have no Cause to be either angry with me, or sorry for me; yea, I am not only willing to part with every thing that is dear to me in this World for this Cause, but I am also thankful that God has given me an Heart so to do, and will accept me so to suffer for him. Some lamented him, some derided him, all dissuaded him: Nevertheless the more they did it, the more fixed he was in his Purpose to seek the Ordinances of the Gospel, where they should be dispensed with most of the Commanded Purity; and the sudden Deaths of the chief Relations which thus lay at him, quickly after convinced him what a Folly it had been to have quitted his Profession, in Expectation of any Satisfaction from them. So to Holland he attempted a removal.*

§4. Having with a great Company of Christians 50 Hired a Ship to Transport them to Holland, the Master perfidiously betrayed them into the Hands of those Persecutors, who Rifled and Ransack'd their Goods, and clapp'd their Persons into Prison in Boston,<sup>77</sup> where they lay for a Month together. But Mr. Bradford being a Young Man of about Eighteen, was dismissed sooner than the rest, so that within a while he had Opportunity with some others to get over to Zealand, through Perils both by Land and Sea not inconsiderable; where he was not long Ashore e're a Viper seized on his Hand, that is, an Officer, who carried him unto the Magistrates, unto whom an envious Passenger had accused him of having fled out of England. When the Magistrates understood the True Cause of his coming thither, they were well satisfied with him; and so he repaired joyfully unto his Brethren at Amsterdam, where the Difficulties to which he afterwards stooped in Learning and Serving of a Frenchman at the Working of

<sup>75</sup> The first paragraph relates briefly the experiences of the Pilgrims before they came to America.

<sup>76</sup> The first edition of the *Magnalia*, printed without benefit of the author's reading the proofs, contains many errors. Ansterfield is a misprint for Austerfield.

<sup>77</sup> Boston, England.

*Silks*, were abundantly Compensated by the *Delight* wherewith he sat under the *Shadow* of our Lord in his purely dispensed Ordinances. At the end of Two Years, he did, being of Age to do it, convert his Estate in *England* into Money; but Setting up for himself, he found some of his Designs by the *Providence* of God frowned upon, which he judged a *Correction* bestowed by God upon him for certain Decays of *Internal Piety*, wherunto he had fallen; the *Consumption* of his *Estate* he thought came to prevent a *Consumption* in his *Virtue*. But after he had resided in *Holland* about half a Score Years, he was one of those who bore a part in that Hazardous and Generous Enterprize of removing into *New-England*, with part of the *English Church* at *Leyden*, where at their first Landing, his dearest Consort accidentally falling Overboard, was drowned in the *Harbour*; and the rest of his Days were spent in the Services, and the Temptations, of that *American Wilderness*.

§5. Here was Mr. *Bradford* in the Year 1621. Unanimously chosen the *Governour* of the Plantation: The Difficulties whercof were such, that if he had not been a Person of more than Ordinary Piety, Wisdom and Courage, he must have sunk under them. He had with a Laudable Industry been laying up a Treasure of *Experiences*, and he had now occasion to use it: Indeed nothing but an *Experienced* Man could have been suitable to the Necessities of the People. The Potent Nations of the *Indians*, into whose Country they were come, would have cut them off, if the Blessing of God upon his Conduct had not quell'd them; and if his Prudence, Justice and Moderation had not overruled them, they had been ruined by their own *Distempers*. One *Specimen* of his Demeanour is to this Day particularly spoken of. A Company of Young Fellows that were newly arrived, were very unwilling to comply with the Governour's Order for *Working* abroad on the Publick Account; and therefore on *Christmass-Day*, when he had called upon them, they excused themselves, with a pretence that it was against their *Conscience* to *Work* such a Day. The Governour gave them no Answer, only that he would spare them till they were better informed; but by and by he found them all at *Play* in the Street, sporting themselves with various Diversions; whereupon Commanding the Instruments of their Games to be taken from them, he

effectually gave them to understand, *That it was against his Conscience that they should play whilst others were at Work; and that if they had any Devotion to the Day, they should show it at Home in the Exercises of Religion, and not in the Streets with Pastime and Frolics*; and this gentle Reproof put a final stop to all such Disorders for the future.

§6. For Two Years together after the beginning of the Colony, whereof he was now Governour, the poor People had a great Experiment of *Man's not living by Bread alone*; for when they were left all together without one Morsel of *Bread* for many Months one after another, still the good Providence of God relieved them, and supplied them, and this for the most part out of the *Sea*. In this low Condition of Affairs, there was no little Exercise for the *Prudence* and *Patience* of the Governour, who cheerfully bore his part in all; And that *Industry* might not flag, he quickly set himself to settle *Propriety*<sup>78</sup> among the *New-Planters*; forseeing that while the whole Country labour'd upon a *Common Stock*, the *Husbandry* and *Business* of the Plantation could not flourish, as *Plato* and others long since dream'd that it would, if a *Community* were established. Certainly, if the Spirit which dwelt in the *Old Puritans*, had not inspired these *New-Planters*, they had sunk under the Burden of these Difficulties; but our *Bradford* had a *double Portion* of that Spirit.

§7. The Plantation was quickly thrown into a *Storm* that almost overwhelmed it, by the unhappy Actions of a Minister sent over from *England* by the *Adventurers* concerned for the Plantation; but by the Blessing of Heaven on the Conduct of the Governour, they Weathered out that *Storm*. Only the *Adventurers* hereupon breaking to pieces, threw up all their Concernments with the *Infant Colony*; whereof they gave this as one Reason, *That the Planters dissembled with His Majesty, and their Friends in their Petition, wherein they declared for a Church-Discipline, agreeing with the French and others of the Reforming Churches in Europe*. Whereas 'twas now urged, that they had admitted into their Communion a Person, who at his Admission utterly renounced the Churches of *England*, (which Person by the way, was that very Man who had made the Complaints against them) and there-

<sup>78</sup> Property.

fore though they denied the *Name of Brownists*,<sup>79</sup> yet they were the *Thing*. In Answer hercunto, the very Words written by the Governour were these; *Whereas you Tax us with dissembling about the French Discipline, you do us wrong, for we both hold and practice the Discipline of the French and other Reformed Churches (as they have published the same in the Harmony of Confessions) according to our Means, in Effect and Substance. But whereas you would tie us up to the French Discipline in every Circumstance, you derogate from the Liberty we have in Christ Jesus. The Apostle Paul would have none to follow him in any thing, but wherein he follows Christ; much less ought any Christian or Church in the World to do it. The French may err, we may err, and other Churches may err, and doubtless do in many Circumstances. That Honour therefore belongs only to the Infallible Word of God, and pure Testament of Christ, to be propounded and followed as the only Rule and Pattern for Direction herein to all Churches and Christians. And it is too great Arrogancy for any Man or Church to think, that he or they have so sounded the Word of God unto the bottom, as precisely to set down the Churches Discipline without Error in Substance or Circumstance, that no other without blame may digress or differ in any thing from the same. And it is not difficult to shew that the Reformed Churches differ in many Circumstances among themselves.* By which Words it appears how far he was free from <sup>30</sup> that Rigid Spirit of Separation, which broke to pieces the Separatists themselves in the Low Countries, unto the great Scandal of the Reforming Churches. He was indeed a Person of a well-temper'd Spirit, or else it had been scarce possible for him to have kept the Affairs of Plymouth in so good a Temper for Thirty Seven Years together; in every one of which he was chosen their Governour, except the Three Years, wherein Mr. Winslow, and the Two Years, wherein Mr. Prince, at the choice of the People, <sup>40</sup> took a turn with him.

§8. The Leader of a People in a Wilderness had need be a Moses; and if a Moses had not led the People of Plymouth-Colony, when this Worthy Person was their Governour, the People had never with

<sup>79</sup> Followers of Robert Browne (1550?-1633), English divine, who first formulated the principles of Congregationalism. The term was often applied loosely to people who demanded separation of church and state, or to designate radicals or extremists.

so much Unanimity and Importunity still called him to lead them. Among many Instances thereof, let this one picce of *Self-denial* be told for a Memorial of him, wheresoever this History shall be considered. The Patent of the Colony was taken in his Name, running in these Terms, To William Bradford, his Heirs, Associates and Assigns: But when the number of the *Freemen* was much Increased, and many New Townships Erected, the General Court there desired of Mr. Bradford, that he would make a Surrender of the same into their Hands, which he willingly and presently assented unto, and confirmed it according to their Desire by his Hand and Seal, reserving no more for himself than was his Proportion, with others, by Agreement. But as he found the Providence of Heaven many ways Recompensing his many Acts of *Self-denial*, so he gave this Testimony to the Faithfulness of the Divine Promises; *That he had forsaken Friends, Houses and Lands for the sake of the Gospel, and the Lord gave them him again.* Here he prospered in his Estate; and besides a Worthy Son which he had by a former Wife, he had also Two Sons and a Daughter by another, whom he Married in this Land.

§9. He was a Person for Study as well as Action; and hence, notwithstanding the Difficulties through which he passed in his Youth, he attained unto a notable Skill in Languages; the Dutch Tongue was become almost as Vernacular to him as the English; the French Tongue he could also manage; the Latin and the Greek he had Mastered; but the Hebrew he most of all studied, *Because*, he said, *he would see with his own Eyes the Ancient Oracles of God in their Native Beauty.* He was also well skill'd in History, in Antiquity, and in Philosophy; and for Theology he became so versed in it, that he was an Irrefragable Disputant against the Errors, especially those of Anabaptism, which with Trouble he saw rising in his Colony; wherefore he wrote some Significant things for the Confutation of those Errors. But the Crown of all was his Holy, Prayerful, Watchful and fruitful Walk with God, wherein he was very Exemplary.

§10. At length he fell into an Indisposition of Body, which rendred him unhealthy for a whole Winter; and as the Spring advanced, his Health yet more declined; yet he felt himself not what he counted Sick, till one Day; in the Night after which,

the God of Heaven so fill'd his Mind with *Ineffable Consolations*, that he seemed little short of *Paul*, rapt up into the *Unutterable* Entertainments of *Paradise*. The next Morning he told his Friends, *That the good Spirit of God had given him a Pledge of his Happiness in another World, and the First-fruits of his Eternal Glory*: And on the Day following he died, May 9. 1657. in the 69th Year of his Age—lamented by all the Colonies of *New-England*, as a Common Blessing and Father to them all.

O mihi si Similis Contingat Clausula Vitæ!<sup>80</sup>

Plato's brief Description of a Governour, is all that I will now leave as his Character, in an

#### EPITAPH.

Νομῆς Τροφὸς ἀγέλης ἀνθρωπίνης.<sup>81</sup>

MEN are but FLOCKS: BRADFORD beheld their Need,  
And long did them at once both Rule and Feed.

[Following the life of Bradford, Mather goes on, in Chapter II of Book II, to relate the lives of the successors of Bradford as governor of Plymouth Colony; Chapter III lists the "Assistants," or "Senators," as Mather calls them. Chapter IV is devoted to the life of John Winthrop, first governor of the Massachusetts Bay Colony.]

#### BOOK II, CHAPTER IV

Nehemias Americanus.<sup>82</sup> *The Life of JOHN WINTHROP, Esq; Governour of the MASSACHUSETT Colony.*

Quicunq; Venti erunt, Ars nostra certe non aberit.  
CICERO.<sup>83</sup>

§1. Let Greece boast of her patient *Lycurgus*, the Lawgiver, by whom *Diligence, Temperance, Fortitude* and *Wit* were made the *Fashions* of a therefore Long-lasting and Renowned Commonwealth: Let Rome tell of her Devout *Numa*, the Lawgiver, by whom the most famous Commonwealth saw *Peace* Triumphant over extinguished *War* and cruel *Plunders*; and *Murders* giving place to the more mollifying Exercises of his *Religion*. Our *New-England* shall tell and boast of her WINTHROP, a Lawgiver, as patient as *Lycurgus*, but not admitting any of his Criminal Disorders; as devout as *Numa*, but not liable to any of his Heathenish Madnesses; a Governour in whom the Excellencies of *Christianity* made a most improving Addition unto the *Virtues*, wherein even without those he would have made a *Parallel* for the Great

Men of Greece, or of Rome, which the Pen of a *Plutarch* has Eternized.

§2. A stock of *Heroes* by right should afford nothing but what is *Heroical*; and nothing but an extream Degeneracy would make any thing less to be expected from a Stock of *Winthrops*. Mr. *Adam Winthrop*, the Son of a Worthy Gentleman wearing the same Name, was himself a Worthy, a Discreet, and a Learned Gentleman, particularly Eminent for *Skill* in the *Law*, nor without Remark for *Love* to the *Gospel*, under the Reign of King *Henry VIII*; And Brother to a Memorable Favourer of the *Reformed Religion* in the Days of *Queen Mary*, into whose Hands the famous martyr *Philpot* committed his *Papers*, which afterwards made no Inconsiderable part of our *Martyr-Books*. This Mr. *Adam Winthrop* had a Son of the same Name also, and of the same Endowments and Employments with his Father; and this Third *Adam Winthrop* was the Father of that Renowned *John Winthrop*, who was the Father of *New-England*, and the Founder of a *Colony*, which, upon many Accounts, like him that Founded it, may challenge the *First Place* among the *English* Glories of *America*. Our JOHN WINTHROP, thus Born at the Mansion-House of his Ancestors, at *Groton* in *Suffolk*, on June 12, 1587,<sup>84</sup> enjoyed afterwards an agreeable Education. But though he would rather have Devoted himself unto the Study of Mr. *John Calvin*, than of Sir *Edward Cook*; nevertheless, the Accomplishments of a Lawyer were those wherewith Heaven made his chief Opportunities to be Serviceable.

§3. Being made, at the unusually early Age of *Eighteen*, a *Justice of Peace*, his Virtues began to fall under a more general Observation; and he not only so Bound himself to the Behaviour of a *Christian*, as to become Exemplary for a Conformity to the *Laws of Christianity* in his own Conversation, but also discovered a more than ordinary Measure of those Qualities which adorn an Officer of *Humane Society*. His *Justice* was Impartial, and used the *Ballance* to weigh not the *Cash*, but the *Case* of those who were before him: *Prosopolatry*<sup>85</sup> he reckoned as bad as *idolatry*:<sup>86</sup> His *Wisdom* did exquisitely Temper things according to the *Art of Governing*, which is a Business of more Contrivance than the *Seven Arts* of the *Schools*: Oyer still went before *Terminer*<sup>87</sup> in all

<sup>80</sup> "O, that the end of life may be as sweet for me."

<sup>81</sup> "Shepherd and feeder of the human flock."

<sup>82</sup> "The American Nehemiah."

<sup>83</sup> "Whatever winds shall blow, our art surely shall not die."

<sup>84</sup> Now generally given as January 12, 1587/8.

<sup>85</sup> "Worship of persons."

<sup>86</sup> "Worship of Idols."

<sup>87</sup> "Hearing" still went before "Judging."

his Administrations: his *Courage* made him *Dare to do right*, and fitted him to stand among the *Lions* that have sometimes been the *Supporters* of the Throne: All which Virtues he rendred the more Illustrious, by *Emblazoning* them with the Constant *Liberality* and *Hospitality* of a *Gentleman*. This made him the *Terror* of the Wicked, and the *Delight* of the Sober, the *Envy* of the many, but the *Hope* of those who had any *Hopeful Design* in hand for the Common Good of the Nation and the Interests of Religion.

§4. Accordingly when the *Noble Design* of carrying a Colony of *Chosen People* into an *American Wilderness*, was by some Eminent Persons undertaken, *This* Eminent Person was, by the Consent of all, *Chosen* for the *Moses*, who must be the Leader of so great an Undertaking: And indeed nothing but a *Mosaic Spirit* could have carried him through the *Temptations*, to which either his *Farewel* to his own *Land*, or his *Travel* in a *Strange Land*, must needs expose a Gentleman of his *Education*. Wherefore 20 having Sold a fair Estate of Six or Seven Hundred a Year, he Transported himself with the Effects of it into *New-England* in the Year 1630, where he spent it upon the service of a famous Plantation, founded and formed for the Seat of the most *Reformed Christianity*: And continued there, conflicting with *Temptations* of all sorts, as many Years as the *Nodes of the Moon* take to dispatch a revolution.<sup>88</sup> Those Persons were never concerned in a *New-Plantation*, who know not that the unavoidable Difficulties of such a 30 thing, will call for the *Prudence* and *Patience* of a Mortal Man to Encounter therewithal; and they must be very insensible of the Influence, which the *Just Wrath* of Heaven has permitted the *Devils* to have upon *this World*, if they do not think that the Difficulties of a *New-Plantation*, devoted unto the *Evangelical Worship* of our Lord Jesus Christ, must be yet more than Ordinary. How *Prudently*, how *Patiently*, and with how much *Resignation* to our Lord Jesus Christ, our brave *Winthrop* waded through these 40 *Difficulties*, let Posterity Consider with Admiration. And know, that as the *Picture* of this their *Governour*, was, after his *Death*, hung up with Honour in the *State-House* of his Country, so the *Wisdom*, *Courage*, and *Holy Zeal* of his *Life*, were an Example well-worthy to be Copied by all that shall succeed him in *Government*.

§5. Were he now to be consider'd only as a *Chris-*

*tian*, we might therein propose him as greatly Imitable. He was a very *Religious Man*; and as he strictly kept his *Heart*, so he kept his *House*, under the Laws of *Piety*; *there* he was every Day constant in Holy Duties, both Morning and Evening, and on the *Lord's Days*, and *Lectures*; though he *wrote* not after the Preacher, yet such was his *Attention*, and such his *Retention* in *Hearing*, that he repeated unto his *Family* the *Sermons* which he had heard in the Congregation. But it is chiefly as a *Governour* that he is now to be consider'd. Being the *Governour* over the considerablest Part of *New-England*, he maintain'd the Figure and Honour of his Place with the Spirit of a true *Gentleman*; but yet with such obliging *Condescension* to the Circumstances of the Colony, that when a certain troublesome and malicious Calumniator, well known in those times, printed his Libellous *Nick-Names* upon the chief Persons here, the worst *Nick-Name* he could find for the Governour was *John Temper-well*; and when the Calumnies of that ill Man caused the Arch-Bishop to Summon one Mr. *Cleaves* before the King, in hopes to get some Accusation from him against the Country, Mr. *Cleaves* gave such an Account of the Governour's laudable Carriage in all Respects, and the serious Devotion wherewith Prayers were both publicly and privately made for His Majesty, that the King expressed himself most highly *Pleased* therewithal, only *Sorry* that so Worthy a Person should be no better Accommodated than with the Hardships of *America*. He was, indeed, a *Governour*, who had most exactly studied that Book, which, pretending to Teach *Politicks*, did only contain *Three Leaves*, and but *One Word* in each of those Leaves, which Word was, MODERATION. Hence, though he were a Zealous Enemy to all *Vice*, yet his *Practice* was according to his *Judgment* thus expressed; *In the Infancy of Plantations, Justice should be administered with more Lenity than in a settled State; because People are more apt then to Transgress; partly out of Ignorance of new Laws and Orders, partly out of Oppression of Business, and other straits.* LENTO GRADU<sup>89</sup> *was the old rule; and if the Strings of a new Instrument be wound up unto their height, they will quickly crack.* But when some Leading and Learned Men took Offence at his Conduct in this Matter, and upon a Conference gave it in as their Opinion, *That a stricter Discipline was to be used in the beginning of a*

<sup>88</sup> 18.6 years.

<sup>89</sup> "By slow degrees."

*Plantation, than after its being with more Age established and confirmed*, the Governour being readier to see *his own Errors* than *other Men's*, professed his Purpose to endeavour their Satisfaction with less of *Lenity* in his Administrations. At that *Conference* there were drawn up several other *Articles* to be observed between the Governour and the rest of the *Magistrates*, which were of this Import: *That the Magistrates*, as far as might be, should aforehand ripen their *Consultations*, to produce that *Unanimity* 10 in their *Publick Votes*, which might make them liker to the *Voice of God*; *that* if Differences fell out among them in their *Publick Meetings*, they should speak only to the Case, without any Reflection, with all due *Modesty*, and but by way of *Question*; or Desire the deferring of the *Cause* to further time; and after *Sentence* to imitate privately no *Dislike*; *that* they should be more *Familiar*, Friendly and Open unto each other, and more frequent in their *Visitations*, and not any way expose each other's 20 *Infirmities*, but seek the *Honour* of each other, and all the Court; *that* One Magistrate shall not cross the Proceedings of another, without first advising with him; and *that* they should in all their Appearances abroad, be so circumstanced as to prevent all Contempt of Authority; and *that* they should Support and Strengthen all *Under Officers*. All of which *Articles* were observed by no Man more than by the Governour himself.

§6. But whilst he thus did as our *New-English* 30 *Nehemiah*, the part of a Ruler in Managing the Public Affairs of our *American Jerusalem*, when there were *Tobijahs* and *Sanballats* enough to vex him, and give him the Experiment of *Luther's* Observation, *Omnis qui regit est tanquam signum, in quod omnia Jacula, Satan et Mundus dirigunt*,<sup>90</sup> he made himself still an exacter *Parallel* unto that governour of *Israel*, by doing the part of a *Neighbour* among the distressed People of the *New-Plantation*. To teach them the *Frugality* necessary for those times, he 40 abridged himself of a Thousand comfortable things, which he had allow'd himself elsewhere: His *Habit* was not that *soft Raiment*, which would have been disagreeable to a *Wilderness*; his *Table* was not covered with the *Superfluities* that would have invited unto *Sensualities*: *Water* was commonly his own *Drink*, though he gave *Wine* to others. But at the

same time his *Liberality* unto the Needy was even beyond measure *Generous*; and therein he was continually causing the *Blessing of him that was ready to Perish to come upon him, and the Heart of the Widow and the Orphan to sing for Joy*: But more than those of *Deccas'd Ministers*, whom he always treated with a very singular *Compassion*; among the Instances whereof we still enjoy with us the *Worthy* and now *Aged Son* of that Reverend *Higginson*, whose Death left his Family in a wide World soon after his arrival here, publicly acknowledging the *Charitable Winthrop* for his *Foster-Father*. It was oftentimes no small Trial unto his *Faith*, to think, *How a Table for the People should be furnished when they first came into the Wilderness!* And for very many of the People, his own good Works were needful, and accordingly employed for the answering of his *Faith*. Indeed, for a while the Governour was the *Joseph*, unto whom the whole Body of the People repaired when their *Corn* failed them: And he continued Relieving of them with his *open-handed Bounties*, as long as he had any Stock to do it with; and a lively *Faith* to see the return of the *Bread after many Days*, and not *Starve* in the Days that were to pass till that *return* should be *seen*, carried him chearfully through those Expenses.

Once it was observable that, on *February 5, 1630*,<sup>91</sup> when he was distributing the last Handful of the *Meal in the Barrel* unto a Poor Man distressed by the *Wolf at the Door*, at that Instant they spied a Ship arrived at the Harbour's Mouth, laden with *Provisions* for them all. Yea, the Governour sometimes made his own *private Purse* to be the *Publick*: not by *sucking* into it, but by *squeezing* out of it; for when the *Publick Treasure* had nothing in it, he did himself defray the Charges of the *Publick*. And having learned that Lesson of our Lord, *That it is better to Give, than to Receive*, he did, at the General Court, when he was a Third time chosen Governour, make a Speech unto this purpose: *That he had received Gratuities from divers Towns, which he accepted with much Comfort and Content; and he had likewise received Civilities from particular Persons, which he could not refuse without Incivility in himself: Nevertheless, he took them with a trembling Heart, in regard of God's Word, and the Conscience of his own Infirmities; and therefore he desired them that they would not hereafter take it Ill if he refused*

<sup>90</sup> "Everyone who rules is like a target against which Satan and the world aim their darts."

<sup>91</sup> That is, February 5, 1630/1.

*such Presents for the time to come.* 'Twas his Custom also to send some of his Family upon Errands unto the Houses of the Poor, about their Meal-time, on purpose to *spy* whether they *wanted*; and if it were found that they *wanted*, he would make *that* the Opportunity of sending Supplies unto them. And there was one Passage of his *Charity* that was perhaps a little *unusual*: In an hard and long Winter, when Wood was very scarce at *Boston*, a Man gave him a private *Information* that a needy Person in the Neighbourhood stole Wood sometimes from *his* Pile; whereupon the Governour in a seeming Anger did reply, *Does he so? I'll take a Course with him; go, call that man to me, I'll warrant you I'll cure him of Stealing!* When the Man came, the Governour considering that if he had *Stoln*, it was more out of *Necessity* than *Disposition*, said unto him, *Friend, it is a severe Winter, and I doubt you are but meanly provided for Wood; wherefore I would have you supply your self at my Wood-Pile till this cold Season be* <sup>20</sup> *over.* And he then Merrily asked his Friends, *Whether he had not effectually cured this Man of Stealing his Wood?*

§7. One would have imagined that so good a Man could have had no *Enemies*; if we had not had a daily and woful Experience to Convince us, that *Goodness* it self will *make* *Enemies*. It is a wonderful Speech of *Plato*, (in one of his books, *De Republica*.) *For the trial of true Vertue, 'tis necessary that a good man μηδὲν ἀδικῶν, δοῦσαν εἴη τὴν μεγίστην ἀδικίαν;* <sup>30</sup> *Tho' he do no unjust thing, should suffer the Infamy of the greatest Injustice.* The Governour had by his unspotted *Integrity* procured himself a great Reputation among the *People*; and then the Crime of *Popularity* was laid unto his Charge by such, who were willing to deliver him from the Danger of having *all Men speak well of him.* Yea, there were Persons eminent both for Figure and for Number, unto whom it was almost *Essential* to *dislike* every thing that came from *him*; and yet *he* always maintained <sup>40</sup> an Amicable Correspondence with them; as believing that they acted according to their Judgment and Conscience, or that their Eyes were held by some *Temptation* in the worst of all their Oppositions. Indeed, his *right Works* were so many, that they exposed him unto the *Envy* of his Neighbours; and of such *Power* was that *Envy*, that sometimes he could not *stand before it*; but it was by *not standing* that he most effectually *withstood* it all. Great Attempts were

sometimes made among the *Freemen* to get him left out from his Place in the *Government* upon little Pretences, lest by the too *frequent choice* of *One Man*, the *Government* should cease to be by *Choice*; and with a particular aim at *him*, Sermons were Preached at the Anniversary Court of *election*, to dissuade the *Freemen* from chusing *One Man* Twice together. This was the Reward of his *extraordinary Serviceableness!* But when these Attempts *did* succeed, as they sometimes *did*, his Profound *Humility* appeared in that *Equality of Mind*, wherewith he applied himself cheerfully to serve the Country in whatever Station their *Votes* had allotted for him. And one Year when the *Votes* came to be Numbered, there were found Six less for Mr. *Winthrop*, than for another Gentleman who then stood in Competition: But several other persons regularly Tending their *Votes* before the *Election* was published, were upon a very frivolous Objection, refused by some of the Magistrates, that were afraid lest the *Election* should at last fall upon Mr. *Winthrop*: Which, though it was well perceived, yet such was the *Self-denial* of this *Patriot*, that he would not permit any Notice to be taken of the Injury. But these *Trials* were nothing in Comparison of those harsher and harder *Treats*, which he sometimes had from the *Frowardness* of not a few in the Days of their *Paroxisms*; and from the *Faction* of some against him, not much unlike that of the *Piazzis* in *Florence* against the Family of the *Medices*: All of which he at last Conquered by Conforming to the famous Judge's Motto, *Prudens qui Patiens.* <sup>92</sup> The Oracles of God have said, *Envy is rottenness to the Bones*; and *Gulielmus Parisien-sis* <sup>93</sup> applies it unto Rulers, who are as it were the *bones* of the Societies which they belong unto: *Envy*, says he, *is often found among them, and it is rottenness unto them.* Our *Winthrop* Encountred this *Envy* from others, but Conquered it, by being free from it himself.

§8. Were it not for the sake of introducing the Exemplary Skill of this Wise Man, *at giving soft Answers*, one would not chuse to Relate those Instances of *Wrath*, which he had sometimes to Encounter with; but he was for his *Gentleness*, his *Forbearance*, and *Longanimity*, a Pattern so worthy to be Written *after*, that something must here be Written of it. He seemed indeed never to speak any

<sup>92</sup> "He is prudent who is patient."

<sup>93</sup> William, who became Bishop at Paris (in 1228).

other Language than that of *Theodosius*:<sup>94</sup> *If any Man speak evil of the Governour, if it be thro' Lightness, 'tis to be contemned; if it be thro' Madness, 'tis to be pitied, if it be thro' Injury, 'tis to be remitted.* Behold, Reader, the *Meekness of Wisdom* notably exemplified! There was a time when he received a very sharp Letter from a Gentleman who was a Member of the Court, but he delivered back the Letter unto the Messengers that brought it, with such a Christian Speech as this: *I am not willing to keep such a matter of Provocation by me!* Afterwards the same Gentleman was compelled by the scarcity of Provisions to send unto him that he would Sell him some of his Cattel; whereupon the Governour prayed him to accept what he had sent for as a *Token* of his Good Will; but the Gentleman returned him this Answer: *Sir, your overcoming of your self hath overcome me;* and afterwards gave Demonstration of it. The French have a saying, *That Un Honeste Homme, est un Homme mesle!* A good Man is a mixt 20 Man; and there hardly ever was a more sensible Mixture of those Two things, *Resolution* and *Condescension*, than in this good Man. There was a time when the Court of *Election*, being for fear of Tumult, held at *Cambridge*, May 17. 1637. The Sectarian part of the Country, who had the Year before gotten a *Governour* more unto their Mind, had a Project now to have confounded the *Election*, by demanding that the Court would consider a *Petition* then tendered before their Proceeding thereunto. Mr. Win- 30 throp saw that this was only a Trick to throw all into Confusion, by putting off the *Choice* of the *Governour* and *Assistants* until the *Day* should be over; and therefore he did, with a strenuous *Resolution*, procure a disappointment unto that mischievous and ruinous Contrivance. Nevertheless, Mr. Winthrop himself being by the Voicc of the Freemen in this Exigence chosen the *Governour*, and all of the other Party left out, that ill-affected Party discovered the *Dirt* and *Mire*, which remained with them, after the 40 *Storm* was over; particularly the *Serjeants*, whose office 'twas to attend the *Governour*, laid down their Halberts; but such was the *Condescension* of this Governour, as to take no present Notice of this Anger and Contempt, but only Order some of his own Servants to take the Halberts; And when the Country manifested their deep Resentments of the Affront thus offered him, he prayed them to overlook it. But

<sup>94</sup> Theodosius I (346?-395), Roman emperor (379-395).

it was not long before a Compensation was made for these things by the *doubled Respects* which were from all Parts paid unto him. Again, there was a time when the Suppression of an *Antinomian* and *Familistical* faction,<sup>95</sup> which extremely threatened the Ruin of the Country, was generally thought much owing unto this Renowned man; and therefore when the Friends of that faction could not wreak their Displeasur on him with any *Politick* Vexations, they set themselves to do it by *Ecclesiastical* ones.<sup>96</sup> Accordingly when a sentence of *Banishment* was passed on the Ringleaders of those Disturbances, who

—*Maria et Terras, Cælumq; profundum,  
Quippe ferant, Rapidi, secum vertantq; per Auras;*<sup>97</sup>

many at the Church of *Boston*, who were then that way too much inclined, most earnestly solicited the Elders of that Church, whereof the Governour was a Member, to call him forth as an *Offender*, for passing of that Sentence. The Elders were unwilling to do any such thing; but the governour understanding the *Ferment* among the *People* took that occasion to make a Speech in the Congregation to this Effect: 'Brethren: Understanding that some of you have desired that I should Answer for an *Offence* lately taken 'among you; had I been called upon so to do, I would, 'First, Have advised with the Ministers of the Country, whether the *Church* had Power to call in Question the *Civil Court*; and I would, Secondly, Have 'advised with the rest of the Court, whether I might 'discover their Counsels unto the *Church*. But though 'I know that the Reverend Elders of this Church, and 'some others, do very well apprehend that the *Church* 'cannot enquire into the Proceedings of the Court; 'yet, for the Satisfaction of the weaker, who do not 'apprehend it, I will declare my Mind concerning it. 'If the *Church* have any such Power, they have it 'from the Lord Jesus Christ; but the Lord Jesus Christ 'hath disclaimed it, not only by *Practice*, but also by 'Precept, which we have in his Gospel, *Mat. 20. 25,* '26. It is true, indeed, that *Magistrates*, as they are

<sup>95</sup> A reference to the difficulties occasioned by Anne Hutchinson.

<sup>96</sup> Misprint for *Ecclesiastical*. The passage refers to the Antinomian controversy provoked by Anne Hutchinson and John Wheelwright in 1636-1637. Besides maintaining the "heretical" doctrine that men could commune directly with God, the Antinomians held that the moral law could be disregarded since faith alone is needed for salvation.

<sup>97</sup> "Rack sea and land and sky with mingled wrath,  
In the wild tumult of their stormy path."

'Church-Members, are accountable unto the Church for their Failings; but that is when they are out of their Calling. When *Uzziah* would go offer Incense in the Temple the Officers of the Church called him to an account, and withstood him; but when *Asa* put the Prophet in Prison, the Officers of the Church did not call him to an account for that. If the Magistrate shall in a private way wrong any Man, the Church may call him to an Account for it; but if he be in Pursuance of a Course of Justice, though the thing is that he does be unjust, yet he is not accountable for it before the Church. As for myself, I did nothing in the Causes of any of the Brethren, but by the Advice of the Elders of the Church. Moreover, in the Oath, which I have taken there is this Clause: *In all Cases wherein you are to give your Vote, you shall do as in your Judgment and Conscience you shall see to be Just, and for the publick Good.* And I am satisfied, it is most for the Glory of God, and the publick Good, that there has been such a Sentence passed; yea, those Brethren are so divided from the rest of the Country in their Opinions and Practices, that it cannot stand with the publick Peace for them to continue with us; *Abraham* saw that *Hagar* and *Ishmael* must be sent away.' By such a Speech he marvellously convinced, satisfied and mollified the uneasy Brethren of the Church; *Sic cunctus Pelagi cecidit Frigor.*<sup>98</sup> And after a little patient waiting, the differences all so wore away, that the Church, meerly as a Token of Respect unto the Governour when he had newly met with some Losses in his Estate, sent him a Present of several Hundreds of Pounds. Once more there was a time when some active Spirits among the Deputies of the Colony, by their endeavours not only to make themselves a Court of Judicature, but also to take away the Negative<sup>99</sup> by which the Magistrates might check their Votes, had like by over-driving to have run the whole Government into something too Democratical. And if there were a Town in *Spain* undermined by *Coneys*, another town in *Thrace* destroyed by *Moles*, a third in *Greece* ransacked by *Frogs*, a fourth in *Germany* subverted by *Rats*; I must on this Occasion add, that there was a Country in *America* like to be confounded by a *Swine*. A certain stray Sow being found, was claimed by Two several Persons with a Claim so equally maintained on both sides, that after Six or Seven years'

Hunting the Business from one Court unto another, it was brought at last into the General Court, where the final Determination was, that it was impossible to proceed unto any Judgment in the Case. However, in the debate of this Matter, the Negative of the Upper-House upon the Lower in that Court was brought upon the Stage; and agitated with so hot a Zeal, that a little more and all had been in the Fire. In these Agitations, the Governour was informed that an offence had been taken by some eminent Persons at certain passages in a Discourse by him written thereabout; whereupon, with his usual Condescendency, when he next came into the General Court, he made a Speech of this Import: 'I understand that some have taken Offence at something that I have lately written; which Offence I desire to remove now, and begin this Year in a reconciled State with you all. As for the Matter of my Writing, I had the Concurrence of my Brethren; it is a Point of Judgment which is not at my own disposing. I have examined it over and over again by such Light as God has given me, from the Rules of Religion, Reason, and Custom; and I see no cause to Retract any thing of it: Wherefore I must enjoy my Liberty in that, as you do yourselves. But for the Manner, this, and all that was blame-worthy in it, was wholly my own; and whatsoever I might alledge for my own Justification therein before Men, I wave it, as now setting my self before another Judgment-Seat. However, what I wrote was upon great Provocation, and to vindicate my self and others from great Aspersion; yet that was no sufficient Warrant for me to allow any Distemper of Spirit in my self; and I doubt I have been too prodigal of my Brethren's Reputation; I might have maintained my Cause without casting any Blemish upon others, when I made that my Conclusion, And now let Religion and sound Reason give Judgment in the Case; it looked as if I arrogated too much unto my self, and too little to others. And when I made that Profession, That I would maintain what I wrote before all the World, though such Words might modestly be spoken, yet I perceive an unbecoming Pride of my own Heart breathing in them. For these failings, I ask Pardon of God and Man.'

*Sic ait, et dicto citius Tumida Equora placat.  
Collectasq; fugat; Nubes, Solemq; reducit.*<sup>100</sup>

<sup>98</sup> "So all the din of the sea subsided."

<sup>99</sup> The veto power.

<sup>100</sup> "Thus he spoke, and so calmed the swelling sea, dispelled the gathered clouds, and brought back the sun."

This *acknowledging Disposition* in the Governour made them all *acknowledge*, that he was truly a *Man of an excellent Spirit*. In fine, the *Victories* of an *Alexander*, an *Hannibal*, or a *Cæsar* over *other Men*, were not so Glorious as the *Victories* of this great Man over *himself*, which also at last prov'd *Victories* over *other Men*.

§9. But the stormiest of all the *Trials* that ever befel this Gentleman, was in the Year 1645, when he was, in *Title*, no more than *Deputy-Governour* of the Colony. If the famous *Cato* were Forty-four times call'd into Judgment, but as often acquitted; let it not be wondred, and if our Famous *Winthrop* were one time so. There hapning certain Seditious and Mutinous Practices in the town of *Hingham*, the *Deputy-Governour*, as legally as prudently interposed his *Authority* for the checking of them: Whereupon there followed such an *Enchantment* upon the minds of the *Deputies* in the General Court, that upon a scandalous Petition of the Delinquents unto them, wherein a pretended Invasion made upon the *Liberties* of the *People* was complained of, the *Deputy-Governour*, was most irregularly call'd forth unto an *Ignominious Hearing* before them in a vast Assembly; whereto with a *Sagacious Humility* he *consented*, although he shew'd them how he might have *Refused* it. The result of that *Hearing* was, that notwithstanding the touchy *Jealousie* of the *People* about their *Liberties* lay at the bottom of all this Prosecution, yet Mr. *Winthrop* was publickly *Acquitted*, and the Offenders were severally *Fined* and *Censured*. But Mr. *Winthrop* then resuming the place of *Deputy-Governour* on the Bench, saw cause to speak unto the *Root of the Matter* after this manner. 'I shall not now speak anything about the past *Proceedings* of this Court, or the *Persons* therein concerned. Only 'I bless God that I see an Issue of this troublesome *Affair*. I am well satisfied that I was publickly *Acquitted*, and that I am now publickly *Acquitted*. But 'though I am justified before *Men*, yet it may be the Lord hath seen so much amiss in my *Administrations*, as calls me to be *humbled*; and, indeed for me 'to have been thus charged by *Men*, is it self a *Matter of Humiliation*, whereof I desire to make a right use 'before the Lord. If *Miriam's* Father spit in her Face, 'she is to be *Ashamed*. But give me leave, before you 'go, to say something that may rectify the *Opinions* 'of many *People*, from whence the *Distempers* have 'risen that have lately prevailed upon the *Body* of

this *People*. The Questions that have troubled the 'country have been about the *Authority of the Magistracy*, and the *Liberty of the People*. It is *You* who 'have called us unto this Office; but being thus called, 'we have our *Authority* from God; it is the *Ordinance of God*, and it hath the *Image of God* stamped upon 'it; and the contempt of it has been vindicated by 'God with terrible Examples of his Vengeance. I entreat you to consider, That when you chuse *Magistrates*, you take them from among your selves, *Men subject unto like Passions with your selves*. If you 'see our *Infirmities*, reflect on your own, and you will 'not be so severe *Censurers* of ours. We count him a 'good *Servant* who *breaks not his Covenant*: the *Covenant* between *Us* and *You*, is the *Oath* you have 'taken of us, which is to this Purpose, *That we shall govern you, and judge your Causes according to God's Laws, and our own, according to our best Skill*. 'As for our *Skill*, you must run the hazard of it; and 'if there be an Error, not in the *Will*, but only in 'Skill, it becomes you to bear it. Nor would I have you 'to mistake in the Point of your own *Liberty*. There is 'a *Liberty* of corrupt Nature, which is affected both 'by *Men* and *Beasts*, to do what they list; and this 'Liberty is inconsistent with *Authority*, impatient of 'all Restraint; by this *Liberty*, *Sumus Omnes Deteriores*; <sup>101</sup> 'Tis the Grand Enemy of *Truth* and *Peace*, 'and all the *Ordinances* of God are bent against it. 'But there is a *Civil*, a *Moral*, a *Federal Liberty*, which 'is the proper End and Object of *Authority*; it is a 'Liberty for that only which is *just* and *good*; for this 'Liberty you are to stand with the hazard of your very 'Lives; and whatsoever Crosses it, is not *Authority*, but 'a *Distemper* thereof. This *Liberty* is maintained in a 'way of *Subjection to Authority*; and the *Authority* 'set over you will in all *Administrations* for your good 'be quietly submitted unto, by all but such as have a 'Disposition to *shake off the Yoke*, and lose their true 'Liberty, by their murmuring at the Honour and 'Power of *Authority*.'

The *Spell* that was upon the Eyes of the *People* being thus dissolved, their *distorted* and *enraged* notions of things all vanished; and the *People* would not afterwards entrust the Helm of the *Weather-beaten Bark* in any other Hands but Mr. *Winthrop's* until he Died.

§10. Indeed, such was the *Mixture* of *distant Qualities* in him, as to make a most admirable

<sup>101</sup> "We are all the worse."

*Temper*; and his having a certain *Greatness of Soul*, which rendered him Grave, Generous, Courageous, Resolved, Well-applied, and every way a *Gentleman* in his Demcanour, did not hinder him from taking sometimes the old *Roman's* way to avoid Confusions, namely, *Cedendo*;<sup>102</sup> or from discouraging some things which are agreeable enough to most that wear the name of *Gentlemen*. Hereof I will give no instances but only *oppose* two Passages of his Life.

In the Year 1632, the Governour, with his Pastor, Mr. *Wilson*, and some other Gentleman, to settle a good understanding between the Two Colonies, travelled as far as *Plymouth*, more than Forty Miles, through an Howling Wilderness, no better accommodated in those early Days than the *Princes* that in *Solomon's* time saw *Servants on Horseback*, or than *Genus* and *Species* in the old Epigram, *going on Foot*. The difficulty of the *Walk*, was abundantly compensated by the Honourable, *first Reception*, and then *Dismission*, which they found from the Rulers of *Plymouth*; and by the good Correspondence thus established between the New Colonies, who were like the floating Bottels wearing this Motto, *Si Collidimur, Frangimur*.<sup>103</sup> But there were at this time in *Plymouth* two Ministers, leavened so far with the Humours of the *Rigid Separation*, that they insisted vehemently upon the Unlawfulness of calling any *unregenerate* Man by the Name of *Good-man such an One*, until by their indiscreet urging of this Whimsy, the place began to be disquieted. The wiser People being troubled at these Trifles, they took the opportunity of Governour *Winthrop's* being there, to have the thing publicly propounded in the Congregation; who in answer thereunto, distinguished between a *Theological* and a *Moral Goodness*; adding, that when *Juries* were first used in *England*, it was usual for the *Crier*, after the Names of Persons fit for that Service were called over, to bid them all, *Attend, Good Men and True*; whence it grew to be a *Civil Custom* in the *English Nation*, for Neighbours<sup>40</sup> living by one another, to call one another *Good-man such an one*: And it was pity now to make a stir about a *Civil Custom*, so innocently introduced. And that Speech of Mr. *Winthrop's* put a lasting stop to the Little, Idle, Whimsical *Conceits*, then beginning to grow Obstreperous. Nevertheless, there was one *Civil Custom* used in (and in few *but*) the *English*

*Nation*, which this Gentleman did endeavour to abolish in *this Country*; and that was, *The usage of Drinking to one another*. For although by *Drinking to one another*, no more is meant than an act of *Courtesie*, when one going to *Drink*, does Invite another to do so too, for the same Ends with himself; nevertheless the Governour (not altogether unlike to *Cleomenes*, of whom 'tis reported by *Plutarch*, ἀποντι οὐδεις ποτηριον προσεφερε. *Nolenti poculam nunquam præbuit*,<sup>104</sup>) considered the *Impertinency* and *Insignificancy* of this Usage, as to any of those Ends that are usually pretended for it; and that indeed it ordinarily served for no Ends at all, but only to provoke Persons unto *unseasonable* and perhaps *unreasonable* Drinking, and at last produce that abominable *Health-Drinking*, which the *Fathers* of old so severely rebuked in the *Pagans*, and which the *Papists* themselves do Condemn, when their Casuists pronounce it, *Peccatum mortale, provocare ad Æquales Calices, et Nefas Respondere*.<sup>105</sup> Wherefore in his own most Hospitable House he left it off, not out of any silly or stingy *Fancy*, but meerly that by his *Example* a greater *Temperance*, with *Liberty of Drinking*, might be Recommended, and sundry *Inconveniences* in Drinking avoided; and his *Example* accordingly began to be much followed by the sober People in *this Country*, as it now also begins among Persons of the *Highest Rank* in the *English Nation* it self; until an *Order of Court* came to be made against that *Ceremony* in Drinking, and then, the old *Wont* violently returned, with a *Nitimur in Vetitum*.<sup>106</sup>

§11. Many were the Afflictions of this Righteous man! He lost much of his Estate in a Ship, and in an House, quickly after his coming to *New-England*, besides the Prodigious Expence of it in the Difficulties of his first coming hither. Afterwards his assiduous Application unto the Publick Affairs, (whercin *Ipse se non habuit, postquam Respublica eum Gubernatorem habere coepit*)<sup>107</sup> made him so much to neglect his own *private Interests*, that an *unjust Steward* ran him 2500 l. in debt before he was aware; for the Payment whereof he was forced, many Years before his Deccase, to sell the most of what he had left unto him in the Country. Albeit, by the observ-

<sup>102</sup> "By yielding."

<sup>103</sup> "If we collide, we break."

<sup>104</sup> "Never urged the unwilling to drink."

<sup>105</sup> "It is a mortal sin to challenge another to drink, and it is impious to accept such a challenge."

<sup>106</sup> "A bias towards what is forbidden."

<sup>107</sup> "He no longer owned himself after the state began to possess him as governor."

able Blessings of God upon all Posterity of this *Liberal Man*, his Children all of them came to fair Estates, and lived in good Fashion and Credit. Moreover, he successively Buried Three Wives; the First of which was the Daughter and Heiress of Mr. *Forth*, of *Much-Stambridge* in *Essex*, by whom he had *Wisdom with an Inheritance*; and an excellent Son. The Second was the Daughter of Mr. *William Clopton*, of *London*, who Died with her Child, within a very little while. The Third was the Daughter of the truly <sup>10</sup>Worshipful Sir *John Tyndal*, who made it her whole Care to please, First *God*, and then her *Husband*; and by whom he had Four Sons, which Survived and Honoured their Father. And unto all these, the Addition of the *Distempers*, ever now and then raised in the *Country*, procured unto him a very singular share of Trouble; yea, so hard was the Measure which he found even among Pious Men, in the Temptations of a *Wilderness*, that when the *Thunder* and *Lightning* had smitten a *Wind-mill* whereof he was Owner, <sup>20</sup>some had *such things in their Heads*, as publickly to Reproach this *Charitablest* of Men, as if the *Voice of the Almighty* had rebuked, I know not what *Opposition*, which they *judged* him Guilty of: which things I would not have mentioned, but that the Instances may fortifie the Expectations of my *best Readers* for such Afflictions.

§12. He that had been for his Attainments, as they said of the blessed *Macarius*, a *Παῖδαριος* (An *old Man while a young One*), and that had in his <sup>30</sup>young Days met with many of those *Ill Days*, whereof he could say, he had *little Pleasure in them*; now found *old Age* in its Infirmities advancing Earlier upon him, than it came upon his much longer lived Progenitors. While he was yet Seven Years off of that which we call *the grand Climacterical*,<sup>108</sup> he felt the Approaches of his *Dissolution*; and finding he could say,

*Non Habitus, non ipse Color non Gressus Eutnis,  
Non Species Eadem, quæ fuit ante, manet;*<sup>109</sup>

he then wrote this account of himself: *Age now comes upon me, and Infirmities therewithal, which makes me apprehend that the time of my departure out of this World is not far off. However our times are all in the Lord's Hand, so as we need not trouble our Thoughts how long or short they may be, but*

<sup>108</sup> That is, he attained the age of sixty-three.

<sup>109</sup> "There remains not the semblance, nor even the color, nor the way of life, nor the same aspect, of what was before."

*how we may be found Faithful when we are called for.* But at last when *that Year* came, he took a *Cold* which turned into a *Feaver*, whereof he lay *Sick* about a Month, and in that *Sickness*, as it hath been observed, that there was allowed unto the *Serpent* the *bruising of the Heel*; and accordingly at the *Heel* or the *Close* of our Lives the *old Serpent* will be Nibbling more than ever in our Lives before; and when the Devil sees that we shall shortly be, *where the wicked cease from troubling*, that *wicked One* will trouble us more than ever; so this eminent Saint now underwent sharp Conflicts with the *Tempter*, whose *Wrath* grew *Great*, as the *Time* to exert it grew *Short*; and he was Buffeted with the Disconsolate Thoughts of Black and Sore *Desertions*, wherein he could use that sad Representation of his own condition.

*Nuper Eram Judex; Jam Judicor, Ante Tribunal,  
Subsistens paveo, Judicor ipse modo.*<sup>110</sup>

But it was not long before those *Clouds* were Dispelled, and he enjoyed in his Holy Soul the *Great Consolations of God*! While he thus lay *Ripening* for Heaven, he did out of Obedience unto the *Ordinance* of our Lord, send for the *Elders of the Church* to *Pray* with him; yea, they and the whole Church *Fasted* as well as *Prayed* for him; and in that *Fast* the venerable *Cotton* preached on *Psal. 35. 13, 14*: *When they were Sick, I humbled my self with Fasting; I behaved my self as though he had been my Friend or* <sup>40</sup>*Brother; I bowed down heavily, as one that Mourned for his Mother*: From whence I find him raising that Observation, *The Sickness of one that is to us as a Friend, a Brother, a Mother, is a just occasion of deep humbling our Souls with Fasting and Prayer*; and making this Application:

'Upon this occasion we are now to attend this Duty for 'a Governor, who has been to us as a *Friend* in his *Counsel* 'for all things, and *Help* for our *Bodies* by *Physick*, for our 'Estates by *Law*, and of whom there was no fear of his 'becoming an *Enemy*, like the *Friends of David*: A *Governour* who has been unto us as a *Brother*; not usurping 'Authority over the Church; often speaking his *Advice*, and 'often contradicted, even by Young Men, and some of low 'degree; yet not replying, but offering Satisfaction also 'when any supposed Offences have arisen; a *Governour* who 'has been unto us as a *Mother*, Parent-like distributing his 'Goods to Brethren and Neighbours at his first coming: 'and gently bearing our *Infirmities* without taking notice 'of them.'

<sup>110</sup> "Once I was the judge; now I am judged. I stand trembling before the judge, now I myself am judged."

Such a Governour, after he had been more than Ten several times by the People chosen their Governour, was New-England now to lose; who having, like Jacob, first left his Council and Blessing with his Children gathered about his Bed-side; and, like David, served his Generation by the Will of God, he gave up the Ghost, and fell asleep on March 26, 1649. Having, like the dying Emperour Valentinian, this above all his other Victories for his Triumphs, His overcoming of himself.

The words of Josephus about Nehemiah, the Gov-

ernour of Israel, we will now use upon this Governour of New-England, as his

## EPITAPH.

FROM

*Manductio ad Ministerium*<sup>112</sup>

## [THE FIRST POINT OF WISDOM]

§1. Intending to give you some DIRECTIONS for your Proceeding in the STUDIES, upon which you are Enttring, that you may be prepared and furnished for the Work of the Evangelical MINISTRY, to which you are designed; I shall not consult the Method which any of the twice Twelve, *Dissertationes de Studii*, (Collected by Elzivir in one little volumn) have 20 given you. But the Contemplation of DEATH shall be the FIRST Point of the Wisdom that my Advice must lead you to. In the FIRST Place, My Son, I advise you to consider yourself as a Dying Person, and one that must shortly put off this Earthly Tabernacle. I move you, I press you, To remember how short your Time is, yea, though it should reach to the longest that is ordinarily known among the Children of Men; and how much more short it may be made for ought you know, in the *Early Anticipations* of Mortality. Do 30 this, that you may do nothing like *Living in Vain*. Place yourself in the *Circumstances* of a Dying Person; your Breath failing, your Throat rattling, your Eyes with a dim Cloud, and your Hands with a damp Sweat upon them, and your Weeping Friends no longer able to retain you with them: And then entertain such sentiments of *this World*, and of the Work to be done in this World, that such a View must

needs inspire you withal. Such a *Numbring of your Days*, I hope, will compel you to *Apply your Heart unto Wisdom*; and Instruct and Excite you to spend your little TIME in such Things, and so Industriouslly, as may be a Matter of *Comfortable Reflection* at the End of your Days. . . . My Proposal is, That you would set apart *proper Times*, (And be surc, The *Present Time*!) to think, *What sort of Life shall I most approve when I come to Dye! In what Work shall I most wish to have lived, when I see that I am to Dye? What Method and Manner of Living shall I apprehend the most Eligible, when my Dying Hour is come upon me? Behold, What will give to the Young Man Knowledge and Discretion!*

## [WAYS TO DO GOOD]

§4. . . . My Son, My Advice to you, is, Begin betimes to take that Noble QUESTION into Consideration, *What Good may I be capable of doing in the World?* Have stated and proper Times for it, and these as often as may be, to consider on the QUESTION; and keep a Record of your Purposes. First with an humble and mournful sence how much you want that Wisdom, which is to *find out well-advised Inventions*, Look up to GOD your SAVIOUR, that by Him (who is the Wisdom of GOD) living in you, and leading of you, you may obtain a fair View of the *Opportunities to do Good*, which He has put into your Hand, that they may not be a Price in the Hand of a Fool; and a clear View of the *Methods* to be taken that this Good may be prosecuted, and your Desire sweetly accomplished. Then proceed and Enquire.

Enquire, First, *What shall I do for MY SELF, that*

<sup>111</sup> "He was a man naturally good and just, and most jealous for the honor of his countrymen; to them he left an eternal memorial—the walls of Jerusalem."

Mather's Latin paraphrase substitutes *New England* for *Jerusalem*.

<sup>112</sup> Originally published in Boston in 1726, this treatise gives directions for a candidate of the ministry, outlining his proper studies and describing conduct becoming a minister.

*I may MY SELF Improve in Knowledge and Goodness; and the Ends of those Means, which the Divine Cultivation employs upon me?*

Enquire, next, *What shall I do for my several RELATIVES, my Kindred according to the Flesh, that I may prove a Blessing in each of my Relations?* Take a Catalogue of them; and successively bestow *distinct Thoughts* upon them all.

Then go on to take some Cognizance of the several SOCIETIES to which you stand related; Especially the *Church* whercof you are a *Member* (and the *College*, if you belong to *That!*) Yea, the *Town*, and the *Land*, whercof you are an *Inhabitant*.

Think, *What Good is to be proposed and promoted here!* To what an Extent, O dear Son, and pleasant Child, may thy *Projections* carry thee!

*Particular Persons* in your Neighbourhood may now also be found out as *Objects* that *Good* may be done unto; The *Poor* for to be relieved; The *Sick* for to be visited; The *Sad* for to be comforted; and those that are *out of the Way*, to be reclaimed from the *Error of their Way*. Many of those whom you have distinguished in thus doing of *Good* unto them, you will find prove *Monsters of Ingratitude*. But let not this dishearten you. GOD is now trying of you, *Whether you will do Good for the pure sake of Good*; And you will this way have *Recompences* ascertained unto you, in the *Harvest*, when, *Whatever Good Thing any Man Does, the same shall he receive of the Lord*. . . .

[ON COLLEGE LOVE AFFAIRS]

§5. . . . That you may not suffer a *Vile Impediment* in your *Studies* and *Avocation* from them, I do now particularly warn you against the senseless Folly of an Entanglement in any *foolish Amour* while you are yet a *Student* at the *College*. 'Tis time enough to think of *Marriage* when your Condition in other Circumstances, as well as that of *Age*, will qualify you to make a *Wise Choice* in a Point which a very great *Felicity* or a very great *Calamity*, for the rest of your Days, will turn upon.

[ON POETRY AND LITERARY STYLE]

§8. Poetry . . . has been from the Beginning in such Request, that I must needs recommend unto you some Acquaintance with it. Though some have had a Soul so *Unmusical* that they have decried all *Verse*, as being but a meer *Playing* and *Fiddling*

upon *Words*; All *Versifying*, as it were more *Unnatural* than if we should chuse *Dancing* instead of *Walking*; and *Ryme*, as if it were but a sort of *Morisco Dancing*<sup>118</sup> with *Bells*: Yet I cannot wish you a Soul that shall be wholly *Unpoetical*. An Old *Horace* has left us an *Art of Poetry*, which you may do well to bestow a *Perusal* on. And besides your *Lyrick Hours*, I wish you may so far understand an *Epic Poem* that the Beauties of an *Homer* and a *Virgil* may be discerned with you. . . .

There has been a deal of a do about a *STYLE*; So much that I must offer you my Sentiments upon it. There is a *Way of Writing* wherein the Author endeavours that the Reader may have *something to the Purpose* in every Paragraph. There is not only a *Vigour* sensible in every *Sentence*, but the Paragraph is embellished with *Profitable References*, even to something beyond what is *directly spoken*. Formal and Painful *Quotations* are not studied; yet all that could be learnt from them is insinuated. The Writer pretends not unto *Reading*, yet he could not have writ as he does if he had not *Read* very much in his Time; and his Composites are not only a *Cloth of Gold*, but also stuck with as many *Jewels* as the Gown of a Russian Ambassador. This *Way of Writing* has been decried by many, and is at this Day more than ever so, for the same Reason, that in the old Story, the *Grapes* were decried, *That they were not Ripe*. A Lazy, Ignorant, Conceited Sett of Authors, would persuade the whole Tribe, to lay aside that *Way of Writing*, for the same Reason that one would have persuaded his Brethren to part with the Encumbrance of their *Bushy Tails*. But, however *Fashion* and *Humour* may prevail, they must not think that the Club at their *Coffee-House* is, *All the World*; but there will always be those, who will in this Case be governed by *Indisputable Reason*; And who will think, that the real Excellency of a Book will never ly in *saying of little*; That the less one has for his Money in a Book, 'tis really the more Valuable for it; and that the less one is instructed in a Book, and the more Superfluous *Margin*, and Superficial *Harangue*, and the less Substantial *Matter* one has in it, the more tis to be accounted of. . . . Nothing appears to me more Impertinent and Ridiculous than the *Modern Way*, [I cannot say, *Rule*; For they have *None*] of *Criticising*. The Blades that set up for

<sup>118</sup> That is, Morris dancing, or mumming dance, once common in England in pageants and May-day games.

*Criticks*, I know not who constituted or commission'd 'em!—they appear to me, for the most part as *Contemptible*, as they are a *Supercilious* Generation. For indeed no Two of them have the same *Style*; and they are as intollcrably Cross-Grain'd and severe in their Censures upon one another, as they are upon the rest of Mankind. But while each of them, conceitedly enough, sets up for the *Standard of Perfection*, we are entirely at a Loss which *Fire* to follow. Nor can you easily find any one thing wherein they agree for their *Style*, except perhaps a perpetual Care to give us Jeune and Empty Pages, without such *Touches of Erudition* (to speak in the *Style* of an Ingenious Traveller) as may make the Discourses less *Tedious*, and more *Enriching*, to the Mind of him that peruses them. There is much Talk of a *Florid Style*, obtaining among the Pens, that are most in Vogue; but how often would it puzzle one, even with the best Glasses to find the *Flowers*! And if they were to be Chastized for it, it would be with as much of 20 Justice, as *Jerom* was, for being a *Ciceronian*. After all, Every Man will have his own *Style*, which will distinguish him as much as his *Gate*:<sup>114</sup> And if you can attain to that which I have newly described, but always writing so as to give an *Easy Conveyance* unto your Ideas, I would not have you by any *Scourging* be driven out of your *Gate*, but if you must confess a *Fault* in it, make a Confession like that of the Lad, unto his Father while he was beating him for his *Versifying*.

However, since every Man will have his own *Style*, I would pray, that we may learn to treat one another with mutual *Civilities*, and *Condescensions*, and handsomely *indulge* one another, as *Gentlemen* do in other Matters.

I wonder what ails People, that they can't let *Cicero* write in the *Style* of *Cicero*, and *Seneca* write in the (much other!) *Style* of *Seneca*; and own that Both may please in their *several Ways*.—But I will freely tell you; what has made me consider the 40 *Humourists* that set up for *Criticks upon Style*, as the most *Unregardable Set of Mortals* in the World, is This! Far more *Illustrious Criticks* than any of those to whom I am now bidding *Defiance*, and no less

<sup>114</sup> That is, *gaii*.

Men than your *Erasmus's*, and your *Grotius's*,<sup>115</sup> have taxed the *Greek Style* of the *New Testament*, with I know not what *Solæcisms* and *Barbarisms*; And, how many *learned Folks* have Obscquiously run away with the Notion! Whereas 'tis an Ignorant and Insolent *Whimsey*; which they have been guilty of. It may be (and particularly by an Ingenious *Blackwal*,<sup>116</sup> it has been) Demonstrated, That the Gentlemen are mistaken in every one of their pretended Instances; All the Unquestionable *Classicks*, may be brought in, to convince them of their Mistakes. Those Glorious Oracles are as *pure Greek* as ever was written in the World; and so Correct; So Noble, so Sublime is their *Style*, that never any thing under the Cope of Heaven, but the Old Testament, has equall'd it. . . .

[ON MUSIC]

§10. . . . For MUSIC, I know not what well to say.—Do as you please. If you *Fancy* it, I don't *Forbid* it. Only do not for the sake of it Alienate your Time too much from those that are more Important Matters. It may be so, that you may serve your god better for the Refreshment of *One that can play well on an Instrument*. However, to accomplish yourself at *Regular Singing* is a thing that will be of *Daily Use* to you. For I would not have a Day pass you without *Singing*, but so as at the same time to *make a Melody in your Heart unto the Lord*. . . .

[ON WELL-STUDIED SERMONS]

§16. . . . The *First Thing*, which I have to demand of you, is, That you entertain the People of god with none but *Well-Studied Sermons*; and employ none but *well-beaten Oil* for the *Lamps* of the *Golden Candlestick*: And be nothing like him who was among the *Jews* called *The Plagiary Prophet*, and whose punishment was not an easy one. Heaven forbid, that you should be one of those *Pitiful Parsons*, to whom there has been that Advice given for the Discharge of their *Pastoral Care*: That *they should use other Men's Sermons*, rather than make any of their own. . . . 1726

<sup>115</sup> Hugo Grotius (1583–1645), Dutch jurist and Biblical commentator.

<sup>116</sup> Anthony Blackwall (1674–1730), English classical scholar and author of *The Sacred Classics Defended* (1725).

## JONATHAN EDWARDS (1703-1758)

Jonathan Edwards, the greatest of American theologians, was the last great champion of Calvinism. When he was born in 1703, at East Windsor, Connecticut, liberalism at Harvard had already driven Increase Mather into retirement; and Cotton Mather, exerting every effort to stave off the further decline of orthodoxy in New England, was working with might and main to serve the best interests of Yale, established in 1701 as a bulwark of defense against the rising tide of rationalism. Edwards came to play a very similar rôle for his generation to that which fate decreed for Cotton Mather in his time and place. For Yale, too, became infected with the new views shortly after Edwards' graduation in 1720, so that the Calvinists soon chalked off Yale as an asset to their cause, and in 1746 founded the College of New Jersey, later Princeton University, to stem the tide. Shortly after his *Freedom of the Will* (1754) established Edwards as the greatest living defender of the Calvinist faith, the trustees of Princeton called him from his obscure missionary post among the Indians at Stockbridge, Massachusetts, to assume the presidency of "Old Nassau." Whatever he might have done there for the cause was stopped in 1758 by his sudden death, brought on by inoculation against smallpox, within a few months after his inauguration.

Edwards, the fifth of eleven children and only son of a Calvinist preacher, was of orthodox ministerial ancestry. His father's service for more than sixty years in one congregation bespeaks his worth. For lack of good schools at East Windsor, young Edwards' schoolroom became his father's study, where he progressed so well under his father's direction that he entered Yale in 1716, during his thirteenth year. Already as a boy he was passionately fond of study, not only acquiring a knowledge of Latin, Greek, and Hebrew writings, but being especially interested in the pursuit of abstruse subjects. He early trained himself to read with pen or pencil in hand, and not only to think as he went along, but to put his thoughts into exact language, with the result that he early acquired an extraordinary perspicacity of mind.

Moses Coit Tyler relates the following story to illustrate the lad's unusual sagacity at the age of twelve.

Hearing that an older boy in the neighborhood held the opinion that the soul is material, and that it remained in the body until the resurrection day, young Edwards, instead of debating the question in the typical boyish fashion, wrote his friend a playful letter, ironically professing to be on the point of adopting the same opinions, but humbly submitting for solution a number of questions which served most ingeniously and effectively to expose the absurdities of his friend's doctrines. Here already are evident the peculiarities of Edwards' mind—a keenness of analysis, a faculty for discovering the absurdities involved in a false proposition, an unusual ability to set forth these absurdities in a manner at once fair and irresistible, an engaging sense of raillery, freedom from any arrogance of tone, and an adroit use of the Socratic strategy of a deferential manner in debate.

As an undergraduate at Yale (hence before his eighteenth year) he began the keeping of a notebook in which he tried to put into precise form the thoughts that came to him on subjects like being, cause, space, time, motion, matter, consciousness, union of mind and body, and personal identity. The following notation under the heading of "The Place of Minds" illustrates the nature of these early intellectual interests.

Our common way of conceiving of what is spiritual, is very gross, and shadowy, and corporeal, with dimensions, and figure, and so forth. If we would get a right notion of what is spiritual, we must think of thought, or inclination, or delight. How large is that thing in the mind which they call a thought? Is love square, or round? Is the surface of hatred rough, or smooth? Is joy an inch, or a foot, in diameter? These are spiritual things; and why should we then form such a ridiculous idea of spirits, as to think them so long, so thick, or so wide, or to think there is a necessity of their being square, or round, or some other certain figure?

Already as a lad of sixteen or seventeen he worked out for himself a system of idealistic philosophy that is essentially the same as Berkeley's. For example, at the end of his notes on "Being," while considering the relation between ideal reality and material existence, he asked:

What, then, is to become of the universe? Certainly, it exists nowhere but in the Divine mind. . . . Those beings which have knowledge and consciousness are the only proper, and real, and substantial beings; inasmuch as the being of other things is only by these. From thence we may see the gross mistake of those who think material things the most substantial beings, and spirits more like a shadow; whereas spirits only are properly substance. . . . The material universe exists only in the mind. . . . All material existence is only idea.

No wonder that with a mind so inclined he should devour eagerly the metaphysical books which he found in the Yale library. As a sophomore he discovered Locke's *Essay Concerning Human Understanding*, and fell upon it, he tells us, with a greater delight "than the most greedy miser finds when gathering up handfuls of silver and gold from some newly discovered treasure."

While he continued to pursue philosophical inquiries with a passion, he was also interested in scientific questions. Already as a boy at East Windsor, he had indulged his curiosity about things in the realm of natural science. Out of this interest grew his composition on spiders, which his father encouraged him to write and to send to a learned correspondent in Europe with whom the elder Edwards was in the habit of exchanging intelligences and letters on scientific, metaphysical, and religious topics. In the resulting essay on spiders, Edwards detailed with great precision of statement and with equal cogency of reasoning his own observations, in a manner to make spiders as interesting as, many years later, Darwin was to make earthworms. Some years after, as a tutor at Yale, he pursued his scientific researches with great diligence, especially in physics and astronomy; and original notes of the time reveal that his acute, ingenious, and original mind anticipated a number of important scientific theories and discoveries. He did enough in mathematical investigations, in the physical sciences, and in linguistic studies to show that, given adequate outward facilities, he might easily have acquired the same fame in these areas that his contributions to mental science and divinity merit.

The intense intellectual training to which he subjected himself as a student was accompanied by equally rigorous moral and spiritual discipline. Much troubled about his own faith and salvation, he made, between 1720 and 1723, a series of seventy resolutions by which to regulate his life. The following are typical: "To live with all my might, while I do live." "To do whatever I think to be my duty." "Never to do any thing which I should be afraid to do, if it were the last hour of my life." "When I feel pain, to think of the pains of Martyrdom, and of Hell."

"Never to do any thing for revenge." "Never to speak anything but the pure and simple verity." "Never to give over in the least or slacken my fight with my corruptions, however unsuccessful I may be." On September 23, 1723, he made the important observation that "old men seldom have any advantage of new discoveries, because they are beside the way of thinking to which they have been so long used," and accordingly he resolved, "If ever I live to years, that I will be impartial to hear the reasons of all pretended discoveries, and receive them if rational, how long soever I have been used to another way of thinking."

Thus he sought to develop alike in scientific knowledge and moral perfection during the years between his graduation in 1720 and his becoming in 1726 the colleague of his grandfather Solomon Stoddard in the Northampton parish. Yet, through the earlier of the intervening years, two of which were devoted to studying divinity at Yale, another as pastor to a Presbyterian congregation in New York City, and the last two to tutoring at Yale, he felt the lack of a third element in his soul—the sense of religious perfection, the development of his religious affections toward an exalted, mystical sense of sweet and absolute dependence on God's sovereignty. His struggles came to a head in 1721, when he felt a conversion, described in the following terms:

From my childhood up, my mind had been full of objections against the doctrine of God's sovereignty, in choosing whom he would to eternal life, and rejecting whom he pleased; leaving them eternally to perish, and be everlastingly tormented in hell. It used to appear like a horrible doctrine to me. But I remember the time very well, when I seemed to be convinced, and fully satisfied, as to this sovereignty of God, and his justice in thus eternally disposing of men, according to his sovereign pleasure. . . . But I have often, since that first conviction, had quite another kind of sense of God's sovereignty than I had then. I have often since had not only a conviction, but a *delightful* conviction. The doctrine has very often appeared exceedingly pleasant, bright, and sweet. Absolute sovereignty is what I love to ascribe to God. . . .

The first instance, that I remember, of that sort of inward, sweet delight in God and divine things, that I have lived much in since, was on reading these words, I Tim. i. 17. *Now unto the King eternal, immortal, invisible, the only wise God, be honour and glory for ever and ever, Amen.* As I read the words, there came into my soul, and was as it were diffused through it, a sense of the glory of a divine Being; a new sense, quite different from anything I ever experienced before. Never any words of Scripture seemed to me as these words did. I thought with myself how beautiful a Being that was, and how happy I should be, if I might enjoy that God, and be rapt up to him in heaven, and be as it were swallowed up in him forever! I

kept saying, and as it were singing, over these words of scripture to myself.

In the *Personal Narrative* or *Narrative of His Conversion*, as the document written nearly twenty years after the event is variously called, he described at greater length the development within him of this mystical sense by which he came to see even in the thunderstorm the imminent presence and majesty of God. As this "sweet inward sense" grew within him, the virtue of holiness appeared to him bright, charming, and serene. The soul of a true Christian lost in God seemed like a white lily inclined toward the east to receive the sunlight of God's glory. This romantic or poetic mysticism of immediate religious insight, based not on external evidence or achieved by the rational principle, but the result of a mystic, intuitive, enraptured mood, is a projection of the Puritanic introspection of an earlier age, but also a departure from the rigorous method which had sought confirmation of religious conviction less in ecstatic vision than in literal reading of the Scripture. It is the chief thing that sets Edwards apart from seventeenth-century Puritanism; and it is to be borne in mind when trying to account for the strange dichotomies and seeming contradictions that trouble the student who tries to reconcile the diversities of Edwards' mental and spiritual development. For his personality was as subtly sensitive as sincerely honest, and it is necessary to follow the niceties of his metaphysical distinctions if one hopes to see anything more than jarring inconsistencies in his thoughtful and practical life.

By 1726, when he went to Northampton, he had developed his religious affections to a remarkable degree and was full of the mystical spirit of sweet inwardness. During the next year he married Sarah Pierrepont, the beautiful, sensitive daughter of James Pierrepont of New Haven, whom he had apostrophized four years earlier in a descriptive passage that remains a classic of American literature of adoration and etherealized love.

Upon the death of Stoddard in 1729, Edwards was in sole charge of one of the most important inland churches. Though limited in bodily energy and supplied with only a meager aid of books, he drove steadily ahead in his life of stern self-discipline and intense mental application, rising at four in the morning, devoting thirteen hours a day to his study, and finding simple but satisfying relaxation in solitary woodland walks, during which the thoughts that came to him were jotted down in a little booklet for future elaboration. He speedily built up a great reputation as a preacher. Naturally endowed with a

splendid address and pulpit presence, his undemonstrative but fervent intensity gave his preaching a singular power, so that contemporaries who heard him marveled at his ability to sway his auditors at will. A sermon on the Day of Judgment left so vivid and solemn an impression that it was expected, as soon as Mr. Edwards should close his sermon, "the Judge would descend and the final separation take place." On another occasion, while he was preaching to the usually listless and indifferent congregation at Enfield, an observer noticed that he had the people bowed down in agony and terror: "There was such a breathing of distress and weeping, that the preacher was obliged to speak to the people, and desire silence that he might be heard."

This fearful preaching was inspired by Edwards' philosophy of the importance of the religious affections in religion and by the sense of mystical dependence upon God as he outlined these doctrines in his treatise of 1731 entitled *God Glorified in the Work of Redemption by the Greatness of Man's Dependence upon Him in the Whole of It* and in *A Divine and Supernatural Light, Immediately Imparted to the Soul by the Spirit of God, Shown to be both a Scriptural, and Rational Doctrine* (1734). His preaching, in turn, inspired a spontaneous revival of the religious spirit among the younger people of his congregation during 1734. It soon affected the whole community. Religion and what was becoming known as "getting religion" became all-absorbing topics of interest and common conversation. Experience of a terrible conviction of unworthiness and sinfulness, a resignation to God's justice in damning sinners to eternal perdition, followed by the delightful assurance of salvation through surrender of the sinner to Christ—these were the three rapid steps by which the abrupt transition from a state of sin to one of grace was made. This was called "conversion," and sermons like Edwards' famous and fearful *Sinners in the Hands of an Angry God* (1741) were calculated to induce it, to the accompaniment of visions, trances, weeping, and convulsions. "Small wonder," said the Reverend Charles Chauncey of the First Church of Boston, where religion was more staid, and where such "goings-on" were discountenanced, "that under such preaching there was 'swooning away and falling to the Ground . . . bitter Shriekings and Screechings; Convulsion-like Tremblings and Agitations, Strugglings and Tumbings.'"

While Edwards himself apparently never sought to inspire the type of religious excess and orgy that accompanied the efforts of other revivalists in remoter regions, he stoutly defended the principle of awaken-

ing the religious affections by stirring the emotions, and published, as early as 1737, *A Faithful Narrative of the Surprising Work of God in the Conversion of Many Hundred Souls in Northampton, and the Neighboring Towns and Villages* and other works of a similar nature accurately descriptive of the manifestations and warmly commendatory of the methods of revivalism. The most notable of these publications, as presenting his fundamental views on the questions involved, is a sermon preached during 1742-3 and published in 1746 as *A Treatise Concerning Religious Affections*.

The movement, begun in Edwards' parish, spread rapidly through a series of revivals until it culminated in the Great Awakening of 1740 under the auspices of the Wesleys and George Whitefield. By that time German pietism as represented by men like Spener and Count Zinzendorf of the Moravian communities had joined forces with English Methodism, and the evangelical movement spread rapidly through the peripatetic journeyings of Whitefield and the Wesleys, who found the colonial frontier environment admirably adapted to its reception. It was not long before it swept from Massachusetts through Connecticut, New Jersey, and into Pennsylvania, whence the pietistic German sects of Pennsylvania, fanning out through the Shenandoah Valley, carried it southward to meet Moravian pietism moving northward from Georgia. The powerful preaching of the Presbyterian Samuel Davies carried it into the Virginia back country, so that by 1800 the wave of religious sentiment, now reinforced by the evangelistic movement among the Baptists, crossed the Appalachians and overran the frontier into Kentucky and Tennessee.

While the Great Awakening produced no great literature, its indirect influence on American literature was enormous. It induced, as the original Puritan impulse alone could never have induced, that strain of moral didacticism which aggressive fundamentalism demanded of nineteenth-century American writers. It retarded the development of the drama and insisted upon wholesome moral lessons in the novel when it permitted the novel at all. It chastened and subdued the romantic literary impulses that found their way from Europe to America, accepting the moral idealism of romanticism but banning its moral anarchism. These restrictions proved to be no unmitigated losses, for under them American literature gained in restraint, idealism, and moral decency what it lost in freedom of expression and variety of subject. Often, however, it hardened into the kind of "stiff-necked village piety" of the nineteenth century that

provoked Mark Twain to write *The Man That Corrupted Hadleyburg*, and in the twentieth brought on the kind of fundamentalism that lies at the bottom of the Scopes trial in Dayton, Tennessee. It inspired Sinclair Lewis' *Main Street* no less than his *Elmer Gantry*, which, as Professor Walter F. Taylor has observed, only "mirrors the obverse side of a religious movement whose first literary result was Edwards' *Faithful Narrative of the Surprising Work of God*."

So much for one of the more enduring effects of Edwards and the Great Awakening. More immediately, Jonathan Edwards' revival of emotional religion produced dire results in Northampton. Religion swallowed in large gulps did not always stay down, and Edwards soon had cause to reflect dolefully that the religious emotions which he evoked so handily had a way of wearing off as rapidly: the "supernatural sense" or "inward principle" which conversion was supposed to inspire were often evanescent, like the "enthusiastic delusions of an over-heated imagination." He admonished his back-sliding parishioners and imposed penalties and burdens, against which they rebelled; and when, in his efforts to enforce godliness, he ruled that only the definitely and demonstrably converted would be admitted to the Lord's Supper, a large part of his congregation deserted him. Other quarrels—religious, civic, and social—followed; and by 1750, those who remained were sufficiently disaffected to charge him with attempting to reinstate a theocratic government over them, and to dismiss him from the church over which he had presided for a quarter of a century. Arrived at the height of his spiritual and intellectual powers, he must nevertheless have presented a pathetic figure on July 1, 1750, as he stood before the people whom he had guided for so long to deliver his *Farewell Sermon*, for he knew that the immediate future for himself and his large family would be anything but bright. During the next year he was compelled to move into the wilderness settlement of Stockbridge as missionary to the Indians and as pastor to a small group of whites.

While his removal thither brought on many hardships, it afforded him leisure to return to a project which he had first conceived in 1741, but which the Awakening and the ensuing difficulties at Northampton had sidetracked. Whether the emotional upheaval of the Great Awakening had any direct bearing upon Edwards' decision to turn to a more fundamental examination of man's relation to his God is problematical, but it is noteworthy that the issues of the Arminian controversy occupied his mind increasingly from 1740 onward, until 1752, when he

became wholly absorbed in the question of the determined *versus* the free will. Unless the doctrine of necessity could be established, he admitted, "it is, to me, beyond doubt, that the friends of those great gospel truths [i.e., the Calvinists] will but poorly maintain their controversy with the adversaries of those truths [i.e., the Arminians]. They will be obliged often to dodge, shuffle, hide, and turn their backs: and the latter will have a strong fort, from whence they never can be driven, and weapons to use, which those whom they oppose will find no shield to screen themselves from; and they will always puzzle, confound, and keep under the friends of sound doctrine, and glory and vaunt themselves in their advantage over them; and carry their affairs with a high hand, as they have done already for a long time past." Ready to admit that if the opposition could prove the will to be free, the Calvinist position would be utterly lost, he devoted his full energies to the establishment of the doctrine of necessity, calling it "one of the most important truths of moral philosophy that can ever be discussed, and most necessary to be known."

His contribution to this high philosophical problem appeared in 1754 as *A Careful and Strict Enquiry into the Modern Prevailing Notions of that Freedom of Will which is supposed to be Essential to Moral Agency, Virtue and Vice, Reward and Punishment, Praise and Blame*. In this book he is not content merely to establish the sovereignty of God according to the time-hallowed practice of the Calvinists, i.e., by referring the matter to the proofs of Scripture; but he chose to meet the opponents on their own ground and with their own weapons by proving it on the bases of logic and metaphysics. His rigorously reasoned book falls naturally into two parts: the first containing his positive argument for the principle of necessity, together with his definitions of the terms "liberty" and "freedom," and the second, his answers to the objections raised by the Arminians. Both rest upon one fundamental postulate: "I assert that nothing ever comes to pass without a Cause," and the corollaries (1) that it is the strongest motive that moves the will, and (2) that man is always moved in the direction of what seems to him most agreeable. Careful to exclude any notion of independent activity on the part of the will, he considered the will as purely passive. That is, the will is always of necessity drawn in the direction of the greatest apparent good, which is to say that the actions of the will are necessarily determined by something outside itself. Thus the will itself appeared to have no *freedom*, while man still retained *liberty*; for *liberty* he defined as "the

power, opportunity, or advantage that any one has to do as he pleases, or conducting in any respect, according to his pleasure, without considering how his pleasure comes to be as it is." The question, as Edwards sees it, is: Can a man do what he wills? Not, Can he will as he wills? As long as man is able to do what he chooses, he is free, although he may not be able to choose his choices. Having defined liberty as the ability of man to do as he wills, Edwards went on to assert that no higher liberty than this could be conceived, but this liberty did not presuppose that man's will is able to modify the desire or choice that, in the first instance, determined the will. Thus Edwards does not so much deny the freedom of the will as define it in such a way as to limit it to the power of acting solely upon impulses from outside itself, in the generation of which the mind, or will, is wholly passive.

In the second part of his treatise he took up the objections of the opposition to the doctrine of necessity, disposing of them one by one by bringing them to their *reductio ad absurdum*, at the same time that he traced back, through the labyrinth of causation, all effects to an all-inclusive, all-enduring First Cause, which itself is uncaused, and hence superhuman, or supernatural, or from God, since in the purely human realm an uncaused effect is inconceivable.

While thus arguing quite logically from his original assumptions, Edwards succeeded in proving to his satisfaction the central doctrine of his faith—the absolute dependence of man on the absolute sovereignty of God. His book remains the most original contribution of colonial America to philosophic thought. But Edwards did not succeed in saying the last word on the subject and settling the matter for all time, for the perennial philosophic controversy regarding free will and determinism still goes on among theorists with some slight shifts in the grounds and methods of debate.

By the irony of fate Edwards' championship of revivalism and his insistence on "conversion" as the sole ground of salvation supplied the final blow to destroy the theocratic system that he later labored to uphold. And in this later effort, beginning with *The Freedom of the Will*, to restore Puritanism to its pristine glory, the rigor of his systematic philosophical writing served only to expose in stark and naked relief the humanly intolerable grotesqueries of the Calvinistic dogma, in a way effectively and finally to doom it.

Edwards' crowning work on the freedom of the will failed to achieve the high purpose for which he designed it. It brought the theoretical philosopher very little nearer the solution of his problem; while

the ordinary man commonly contents himself with Dr. Samuel Johnson's dictum about the free will when he observed that "all theory is against it, all experience for it." Or he may take the position of Dr. Oliver Wendell Holmes, who observed (possibly with Edwards' logical argument in mind) at the end of his poem on "The Wonderful One-Hoss Shay," which was built to outlast eternity, only to collapse—

All at once, and nothing first,—  
Just as bubbles do when they burst.  
  
End of the wonderful one-hoss shay.  
Logic is logic. That's all I say.

After *The Freedom of the Will*, Edwards produced several more important treatises: (1) *The Nature of True Virtue*, (2) *Concerning the End for which God Created the World* (both written in 1755 but first published posthumously as *Two Dissertations* in 1765), and (3) *The Great Christian Doctrine of Original Sin Defended* (1758), thus rounding out and unifying his system.

Readers of Edwards often encounter difficulties trying to reconcile his earlier transcendental tendencies as expressed in the *Personal Narrative* and *The Treatise Concerning Religious Affections* with his later Calvinistic position as promulgated in *The Freedom of the Will* and *The Great Christian Doctrine of Original Sin Defended*. The *Personal Narrative*, for example, abounds in moods of exalted rapture during which the virtue of holiness appeared to him as bright, charming, and serene; religion was a joyful experience, and the things of the spirit were "immensely and most exquisitely beautiful." Edwards, almost alone among Puritan theologians, succeeded in transmuting religious experience into forms of lofty and enduring beauty; and the *Personal Narrative* is excellent even when judged by the aesthetic standards of pure literature. Though his words are sometimes incapable of carrying the burden of his ecstatic vision, he nevertheless possessed, as Professor Walter F. Taylor says, "the romantic gift of suggesting far reaches and overtones of experience that words, by their very nature, cannot fully convey," and his mysticism appeals to human traits that are immemorial and enduring. "No religious autobiography in English," concludes Professor Taylor, "is so rich in poetry as the *Personal Narrative*."

To the younger Edwards, feeling his way along the path of mysticism and transcendentalism, rediscovering the doctrine of the inner life, the subjection of will to the natural desires of man was not a fearful and horrible thing; for they had led, in his case at least, to that sweet inwardness of affection that found

extreme pleasure in "taking a trembling walk with God." And the first flush of his tremendous success as an evangelist, when hundreds professed themselves "converted" to God by his excitation within them of the religious emotions, supplied him with confirmatory faith in the efficacy of the affections. However, subsequent events, attended by the growing responsibilities and severe trials of life that he experienced and the sobered reflections of maturity, led him to re-examine the psychological bases of his thinking and eventually to doubt whether the emotional man were quite worthy of implicit trust. And as he questioned his earlier faith in the free exercise of the affections, he placed greater emphasis on rational restraint. There was no complete change of front, but a shift of emphasis from faith in the heart to a trust of the head.

This very complex development of his mind, too involved to be stated here, is treated excellently in the Introduction by Professors Clarence H. Faust and Thomas H. Johnson to their book of *Selections from Jonathan Edwards* (New York, 1935). It is indicated summarily by their comments on the complex of ideas that welled up in New England under the guise of humanitarianism during Edwards' younger years. Humanitarians emphasized "the belief that man in the savage or 'natural' state is a better creature than when he is educated. Under theocracy sound learning was assumed the root of true religion, but for the humanitarians too much learning was a dangerous thing; for them the inner light needed not training but release, that the splendor might escape."

These doctrines, taught later in various forms by Rousseau and the French Revolutionists, had earlier found expression in the philosophy of the deists and the Quakers, and indeed by such leaders as John Wesley and George Whitefield—itinerant exhorters whose stress upon their faith that conversion, or the conviction that a "new light" had shone upon them, gave rise to a tide of revival meetings which Edwards supported.

Incompatible as these philosophies are, we see Edwards trying to reconcile them as their vectors cut through his career, and the tragedy that overtook him may be perceived more clearly if the student watches their intersections without losing sight of their direction. It is in moments when Edwards attempted to bring his theocratic and humanitarian principles together, when he sought to establish in logical relationship the intellectual love of God with human emotions, that his mysticism is most evident—as, for example, in the *Treatise concerning Religious Affections*. The tragedy inherent in the *Farewell Sermon* is that Edwards's earlier support of emotional relief, his devotion to 'New Lightism,' had been lessons too well learned by his congregation. His effort to re-assert theocratic government came tardily, and the casuistry to which he resorted in an

attempt to reconcile the eternal antinomies passed over the heads of his pastoral children. Thus he was compelled to abandon his pulpit.

Jonathan Edwards never abandoned his fundamentally psychological approach to the problems of theology and philosophy, as first outlined in the *Treatise Concerning Religious Affections*, or changed his terminology, or admitted that he had been wrong in his defense of the Great Awakening; but after that upheaval he was impelled, by natural causes, to fight henceforth for the logical and rational re-establishment of Calvinism in terms of determinism, depravity, and election.

Edwards' position in the history of American literature rests not merely on the cogency of his logic or the systematic structure of his philosophy. He is a

man of letters in his own right and in the full meaning of the terms. Following his thought, especially in his more technical works, is often hard work; but it is so because his matter, not his manner, occasions the difficulty. His style does not get in the way of his ideas, as does that of Cotton Mather. His manner of writing is direct and precise, dignified but clear. Often he is graphic in his representations, and not infrequently his sentences are illuminated by telling figurativeness, though never remotely resembling the pedantic allusiveness or fantastic imagery of Cotton Mather. He is notably free from clichés and jargon. His style becomes the perfect medium of the quiet, unostentatious ebb and flow of his serious and profound thought in a manner to make him a great artist and a master of English prose writing.

### *The Flying Spider*<sup>1</sup>

*May it please your Honour,*

There are some things that I have happily seen of the wondrous way of the working of the spider.

<sup>1</sup> This remarkable letter was sent by Edwards' father to a European correspondent with whom the elder Edwards was in the habit of exchanging "intelligences." Written in 1715, when

Although every thing belonging to this insect is admirable, there are some phenomena relating to them more particularly wonderful. Everybody that is

the young Edwards was only eleven, it is "a precocious exhibition of detailed and accurate observation, with a startling mixture of childlike naïveté and mature analysis."

used to the country, knows their marching in the air from one tree to another, sometimes at the distance of five or six rods. Nor can one go out in a dewy morning, at the latter end of August and the beginning of September, but he shall see multitudes of webs, made visible by the dew that hangs on them, reaching from one tree, branch and shrub, to another; which webs are commonly thought to be made in the night, because they appear only in the morning; whereas none of them are made in the night, for these spiders never come out in the night when it is dark, as the dew is then falling. But these webs may be seen well enough in the day time by an observing eye, by their reflection in the sunbeams. Especially late in the afternoon, may these webs, that are between the eye and that part of the horizon that is under the sun, be seen very plainly, being advantageously posited to reflect the rays. And the spiders themselves may be very often seen travelling in the air, from one stage to another amongst the trees, in a very unaccountable manner. But I have often seen that, which is much more astonishing. In very calm and serene days in the fore-mentioned time of year, standing at some distance behind the end of an house or some other opake body, so as just to hide the disk of the sun and keep off his dazzling rays, and looking along close by the side of it, I have seen a vast multitude of little shining webs, and glistening strings, brightly reflecting the sunbeams, and some of them of great length, and of such a height, that one would think they were tacked to the vault of the heavens, and would be burnt like tow in the sun, and make a very beautiful, pleasing, as well as surprising appearance. It is wonderful at what a distance, these webs may plainly be seen. Some that are at a great distance appear (it cannot be less than) several thousand times as big as they ought. I believe they appear under as great an angle, as a body of a foot diameter ought to do at such a distance; so greatly doth brightness increase the apparent bigness of bodies at a distance, as is observed of the fixed stars.

But that which is most astonishing, is, that very often appears at the end of these webs, spiders sailing in the air with them; which I have often beheld with wonderment and pleasure, and showed to others. And since I have seen these things, I have been very conversant with spiders; resolving if possible, to find out the mysteries of these their astonishing works. And I have been so happy as very frequently to see their

manner of working; that when a spider would go from one tree to another, or would fly in the air, he first lets himself down a little way from the twig he stands on by a web, as in Fig. 1; and then, laying hold of it

by his fore feet, and bearing himself by that, puts out a web, as in Fig. 2, which is drawn out of his tail with infinite ease, in the gently moving air, to what length the spider pleases; and if the farther end happens to catch by a shrub or the branch of a tree, the spider immediately feels it, and fixes the hither end of it to the web by which he let himself down, and goes over by that web which he put out of his tail as in Fig. 3. And this, my eyes have innumerable times made me sure of.

Now, Sir, it is certain that these webs, when they first proceed from the spider, are so rare a substance, that they are lighter than the air, because they will ascend in it, as they will immediately in a calm air, and never descend except driven by a wind; wherefore 'tis certain. And 'tis as certain, that what swims and ascends in the air is lighter than the air, as that what ascends and swims in water is lighter than water. So that if we should suppose any such time, wherein the air is perfectly calm, this web is so easily drawn out of the spider's tail, that if the end of it be once out, barely the levity of it is sufficient to draw it out to any length; wherefore if it don't happen that the end of this web, *b c*, catches by a tree or some other body, 'till there is so long a web drawn out, that its levity shall be so great as more than to counterbalance the gravity of the spider, or so that the web and the spider, taken together, shall be lighter than such a quantity of air as takes up equal space, then according to the universally acknowledged laws of nature, the web and the spider together will ascend, and not descend, in the air: as when a man

is at the bottom of the water, if he has hold of a piece of timber so great, that the wood's tendency upwards is greater than the man's tendency downwards, he together with the wood will ascend to the surface of the water. And therefore, when the spider perceives that the web *b c* is long enough to bear him up by its ascending force, he lets go his hold of the web *a b*, Fig. 3, and ascends in the air with the web *b c*. If there be not web more than enough, just to counterbalance the gravity of the spider, the spider together with the web will hang in equilibrio, neither ascending nor descending, otherwise than as the air moves. But if there is so much web, that its greater levity shall more than equal the greater density of the spider, they will ascend till the air is so thin, that the spider and web together are just of an equal weight with so much air. And in this way, Sir, I have multitudes of times seen spiders mount away into the air, from a stick in my hands, with a vast train of this silver web before them; for, if the spider be disturbed upon the stick by shaking of it, he will presently in this manner leave it. And their way of working may very distinctly be seen, if they are held up in the sun, or against a dark door, or any thing that is black.

Now, Sir, the only remaining difficulty is, how they first put out the end of the web *b c*, Fig. 3, out of their tails. If once the web is out, it is easy to conceive how the levity of it, together with the motion of the air, may draw it out to a great length. But how should they first let out of their tails, the end of so fine and even a string; seeing that the web, while it is in the spider, is a certain cloudy liquor, with which that great bottle tail of theirs is filled; which immediately, upon its being exposed to the air, turns to a dry substance, and exceedingly rarifies and extends itself. Now if it be a liquor, it is hard to conceive how they should let out a fine even thread, without expelling a little drop at the end of it; but none such can be discerned. But there is no need of this; for it is only separating that part of the web *b c*, Fig. 2, from *a b*, and the end of the web is already out. Indeed, Sir, I never could distinctly see them do this: so small a piece of web being imperceptible among the spider's legs. But I cannot doubt but that it is so, because there is a necessity that they should some way or other separate the web *a b*, Fig. 3, from their tails, before they can let out the web *b c*. And then I know they do have ways of dividing their webs by biting

them off, or in some other way. Otherwise they could not separate themselves from the web *a b*, Fig. 3.

And this, Sir, is the way of spiders going from one tree to another, at a great distance; and this is the way of their flying in the air. And, although I say I am certain of it, I don't desire that the truth of it should be received upon my word; though I could bring others to testify to it, to whom I have shown it, and who have looked on, with admiration, to see their manner of working. But every one's eyes, that will take the pains to observe, will make them as sure of it. Only those, that would make experiment, must take notice that it is not every sort of spider that is a flying spider, for those spiders that keep in houses are a quite different sort, as also those that keep in the ground, and those that keep in swamps, in hollow trees, and rotten logs; but those spiders, that keep on branches of trees and shrubs, are the flying spiders. They delight most in walnut trees, and are that sort of spiders that make those curious network polygonal webs, that are so frequently to be seen in the latter end of the year. There are more of this sort of spiders by far than of any other.

But yet, Sir, I am assured that the chief end of this faculty, that is given them, is not their recreation, but their destruction; because their destruction is unavoidably the effect of it; and we shall find nothing, that is the continual effect of nature, but what is of the means by which it is brought to pass. But it is impossible, but that the greatest part of the spiders upon the land should, every year, be swept into the ocean. For these spiders never fly, except the weather is fair and the atmosphere dry; but the atmosphere is never clear, neither in this nor any other continent, only when the wind blows from the midland parts, and consequently towards the sea. As here in New-England, the fair weather is only when the wind is westerly, the land being on that side, and the ocean on the easterly. And I never have seen any of these spiders flying, but when they have been hastening directly towards the sea. And the time of their flying being so long, even from about the middle of August every sunshiny day, until about the end of October; (though their chief time, as I observed before, is the latter end of August, and beginning of September;) and they never flying from the sea, but always towards it; must needs get there at last; for it's unreasonable to suppose that they have sense enough

to stop themselves when they come near the sea; for then they would have hundreds of times as many spiders upon the sea-shore, as any where else.

The same also holds true of other sorts of flying insects; for at these times, that I have viewed the spiders with their webs in the air, there has also appeared vast multitudes of flies, and all flying the same way with the spiders and webs directly to the ocean; and even such as butterflies, millers and moths, which keep in the grass at this time of year, I have <sup>10</sup> seen vastly higher than the tops of the highest trees, all going the same way. These I have seen towards evening, without such a screen to defend my eyes from the sunbeams; which I used to think were seeking a warmer climate.

The reason of their flying at that time of year, I take to be because then the ground and trees, the

places of their residence in summer, begin to be chilly and uncomfortable. Therefore when the sun shines pretty warm they leave them, and mount up in the air, and expand their wings to the sun, and flying for nothing but their own ease and comfort, they suffer themselves to go that way, that they find they can go with the greatest ease, and so where the wind pleases; and it being warmth they fly for, they find it cold and laborious flying against the wind. They therefore seem to use their wings, but just so much as to bear them up, and suffer them to go with the wind. So that without doubt almost all aerial insects, and also spiders which live upon trees and are made up of them, are at the end of the year swept away into the sea, and buried in the ocean, and leave nothing behind them but their eggs, for a new stock the next year.

### *The Soul* <sup>2</sup>

I am informed y<sup>t</sup> you have advan[c]ed a notion y<sup>t</sup> the Soul is matereal & keeps w<sup>th</sup> y<sup>e</sup> body till y<sup>e</sup> resurrection as I am a profes't Lover of Novelty you <sup>20</sup> must allow me to be much entertain'd by this discovery w<sup>ch</sup> however old in some part of y<sup>e</sup> world is new in this

I am informed y<sup>t</sup> you have advanced an Notion y<sup>t</sup> the Soul is materiall & attends y<sup>e</sup> body till y<sup>e</sup> resurrection as I am a profest Lover of novelty you must imagin I am very much entertained by this discovery (w<sup>ch</sup> however in some parts of y<sup>e</sup> world is new to us) but suffer my Curiosity a Littel further I w<sup>d</sup> know y<sup>e</sup> manner of y<sup>e</sup> kingdom before I swear allegiance <sup>30</sup> 1<sup>st</sup> I w<sup>d</sup> know whether this materiall Soul keeps w<sup>th</sup> in y<sup>e</sup> Coffin and if so whether it might not be convenient to build a repository for it in order to w<sup>ch</sup> I w<sup>d</sup> know w<sup>t</sup> Shape it is of whether round triangular or fore square or whethe is it a number of Long fine strings reaching from y<sup>e</sup> head to y<sup>e</sup> foot and whether it dus not Live a very discontented Life I am afraid when y<sup>e</sup> Coffin Gives way y<sup>e</sup> earth will fall in and

Crush it but if it should Chuse to Live above Ground and hover about y<sup>e</sup> Grave how big it is whether it <sup>40</sup> Covers all y<sup>e</sup> body or is assined to y<sup>e</sup> head or breast or how if it Covers all y<sup>e</sup> body w<sup>t</sup> it dus when another body is Laid upon y<sup>t</sup> whether y<sup>e</sup> 1<sup>st</sup> First Gives way and if so where is y<sup>e</sup> place of retreat but suppose y<sup>e</sup> Souls are not so big but y<sup>t</sup> 10 or a dozen of you may be about one body whether yy will not Quarrel for y<sup>e</sup> highest place and as I insist much upon my honnour and property I w<sup>d</sup> know wher I must Quit my dear head if a Superior Soul Comes in y<sup>e</sup> way but above all I am Conscarned to know w<sup>t</sup> they do where <sup>30</sup> a burcing Place has bin filled 20 30 or 100 times if they are a top of one another y<sup>e</sup> uppermost will be so far of y<sup>t</sup> it Can take no Care of y<sup>e</sup> body I strongly suspect they must march off[f] every time there Comes anew Set I hope ther is some Good place provided for them but dupt [d(o)ubt?] y<sup>e</sup> undergoing so much hard Ship & being deprived of y<sup>e</sup> body at Last will make them ill temper'd I Live it<sup>wth</sup> your phisicall Genus to determin whether some medesinall applications might not be proper in such Cases and <sup>40</sup> subscrib your prosclite when I can have solution of these maters

<sup>2</sup> This letter, written about the same time as the essay on the spider, or shortly thereafter, is peculiarly compounded of <sup>40</sup> philosophical sagacity and good-natured raillery.

*Of Being*<sup>3</sup>

That there should absolutely be nothing at all is utterly impossible, the Mind Can never Let it stretch its Conceptions ever so much bring it self to Conceive of a state of Perfect nothing, it puts the mind into mere Convulsion and Confusion to endeavour to think of such a state, and it Contradicts the very nature of the soul to think that it should be, and it is the Greatest Contradiction and the Aggregate of all Contradictions to say that there should not be, tis true we Cant so Distinctly show the Contradiction<sup>10</sup> by words because we Cannot talk about it without Speaking horrid Nonsense and Contradicting our selve at every word, and because nothing is that whereby we Distinctly show other particular Contradictions, but here we are Run up to Our first principle and have no other to explain the Nothingness or not being of nothing by, indeed we Can mean nothing else by nothing but a state of Absolute Contradiction; and If any man thinks that he Can think well Enough how there should be nothing I'll Engage<sup>20</sup> that what he means by nothing is as much something as any thing that ever He thought of in his Life, and I believe that if he knew what nothing was it would be intuitively Evident to him that it could not be. So that we see it is necessary some being should Eternally be and tis a more palpable Contradiction still to say that there must be being somewhere and not elsewhere for the words absolute nothing, and where, Contradict each other; and besides it Gives as great a shock to the mind to think of pure nothing<sup>30</sup> being in any one place, as it Does to think of it in all and it is self evident that there Can be nothing

in one place as well as in another and so if there Can be in one there Can be in all. So that we see this necessary eternall being must be infinite and Omnipresent. . . .

A state of Absolute nothing is a state of Absolute Contradiction absolute nothing is the Aggregate of all the Absurd[?] contradictions in the World, a state wherein there is neither body nor spirit, nor space neither empty space nor full space neither little nor Great, narrow nor broad neither infinitely Great space, nor finite space, nor a mathematical point neither Up nor Down neither north nor south (I dont mean as it is with Respect to the body of the earth or some other Great body but no Contrary Point, nor Positions or Directions[]) no such thing as either here Or there this way or that way or only one way; When we Go About to form an idea of Perfect nothing we must shut Out all these things we must shut out of our minds both space that has something in it and space that has nothing in it we must not allow our selves to think of the least part of space never so small, nor must we suffer our thoughts to take sanctuary in a mathematical point, when we Go to Expell body out of Our thoughts we must Cease not to leave empty space in the Room of it and when we Go to Expell emptiness from Our thoughts we must not think to squeeze it out by any thing Close hard and solid but we must think of the same that the sleeping Rocks Dream of and not till then shall we Get a Compleat idea of nothing . . .

*Notes on the Mind*<sup>4</sup>

EXISTENCE. If we had only the sense of Seeing, we should not be as ready to conclude the visible world to have been an existence independent of perception, as we do; because the ideas we have by the sense of Feeling, are as much mere ideas, as those we have by the sense of Seeing. But we know, that the things that are objects of this sense, all that the mind views

by Seeing, are merely mental Existences; because all these things, with all their modes, do exist in a looking-glass, where all will acknowledge, they exist only mentally.

It is now agreed upon by every knowing philosopher, that Colours are not really in the things, no more than Pain is in a needle; but strictly no where

<sup>3</sup> These passages from Edwards' youthful efforts to speculate on the subject of Being date to about the same time as the preceding selection.

<sup>4</sup> These speculations form a part of Edwards' "Notes on the Mind," which he wrote down during his collegiate career at Yale, 1716-20.

else but in the mind. But yet I think that Colour may have an existence out of the mind, with equal reason as any thing in Body has any existence out of the mind, beside the very substance of the body itself, which is nothing but the Divine power, or rather the Constant Exertion of it. For what else is that, which we call by the name of Body? I find Colour has the chief share in it. 'Tis nothing but Colour, and Figure, which is the termination of this Colour, together with some powers, such as the power of resisting, and motion, &c. that wholly makes up what we call Body. And if that, which we principally mean by the thing itself, cannot be said to be in the thing itself, I think nothing can be. If Colour exists not out of the mind, then nothing belonging to Body, exists out of the mind but Resistance, which is Solidity, and the termination of this Resistance, with its relations, which is Figure, and the communication of this Resistance, from space to space, which is Motion; though the latter are nothing but modes of the former. Therefore, there is nothing out of the mind but Resistance. And not that neither, when nothing is actually resisted. Then, there is nothing but the Power of Resistance. And as Resistance is nothing else but the actual exertion of God's power, so the Power can be nothing else, but the constant Law or Method of that actual exertion. And how is there any Resistance, except it be in some mind, in idea? What is it that is resisted? It is not Colour. And what else is it? It is ridiculous to say, that Resistance is resisted. That, does not tell us at all what is to be resisted. There must be something resisted before there can be Resistance; but to say Resistance is resisted, is ridiculously to suppose Resistance, before there is anything to be resisted. Let us suppose two globes only existing, and no mind. There is nothing there, *ex confesso*, but Resistance. That is, there is such a Law, that the space within the limits of a globular figure shall resist. Therefore, there is nothing there but a power, or an establishment. And if there be any Resistance really out of the mind, one power and establishment must resist another establishment and law of Resistance, which is exceedingly ridiculous. But yet it cannot be otherwise, if any way out of the mind. But now it is easy to conceive of Resistance, as a mode of an idea. It is easy to conceive of such a power, or constant manner of stopping or resisting a colour. The idea may be resisted, it may move, and stop and rebound; but how a mere power, which is nothing real, can move and stop, is inconceivable, and it is impossible to say a word about it without contradiction. The world is therefore an ideal one; and the Law of creating, and the succession of these ideas is constant and regular. . . .

### Diary

*Thursday forenoon, Oct. 4, 1723.* Have this day fixed and established it, that Christ Jesus has promised me faithfully, that, if I will do what is my duty, so and according to the best of my prudence in the matter, that my condition in this world, shall be better for me than any other condition whatever, and more to my welfare, to all eternity. And, therefore, whatever my condition shall be, I will esteem it to be such; and if I find need of faith in the matter, that I will confess it as impiety before God. . . .

*Thursday night, Dec. 12.* If, at any time, I am forced to tell others wherein I think they are somewhat to blame; in order to avoid the important evil so, that there shall be a probability of their taking it as the effect of little, fretting, angry emotions of mind.— . . . When I do want, or am likely to want, good books, to spend time in studying Mathematics, and in reviewing other kinds of old learning; to spend more time in visiting friends, in the more private duties of a pastor, in taking care of worldly business, in going abroad and other things that I may contrive.

*Friday morning, Dec. 27.* At the end of every month, to examine my behaviour, strictly, by some chapter in the New Testament, more especially made up of rules of life.—At the end of the year, to examine my behaviour by the rules of the New Testament in general, reading many chapters. It would also be convenient, some time at the end of the year, to read, for this purpose, in the book of Proverbs.

*Tuesday night, Dec. 31.* Concluded never to suffer, nor express, any angry emotions of mind, more or less, except the honour of God calls for it in zeal for him, or to preserve myself from being trampled on.

1724. *Wednesday, Jan. 1.* Not to spend too much time in thinking, even of important and necessary worldly business, and to allow every thing its proportion of thought, according to its urgency and importance. . . .

*Monday, Jan. 20.* I have been very much to blame, in that I have not been as full, and plain and downright, in my standing up for virtue and religion, when I have had fair occasion, before those who seemed to take no delight in such things. If such conversation would not be agreeable to them, I have in some degree minced the matter, that I might not displease, and might not speak right against the grain, more than I should have loved to have done with others, to whom it would be agreeable to speak directly for religion. I ought to be exceedingly bold with such persons, not talking in a melancholy strain, but in one confident and fearless, assured of the truth and excellence of the cause.

*Monday, Feb. 3.* Let every thing have the value now which it will have on a sick bed: and frequently, in my pursuits of whatever kind, let this question come into my mind, "How much shall I value this, on my death-bed?" . . .

*Thursday, Feb. 6.* More convinced than ever, of the usefulness of free, religious conversation. I find by conversing on Natural Philosophy, that I gain knowledge abundantly faster, and see the reasons of things much more clearly than in private study: wherefore, earnestly to seek, at all times, for religious conversation; for those, with whom I can, at all times, with profit and delight, and with freedom, so converse. . . .

#### AT YALE COLLEGE

*Saturday night, June 6.* This week has been a very remarkable week with me, with respect to despondencies, fears, perplexities, multitudes of cares, and distraction of mind: it being the week I came hither to New-Haven, in order to entrance upon the office of Tutor of the College. I have now, abundant reason to be convinced, of the troublesomeness and

vexation of the world, and that it never will be another kind of world.

*Tuesday, July 7.* When I am giving the relation of a thing, remember to abstain from altering either in the matter or manner of speaking, so much, as that, if every one, afterwards, should alter as much, it would at last come to be properly false. . . .

*Friday, Nov. 6.* Felt sensibly, somewhat of that trust and affiance, in Christ, and with delight committing of my soul to him, of which our divines used to speak, and about which, I have been somewhat in doubt.

*Tuesday, Nov. 10.* To mark all that I say in conversation, merely to beget in others, a good opinion of myself, and examine it.

*Sabbath, Nov. 15.* Determined, when I am indisposed to prayer, always to premeditate what to pray for; and that it is better, that the prayer should be of almost any shortness, than that my mind should be almost continually off from what I say. . . .

*Friday, May 28 [1725].* It seems to me, that whether I am now converted or not, I am so settled in the state I am in, that I shall go on in it all my life. But, however settled I may be, yet I will continue to pray to God, not to suffer me to be deceived about it, nor to sleep in an unsafe condition; and ever and anon, will call all into question and try myself, using for helps, some of our old divines, that God may have opportunities to answer my prayers, and the Spirit of God to show me my error, if I am in one. . . .

*May 18 [1735].* My mind at present is, never to suffer my thoughts and meditations, at all to ruminate.

*June 11.* To set apart days of meditation on particular subjects; as sometimes, to set apart a day for the consideration of the Greatness of my Sins; at another, to consider the Dreadfulness and Certainty, of the Future Misery of Ungodly men; at another, the Truth and Certainty of Religion; and so, of the Great Future Things promised and threatened in the Scriptures.

*Sarah Pierrepont*<sup>5</sup>

They say there is a young lady in [New Haven] who is beloved of that Great Being, who made and rules the world, and that there are certain seasons in which this Great Being, in some way or other invisible, comes to her and fills her mind with exceeding sweet delight, and that she hardly cares for any thing, except to meditate on him—that she expects after a while to be received up where he is, to be raised up out of the world and caught up into heaven; being assured that he loves her too well to let her remain at a distance from him always. There she is to dwell with him, and to be ravished with his love and delight forever. Therefore, if you present all the world before her, with the richest of its treasures, she disregards it and cares not for it, and is unmin-

ful of any pain or affliction. She has a strange sweetness in her mind, and singular purity in her affections; is most just and conscientious in all her conduct; and you could not persuade her to do any thing wrong or sinful, if you would give her all the world, lest she should offend this Great Being. She is of a wonderful sweetness, calmness and universal benevolence of mind; especially after this Great God has manifested himself to her mind. She will sometimes go about from place to place, singing sweetly; and seems to be always full of joy and pleasure; and no one knows for what. She loves to be alone, walking in the fields and groves, and seems to have some one invisible always conversing with her.

*Nature*<sup>6</sup>

We have shown that the Son of God created the world for this very end, to communicate Himself in an image of His own excellency. He communicates Himself properly only to spirits, and they only are capable of being proper images of His excellency, for they only are properly *beings*, as we have shown. Yet He communicates a sort of a shadow or glimpse of His excellencies to bodies which, as we have shown, are but the shadows of beings and not real beings. He who, by His immediate influence, gives being every moment, and by His spirit actuates the world, because He inclines to communicate Himself and His excellencies, doth doubtless communicate His excellency to bodies, as far as there is any consent or analogy. And the beauty of face and sweet airs in men are not always the effect of the corresponding excellencies of mind; yet the beauties of nature are really emanations or shadows of the excellency of the Son of God.

So that, when we are delighted with flowery meadows and gentle breezes of wind, we may consider that we see only the emanations of the sweet benevolence of Jesus Christ. When we behold the fragrant rose and lily, we see His love and purity.

So the green trees and fields, and singing of birds, are the emanations of His infinite joy and benignity. The easiness and naturalness of trees and vines are shadows of His beauty and loveliness. The crystal rivers and murmuring streams are the footsteps of His favor, grace, and beauty. When we behold the light and brightness of the sun, the golden edges of an evening cloud, or the beauteous bow, we behold the adumbrations of His glory and goodness; and in the blue sky, of his mildness and gentleness. There are also many things wherein we may behold His awful majesty: in the sun in his strength, in comets, in thunder, in the hovering thunder-clouds, in ragged rocks and the brows of mountains. That beauteous light with which the world is filled in a clear day is a lively shadow of His spotless holiness, and happiness and delight in communicating Himself. And doubtless this is a reason that Christ is compared so often to those things, and called by their names, as the Sun of Righteousness, the morning-star, the rose of Sharon, and lily of the valley, the apple-tree among trees of the wood, a bundle of myrrh, a roe, or a young hart. By this we may discover the beauty of many of those metaphors and similes which to an

<sup>5</sup> This tribute to Sarah Pierrepont was written in 1723, when Edwards was twenty, and Miss Pierrepont thirteen. They were married four years later.

<sup>6</sup> This undated fragment was found among Edwards' manuscripts.

In like manner, when we behold the beauty of man's body in its perfection, we still see like emanations of Christ's divine perfections, although they do not always flow from the mental excellencies of

the person that has them. But we see the most proper image of the beauty of Christ when we see beauty in the human soul.

### *Narrative of Surprising Conversions*<sup>7</sup>

My Letter to a Brother [the Reverend Benjamin Colman<sup>8</sup>] May 30. 35.

Dear Sir

In answer to your Desire, I here send you a Particular account of the Present Extraordinary circumstances of this Town, & the neighbouring Towns with Respect to Religion. I have observed that the Town for this several years have gradually been Reforming; There has appeared Less & Less of a party spirit, & a contentious disposition, which before had Prevail'd for many years between two Parties in the Town. The young People also have been Reforming more and more; They by degrees Left off their frolicking, and have been observably more decent in their attendance on the Publick worship. The winter before Last there appeared a strange flexibleness in the young People of the Town, and an unusual disposition to Harken to Counsel, on this Occasion; It had been their manner of a Long Time, & for Ought I know, always, to make sabbath day nights & Lecture days, to be Especially Times of diversion, & Company Keeping: I then Preach'd a sermon on the Sabbath before the Lecture, to show them the unsuitableness, & Inconvenience of the Practice, & to Perswade them to Reform it; & urged it on Heads of Families that It should be a thing agreed among them to Govern their Families, & keep them in at those times. & There happen'd to be at my house the Evening after, men that belonged to the several parts of the Town, to whom I moved that they should desire the Heads of Families, in my name, to meet together in their several neighbourhoods, that they might Know Each

others minds, and agree Every one to restrain his Family; which was done, & my motion Complied with throughout the Town; but the Parents found Little or no occasion for the Exercise of Government in the case; for the young People declared themselves convinced by what they had heard, and willing of themselves to Comply with the Counsel Given them; & I suppose it was almost universally complied with thenceforward. After this there began to be a Remarkable Religious Concern among some Farm Houses, at a Place Called Pascommuck, & five or six that I hoped were savingly wrought upon there. & in April there was a very sudden and awfull death of a young man in Town, in the very Bloom of his youth, who was violently seized with a Pleurisy & taken Immediately out of his head, and died in two days; which much affected many young People in the Town. This was followed with another death of a young married woman, who was in Great Distress in the Beginning of her Illness, but was hopefully Converted before her death; so that she died full of Comfort, and in a most Earnest & moving manner, warning & counselling others, which I believe much contributed to the solemnizing of the spirits of the young People in the Town; and there began Evidently to appear more of a Religious concern upon Peoples minds. In the Fall of the year I moved to the young People that they should set up Religious meetings, on Evenings after Lectures, which they complied with; this was followed with the death of an Elderly Person in the Town, which was attended with very unusual Circumstances, which much affected many People. about that Time began the Great noise that there was in this Part of the Country about Arminianism, which seemed strangely to be overruled for the Promoting of Religion; People seemed to be Put by it upon Enquiring, with concern & Engagedness of mind, what was the way of salvation, and what were the Terms of our acceptance with God; & what was said Publickly on that occasion; however found fault with by many Elsewhere, &

<sup>7</sup> This "narrative" is Edwards' own account of the Great Awakening in Northampton, where it seems to have been inspired by his preaching as early as 1734. The revival ran its course during the next fifteen years, eventually spreading all over the eastern seaboard from Maine to Georgia.

<sup>8</sup> This is the same Benjamin Colman who, as pastor of the Brattle Street Church from 1699 to his death in 1747, had caused the Mathers much concern. Edwards wrote his letter in answer to Colman's request for particulars concerning the revival at Northampton. Colman was so much impressed that he published the letter in 1736. The text here followed is from Edwards' own copy of the letter, now deposited in the Andover Theological Seminary.

Ridicul'd by some, was most Evidently attended with a very Remarkable blessing of Heaven, to the souls of the People in this Town, to the Giving of them an universal satisfaction & Engaging their minds with Respect to the thing in Question, the more Earnestly to seek salvation in the way, that had been made Evident to them; & then, a Concern about the Great things of Religion began, about the Latter End of Decem<sup>b</sup>er, & the beginning of January, to Prevail abundantly in the Town, till in a very Little Time it 10 became universal throughout the Town, among old and young, & from the highest to the Lowest; all seemed to be siezed with a deep concern about their Eternal salvation; all the Talk in all companics, & upon occasions was upon the things of Religion, and no other talk was anywhere Relished; & scarcely a single Person in the whole Town was Left unconcerned about the Great things of the Eternal World: Those that were wont to be the vainest, & Loosest Persons in Town seemed in General to be siezed with 20 strong convictions: Those that were most disposed to contemn vital & Experimental Religion, & those that had the Greatest Conceit of their own Reason: the highest Families in the Town, & the oldest Persons in the Town, and many Little Children were affected Remarkably; no one Family that I know of, & scarcely a Person has been Exempt & the Spirit of God went on in his saving Influences, to the appearance of all Human Reason & Charity, in a truly wonderfull and astonishing manner. The news of it filled 30 the neighbouring Towns with Talk, & there were many in them that scoffed and made a Ridicule of the Religion that appeared in Northampton; But it was observable that it was very frequent & Common that those of other Towns that came into this Town, & observed how it was here, were Greatly affected, and went home with wounded spirits, & were never more able to Shake off the Impression that it made upon them, till at Length there began to appear a General concern in several of the Towns in the 40 County: in the month of march the People in new Hadley seemed to be siezed with a deep concern about their salvation, all as it were at once, which has Continued in a very Great degree Ever since: about the same time there began to appear the Like Concern in the west Part of Suffield, which has since spread into all Parts of the Town. It next began to appear at Sunderland, & soon became universal, & to a very Great Degree, about the same Time it began

to appear in Part of Deerfield, Called Green River, & since has filled the Town. It began to appear also at a part of Hatfield, and after that the whole Town in the second week in April seemed to be siezed at once, & there is a Great & General concern there. and there Gradually Got in a Considerable degree of the same Concern into Hadley old society, & Mr Hopkins's Parish in Springfield, but it is nothing near so Great as in many other Places. the next Place that we heard of was Northfield, where the Concern was very Great & General. we have heard that there is a considerable degree of it at Longmeadow, & there is something of it in old Springfield in some parts of the society. about three weeks ago the Town of Enfield were struck down as it were at once, the worst Persons in the Town seemed to be suddenly siezed with a Great degree of Concern about their souls, as I have been informed: & about the same Time, Mr Bull of Westfield [said] that there began to be a Great alteration there, & that there had been more done in one week before that Time that I spoke with him than had been done in seven year before: the People of Westfield have till now above all other Places, made a scoff & derision of this concern at Northampton. There has been a Great Concern of a Like Nature at Windsor, on the westside of the River, which began about the same Time that it began to be General here at Northampton; & my Father has told me that there is an hopefull beginning on the East side in his society. Mr Noyes writes me word that there is a Considerable Revival of Religion at New-Haven; & I have been Credibly Informed that there is something of it at Guilford, and Lime, as there also is at Coventry, Bolton, & a society in Lebanon called the Crank: I yesterday saw Mr White of Bolton, and also Last night saw a young man that belongs to Coventry, who Gave a very Remarkable account of that Town, of the manner in which the Rude debauched young People there were suddenly 50 siezed with a concern about their souls.

as to the nature of Persons Experiences, & the Influences of that spirit that there is amongst us, Persons when siezed with concern are brought to forsake their vices, & ill Practices; the Looser sort are brought to forsake & to dread their former Extravagances: Persons are soon brought to have done with their old Quarrels; Contention & Intermeddling with other mens matters seems to be dead amongst us. I believe there never was so much done at Confessing

of faults to Each other, & making up differences, as there has Lately been: where this concern comes it Immediately Puts an End to differences between ministers & People: there was a considerable uneasiness at New Hadley between some of the People & their minister, but when this Concern came amongst them it Immediately Put an End to it, & the People are now universally united to their minister. There was an Exceeding alienation at Sunderland, between the minister & many of the People; but when this Concern came amongst them it all vanished at once, & the People are universally united, in hearty affection to their minister. There were some men at Deerfield, of Turbulent spirits, that kept up an uneasiness there with Mr ashley; but one of the Chief of them has Lately been Influenced, fully, & freely to confess his fault to him, & is become his hearty Friend.

People are brought off from Inordinate Engagedness after the World, & have been Ready to Run into the other Extreme of too much neglecting their worldly Business & to mind nothing but Religion. Those that are under Convictions are Put upon it Earnestly to Enquire what they shall do to be saved, & diligently to use appointed means of Grace, and apply themselves to all known duty. & those that obtain Hope themselves, & the Charity of others Concerning their Good Estate, Generally seem to be brought to A Great Sense of their own Exceeding misery in a natural Condition, & their utter helplessness, & Insufficiency for themselves, & their Exceeding wickedness & Guiltiness in the sight of God; it seldom fails but that Each one seems to think himself worse than any body Else, & they are brought to see that they deserue no mercy of God, that all their Prayers & Pains are Exceeding worthless & Polluted, & that God, notwithstanding all that they have done, or can do, may Justly Exccute his Eternal wrath upon them, & they seem to be brought to a Lively sense of the Excellency of Jesus Christ & his sufficiency & willingness to save sinners, & to be much weaned in their affections from the world, & to have their Hearts filled with Love to God and Christ, and a disposition to Lie in the dust before him. they seem to have Given them a Lively Conviction of the Truth of the Gospel, & the divine authority of the Holy Scriptures; tho they cant have the Excercise of this at all Times alike, nor Indeed of any other Grace. they seem to be brought to abhor themselves for the sins of their Past Life, & to Long to be holy, & to Live holily, & to Gods

Glory; but at the same time complain that they can do nothing, they are poor Impotent Creatures, utterly Insufficient to Glorify their Creatour & Redeemer. They Commonly seem to be much more sensible of their own wickedness after their Conversion then before, so that they are often Humbled by it, it seems to them that they are Really become more wicked, when at the same time they are Evidently full of a Gracious Spirit: Their Remaining sin seems to be their very Great Burthen, & many of them seem to Long after Heaven, that there they may be Rid of sin. They Generally seem to be united in dear Love, and affection one to another, & to have a Love to all mankind: I never saw the Christian spirit in Love to Enemies so Exemplified, in all my Life as I have seen it within this Half year. They commonly Express a Great Concern for others salvation; some say that they think they are far more Concern'd for others conversion, after they themselves have been Converted, than Ever they were for their own; several have thought (tho Perhaps they might be deceived in it) that they could freely die for the salvation of any soul, of the meanest of mankind, of any Indian in the woods. This Town never was so full of Love, nor so full of Joy, nor so full of distress as it has Lately been. Some Persons have had those Longing desires after Jesus Christ, that have been to that degree as to take away their strength, and very much to weaken them, & make them faint: many have been Even Overcome with a sencs of the dying Love of Christ, so that the home of the body has been Ready to fail under it; there was once three Pious young Persons in this Town talking together of the dying Love of Christ, till they all fainted away; tho tis Probable the fainting of the two Latter was much Promoted by the fainting of the first. many Express a sense of the Glory of the divine Perfections, & of the Excellency & fullness of Jesus Christ, & of their own Littleness & unworthiness, in a manner Truly wonderfull, & almost vnparalleld; & so likewise of the Excellency & wonderfullness of the way of Salvation by Jesus Christ. Their Esteem of the Holy Scriptures is Exceedingly Increased. Many of them say the Bible seems to be a new Book to them, as tho they never Read it before: There have been some Instances of Persons that by only an accidental sight of the Bible, have been as much moved, it seem'd to me, as a Lover by the sight of his sweet heart. The Preaching of the Word is Greatly Prized by them, they say they never heard

Preaching before; and so are Gods Sabbaths, & ordinances, & opportunities of Publick worship; the Sabbath is Longed for before it comes, some by only hearing the bell Ring on some occasion in the week time, have been Greatly moved, because it has Put them in mind of its Ringing to Call the People together to worship God. But no Part of Publick worship has commonly put an Effect on them as singing Gods Praises. They have a Greater Respect to ministers than they used to have, there is scarcely a minister Preaches here but Gets their Esteem & affection. The Experiences of some Persons Lately amongst [us] have been beyond almost all that Ever I heard or Read of. There is a Pious woman in this Town that is a very modest Bashfull Person, that was moved by what she heard of the Experiences of others Earnestly to seek to God to give her more clear manifestations of himself, and Evidences of her own Good Estate, & God answer'd her Request, and Gradually gave her more & more of a sense of his Glory & Love, which she had with Intermissions for several days, till one morning the week before Last she had it to a more than ordinary degree, and it Prevaild more & more till towards the middle of the day, till her nature began to sink vnder it, as she was alone in the House; but there came somebody into the House, & found her in an unusual, Extraordinary frame She Expressed what she saw & felt to him; it came to that at Last that they Raised the neighbours, they were afraid she would die; I went up to see her & found her Perfectly sober & in the Exer[c]ise of her Reason, but having her nature seemingly overborn & sinking, and when she could speak Expressing in a manner that cant be described the sense she had of the Glory of God, and Particularly of such & such Perfections, & her own vnworthiness, her Longing to Lie in the dust, sometimes her Longing to Go to be with Christ, & crying out of the Excellency of Christ, & the wonderfullness of his dying Love; & so she continued for Hours together tho not alwaies in the same degree; at sometimes she was able to discourse to those about her; but it seemed to me if God had manifested a Little more of himself to her she would Immediately have sunk & her frame dissolved under it. She has since been at my House, & continues as full as she can hold, but looks on her self not as an Eminent saint, but as the worst of all, & vnworthy to Go to speak with a minister; but yet now beyond any Great Doubt of her Good Estate. There are two Persons

that Belong to other Towns that have had such a sense of Gods Exceeding Greatness & majesty, that they were as it were swallowed up; they both of them told me to that Purpose that if they in the Time of it they had had the Least fear that they were not at Peace with that Great God, they should Immediately have died. But there is a very vast variety of degrees of spiritual discoveries, that are made to those that we hope are Godly. as there is also in the steps, & method of the spirits operation in convincing & converting sinners, and the Length of Time that Persons are under conviction before they have comfort. There is an alteration made in the Town in a few months that strangers can scarcely [be] conscious of; our Church I believe was the Largest in New England before, but Persons Lately have thronged in, so that there are very few adult Persons Left out. There have been a Great multitude hopefully converted, too many, I find, for me to declare abroad with Credit to my Judgment. the Town seems to be full of the Presence of God; our young People when they Get together instead of frolicking as they used to do are altogether on Pious subjects; tis so at weddings & on all occasions. The Children in this, & the neighbouring Towns have been Greatly affected & Influenced by the spirit of God, & many of them hopefully changed; the youngest in this Town is between 9. & 10 years of age, some of them seem to be full of Love to X.<sup>o</sup> & have Expressed Great Longings after him & willingness to die, & Leave Father & mother & all things in the world to Go to him, together with a Great sense of their unworthiness & admiration at the free Grace of God towards them. & there have been many old People, many above fifty & several near seventy that seem to be wonderfully changed & hopefully new born. the Good People that have been formerly Converted in the Town have many of them been wonderfully enliven'd & Increased. This work seems to be upon Every account an Extraordinary dispensation of Providence. Tis Extraordinary upon the account of [the] universality of it in affecting all sorts high & Low Rich & Poor wise & unwise old & young vicious & moral; tis very Extraordinary as to the numbers that are hopefully savingly wrought upon, & particularly the number of aged Persons & Children & Loose Livers; and also on the account of the Quickness of the work of the Spirit on them, for many seem to have been suddenly taken from a Loose

<sup>o</sup> Christ.

way of Living, & to be so changed as to become truly holy spiritual Heavenly Persons; tis Extraordinary as to the degrees of Gracious Communications, & the abundant measures in which the Spirit of God has been Poured out on many Persons; tis Extraordinary as to the Extent of it, Gods spirit being so Remarkably Poured out on so many Towns at once, & its making such swift Progress from Place to Place. The Extraordinariness of the thing has been I believe one Principal cause that People abroad have suspected it. 10 There have been as I have heard many odd & strange stories that have been carried about the Countrey of this affair, which it is a wonder some wise men should be so Ready to Believe. Some indeed vnder Great terrours of Conscience have had Impressions on their Imaginations; and also vnder the Power of the spiritual discoveries, they have had Livelily Impressed Ideas of Christ shedding blood for sinners, his blood Running from his veins, & of Christ in his Glory in Heaven & such Like things, but they are alwaies 20 taught, & have been several times taught in Publick not to Lay the weight of their hopes on such things & many have nothing of any such Imaginations. there have been several Persons that have had their natures overborn vnder strong Convictions, have trembled, & han't been able to stand, they have had such a sense of divine wrath; But there are no new doctrines Embraced, but People have been abundantly Established in those that we account orthodox; there is no new way of worship affected. there is no oddity of Beha- 30 viour Prevails; People are no more superstitious about their Clothes, or any thing Else than they used to be: Indeed there is a Great deal of talk when they are together of one anothers Experiences, & Indeed no other is to be expected in a Town where the Concern of the soul, is so vniversally the Concern & that to so Great a degree. & doubtless some Persons vnder the strength of Impressions that are made on their minds and vnder the Power of strong affections, are Guilty of Imprudences, their zeal may need to be Regulated 40 by more Prudence, & they may need a Guide to their assistancce; as of old when the Church of Corinth had the Extraordinary Gifts of the spirit, they needed to be told by the apostle that the spirit of the Prophets were subject to the Prophets, & that their Gifts were to be exercised with Prudence, because God was not the author of Confusion but of Peace. There is no unlovely oddity in Peoples Temper Prevailing with this work, but on the contrary the face of

things is much changed as to the appearance of a meek, humble, amiable behaviour. Indeed the devil has not been Idle, but his hand has Evidently appeared in several Instances Endavouring to mimick the work of the spirit of God and to cast a slur upon it & no wonder: & there has hereby appeared the need of the watchfull Eye of skillfull Guides, & of wisdom from above to direct them. There Lately Came up hither a Couple of ministers from Connecticut viz. Mr Lord of Preston, & Mr Owen of Groton, who had heard of the Extraordinary circumstances of this & the neighbouring Towns, who had heard the affair well Represented by some, & also had heard many Reports Greatly to its disadvantage, who came on purpose to see & satisfy themselves; & that they might thoroughly Acquaint themselves, went about, & spent Good Part of a day, in hearing the accounts of many of our new Converts, & Examining of them; which was Greatly to their satisfaction & they took Particular notice, among other things of the modesty with which Persons Gave account of themselves, & said that the one half was not told them, & could not be told them; & that if they Renounced these Persons Experiences they must Renounce Christianity it self. and Mr Owen said Particularly as to their Impressions on their Imaginations, they were quite different from what had been Represented, & that they were no more than might naturally be Expected in such cases.

Thus sir I have Given you a Particular account of this affair which satan has so much misrepresented in the Countrey. This is a true account of the matter as far as I have Opportunity to Know, & I suppose I am vnder Greater advantages to Know than any Person Living. Having been thus Long in the account, I forbear to make Reflections, or to Guess what God is about to do; I Leave this to you, and shall only say, as I desire alwaies to say from my Heart *To God be all the Glory whose work alone it is;* & Let him have an Interest in your Prayers, who so much needs divine help at that day, & is your affectionate Brother,

& Humble servant,

Northampton May 30. 1735. Jth Edwards.

Since I wrote the foregoing Letter, there has Happen'd a thing of a very awfull nature in the Town; My Uncle Hawley, the Last Sabbath day morning, Laid violent Hands on himself, & Put an End to his

Life, by Cutting his own throat. He had been for a Considerable Time greatly Concern'd about the Condition of his soul; till, by the ordering of a sovereign Providence he was suffered to fall into deep melancholly, a distemper that the Family are very Prone to; he was much overpowered by it; the devil took the advantage & drove him into despairing thoughts: he was Kept very much awake a nights, so that he had but very Little sleep for two months. till he seemed not to have his Faculties in his own Power: he was in a Great measure Past a Capacity of Receiving advice, or being Reason'd with. the Coroners Inquest Judged him delirious. Satan seems to be in a Great Rage, at this Extraordinary breaking forth of the work of God. I hope it is because he knows that he has but a short time: doubtless he had a Great Reach, in this violent attack of his against the whole affair. We have appointed a day of Fasting in the Town this week, by Reason of this & other appearances of satans Rage amongst us against Poor souls. I yesterday saw a woman that belongs to Durham, who says there is a Considerable Revival of Religion there.

I am yours &c—  
J. E.

Northampton June 3. 1735.

### *Sinners in the Hands of an Angry God*<sup>10</sup>

Your wickedness makes you as it were heavy as lead, and to tend downwards with great weight and pressure towards hell; and if God should let you go, you would immediately sink and swiftly descend and plunge into the bottomless gulf, and your healthy constitution, and your own care and prudence, and best contrivance, and all your righteousness, would have no more influence to uphold you and keep you out of hell, than a spider's web would have to stop a fallen rock. Were it not for the sovereign pleasure of God, the earth would not bear you one moment; for you are a burden to it; the creation groans with you; the creature is made subject to the bondage of your corruption, not willingly; the sun does not willingly shine upon you to give you light to serve sin and Satan; the earth does not willingly yield her increase to satisfy your lusts; nor is it willingly a stage for your wickedness to be acted upon; the air does not willingly serve you for breath to maintain the flame of life in your vitals, while you spend your life in the service of God's enemies. God's creatures are good, and were made for men to serve God with, and do not willingly subserve to any other purpose, and groan when they are abused to purposes so directly contrary to their nature and end. And the world would spew you out, were it not for the sovereign hand of him who hath subjected it in hope. There are black clouds of God's wrath now hanging directly over your heads, full of the dreadful storm, and big with thunder; and were it not for the restraining hand of God, it would immediately burst forth upon you. The sovereign pleasure of God, for the present, stays his rough wind; otherwise it would come with fury, and your destruction would come like a whirl-

<sup>10</sup> As a text for his sermon Edwards chose *Deut.* XXXII, 35: "Their foot shall slide in due time."

This selection is from the "Application," i.e., the concluding portion of *Sinners in the Hands of an Angry God*. The sermon itself is hardly characteristic of Edwards' preaching, which is described by Samuel Hopkins, a pupil of Jonathan Edwards, in these terms:

"His appearance in the desk was with a good grace, and his delivery easy, natural and very solemn. He had not a strong, loud voice, but appeared with such gravity and solemnity, and spake with such distinctness, clearness and precision, his words were so full of ideas, set in such a plain and striking light, that few speakers have been so able to demand the attention of an audience as he. His words often discovered a great degree of inward fervor, without much noise or external emotion, and fell with great weight on the minds of his hearers. He made but little motion of his head or hands in the desk, but spake as to discover the motion of his own heart, which tended in the most natural and effectual manner to move and affect others."

In describing the occasion attending Edwards' delivery of *Sinners in the Hands of an Angry God* and the manifestations of the Great Awakening in Enfield, where Edwards preached

this sermon in 1741, Benjamin Trumbull wrote in his *History of Connecticut*:

"While the people in neighboring towns were in great distress for their souls, the inhabitants in that town (Enfield) were very secure, loose, and vain. A lecture had been appointed at Enfield, and the neighboring people, the night before, were so affected at the thoughtlessness of the inhabitants, and in such fear that God would, in his righteous judgment, pass them by, while the divine showers were falling all around them, as to be prostrate before him a considerable part of it, supplicating mercy for their souls. When the time appointed for the lecture came, a number of the neighboring ministers attended, and some from a distance. When they went into the meeting-house, the appearance of the assembly was thoughtless and vain. The people hardly conducted themselves with common decency. The Rev. Mr. Edwards, of Northampton, preached, and before the sermon was ended, the assembly appeared deeply impressed and bowed down, with an awful conviction of their sin and danger. There was such a breathing of distress and weeping, that the preacher was obliged to speak to the people and desire silence, that he might be heard. This was the beginning of the same great and prevailing concern in that place, with which the colony in general was visited."

wind, and you would be like the chaff of the summer threshing floor.

The wrath of God is like great waters that are dammed for the present; they increase more and more, and rise higher and higher, till an outlet is given; and the longer the stream is stopped, the more rapid and mighty is its course, when once it is let loose. It is true, that judgment against your evil works has not been executed hitherto; the floods of God's vengeance have been withheld; but your guilt in the mean time is constantly increasing, and you are every day treasuring up more wrath; the waters are constantly rising, and waxing more and more mighty; and there is nothing but the mere pleasure of God, that holds the waters back, that are unwilling to be stopped, and press hard to go forward. If God should only withdraw his hand from the flood-gate, it would immediately fly open, and the fiery floods of the fierceness and wrath of God, would rush forth with inconceivable fury, and would come upon you with <sup>20</sup> omnipotent power; and if your strength were ten thousand times greater than it is, yea, ten thousand times greater than the strength of the stoutest, sturdiest devil in hell, it would be nothing to withstand or endure it.

The bow of God's wrath is bent, and the arrow made ready on the string, and justice bends the arrow at your heart, and strains the bow, and it is nothing but the mere pleasure of God, and that of an angry God, without any promise or obligation at all, <sup>30</sup> that keeps the arrow one moment from being made drunk with your blood. Thus all you that never passed under a great change of heart, by the mighty power of the Spirit of God upon your souls; all you that were never born again, and made new creatures, and raised from being dead in sin, to a state of new, and before altogether unexperienced light and life, are in the hands of an angry God. However you may have reformed your life in many things, and may have had religious affections, and may keep up a form of <sup>40</sup> religion in your families and closets, and in the house of God, it is nothing but his mere pleasure that keeps you from being this moment swallowed up in everlasting destruction. However unconvinced you may now be of the truth of what you hear, by and by you

will be fully convinced of it. Those that are gone from being in the like circumstances with you, see that it was so with them; for destruction came suddenly upon most of them; when they expected nothing of it, and while they were saying, Peace and safety: now they see, that those things on which they depended for peace and safety, were nothing but thin air and empty shadows.

The God that holds you over the pit of hell, much <sup>10</sup> as one holds a spider, or some loathsome insect over the fire, abhors you, and is dreadfully provoked: his wrath towards you burns like fire; he looks upon you as worthy of nothing else, but to be cast into the fire; he is of purer eyes than to bear to have you in his sight; you are ten thousand times more abominable in his eyes, than the most hateful venomous serpent is in ours. You have offended him infinitely more than ever a stubborn rebel did his prince; and yet it is nothing but his hand that holds you from falling <sup>20</sup> into the fire every moment. It is to be ascribed to nothing else, that you did not go to hell the last night; that you was suffered to awake again in this world, after you closed your eyes to sleep. And there is no other reason to be given, why you have not dropped into hell since you arose in the morning, but that God's hand has held you up. There is no other reason to be given why you have not gone to hell, since you have sat here in the house of God, provoking his pure eyes by your sinful wicked manner of attending his solemn worship. Yea, there is nothing else that is to be given as a reason why you do not <sup>30</sup> this very moment drop down into hell.

O sinner! Consider the fearful danger you are in: it is a great furnace of wrath, a wide and bottomless pit, full of the fire of wrath, that you are held over in the hand of that God, whose wrath is provoked and incensed as much against you, as against many of the damned in hell. You hang by a slender thread, with the flames of divine wrath flashing about it, and <sup>40</sup> ready every moment to singe it, and burn it asunder; and you have no interest in any Mediator, and nothing to lay hold of to save yourself, nothing to keep off the flames of wrath, nothing of your own, nothing that you ever have done, nothing that you can do, to induce God to spare you one moment. . . .

*Freedom of the Will*<sup>11</sup>

## PART I, SECTION V

Concerning the Notion of Liberty,  
and of Moral Agency

The plain and obvious meaning of the words *Freedom* and *Liberty*, in common speech, is *power, opportunity or advantage, that any one has, to do as he pleases*. Or in other words, his being free from hindrance or impediment in the way of doing, or 10 conducting in any respect, as he wills.\* And the contrary to Liberty, whatever name we call that by, is a person's being hindered or unable to conduct as he will, or being necessitated to do otherwise.

If this which I have mentioned be the meaning of the word Liberty, in the ordinary use of language; as I trust that none that has ever learned to talk, and is unprejudiced, will deny; then it will follow, that in propriety of speech, neither Liberty, nor its contrary, can properly be ascribed to any being or thing, but 20 that which has such a faculty, power or property, as is called will. For that which is possessed of no such thing as will, cannot have any power or opportunity of doing according to its will, nor be necessitated to act contrary to its will, nor be restrained from acting agreeably to it. And therefore to talk of Liberty, or the contrary, as belonging to the very will itself, is not to speak good sense; if we judge of sense, and nonsense, by the original and proper signification of words. For the will itself is not an agent that has a 30 will: the power of choosing itself, has not a power of

choosing. That which has the power of volition or choice is the man or the soul, and not the power of volition itself. And he that has the Liberty of doing according to his will, is the agent or doer who is possessed of the will; and not the will which he is possessed of. We say with propriety, that a bird let loose has power and Liberty to fly; but not that the bird's power of flying has a power and Liberty of flying. To be free is the property of an agent, who is possessed of powers and faculties, as much as to be cunning, valiant, bountiful, or zealous. But these qualities are the properties of men or persons and not the properties of properties.

There are two things that are contrary to this which is called Liberty in common speech. One is constraint; the same is otherwise called force, compulsion, and coercion; which is a person's being necessitated to do a thing contrary to his will. The other is restraint; which is his being hindered, and not having power to do according to his will. But that which has no will, cannot be the subject of these things. I need say the less on this head, Mr. Locke having set the same thing forth, with so great clearness, in his *Essay on the Human Understanding*.

But one thing more I would observe concerning what is vulgarly called Liberty; namely, that power and opportunity for one to do and conduct as he will, or according to his choice, is all that is meant by it; without taking into the meaning of the word any thing of the cause or original of that choice; or at all considering how the person came to have such a volition; whether it was caused by some external motive or internal habitual bias; whether it was determined by some internal antecedent volition, or whether it happened without a cause; whether it was necessarily connected with something foregoing, or not connected. Let the person come by his volition or choice how he will, yet, if he is able, and there is nothing in the way to hinder his pursuing and executing his 40 will, the man is fully and perfectly free, according to the primary and common notion of freedom.

What has been said may be sufficient to show what is meant by Liberty, according to the common notions of mankind, and in the usual and primary acceptation of the word: but the word, as used by

\* I say not only doing, but conducting; because a voluntary forbearing to do, sitting still, keeping silence, &c., are instances of persons' conduct, about which Liberty is exercised; though they are not so properly called doing.

<sup>11</sup> The full title of the work is *A Careful and Strict Enquiry into the Modern Prevailing Notion, of that Freedom of Will which is supposed to be Essential to Moral Agency, Virtue and Vice, Reward and Punishment, Praise and Blame*.

Apparently Edwards first formed the design for the book in 1741, when he wrote to a friend that he had been engaged "pretty thoroughly in the study of the Arminian Controversy," 40 which, in his estimation, turned chiefly on the question of a free *versus* a determined will, and that he had "writ" considerably upon it" in his private papers. The book was laid aside during the excitements of the Great Awakening and the painful period of his difficulties that followed in Northampton. But in 1752, two years after his dismissal, while settled as a missionary in Stockbridge, Mass., he resumed the work. It was published in Boston in 1754.

Arminians,<sup>12</sup> Pelagians<sup>13</sup> and others, who oppose the Calvinists, has an entirely different signification. These several things belong to their notion of Liberty.

1. That it consists in a self-determining power in the will, or a certain sovereignty the will has over itself, and its own acts, whereby it determines its own volitions; so as not to be dependent in its determinations, on any cause without itself, nor determined by any thing prior to its own acts. 2. Indifference belongs to Liberty in their notion of it, or that the mind, previous to the act of volition, be in equilibrio. 3. Contingence is another thing that belongs and is essential to it; not in the common acceptation of the word, as that has been already explained, but as opposed to all necessity, or any fixed and certain connection with some previous ground or reason of its existence. They suppose the essence of Liberty so much to consist in these things, that unless the will of man be free in this sense, he has no real freedom, how much soever he may be at Liberty to act according to his will.

A moral Agent is a being that is capable of those actions that have a moral quality, and which can properly be denominated good or evil in a moral sense, virtuous or vicious, commendable or faulty. To moral Agency belongs a moral faculty, or sense of moral good and evil, or of such a thing as desert or worthiness, of praise or blame, reward or punishment; and a capacity which an agent has of being influenced in his actions by moral inducements or motives, exhibited to the view of understanding and reason, to engage to a conduct agreeable to the moral faculty.

The sun is very excellent and beneficial in its action and influence on the earth, in warming it, and causing it to bring forth its fruits; but it is not a moral Agent. Its action, though good, is not virtuous or meritorious. Fire that breaks out in a city, and consumes great part of it, is very mischievous in its operation; but is not a moral Agent. What it does is not faulty or sinful, or deserving of any punishment. The brute creatures are not moral Agents. The actions of some of them are very profitable and pleasant; others are very hurtful; yet, seeing they have no moral faculty, or sense of desert, and do not act from

choice guided by understanding, or with a capacity of reasoning and reflecting, but only from instinct, and are not capable of being influenced by moral inducements, their actions are not properly sinful or virtuous; nor are they properly the subjects of any such moral treatment for what they do, as moral Agents are for their faults or good deeds. . . .

#### PART II, SECTION I

##### Showing the Manifest Inconsistence of the Arminian Notion of Liberty of Will, Consisting in the Will's Self-determining Power

Having taken notice of those things which may be necessary to be observed, concerning the meaning of the principal terms and phrases made use of in controversies, concerning human Liberty, and particularly observed what Liberty is, according to the common language and general apprehension of mankind, and what it is as understood and maintained by Arminians; I proceed to consider the Arminian notion of the Freedom of the Will, and the supposed necessity of it in order to moral agency, or in order to any one's being capable of virtue or vice, and properly the subject of command or counsel, praise or blame, promises or threatenings, rewards or punishments; or whether that which has been described, as the thing meant by Liberty in common speech, be not sufficient, and the only Liberty which makes or can make any one a moral agent, and so properly the subject of these things. In this Part, I shall consider whether any such thing be possible or conceivable, as that Freedom of Will which Arminians insist on; and shall inquire, whether any such sort of Liberty be necessary to moral agency, &c., in the next Part.

And first of all, I shall consider the notion of a self-determining Power in the Will; wherein, according to the Arminians, does most essentially consist the Will's Freedom, and shall particularly inquire, whether it be not plainly absurd, and a manifest inconsistency, to suppose that the Will itself determines all the free acts of the Will.

Here I shall not insist on the great impropriety of such phrases and ways of speaking as the Will's determining itself; because actions are to be ascribed to agents, and not properly to the powers of agents; which improper way of speaking leads to many mistakes, and much confusion, as Mr. Locke observes. But I shall suppose that the Arminians, when they speak of the Will's determining itself, do by the Will

<sup>12</sup> Followers of Arminius (1560–1609), Dutch Protestant divine and reformer, opposed to Calvin at various points.

<sup>13</sup> Followers of Pelagius (fl. 400), British monk who maintained that the will of man is free and denied the doctrine of original sin.

mean the soul willing. I shall take it for granted, that when they speak of the Will, as the determiner, they mean the soul in the exercise of a power of willing, or acting voluntarily. I shall suppose this to be their meaning, because nothing else can be meant, without the grossest and plainest absurdity. In all cases when we speak of the powers or principles of acting, as doing such things, we mean that the agents which have these Powers of acting, do them in the exercise of those Powers. So when we say, valor fights 10 courageously, we mean, the man who is under the influence of valor fights courageously. When we say, love seeks the object loved, we mean, the person loving seeks that object. When we say, the understanding discerns, we mean the soul in the exercise of that faculty. So when it is said, the Will decides or determines, the meaning must be, that the person in the exercise of a Power of willing and choosing, or the soul acting voluntarily, determines.

Therefore, if the Will determines all its own free 20 acts, the soul determines all the free acts of the Will in the exercise of a Power of willing and choosing; or which is the same thing, it determines them of choice; it determines its own acts by choosing its own acts. If the Will determines the Will, then choice orders and determines the choice; and acts of choice are subject to the decision, and follow the conduct of other acts of choice. And therefore if the Will determines all its own free acts, then every free act of choice is determined by a preceding act of choice, 30 choosing that act. And if that preceding act of the Will or choice be also a free act, then by these principles, in this act too, the Will is self-determined; that is, this, in like manner, is an act that the soul voluntarily chooses; or, which is the same thing, it is an act determined still by a preceding act of the Will, choosing that. And the like may again be observed of the last mentioned act, which brings us directly to a contradiction; for it supposes an act of the Will preceding the first act in the whole train, directing 40 and determining the rest; or a free act of the Will, before the first free act of the Will. Or else we must come at last to an act of the Will, determining the consequent acts, wherein the Will is not self-determined, and so is not a free act, in this notion of freedom; but if the first act in the train, determining and fixing the rest, be not free, none of them all can be free; as is manifest at first view, but shall be demonstrated presently.

If the Will, which we find governs the members of the body and determines and commands their motions and actions, does also govern itself, and determine its own motions and actions, it doubtless determines them the same way, even by antecedent volitions. The Will determines which way the hands and feet shall move, by an act of volition or choice; and there is no other way of the Will's determining, directing or commanding any thing at all. Whatsoever the Will commands, it commands by an act of the Will. And if it has itself under its command, and determines itself in its own actions, it doubtless does it the same way that it determines other things which are under its command. So that if the freedom of the Will consists in this, that it has itself and its own actions under its command and direction, and its own volitions are determined by itself, it will follow, that every free volition arises from another antecedent volition, directing and commanding that; and if that directing volition be also free, in that also the Will is determined; that is to say, that directing volition is determined by another going before that, and so on, until we come to the first volition in the whole series; and if that first volition be free, and the Will self-determined in it, then that is determined by another volition preceding that, which is a contradiction; because by the supposition, it can have none before it to direct or determine it, being the first in the train. But if that first volition is not determined by any preceding act of the Will, then that act is not determined by the Will, and so is not free in the *Arminian* notion of freedom, which consists in the Will's self-determination. And if that first act of the Will, which determines and fixes the subsequent acts, be not free, none of the following acts, which are determined by it, can be free. If we suppose there are five acts in the train, the fifth and last determined by the fourth, and the fourth by the third, the third by the second, and the second by the first; if the first is not determined by the Will, and so not free, then none of them are truly determined by the Will; that is, that each of them is as it is, and not otherwise, is not first owing to the Will, but to the determination of the first in the series, which is not dependent on the Will, and is that which the Will has no hand in the determination of. And this being that which decides what the rest shall be, and determines their existence; therefore the first determination of their existence is not from the Will. The case is just the same, if

instead of a chain of five acts of the Will, we should suppose a succession of ten, or a hundred, or ten thousand. If the first act be not free, being determined by something out of the Will, and this determines the next to be agreeable to itself, and that the next, and so on; they are none of them free, but all originally depend on, and are determined by some cause out of the Will; and so all freedom in the case is excluded, and no act of the Will can be free, according to this notion of freedom. If we should suppose a long chain of ten thousand links, so connected, that if the first link moves, it will move the next, and that the next, and so the whole chain must be determined to motion, and in the direction of its motion, by the motion of the first link, and that is moved by something else. In this case, though all the links but one, are moved by other parts of the same chain; yet it appears that the motion of no one, nor the direction of its motion, is from any self-moving or self-determining power in the chain, any more than if every link were immediately moved by something that did not belong to the chain. If the Will be not

free in the first act, which causes the next, then neither is it free in the next, which is caused by that first act; for though indeed the Will caused it, yet it did not cause it freely, because the preceding act, by which it was caused, was not free. And again, if the Will be not free in the second act, so neither can it be in the third, which is caused by that; because in like manner, that third was determined by an act of the Will that was not free. And so we may go on to the next act, and from that to the next; and how long soever the succession of acts is, it is all one. If the first on which the whole chain depends, and which determines all the rest, be not a free act, the Will is not free in causing or determining any one of those acts, because the act by which it determines them all, is not a free act, and therefore the Will is no more free in determining them, than if it did not cause them at all. Thus, this *Arminian* notion of Liberty of the Will, consisting in the Will's *self-determination*, is repugnant to itself, and shuts itself wholly out of the world. . . .

1754

*To the Trustees of the College of New Jersey at Princeton*

Stockbridge, Oct. 19, 1757.

Rev. and Hon. Gentlemen,

I was not a little surprised, on receiving the unexpected notice, of your having made choice of me, to succeed the late President Burr, as the Head of Nassau Hall.—I am much in doubt, whether I am called to undertake the business, which you have done me the unmerited honour to choose me for.—If some regard may be had to my outward comfort, I might mention the many inconveniences, and great detriment, which may be sustained, by my removing, with my numerous family, so far from all the estate I have in the world, (without any prospect of disposing of it, under present circumstances, but with great loss,) now when we have scarcely got over the trouble and damage, sustained by our removal from Northampton, and have but just begun to have our affairs in a comfortable situation, for a subsistence in this place; and the expense I must immediately be at, to put myself into circumstances, tolerably comporting with the needful support of the honours of the office I am invited to; which will not well consist with my ability.

\* But this is not my main objection. The chief difficulties in my mind, in the way of accepting this important and arduous office, are these two: First, my own defects, unfitting me for such an undertaking, many of which are generally known; beside others, of which my own heart is conscious.—I have a constitution, in many respects peculiarly unhappy, attended with flaccid solids, vapid, sisy and scarce fluids, and a low tide of spirits; often occasioning a kind of childish weakness and contemptibleness of speech, presence, and demeanor, with a disagreeable dulness and stiffness, much unfitting me for conversation, but more especially for the government of a college.—This makes me shrink at the thoughts of taking upon me, in the decline of life, such a new and great business, attended with such a multiplicity of cares, and requiring such a degree of activity, alertness, and spirit of government; especially as succeeding one so remarkably well qualified in these respects, giving occasion to every one to remark the wide difference. I am also deficient in some parts of learning, particularly in Algebra, and the higher parts of Mathematics, and in the Greek Classics; my Greek learning having

been chiefly in the New Testament.—The other thing is this; that my engaging in this business will not well consist with those views, and that course of employ in my study, which have long engaged and swallowed up my mind, and been the chief entertainment and delight of my life.

And here, honoured Sirs, (emboldened, by the testimony I have now received of your unmerited esteem, to rely on your candour,) I will with freedom open myself to you.

My method of study, from my first beginning the work of the ministry, has been very much by writing; applying myself, in this way, to improve every important hint; pursuing the clue to my utmost, when any thing in reading, meditation, or conversation, has been suggested to my mind, that seemed to promise light, in any weighty point; thus penning what appeared to me my best thoughts, on innumerable subjects, for my own benefit.—The longer I prosecuted my studies, in this method, the more habitual it became, and the more pleasant and profitable I found it.—The farther I travelled in this way, the more and wider the field opened, which has occasioned my laying out many things in my mind, to do in this manner, if God should spare my life, which my heart hath been much upon; particularly many things against most of the prevailing errors of the present day, which I cannot with any patience see maintained, (to the utter subverting of the gospel of Christ,) with so high a hand, and so long continued a triumph, with so little control, when it appears so evident to me, that there is truly no foundation for any of this glorying and insult. I have already published something on one of the main points in dispute between the Arminians and Calvinists: and have it in view, God willing, (as I have already signified to the public,) in like manner to consider all the other controverted points, and have done much towards a preparation for it.—But beside these, I have had on my mind and heart, (which I long ago began, not with any view to publication,) a great work, which I call a *History of the Work of Redemption*, a body of divinity in an entire new method, being thrown into the form of a history; considering the affair of Christian Theology, as the whole of it, in each part, stands in reference to the great work of redemption by Jesus Christ; which I suppose to be, of all others, the grand design of God, and the *summum* and *ultimum* of all the divine operations and decrees; par-

ticularly considering all parts of the grand scheme, in their historical order.—The order of their existence, or their being brought forth to view, in the course of divine dispensations, or the wonderful series of successive acts and events; beginning from eternity, and descending from thence to the great work and successive dispensations of the infinitely wise God, in time, considering the chief events coming to pass in the church of God, and revolutions in the world of mankind, affecting the state of the church and the affair of redemption, which we have an account of in history or prophecy; till at last, we come to the general resurrection, last judgment, and consummation of all things; when it shall be said, *It is done. I am Alpha and Omega, the Beginning and the End.*—Concluding my work, with the consideration of that perfect state of things, which shall be finally settled, to last for eternity.—This history will be carried on with regard to all three worlds, heaven, earth and hell; considering the connected, successive events and alterations in each, so far as the scriptures give any light; introducing all parts of divinity in that order which is most scriptural and most natural; a method which appears to me the most beautiful and entertaining, wherein every divine doctrine will appear to the greatest advantage, in the brightest light, in the most striking manner, shewing the admirable contexture and harmony of the whole.

I have also, for my own profit and entertainment, done much towards another great work, which I call the *Harmony of the Old and New Testament*, in three parts. The first, considering the Prophecies of the Messiah, his redemption and kingdom; the evidences of their references to the Messiah, etc. comparing them all one with another, demonstrating their agreement, true scope, and sense; also considering all the various particulars wherein those prophecies have their exact fulfilment; showing the universal, precise, and admirable correspondence between predictions and events. The second part, considering the Types of the Old Testament, shewing the evidence of their being intended as representations of the great things of the gospel of Christ; and the agreement of the type with the antitype. The third and great part, considering the Harmony of the Old and New Testament, as to doctrine and precept. In the course of this work, I find there will be occasion for an explanation of a very great part of the holy Scriptures; which may, in such a view, be explained in a method, which to me

seems the most entertaining and profitable, best tending to lead the mind to a view of the true spirit, design, life and soul of the scriptures, as well as their proper use and improvement.—I have also many other things in hand, in some of which I have made great progress, which I will not trouble you with an account of. Some of these things, if divine providence favour, I should be willing to attempt a publication of. So far as I myself am able to judge of what talents I have, for benefitting my fellow creatures by word, I think I can write better than I can speak.

My heart is so much in these studies, that I cannot find it in my heart to be willing to put myself into an incapacity to pursue them any more in the future part of my life, to such a degree as I must, if I undertake to go through the same course of employ, in the office of president, that Mr. Burr did, instructing in all the languages, and taking the whole care of the instruction of one of the classes, in all parts of learning, besides his other labours. If I should see light to determine me to accept the place offered me, I should be willing to take upon me the work of a president, so far as it consists in the general inspection of the whole society; and to be subservient to the school, as to their order and methods of study and instruction, assisting, myself, in the immediate instruction in the arts and sciences, (as discretion

should direct, and occasion serve, and the state of things require,) especially of the senior class; and added to all, should be willing to do the whole work of a professor of divinity, in public and private lectures, proposing questions to be answered, and some to be discussed in writing and free conversation, in meetings of graduates, and others, appointed in proper seasons, for these ends. It would be now out of my way, to spend time, in a constant teaching of the languages; unless it be the Hebrew tongue; which I should be willing to improve myself in, by instructing others.

On the whole, I am much at a loss, with respect to the way of duty, in this important affair: I am in doubt, whether, if I should engage in it, I should not do what both you and I would be sorry for afterwards. Nevertheless, I think the greatness of the affair, and the regard due to so worthy and venerable a body, as that of the trustees of Nassau Hall, requires my taking the matter into serious consideration. And unless you should appear to be discouraged, by the things which I have now represented, as to any farther expectation from me, I shall proceed to ask advice, of such as I esteem most wise, friendly and faithful: if, after the mind of the Commissioners in Boston is known, it appears that they consent to leave me at liberty, with respect to the business they have employed me in here.

## BENJAMIN FRANKLIN (1706-1790)

Franklin, only three years younger than Edwards, outlived the defender of Puritanism by thirty-two years. As Edwards' order passed, Franklin became the champion of a new order, that of the Enlightenment, scientific deism, political liberalism, and humanitarian progressivism. While "Edwards' conversions at Northampton were reckoned as thirty a week, Franklin was selling 10,000 copies of *Poor Richard's Almanac*." And when, after three months as president of Princeton, Edwards died in 1758, Franklin, having already "drawn lightning from heaven," was preparing soon to "snatch the sceptre from tyrants." While Edwards devoted his life to "exploring the fearful mysteries of God," Franklin was "making himself thoroughly at home with Man"; for as Edwards incorporated in his large nature the religious experience of his times, so Franklin represented the secular experience of the eighteenth century. During his life, which all but spanned the century, Franklin's industrious versatility touched every important movement of the age. He was active as a tradesman, printer, publisher, publicist, propagandist, economist, public official, diplomat, statesman, philosopher, man of letters, philanthropist, inventor, scientist, moralist, scientific deist, and man of the world. His copious mind and industrious versatility furnished him points of contact with men as various as Increase and Cotton Mather, the Puritan priests, Whitefield the Methodist, Rush the physician, West the artist, Webster the lexicographer, and Jay, Adams, Jefferson, Washington, and a host of other American statesmen; while abroad he met the deist Voltaire, the leveler Tom Paine, the celebrated North, the ministerial Pitt, the chemist Priestley, the statesman Burke, the despotic minister Vergennes, and the aristocrats of Louis' court in France. In his youthful years he set type in the London of Pope and Swift's day and talked with Bernard Mandeville, author of *The Fable of the Bees; or, Private Vices Public Benefits* (1723). In middle life he associated with the members of the Royal Society in London and the Physiocrats in France, while submitting to Parliamentary examination in London and winning diplomatic triumphs in Paris. He was as capable in affairs

of state and diplomacy as he was gracious in high social circles or honored among learned groups, employing his pen with equal finesse, whether writing documents of state or exchanging billets-doux with the ladies of the French court. In his old age he read the tidings of the Fall of the Bastille; he heard the wranglings of the Constitutional Convention, throwing his wisdom and influence on the side of adoption; and he lived to see the United States of America established.

Franklin's *Autobiography* has made the details of his earlier life a matter of common knowledge. The fifteenth of seventeen children of a thrifty tallow chandler of Boston, sprung from humble, sturdy stock, he inherited from his father not only his strong physical constitution but also "solid judgment in prudential matters." On his mother's side he was descended from Peter Folger, one of the early New England settlers, of whom Cotton Mather thought well enough to commemorate him in the *Magnalia* as "a learned and godly Englishman." He had enjoyed only about two years of schooling when his father put him to work cutting wicks, filling candle molds, boiling soap, and running errands—work very little to Benjamin's taste, which turned more to books. He soon exhausted the slender stock of his father's library, which consisted chiefly of the New England historians and theologians. With his first money he bought a copy of Bunyan's *Pilgrim's Progress*, and after he had thoroughly digested it, traded it for Burton's *Historical Collections*, a class of writings for which he had a special fondness.

A new period of his life began when, at the age of twelve, he was apprenticed to his brother James, a printer and the editor of the *New-England Courant*. His mind profited by the information he gathered from the material he set to type; and, what is equally important, his training as a typesetter and proof-reader taught him accuracy and dexterity in handling words precisely. Later he freely acknowledged, "It has ever since been a pleasure to me to see good workmen handle their tools; and it has been useful to me, having learned so much by it as to be able to do little jobs myself." That is, he came to look

upon words like tools; and while he escaped becoming a poet, as he laughingly admitted, his use of words in much the same way that a master workman handles the implements of his trade led to his development of an effective, workmanlike prose style that eventually became his most useful accomplishment and the principal means to his advancement.

Meanwhile he steadily added to his self-acquired store of knowledge, passing from Plutarch's *Lives* to Defoe's *Essay on Projects*, from which he doubtless gathered early a good deal of the inventive zeal that he later displayed. Cotton Mather's *Essays to Do Good* set his mind in the direction of the humanitarian purposefulness for which he became distinguished. Careful reading of Shaftesbury and Collins made him "a real doubter" in many points of religious doctrine, while Xenophon's *Memorable Things of Socrates* led to his adoption of the Socratic strategy in argumentation, even to making himself a nuisance to people by leading them into confusing and contradictory positions in theological questions. Locke's *On the Human Understanding* prepared his mind for the acceptance of the experimental, empirical, and inductive method of studying the physical world; while his exercises in turning the *Spectator* papers into his own words (both prose and verse) and then back into Addisonian prose were all-important for the development of his clear and effective prose style.

Contact with printer's type and ink exerted another influence on young Franklin—an itch to see his writing in print. In the *Autobiography* he relates how, fearing that his brother would not print any of the writings of his apprentice if his authorship were known, he contrived to slip one of his anonymous compositions under the door, taking care himself to be present when it was discovered.

It was found in the morning, and communicated to his writing friends when they call'd in as usual. They read it, commented on it in my hearing, and I had the exquisite pleasure of finding it met with their approbation, and that, in their different guesses at the author, none were named but men of some character among us for their learning and ingenuity.

Thus were initiated the series of fourteen *Dogood Papers*, printed anonymously in the *New-England Courant* during 1822.

Soon thereafter, young Franklin found his apprenticeship under his brother getting more and more intolerable, and in 1723 he resolved to run away. His entry into Philadelphia as described in the *Autobiography*, however humble and poor a figure he cut at the time, turned out to be only the first step in a

long triumphal march through competence and achievements, to successes and honors such as no earlier American had won. It can hardly be doubted that Franklin's going to Philadelphia was one of the most fortunate events in his life, for in that relatively cosmopolitan and genuinely friendly city, opportunities for advancement were offered to the runaway apprentice that might never have come to him in his native city. Thus Franklin's case becomes an early illustration of the quipster's remark that "Boston is a good place to be from."

In Philadelphia, while working for the printer, Samuel Keimer, he prospered, even to being patronized by Governor Keith, who sent him to England on a commission to buy type and a printing press to be set up in his behalf by Keith. When Keith's promised credit did not arrive, Franklin, thrown on his own resources for a livelihood, found work in the large printing establishments of London. Alert to learn the latest improvements of the trade, he turned his disappointment to advantage, and when he returned to Philadelphia, he was a far more experienced and efficient printer than when he had left eighteen months before. During his stay in London he also expanded his knowledge of men and of books, while moving in the infectious atmosphere of liberal thought represented by Henry Pemberton and Bernard Mandeville.

Pursuing his frugal, prosperous career, he set himself up in 1829 as an independent printer in Philadelphia. The next year he tucked away in his pocket a nice contract by which he became the printer for the Pennsylvania Assembly for the next thirty-four years. He became prominent in the Masonic lodge and began to engage in civic and philanthropic enterprises while forming profitable printing partnerships and other business alliances as he progressed, with the result that in 1748 his industry, thrift, and foresight had rewarded him with a safe competence. He was thus enabled, at the age of forty-two, to retire from the active management of his business and to devote, for another forty-two years, all of his time to those public, philanthropic, and scientific affairs which had come to absorb more and more of his time, and which he preferred to the acquisition of greater wealth.

Franklin's well-known advocacy of the prudential virtues of thrift and industry is often stressed in a way to suggest that he was motivated solely by self-interest. He was, it may freely be admitted, a practical moralist, a successful tradesman and printer, a shrewd propagandist and financier, a clever diplomat, and a disciple of efficiency, but he was also a dis-

interested inventor who refused to take out patents for his contrivances, a philanthropic humanitarian, and a scientist, philosopher, and statesman who gave of himself with the liberality of a prince in the service of his fellow men. He had a true passion for scientific and philosophical inquiries, and throughout his young manhood and middle life he complained that business, public and private, prevented his pursuing his "philosophical amusements" and scientific investigations. In 1765, upon completing his negotiations in England in behalf of the Pennsylvania Assembly, he promised Lord Kames that he would engage in no other political affairs; but year after year his people called upon him for services which only he could render; and in 1785, in his eightieth year, when he entertained the hope that his countrymen would grant him rest and leisure during the few years that remained after his ceaseless efforts in their behalf, he was drafted to serve for three years as President of the commonwealth of Pennsylvania. He could only comment:

I have not firmness enough to resist the unanimous desire of my country folks, and I find myself harnessed again to their service. . . . They engrossed the prime of my life. They have eaten my flesh, and seem resolved now to pick my bones.

In his public life he rose from the position of justice of the peace to clerk of the Pennsylvania Assembly in 1736, postmaster of Philadelphia in 1737, deputy postmaster-general to the colonies in 1753, and so on to commissioner from Pennsylvania to the Albany Congress in 1754, where he proposed the Albany Plan of Union. As supervisor of the construction of forts in the province of Pennsylvania, he aided General Braddock in getting supplies and transportation during 1755 and unsuccessfully urged the General to adopt the methods of frontier warfare that might have averted his defeat. He became colonial agent in London for Pennsylvania in 1757 and again in 1764; by 1770 he represented also Georgia, New Jersey, and Massachusetts. He was Postmaster-General under the Confederation. In 1775 he was a member of the Philadelphia Committee of Safety, a delegate to the Second Continental Congress, and a member of the Committee of Secret Correspondence. In 1776 he was commissioner to Canada, president of the Constitutional Convention, one of the committee to frame the Declaration of Independence, and commissioner of Congress to the French court. He became the chief arbiter and signer of the commercial treaty and of the alliance for mutual defense with France, signer of the Treaty of

Paris in 1783, negotiator of treaties with Sweden (1783) and with Prussia (1785), president of the commonwealth of Pennsylvania from 1785 to 1787, and finally, delegate from Pennsylvania to the Constitutional Convention. Among all the illustrious men of his time he is the only one whose name is affixed to all four principal documents of the Revolutionary period: the Declaration of Independence, the treaty of alliance with France, the treaty of peace with Great Britain, and the Constitution of the United States.

Franklin's passion for service manifests itself nowhere more tellingly than in his educational and generally philanthropic projects. As a man who in his youth had lacked social advantages and a proper education, he made up these wants as best he could through self-study. He read assiduously during hours stolen from sleep or recreation, confessing that his "only recreation" for many years after his return from England in 1726 was his reading. He found time somehow to make himself one of the best-read men of his time, even to acquiring Latin and the modern languages of French, Spanish, Italian, and German at a time when the classical languages were considered the only linguistic requirements of a scholar. But his zeal for education did not stop with himself, although such organizations as the Junto and the Philadelphia Library Company were certainly partially motivated by his own desire for self-improvement. His first major educational project was the formation in 1727 of the Junto, or Leather Apron Club, which became in its day "the best school of philosophy, morality, and politics that then existed in the province." Recalling Defoe's proposals for the formation of Friendly Societies and Mather's urging, in his *Essays to Do Good*, the formation of mutual improvement societies, Franklin also took a cue from the organization of Masonic lodges as he had observed them in London. The members of the Junto were urged to communicate to one another everything significant "in history, morality, poetry, physics, travel, mechanic arts, or other parts of knowledge." Their utilitarian object was equalled only by their humanitarian purposes. The members were sworn to "love truth for truth's sake," but also to be "serviceable" and "to love mankind in general, of whatever profession or religion soever," and to oppose persecution "for mere speculative opinions, or external ways of worship." They cultivated a rigorous ethical program, and members were encouraged to report not only "unhappy effects of intemperance" and of "imprudence, or passion, or of any other vice or folly," but also the "happy effects of temperance, of prudence.

of moderation." Thus they encouraged tolerance, the empirical method, scientific disinterestedness, and humanitarianism.

Out of the Junto grew the Philadelphia Library Company in 1731 to become "the mother of all the North American subscription libraries." It grew rapidly, and an inventory of 1757 shows that by that time it owned what was necessary for an alert mind to discover all the theses and their implications—philosophic, religious, political, scientific, and social—that were needed to overthrow priest and king, dogma and authority. Franklin also played a prominent part in the founding of the American Philosophical Society in 1744, becoming its first secretary and subsequently its president. In 1749 he founded the Philadelphia Academy, later the College, and eventually the University of Pennsylvania. In his *Proposal for Promoting Useful Knowledge among the British Plantations in America* (1743) and the *Proposals Relating to the Education of Youth in Pensilvania* (1749) he urged the necessity of supplying "the succeeding Age with Men qualified to serve the Publick with Honour to themselves, and to their Country." Designed for the citizenry rather than for the clergy, offering instruction in English and the modern foreign, as well as the classical, languages and literatures, in physical culture, natural history, mechanics, mathematics (especially arithmetic), and gardening, rather than sectarian theology, Franklin's academy was more utilitarian and secular than any other school then existing in the colonies.

But no amount of learning or theorizing, unless it could be turned to use, was worth much to Franklin: "I have always set a greater value on the character of a *doer of good* than on any other kind of reputation." Less concerned about the golden pavements in Heaven than that the cobblestones on Chestnut Street should be evenly laid, less troubled about saving his soul from burning in Hell than that there should be a fire company in Philadelphia to protect his own and his neighbor's house, less interested in the light that never was on sea or land than that there should be street lamps to light the belated wayfarer to his home—Franklin set about, with true Yankee practicality, to put theory to use. His inventive ingenuity resulted in many improvements in the techniques of printing, his perfection of the stove that bears his name, and the invention of the lightning rod. He inquired into the causes and cure of smoky chimneys. He instituted a better system of paving, cleaning, and lighting the streets of Philadelphia, methods that were widely adopted elsewhere; he organized the first regularly paid police force in

the colonies; he founded the first fire insurance company in Philadelphia; he organized an efficient fire-fighting company in Philadelphia; he established the first charity hospital in the city; and he inaugurated a postal system in his city and for the colonies without which they could hardly have developed the cohesion necessary to fight and win the war for independence.

Beyond these more practical applications of his desire to improve the lot of mankind on this earth, he turned his curiosity to the realm of natural philosophy, and in 1752 demonstrated the identity of lightning and electricity, going on to a variety of investigations into such subjects as evaporation, ocean temperatures, the course of storms over the Atlantic, the distillation of sea water, the sources of springs, the cultivation of grass, the effects of the sun's rays on cloth, and the efficiency of various mediums for sound. On the strength of his accomplishments in these experiments he was elected a Fellow of the Royal Society of London in 1756 and to membership in other learned or scientific societies of Edinburgh, Göttingen, Rotterdam, Paris, Padua, Madrid, Lyons, Orleans, Manchester, Milan, London, and St. Petersburg, while collecting honorary degrees from Harvard, Yale, William and Mary, the University of St. Andrews, and Oxford, besides numerous medals and awards in honor of his contributions to knowledge. In the end, his international fame rested as much on his character as a statesman, diplomat, and economist as on his scientific and philosophic enquiries. However, in a conversation reputed to have taken place between Joseph II of Austria and himself, he said, "Necessity . . . made me a politician. . . . I was Franklin the *Philosopher* to the world long before I had in fact, become Franklin the *Politician*." His prior and real interest lay in scientific research and speculation, and there can be little doubt that "his doctrine of scientific deism antedated and conditioned his political, economic, and humanitarian interests."

In his case, science and philosophy reinforced each other in the determination of his religion and in the regulation of his entire outlook on life. For one thing, his fame as a scientist preceded him wherever he went, and in the course of his wide travels in Europe he found himself openly welcomed by, and invited to exchange ideas with, the great savants of England, Holland, Germany, France, Italy, and Spain. In England he associated with liberals like Richard Price, lodged with the philosopher Hume, consulted with Adam Smith, and was on intimate terms with the chemist and political liberal, Joseph Priestley. In

France he knew Voltaire, Turgot, Buffon, Mirabeau, Quesnay, Lavoisier, Robespierre, D'Alembert, Condorcet, La Rochefoucauld, and the Abbé Raynal, besides many others hardly less prominent. While there were great differences among them, they possessed minds that were alike "free, liberal, and inquiring"; and Franklin found in them all confirmation for the rational views and enlightened cast of mind that his early reading had inspired in him.

Following an early reading of Locke, doubts raised concerning the Calvinism in which he had been reared set his mind off on a series of questions from which there was no return to bibliolatry. Passages like the following in Locke induced an *odium theologicum* at the same time exalting the reason as the only proper and efficacious medium for religious inquiries:

Since . . . the precepts of Natural Religion are plain, and very intelligible to all mankind, and seldom come to be controverted; and other revealed truths, which are conveyed to us by books and languages, are liable to the common and natural obscurities and difficulties incident to words; methinks it would become us to be more careful and diligent in observing the former, and less magisterial, positive, and imperious, in imposing our own sense and interpretations of the latter.

Nothing that is contrary to, and inconsistent with, the clear and self-evident dictates of reason, has a right to be urged or assented to as a matter of faith, wherein reason hath nothing to do.

By the time he reached sixteen, his reading of some of the Boyle lectures (presumably Bentley's *Folly of Atheism* of 1692 and Derham's *Physico-Theology* of 1711-1712), of Anthony Collins' *Priestcraft in Perfection* (1710) and *Discourse of Free-Thinking* (1713), and of Shaftesbury's *Inquiry Concerning Virtue or Merit* and his *Characteristics* had effected a conversion, and he avowed himself a "thorough Deist." In London, while setting up Wollaston's *Religion of Nature Delineated*, he was inspired to write his *Dissertation on Liberty and Necessity, Pleasure and Pain* (1725), which led to an acquaintance with Lyons, author of *The Infallibility of Human Judgement* [*sic*]<sup>1</sup>—a connection which in turn led to an intimacy with Dr. Henry Pemberton, then assisting Newton in the preparation of his third edition of the *Principia*. Thus he came close to the fountain-head from which scientific deism derived its basic principles, and it is not surprising that in 1728 he incorporated the fundamental deistic ideas in his *Articles of Belief and Acts of Religion*—a statement of principles from which apparently he never swerved in any essentials during his natural life. This creed is notable as allowing for only one God and for its

assertion that proper worship of God consists primarily in the cultivation of virtue and the doing good to man. There is no hint of a Christ as a necessary redeemer, of Scripture as the sole revelation, or of atonement for sin by repentance. Fundamentally this is the creed that he reiterated sixty-eight years later in his famous letter to Ezra Stiles:

Here is my Creed. I believe in one God, Creator of the Universe. That he governs it by his Providence. That he ought to be worshipped. That the most acceptable service we render to him is doing good to his other Children. That the soul of Man is immortal, and will be treated with Justice in another Life respecting its Conduct in this. These I take to be the fundamental Principles of all sound Religion, and I regard them as you do in whatever Sect I meet with them.

As to Jesus of Nazareth, my Opinion of whom you particularly desire, I think the System of Morals and his Religion, as he left them to us, the best the World ever saw or is likely to see; but I apprehend it has received various corrupting Changes, and I have, with most of the present Dissenters in England, some Doubts as to his Divinity; tho' it is a question I do not dogmatize upon, having never studied it, and think it needless to busy myself with it now, when I expect soon an Opportunity of knowing the Truth with less Trouble. I see no harm, however, in its being believed, if that Belief has a good Consequence, as probably it has, of making his Doctrines more respected and better observed. . . .

I shall only add, respecting myself, that, having experienced the Goodness of that Being in conducting me prosperously thro' a long life, I have no doubt of its Continuance in the next, though without the smallest Conceit of meriting such Goodness. . . .

Although his death was hardly more than a month off, Franklin was still the prudential man, and consequently added this characteristic postscript:

I confide, that you will not expose me to Criticism and censure by publishing any part of this Communication to you. I have ever let others enjoy their religious Sentiments, without reflecting on them for those that appeared to me unsupportable and even absurd. All Sects here, and we have a great Variety, have experienced my good will in assisting them with Subscriptions for building their new Places of Worship; and, as I have never opposed any of their Doctrines, I hope to go out of the World in Peace with them all.

Franklin's creed is a succinct, though moderate, statement of scientific deism as formulated during the seventeenth and eighteenth centuries on the bases of Newtonian science and Lockean psychology. It represents an assertion of the rational credo of Newton, Diderot, and Voltaire over the religious concepts of Luther, Calvin, and Edwards—an Age of Enlightenment superseding an Era of Faith.

Motivated by the amazing discoveries of Newton

respecting the operation of universal laws throughout the cosmos, the men of the Enlightenment came to regard the universe as one gigantic machine, controlled by harmonious, changeless laws, behind which stood an impersonal Creator, who instituted the laws and set them in motion, but who then withdrew himself from his creations, to stand aloof merely to observe their operation. He no longer interferes in the affairs of the world, or changes the laws by which it operates, or works any special providences. The remarkable success of Newton in formulating the laws of motion led the disciples of the Enlightenment to believe that man might penetrate the secrets of nature, that human reason might ultimately "read the thoughts of God." For the attainment of this goal, they argued, man would do better to study the entities of mind and matter in time and space than to quarrel over the meaning of the equivocal terms of the Scriptures. With infinite faith in the benevolence of nature and the ability of man's reason to penetrate to the core of rationality underlying all nature, the scientific rationalist assumed that natural laws are designed to afford man all the happiness he is capable of, provided man brings himself into harmony with those eternal, natural laws. As part of this natural universe, man originally shared in its benevolence, and accordingly the deist had faith in man's goodness as opposed to the Calvinist's belief in man's natural depravity. He was ready to admit the evils of tyranny, priestcraft, poverty, and inequality in the world, but these he referred to long accretions of traditionalism and superstition by which man had fallen from his harmonious adjustment to this divine, universal law and order. What was desired was a rededication of the human reason to the search for this orderliness and a readjustment of man's life and of his environment to the findings of the enlightened reason.

Corollary with these principles deduced from Newtonianism was the psychology and sociology of John Locke, the close friend of Newton, with whom the great mathematician had discussed his theories in detail. Locke had denied innate ideas and all inherited traits supposedly setting men apart from each other. He had affirmed the all-importance of a proper education according to logic and natural principles and the readjustment of man's environment in accordance with those principles by the removal of institutions and conventions inimical to the full, natural, free development of human potentialities. The evils of society could be abolished, it was argued, by a return to the rationally ordered life of the natural man and the overthrow of unnatural or unreasonable

conventions and institutions, whether social or economic, throne or altar. Hence the men of the Enlightenment became critics of the *status quo*, breakers of idols, and disciples of progress, professing and practicing humanitarian principles. Doing good to one's fellow man became a satisfactory substitute for an unreasoned worship (or idolatry, as they called it) of God. A religion of practical morality based on rational principles replaced a worship by adoration of a deity resting on faith or authority. "The most acceptable service of God," said Franklin, "is doing good to man." Thus it came to pass that while the Enlightenment sanctioned "a radical attack on ancient wrongs," it also sanctioned a program that had special American connotations—"the ideal of a larger, more satisfactory life for the common man." Franklin, standing squarely in this tradition of the Enlightenment, illustrates its manifold program in (1) his satirical attack on irrational and traditional policies and institutions, (2) his practical humanitarianism, (3) his absorbing interest in scientific inquiries and philosophical liberalism, and (4) his rational and prudential moralism.

Franklin's ethical system is based on human reason and prudential wisdom rather than on religious authority or transcendental duty. The thirteen virtues, as set down in the *Autobiography*, in which he schooled himself, include only four—Temperance, Sincerity, Justice, and Humility—that derive purely or largely from a love of righteousness for its own sake. The other nine must be referred to more worldly considerations—either his love for a systematic and industrious conduct of business or his passion for living on good terms with his fellow men. There was for him no great difference between *moral* virtue and *prudential* wisdom. His form of morality based on rational conduct left far more freedom for the desires of the natural man than did the older systems based on revealed religion. All he desired was rational, temperate self-control, and he was not squeamish about the precise means best designed to achieve that end. The best expression of his practical morality appears in his two *Dialogues* between Philocles and Horatio, written to show that the proper object of conduct is a temperate pleasure. True pleasure, he pointed out, depends upon the conscious choice of what is moral or right, and right is determined by the human reason studying "the Sacred Book of Nature."

It is in connection with his desire to teach his lessons of prudential morality to the common man of his day that we come (after his earlier *Dogood* and *Busy-Body* papers) upon the first significant work

of Franklin the writer, or man of letters. Himself a self-made man and a disciple of economic individualism, he was firm in his faith that what was most needed by his clientele of mainly middle-class readers was practical advice on how to develop economic independence in terms of moral integrity and prudential wisdom. Accordingly he set about instructing his fellow men on these heads in *Poor Richard's Almanac*, which circulated annually many thousand copies. Poor Richard, or Richard Saunders, became the purveyor of the sugar-coated pills of pointed jest, witty sayings, popular saws, and prudential precepts which Franklin inserted wherever there was a bit of space in the calendar not filled with other matter. *Poor Richard's Almanac* thus became, during the years from 1732 to 1757, a miscellany of both useful and entertaining knowledge, liberally besprinkled with the sayings of Poor Richard—some new, some old. In 1757 Franklin very cleverly wove these pungent epigrams and proverbial gems into a connected essay, called *The Way to Wealth*. Among typical ones are the following: "Keep your eyes wide open before marriage, half shut afterwards." "He that can have patience can have what he will." "Three may keep a secret if two of them are dead." "God heals, the doctor takes the fee." "Plough deep while sluggards sleep, and you shall have corn to sell and to keep." "Many a little makes a mickle." "Beware of little expenses, for a small leak will sink a great ship." "It is hard for an empty sack to stand upright." "Get all you can, and what you get, hold." "Diligence is the mother of good luck." "God helps them that help themselves." "Dost thou love life, then do not squander time, for that's the stuff life is made of." "The sleeping fox catches no poultry." "There will be sleeping enough in the grave."

*The Way to Wealth* emphasized individual enterprise in a way that appealed to people just embarking on the exciting adventure of exploiting the vast resources of a new land. The industrial revolution, a machine age, and the complexities of modern urban life had not yet cast any doubts upon the faith that a man's future could be assured by the labor of his own hands. Franklin's *Way to Wealth* put in trenchant words what thousands of Americans were thinking, and to the many others who had not yet advanced to grasp this ideal of American self-sufficiency and self-reliance, Poor Richard became an inspired and revered tutor. The tremendous effect of his philosophy of thrift, industry, and prudence on a young nation during its period of tutelage can hardly be overestimated. Nor was its influence confined to America. By the beginning of the current century

*The Way to Wealth* had gone through seventy-five editions in English, fifty-six in French, eleven in German, and nine in Italian; was translated also into Spanish, Danish, Swedish, Welsh, Polish, Gaelic, Russian, Bohemian, Dutch, Catalan, Chinese, and modern Greek; and was put into phonetic writing and into Braille. It has been printed at least five hundred times and is today as popular as ever.

Although Franklin never thought of himself as a literary man, in the course of his long career as publisher, statesman, publicist, and diplomat, he tossed off either as by-products or as calculated means to some immediate and practical end hundreds of pamphlets, reports, proposals, articles, essays, letters, dialogues, dissertations, allegories, apologies, fables, and bagatelles, besides lampoons and burlesques, emblems and epigrams. Of them all, his *Autobiography* is the most important single document entitling him to a place of prominence as a writer of *belles-lettres*. A classic of its kind, reaching "virtual perfection in graceful clarity of style," it merits the popularity which it enjoys the world over as a purely literary work. But even it was written, so he declared, less at his own instance than at the ceaseless importunities of friends and strangers, so that he determined it would be a saving of time and energy to himself if he wrote his life down in simple terms that all might read rather than to answer all individual persons who desired information about him, or to give reasons and detail excuses to all and sundry explaining why he had not written his autobiography. Begun in 1771 and added to from time to time until 1789, the *Autobiography* remained incomplete at his death, tracing his life to 1757 only. Remarkable as it is for clarity, it leaves out much of importance even for this first half of his life, before he entered upon the most successful and celebrated part of his career, so that it must be supplemented by others of his numerous writings before anything like a full-bodied picture of the many-sided Franklin emerges. Aside from its stylistic excellence and the great importance of the subject itself, the book is notable for its near approach to true autobiography—its numerous "little, nameless, unremembered" but nonetheless authentic and influential episodes of life, and especially its accuracy and fidelity. He is not the successful man intent on covering up those acts of his that in retrospect he would rather have left undone or those episodes that he preferred neither to remember nor to perpetuate for the delectation of posterity. Franklin blinked none of these unpleasant aspects of his life, but set down with frank fidelity his major "errata" as well as his lesser vices, not neglecting to point out that, his pro-

gram of self-discipline notwithstanding, he was often disorderly and unmethodical, not always scrupulous in his business, and sometimes overindulgent and immoral. But through it all appears the portrait of a man that is authentic because it is stripped of all pretense and defense, and a character who is lovable because he is human. It cannot be said of Franklin, as it can of Mark Twain, who tried equally hard to write true autobiography, that he "never came within shouting distance of self-revelation."

At the beginning of his long career as an occasional essayist Franklin wrote the fourteen *Dogood* papers which he printed anonymously in his brother's *New-England Courant* during 1722. The six numbers of *The Busy-Body* papers that he wrote in Philadelphia during 1729 are in all essentials a continuation. From time to time he wrote other informal essays, dialogues, and other forms of polite discourse dealing playfully with the vices and follies of men, but, as he grew in age and influence he turned more and more to serious ethical and religious matters, aspects of current political and economic issues, scientific and philosophical investigations, the treatment of Indians and Negroes, colonial defense and military preparedness, forms of government (colonial and intercolonial), and the relations of the colonies to the mother country and to the other European nations. Never ambitious to build for himself a literary reputation, he took no care of his writings, and usually sent them forth to take their chances without so much as affixing his name. When Lord Kames asked him for copies of all his writings, he had to say that he had not kept copies, but would see what could be collected from among his friends. He allowed even his scientific and philosophical opinions to shift for themselves; and once, when his invention of the lightning rod was attacked in print, and friends urged him to publish a rejoinder, he said, "I have never entered into any controversy in defence of my philosophical opinions, I leave them to take their chance in the world. If they are *right*, truth and experience will support them; if *wrong*, they ought to be refuted and rejected. Disputes are apt to sour one's temper and disturb one's quiet. I have no private interest in the reception of my inventions by the world, having never made, nor proposed to make the least profit by any of them." Believing that "there never was a good War, or a bad Peace," he preferred peace to disputation, and his usual manner, when dealing with controversial matters, as he explained in the *Autobiography*, was to say "I conceive," "I apprehend," "I imagine," or "It so appears to me at present" rather than "I declare" or "I assert." Often

he was strongly provoked to take a less deferential line of attack, but he persevered in his resolution, while admitting:

. . . this mode, which I at first put on with some violence to my natural inclination, became at length so easy, and so habitual, that perhaps for these fifty years no one has ever heard a dogmatical expression escape me. And to this habit (after my character of integrity) I think it principally owing that I had early so much weight with my fellow-citizens when I proposed new institutions, or alterations in the old, and so much influence in public councils when I was a member; for I was but a bad speaker, never eloquent, subject to much hesitation in my choice of words, hardly correct in language, and yet I generally carried my points.

But if Franklin took little care of his writings, his friends did it for him. Thus it happened that the reports of his electrical experiments first came to be published, not at his own instigation, but because a correspondent to whom he had communicated his findings, published them in London, without Franklin's knowledge, in 1751 under the title *Experiments and Observations on Electricity, made at Philadelphia in America, by Mr. Benjamin Franklin, and Communicated in Several Letters to Mr. P. Collinson, of London, F. R. S.* This booklet was enlarged in 1752 and again in 1754, and was soon many times republished, in English, Latin, French, German, Dutch, Italian, and other languages. His fame spread, and among common folk in Europe he came to be regarded as a kind of arch-magician, whose renown as an electrician threw an exaggerated and somewhat weird light upon his accomplishments and prestige as a statesman. The vision was made complete by pictures circulated throughout Europe and America showing him seated in an arm chair, with flashes of lightning playing about his head, while underneath appeared a subscription to the effect that he had "seized the lightning from heaven and snatched the sceptre from tyrants." Even the hard-fisted Dr. Johnson professed to believe Franklin the "master-mischief, who has taught his countrymen how to put in motion the engine of political electricity . . . and to give the great stroke by the name of Boston," while lesser people felt that things in the British colonies were well enough were it not for Dr. Franklin, who had, "with a brand lighted from the clouds, set fire to all America."

His stature as an economist and political thinker is revealed in his numerous pamphlets and dissertations in these areas. Ordinarily they are done in a straightforward, expository style of argumentation, a manner calculated to add little to his literary renown. But there are exceptions, notably when he employed

satire to subserve his political and diplomatic purposes. Like Swift, he enjoyed the practical joke done with a straight face, especially if it could be made to carry a pointed allegory. He scored several highly successful hits in this Swiftian technique of ridiculing an opponent's position by pretending to support it but managing so subtly to distort it as to render it absurd or foolish. For the reception of the first of these successes the ground had been prepared by his admirable *Examination of Dr. Benjamin Franklin in the British House of Commons relative to the Repeal of the Stamp Act* (London, 1766). Its tact, good humor, and lucidity recommended it to many Englishmen as the most informative document of the day, and succeeding straightforward pleadings of the American cause in other pamphlets heightened the impression that Franklin was a reliable reporter. At the psychological moment he published in the *Gentleman's Magazine* for September, 1773, his *Rules for Reducing a Great Empire to a Small One*. His readers were prompt to see the parallelism between his "rules" and British colonial "policies," and many Englishmen were won over to the colonial point of view. The next month he published, in the same magazine, his *Edict of the King of Prussia*, and had himself the great good fortune to see how some of his British friends were taken in by the hoax which represented the King of Prussia, as patron to Britain, adopting the same tone in his edict toward England that the British were employing in their pronouncements toward the American colonies. His satirical letter in 1777 "From the Count De Schaumbergh to the Baron Hohendorf" on the sale of Hessian troops used during the Revolutionary War was hardly less effective; and even in the last year of his life, while serving as president of the Pennsylvania Society for the Abolition of Slavery, he employed this technique with telling effect. In the last piece of writing published during his lifetime he represented one Sidi Mehemet Ibrahim, a member of the Tripolitan divan and a professing African Moham-medan, defending the practice of enslaving Christians, by employing all the arguments current among American defenders of the Negro slave trade—with the notable difference that they were used by the heathens against Christians.

Finally, it remains to mention the most delightful of Franklin's miscellaneous and more trifling writings as an eighteenth-century wit and accomplished man of the world, as typified by his ephemera-like "Bagatelles." Most of these graceful letters and familiar essays, varying from the light, urbane meditations of a *bon vivant* to the clever gallantry of a courtier,

were written during his years at Passy for the diversion of his French friends. These "Bagatelles," as he called them, reflect the French elegance of the *salons* of Madame Brillon and Madame Helvétius. Among the best known of these trifles is "The Whistle," a moralized anecdote, and the most graceful is "The Ephemera," a parable on the brevity of life. As Stuart Pratt Sherman has remarked, the tallow chandler's son who entered on the cycle of his development by cultivating thrift with Defoe, continued it by cultivating tolerance and philanthropy with Voltaire, and completed it by cultivating "the graces" with Lord Chesterfield. Franklin himself was aware of this remarkable progression, resulting largely from his long residence abroad; for it is a noteworthy fact that he spent practically the whole of the Revolutionary War period away from America in the diplomatic and political interests of his country. Writing home in his seventy-second year, he said, "Figure to yourself an old man, with gray hair appearing under a marten fur cap, among the powdered heads of Paris. It is this odd figure that salutes you with handfuls of blessings."

Yet, extensive as were his education and experience, his mind was focused on "useful attainments." He had little of what is called poetry in his soul. His writings, filling ten stout volumes, contain few references to the theater, fiction, music, painting, sculpture, or architecture. He does not instinctively resort for the illustrations of his writings to the illuminating facts of history; he seldom explores the broader reaches of philosophy; only occasionally does he touch upon the wider and larger implications of science. As Sainte-Beuve once observed, "There is a flower of religion, a flower of honor, a flower of chivalry, that you must not require of Franklin." One needs to go no further than to compare him with his townsman Francis Hopkinson or his compatriot Thomas Jefferson to realize how relatively limited he was in point of cultural variety. Throughout his life he sought for and won other, simpler, and more substantial goals, which, at least according to his way of thinking, were equally honorable. Yet in dedicating his life to the service of his fellow men, he achieved, more or less incidentally, certain priorities at which he had not aimed at all, but which posterity gratefully acknowledges. He was the first to offer "a widely influential challenge to the religious life by the secular life," in the sense that he is the first important American writer to break with Puritanism; he was the "first genuinely international figure" to emerge in America; and he was the first American to achieve "solid permanence in literary fame."

## FROM THE

*Autobiography*<sup>1</sup>

Twyford,<sup>2</sup> at the Bishop of St. Asaph's, 1771.

Dear Son, I have ever had a Pleasure in obtaining  
 any little Anecdotes of my Ancestors. You may re-

<sup>1</sup> The text of Franklin's *Autobiography* remains in a poor con-  
 dition, owing in part to Franklin's manner of writing it at four  
 different periods and his making several drafts, but chiefly to the  
 inaccuracy of the transcriptions made by John Bigelow and other  
 editors, as well as to the confusion created by the appearance of  
 several translations, chiefly in French, reputedly from authentic  
 manuscripts. The *Autobiography* first appeared in print in a  
 French translation, presumably made by Dr. Jacques Gibelin,  
 Paris, 1791. This was followed by several English translations  
 of the French translation. John Bigelow's edition, *Autobiography  
 of Benjamin Franklin. Edited from his Manuscript, with Notes*

member the Enquiries I made among the Remains  
 of my Relations when you were with me in England;  
 and the journey I undertook for that purpose. Now  
 imagining it may be equally agreeable to you to know  
 the Circumstances of my Life, many of which you are

and an Introduction, appeared in Philadelphia, in 1868. His  
 introduction contains a "Historical Sketch of the Fortunes and  
 Misfortunes of the Autograph Manuscript of Franklin's Memoirs  
 of His Own Life" that is indicative of the difficulties involved in  
 the establishment of a definitive text. The text used follows the  
 holograph in the Henry E. Huntington Library, San Marino,  
 California.

 Winchester, England. Shipley, Bishop of St. Asaph since 1769,  
 was a follower of Burke and a champion of colonial rights.

yet unacquainted with; and expecting a Weeks uninterrupted Leisure in my present Country Retirement, I sit down to write them for you. To which I have besides some other Inducements. Having emerg'd from the Poverty and Obscurity in which I was born and bred, to a State of Affluence and some Degree of Reputation in the World, and having gone so far thro' Life with a considerable Share of Felicity, the conducing Means I made use of, which, with the Blessing of God, so well succeeded, my Posterity may like to know, as they may find some of them suitable to their own Situations, and therefore fit to be imitated. That Felicity, when I reflected on it, has induc'd me sometimes to say, that were it offer'd to my Choice, I should have no Objection to a Repetition of the same Life from its Beginning, only asking the Advantages Authors have in a second Edition to correct some Faults of the first. So would I if I might, besides corr[ecting] the Faults, change some sinister Accidents and Events of it for others more favourable, but tho' this were deny'd, I should still accept the Offer. However, since such a Repetition is not to be expected, the next Thing most like living one's Life over again, seems to be a *Recollection* of that Life; and to make that Recollection as durable as possible, the putting it down in Writing. Hereby, too, I shall indulge the Inclination so natural in old Men, to be talking of themselves and their own past Actions, and I shall indulge it, without being troublesome to others who thro' respect to Age might think themselves oblig'd to give me a Hearing, since this may be read or not as any one pleases. And lastly (I may as well confess it, since my Denial of it will be believ'd by no Body) perhaps I shall a good deal gratify my own *Vanity*. Indeed I scarce ever heard or saw the introductory Words, *Without vanity I may say*, &c but some vain thing immediately follow'd. Most People dislike Vanity in others whatever share they have of it themselves, but I give it fair Quarter wherever I meet with it, being persuaded that it is often productive of Good to the Possessor and to others that are within his Sphere of Action: And therefore in many Cases it would not be quite absurd if a Man were to thank God for his Vanity among the other Comforts of Life. . . .

*[(Franklin's account of his ancestry is omitted. Further omissions are indicated in brackets.)]*

Josiah, my father, married young, and carried his Wife with three Children into New England, about

1682. The Conventicles<sup>3</sup> having been forbidden by Law, and frequently disturbed, induced some considerable Men of his Acquaintance to remove to that Country, and he was prevail'd with to accompany them thither, where they expected to enjoy their Mode of Religion with Freedom.—By the same Wife he had 4 Children more born there, and by a second wife ten more, in all 17, of which I remember 13 sitting at one time at his Table, who all grew up to be Men and Women, and married. I was the youngest Son, and the youngest Child but two, and was born in Boston, N. England. My mother, the 2<sup>d</sup> wife was Abiah Folger, a daughter of Peter Folger, one of the first Settlers of New England, of whom honourable mention is made by Cotton Mather, in his Church History of that Country, (entitled *Magnalia Christi Americana*) as *a godly learned Englishman*, if I remember the Words rightly. I have heard that he wrote sundry small occasional Pieces, but only one of them was printed which I saw now many years since. It was written in 1675, in the home-spun Verse of that Time and People, and address'd to those then concern'd in the Government there. It was in favour of Liberty of Conscience, and in behalf of the Baptists, Quakers, and other Sectaries, that had been under Persecution; ascribing the Indian Wars and other Distresses, that had befallen the Country to that Persecution, as so many Judgments of God, to punish so heinous an Offense; and exhorting a Repeal of those uncharitable Laws. The whole appear'd to me as written with a good deal of Decent Plainness and manly Freedom. The six last concluding Lines I remember, tho' I have forgotten the two first of the Stanza, but the Purport of them was that his Censures proceeded from Good will, and therefore he would be known as the Author,

Because to be a Libeller, (says he)  
I hate it with my Heart.  
From Sherburne Town<sup>4</sup> where now I dwell,  
My Name I do put here,  
Without Offense, your real Friend,  
It is Peter Folger

My elder Brothers were all put Apprentices to different Trades. I was put to the Grammar School at Eight Years of Age, my Father intending to devote me as the Tithe of his Sons to the Service of

<sup>3</sup> Conventicles were secret, sometimes illegal, assemblies for religious worship.

<sup>4</sup> Sherborn, Mass.

the Church. My early Readiness in learning to read (which must have been very early, as I do not remember when I could not read) and the Opinion of all his Friends that I should certainly make a good Scholar, encourag'd him in this Purpose of his. My Uncle Benjamin<sup>s</sup> too approv'd of it, and propos'd to give me all his Shorthand Volumes of Sermons I suppose as a Stock to set up with, if I would learn his Character. I continu'd however at the Grammar School not quite one Year, tho' in that time I<sup>10</sup> had risen gradually from the Middle of the Class of that Year to be the Head of it, and farther was remov'd into the next Class above it, in order to go with that into the third at the End of the Year. But my Father in the mean time, from a View of the Expence of a College Education which, having so large a Family, he could not well afford, and the mean Living many so educated were afterwards able to obtain, Reasons that he gave to his Friends in my Hearing, altered his first Intention, took me from<sup>20</sup> the Grammar School, and sent me to a School for Writing and Arithmetic kept by a then famous Man, Mr. Geo. Brownell, very successful in his Profession generally, and that by mild encouraging Methods. Under him I acquired fair Writing pretty soon, but I fail'd in the Arithmetic, and made no Progress in it. At Ten Years old, I was taken home to assist my Father in his Business, which was that of a Tallow Chandler and Sope Boiler. A Business he was not bred to, but had assumed on his Arrival in New<sup>30</sup> England and on finding his Dying Trade would not maintain his Family, being in little Request. Accordingly I was employed in cutting Wick for the Candles, filling the Dipping Mold, and the Molds for cast Candles, attending the Shop, going of Errands, etc.—I dislik'd the Trade and had a strong Inclination for the Sea; but my Father declar'd against it; however, living near the Water, I was much in and about it, learnt early to swim well, and to manage Boats, and when in a Boat or Canoe with other Boys<sup>40</sup> I was commonly allow'd to govern, especially in any case of Difficulty; and upon other Occasions I was generally a Leader among the Boys, and sometimes led them into Scrapes, of w<sup>ch</sup> I will mention one Instance, as it shows an early projecting public Spirit, tho' not then justly conducted. There was a salt Marsh that bounded part of the Mill Pond, on the edge of which at Highwater, we us'd to stand to fish

<sup>s</sup> A silk-dyer in London who invented a system of shorthand.

for Min[n]ows. By much Trampling, we had made it a mere Quagmire. My Proposal was to build a Wharf there fit for us to stand upon, and I show'd my Comrades a large Heap of Stones which were intended for a new House near the Marsh, and which would very well suit our Purpose. Accordingly in the Ev'ning when the Workmen were gone, I assembled a Number of my Playfellows; and working with them diligently like so many Emmets, sometimes two or three to a Stone, we brought them all away and built our little Wharff.—The next Morning the Workmen were surpriz'd at Missing the Stones; which were found in our Wharff; Enquiry was made after the Removers; we were discovered and complain'd of; several of us were corrected by our Fathers; and tho' I pleaded the Usefulness of the Work, mine convinc'd me that nothing was useful which was not honest. . . .

[Characterization of Franklin's father and mother is omitted.]

. . . I continu'd . . . employ'd in my Father's Business for two Years, that, till I was 12 Years old; and my Brother John, who was bred to that Business having left my Father, married and set up for himself at Rhodeisland, there was all Appearance that I was destin'd to supply his Place and be a Tallow Chandler. But my Dislike to the Trade continuing, my Father was under Apprehensions that if he did not find one for me more agreeable, I should break away and get to Sea, as his Son Josiah had done to his great Vexation. He therefore sometimes took me to walk with him, and see Joiners, Bricklayers, Turners, Braziers, etc. at their Work, that he might observe my Inclination, and endeavour to fix it on some Trade or other on Land. It has ever since been a Pleasure to me to see good Workmen handle their Tools; and it has been useful to me, having learnt so much by it, as to be able to do little Jobs myself in my House, when a Workman could not readily be got; and to construct little Machines for my Experiments while the Intention of making the Experiment was fresh and warm in my Mind. My Father at last fix'd upon the Cutler's Trade, and my Uncle Benjamin's Son Samuel who was bred to that Business in London[,] being about that time establish'd in Boston, I was sent to be with him some time on liking. But his Expectations of a Fee with me displeasing my Father, I was taken home again.—

From a Child I was fond of Reading, and all the little Money that came into my Hands was ever laid out in Books. Pleas'd with the Pilgrim's Progress, my first Collection was of John Bunyan's Works, in separate little Volumes. I afterwards sold them to enable me to buy R. Burton's Historical Collections; they were small Chapmen's Books and cheap, 40 or 50 in all.—My Father's little Library consisted chiefly of Books in polemic Divinity, most of which I read, and have since often regretted, that at a time when I 10 had such a Thirst for Knowledge, more proper Books had not fallen in my Way, since it was now resolv'd I should not be a Clergyman. Plutarch's Lives there was in which I read abundantly, and I still think that time spent to great[?] Advantage. There was also a Book of Defoc's, called an Essay on Projects, and another of Dr. Mather's, called Essays to do Good which perhaps gave me a Turn of thinking that had an influence on some of the principal future Events of my Life.

This Bookish inclination at length determin'd my Father to make me a Printer, tho' he had already one Son (James) of that Profession. In 1717 my Brother James return'd from England with a Press and Letters to set up his Business in Boston. I lik'd it much better than that of my Father, but still had a Hankering for the Sea.—To prevent the apprehended effect of such an Inclination, my Father was impatient to have me bound to my Brother. I stood out some time, but at last was persuaded and signed the Indentures, 30 when I was yet but 12 Years old.—I was to serve as an Apprentice till I was 21 Years of Age, only I was to be allow'd Journeyman's Wages during the last Year. In a little time I made great Proficiency in the Business, and became a useful Hand to my Brother. I now had Access to better Books. An Acquaintance with the Apprentices of Booksellers, enabled me sometimes to borrow a small one, which I was careful to return soon and clean. Often I sat up in my Room reading the greatest Part of the Night, when the 40 Book was borrow'd in the Evening and to be return'd early in the Morning[,] lest it should be miss'd or wanted. And after some time an ingenious Tradesman Mr. Matthew Adams who had a pretty Collection of Books, and who frequented our Printing House, took Notice of me, invited me to his Library, and very kindly lent me such Books as I chose to read. I now took a Fancy to Poetry. and made some little Pieces. My Brother, thinking it might turn to account encourag'd me, and put me on composing two occasional Ballads. One was called The *Lighthouse Tragedy*, and contained an Acc<sup>t</sup> of the drowning of Capt. Worthlake with his Two Daughters; the other was a Sailor Song on the Taking of *Teach* or Blackbeard the Pirate. They were wretched Stuff, in the Grub-street Ballad Stile, and when they were printed he sent me about the Town to sell them. The first sold wonderfully, the Event being recent, having made a great Noise. This flatter'd my Vanity. But my Father discourag'd me, by ridiculing my Performances, and telling me Verse-makers were generally Beggars; so I escap'd being a Poet, most probably a very bad one. But as Prose Writing has been of great Use to me in the Course of my Life, and was a principal Means of my Advancement, I shall tell you how in such a Situation I acquir'd what little Ability I have in that Way.

There was another Bookish Lad in the Town, John 20 Collins by Name, with whom I was intimately acquainted. We sometimes disputed, and very fond we were of Argument, and very desirous of confuting one another. Which disputacious Turn, by the way, is apt to become a very bad Habit, making People often extremely disagreeable in Company, by the Contradiction that is necessary to bring it into Practice, and thence, besides souring and spoiling the Conversation, is productive of Disgusts and perhaps Enmities where you may have occasion for Friendship. I had caught it by reading my Father's Books of Dispute about Religion. Persons of good Sense, I have since observ'd, seldom fall into it, except Lawyers, University Men, and Men of all Sorts that have been bred at Edinborough. A Question was once some how or other started between Collins and me, of the Propriety of educating the Female Sex in Learning, and their Abilities for Study. He was of Opinion that it was improper, and that they were naturally unequal to it. I took the contrary Side, perhaps a little for Dispute[']s sake. He was naturally more eloquent, had a ready Plenty of Words, and sometimes as I thought bore me down more by his Fluency than by the Strength of his Reasons. As we parted without settling the Point, and were not to see one another again for some time, I sat down to put my Arguments in Writing, which I copied fair and sent to him. He answer'd and I reply'd. Three of [or] four Letters of a Side had pass'd, when my Father happen'd to find my Papers, and read them.

Without ent'ring into the Discussion, he took occasion to talk to me about the Manner of my Writing, observ'd that tho' I had the Advantage of my Antagonist in correct Spelling and pointing (which I ow'd to the Printing House) I fell far short in elegance of Expression, in Method and in Perspicuity, of which he convinc'd me by several Instances. I saw the Justice of his Remarks, and thence grew more attentive to the *Manner* in writing, and determin'd to endeavour at Improvement.—

About this time I met with an odd Volume of the Spectator. It was the Third. I had never before seen any of them. I bought it, read it over and over, and was much delighted with it. I thought the Writing excellent, and wish'd if possible to imitate it. With that View, I took some of the Papers, and making short Hints of the Sentiment in each Sentence, laid them by a few Days, and then without looking at the Book, try'd to compleat the Papers again, by expressing each hinted Sentiment at length, and as fully as it had been express'd before, in any suitable Words, that should come to hand.

Then I compar'd my Spectator with the Original, discover'd some of my Faults and corrected them. But I found I wanted a Stock of Words or a Readiness in recollecting and using them, which I thought I should have acquir'd before that time, if I had gone on making Verses, since the continual Occasion for Words of the same Import but of different Length, to suit the Measure, or of different Sound for the Rhyme, would have laid me under a constant Necessity of searching for Variety, and also have tended to fix that Variety in my Mind, and make me Master of it. Therefore I took some of the Tales and turn'd them into Verse: And after a time, when I had pretty well forgotten the Prose, turn'd them back again. I also sometimes jumbled my Collections of Hints into Confusion, and after some Weeks, endeavour'd to reduce them into the best Order, before I began to form the full Sentences, and compleat the Paper. This was to teach me Method in the Arrangement of Thoughts. By comparing my work afterwards with the original, I discover'd many faults and amended them; but I sometimes had the Pleasure of Fancying that in certain Particulars of small Import, I had been lucky enough to improve the Method or the Language and this encourag'd me to think I might possibly in time come to be a tolerable English Writer, of which I was extremely ambitious.

My Time for these Exercises and for Reading, was at Night, after Work or before it began in the Morning; or on Sundays, when I contrived to be in the Printing House alone, evading as much as I could the common Attendance on publick Worship, which my Father used to exact of me when I was under his Care: And which indeed I still thought a Duty; tho' I could not, as it seemed to me, afford the Time to practise it.

10 When about 16 Years of Age, I happen'd to meet with a Book, written by one Tryon,<sup>6</sup> recommending a Vegetable Diet. I determin'd to go into it. My Brother being yet unmarried, did not keep House, but boarded himself and his Apprentices in another Family. My refusing to eat Flesh occasioned an Inconveniency, and I was frequently chid for my singularity. I made myself acquainted with Tryon's Manner of preparing some of his Dishes, such as Boiling Potatoes or Rice, making Hasty Pudding, and a few others, and then propos'd to my Brother, that if he would give me Weekly half the Money he paid for my Board I would board myself. He instantly agreed to it, and I presently found that I could save half what he paid me. This was an additional Fund for buying Books. But I had another Advantage in it. My Brother and the rest going from the Printing House to their Meals, I remain'd there alone, and dispatching presently my light Repast, (which often was no more than a Bisket or a Slice of Bread, a Handful of Raisins or a Tart from the Pastry Cook's, and a Glass of Water) had the rest of the Time till their Return, for Study, in which I made the greater Progress from that greater Clearness of Head and quicker Apprehension which usually attend Temperance in Eating and Drinking. And now it was that being on some Occasion made ashamed of my Ignorance in Figures, which I had twice failed in Learning when at School, I took Cocker's Book of Arithmetick, and went thro' the whole by myself with great Ease. I also read Seller's and Sturmy's Books of Navigation, and became acquainted with the little Geometry they contain, but never proceeded far in that Science,—And I read about this Time Locke on Human Understanding, and the art of Thinking by Mess<sup>rs</sup> du Port Royal.

While I was intent on improving my Language, I met with an English Grammar (I think it was Green-

<sup>6</sup> Thomas Tryon (1634–1705), author of *The Way to Health, Long Life and Happiness*.

wood's) at the End of which there were two little Sketches of the Arts of Rhetoric and Logic, the latter finishing with a Specimen of a Dispute in the Socratic Method. And soon after I procur'd Xenophon's Memorable Things of Socrates, wherein there are many Instances of the same Method. I was charm'd with it, adopted it, dropt my abrupt Contradiction, and positive Argumentation, and put on the humble Enquirer and Doubter. And being then, from reading Shaftsbury and Collins, become a real Doubter in many Points of our religious Doctrine, I found this Method safest for myself and very embarrassing to those against whom I us'd it, therefore I took a Delight in it, practis'd it continually and grew very artful and expert in drawing People even of superior Knowledge into Concessions the Consequences of which they did not foresee, entangling them in Difficulties out of which they could not extricate themselves, and so obtaining Victories that neither myself nor my Cause always deserved.—I continu'd this 20 Method some few years, but gradually left it, retaining only the Habit of expressing myself in Terms of modest Diffidence, never using when I advance any thing that may possibly be disputed, the Words, *Certainly, undoubtedly*; or any others that give the Air of Positiveness to an Opinion; but rather say, I conceive, or I apprehend a Thing to be so or so, It appears to me, or I should think it so or so for such and such Reasons, or I imagine it to be so, or it is so if I am not mistaken. This Habit I believe has been 30 of great Advantage to me, when I have had occasion to inculcate my Opinions and persuade Men into Measures that I have been from time to time engag'd in promoting.—And as the chief Ends of Conversation are to *inform*, or to be *informed*, to *please* or to *persuade*, I wish wellmeaning sensible Men would not lessen their Power of doing Good by a Positive assuming Manner that seldom fails to disgust, tends to create Opposition, and to defeat every one of those Purposes for which Speech was given us, to wit, 40 giving or receiving Information, or Pleasure: For if you would *inform*, a positive dogmatical Manner in advancing your Sentiments, may provoke Contradiction and prevent a candid Attention. If you wish Information and Improvement from the Knowledge of others and yet at the same time express yourself as firmly fix'd in your present Opinions, modest sensible Men, who do not love Disputation, will probably leave you undisturbed in the Possession of your

Error; and by such a Manner you can seldom hope to recommend yourself in *pleasing* your Hearers, or to persuade those whose Concurrence you desire. . . .

[More to the same effect, including quotations to enforce his point.]

My Brother had in 1720 or 21, begun to print a Newspaper. It was the second that appear'd in *America*, and was called *The New England Courant*.<sup>7</sup> The only one before it, was *the Boston News Letter*. I remember his being dissuaded by some of his Friends from the Undertaking, as not likely to succeed, one Newspaper being in their Judgment enough for America.—At this time 1771 there are not less than five and twenty.—He went on however with the Undertaking, and after having work'd in composing the Types and printing off the Sheets, I was employ'd to carry the Papers thro' the Streets to the Customers.—He had some ingenious Men among his Friends who amus'd themselves by writing little Picces for this Paper, which gain'd it Credit, and made it more in Demand; and these Gentlemen often visited us.—Hearing their Conversations, and their Accounts of the Approbation their Papers were receiv'd with, I was excited to try my Hand among them. But being still a Boy, and suspecting that my Bother would object to printing any Thing of mine in his Paper if he knew it to be mine, I contriv'd to disguise my Hand, and writing an anonymous Paper I put it in at Night under the Door of the Printing House. It was found in the Morning and communicated to his Writing Friends when they call'd in as usual. They read it, commented on it in my Hearing, and I had the exquisite Pleasure, of finding it met with their Approbation, and that in their different Guesses at the Author none were named but Men of some Character among us for Learning and Ingenuity.—I suppose now that I was rather lucky in my Judges: And that perhaps they were not really so very good ones as I then esteem'd them. Encourag'd however by this, I wrote and convey'd in the same Way to the Press several more Papers, which were equally approv'd, and I kept my Secret till my small Fund of Sense for such Performances was pretty well exhausted, and then I discovered it; when I began to be considered a little more by my Brother's Acquaintance, and in a

<sup>7</sup> The exact date is August 7, 1721. It was the fifth English colonial newspaper to be founded.

manner that did not quite please him, as he thought, probably with reason, that it tended to make me too vain. And perhaps this might be one Occasion of the Differences that we began to have about this Time. Tho' a Brother, he considered himself as my Master, and me as his Apprentice; and accordingly expected the same Services from me as he would from another; while I thought he demean'd me too much in some he requir'd of me, who from a Brother expected more Indulgence. Our Disputes were often brought before our Father, and I fancy I was either generally in the right, or else a better Pleader, because the Judgment was generally in my favour: But my Brother was passionate and had often beaten me, which I took extremely amiss; and thinking my Apprenticeship very tedious, I was continually wishing for some Opportunity of shortening it, which at length offered in a manner unexpected.\*

One of the Picces in our Newspaper, on some political Point which I have now forgotten, gave Offence to the Assembly. He was taken up, censur'd and imprison'd for a Month by the Speaker's Warrant, I suppose because he would not discover his Author. I too was taken up and examin'd before the Council; but tho' I did not give them any Satisfaction, they contented themselves with admonishing me, and dismiss'd me; considering me perhaps as an Apprentice who was bound to keep his Master's Secrets. During my Brother's Confinement, which I resented a good deal, notwithstanding our private Differences, I had the Management of the Paper, and I made bold to give our Rulers some Rubs in it, which my Brother took very kindly, while others began to consider me in an unfavourable Light, as a young Genius that had a Turn for Libelling and Satyr. My Brother's Discharge was accompany'd with an Order of the House, (a very odd one) *that James Franklin should no longer print the Paper called the New England Courant*. There was a Consultation held in our Printing House among his Friends what he should do in this Case. Some propos'd to evade the Order by changing the Name of the Paper; but my Brother seeing Inconveniences in that, it was finally concluded on as a better Way, to let it be printed for the future under the name of *Benjamin Franklin*. And to avoid the Censure of the Assembly

\* I fancy his harsh and tyrannical Treatment of me, might be a means of impressing me with that Aversion to arbitrary Power that has stuck to me thro' my whole life.

that might fall on him, as still printing it by his Apprentice, the Contrivance was, that my old Indenture should be return'd to me with a full Discharge on the Back of it, to be shown on Occasion; but to secure to him the Benefit of my Service I was to sign new Indentures for the Remainder of the Term, w<sup>ch</sup> were to be kept private. A very flimsy Scheme it was, but however it was immediately executed, and the Paper went on accordingly under my Name for several Months. At length a fresh Difference arising between my Brother and me, I took upon me to assert my Freedom, presuming that he would not venture to produce the new Indentures. It was not fair in me to take this Advantage, and this I therefore reckon one of the first Errata of my life: But the Unfairness of it weighed little with me, when under the Impressions of Resentment, for the Blows his Passion too often urg'd him to bestow upon me. Tho' he was otherwise not an ill-natur'd Man: Perhaps I was too saucy and provoking.

When he found I would leave him, he took care to prevent my getting Employment in any other Printing-House of the Town, by going round and speaking to every Master, who accordingly refus'd to give me Work. I then thought of going to New York as the nearest Place where there was a Printer: and I was the rather inclin'd to leave Boston, when I reflected that I had already made myself a little obnoxious to the governing Party; and from the arbitrary Proceedings of the Assembly in my Brother's Case it was likely I might if I stay'd soon bring myself into Scrapes; and farther that my indiscrete Disputations about Religion began to make me pointed at with Horror by good People, as an Infidel or Atheist. I determin'd on the Point: but my Father now siding with my Brother, I was sensible that if I attempted to go openly, Means would be used to prevent me. My Friend Collins therefore undertook to manage a little for me. He agreed with the Captain of a New York Sloop for my Passage, under the Notion of my being a young Acquaintance of his that had got a naughty Girl with Child, whose Friends would compel me to marry her, and therefore I could not appear or come away publickly. So I sold some of my Books to raise a little Money, Was taken on board privately, and as we had a fair Wind[,] in three Days I found myself in New York near 300 Miles from home, a Boy of but 17, without the least Recommendation to or Knowl-

edge of any Person in the Place, and with very little Money in my Pocket. . . .

*[(Failure to find work in New York; decision to proceed to Philadelphia; account of journey thither.)]*

I have been the more particular in this Description of my Journey, and shall be so of my first Entry into that City, that you may in your Mind compare such unlikely Beginnings with the Figure I have since made there. I was in my Working Dress, my best 10 Cloaths being to come round by Sea. I was dirty from my Journey; my Pockets were stuff'd out with Shirts and Stockings; I knew no Soul, nor where to look for Lodging. I was fatigued with Travelling, Rowing and Want of Rest. I was very hungry, and my whole Stock of Cash consisted of a Dutch Dollar and about a Shilling in Copper. The latter I gave the People of the Boat for my Passage, who at first refus'd it on Acc<sup>t</sup> of my Rowing; but I insisted on their taking it, a Man being sometimes more generous when he has 20 but a little Money than when he has plenty, perhaps thro' Fear of being thought to have but little. Then I walk'd up the Street, gazing about, till near the Market House I met a Boy with Bread. I had made many a Meal on Bread, and inquiring where he got it, I went immediately to the Baker's he directed me to in Second Street; and ask'd for Bisket, intending such as we had in Boston, but they it seems were not made in Philadelphia, then I ask'd for a threepenny Loaf, and was told they had none such: so not con- 30 sidering or knowing the Difference of Money and the greater Cheapness nor the Names of his Bread, I bad[e] him give me threepenny worth of any sort. He gave me accordingly three great Puffy Rolls. I was surpriz'd at the Quantity, but took it, and having no room in my Pockets, walk'd off, with a Roll under each Arm, and eating the other. Thus I went up Market Street as far as fourth Street, passing by the Door of Mr. Read, my future Wife's Father, when she standing at the Door saw me, and thought I made 40 as I certainly did a most awkward ridiculous Appearance. Then I turn'd and went down Chestnut Street and part of Walnut Street, eating my Roll all the Way, and coming round found myself again at Market Street Wharff, near the Boat I came in, to which I went for a Draught of the River Water, and being fill'd with one of my Rolls, gave the other two to a Woman and her Child that came down the River in the Boat with us and were waiting to go

farther. Thus refresh'd I walk'd again up the Street, which by this time had many clean dress'd People in it who were all walking the same Way; I join'd them, and thereby was led into the great Meeting House of the Quakers near the Market. I sat down among them, and after looking round awhile and hearing nothing said; being very drowsy thro' Labour and want of Rest the preceding Night, I fell fast asleep, and continu'd so till the Meeting broke up, when one was kind enough to rouse me. This was therefore the first House I was in or slept in, in Philadelphia.—

Walking again down towards the River, and looking in the Faces of People, I met a young Quaker Man whose Countenance I lik'd, and accosting him requested he would tell me where a Stranger could get Lodging. We were then near the Sign of the Three Mariners. Here, says he, is one Place that entertains Strangers, but it is not a reputable House; if thee wilt walk with me, I'll show thee a better. He brought me to the Crooked Billet in Water Street. Here I got a Dinner. And while I was eating it, several sly Questions were ask'd me, as it seem'd to be suspected from my youth and Appearance, that I might be some Runaway. After Dinner my Sleepiness return'd: and being shown to a Bed, I lay down without undressing, and slept till Six in the Evening; was call'd to Supper; went to Bed again very early and slept soundly till next Morning. Then I made myself as tidy as I could, and went to Andrew Bradford the Printer's. I found in the Shop the old Man his Father, whom I had seen at New York, and who travelling on horseback had got to Philadelphia before me. He introduc'd me to his Son, who receiv'd me civilly, gave me a Breakfast, but told me he did not at present want a Hand, being lately supply'd with one. But there was another Printer in town lately set up, one Keimer,<sup>8</sup> who perhaps might employ me; if not, I should be welcome to lodge at his House, and he would give me a little Work to do now and then till fuller Business should offer.

The old Gentleman said, he would go with me to the new Printer: And when we found him, Neighbor, says Bradford, I have brought to see you a young Man of your Business, perhaps you may want such a One. He ask'd me a few Questions, put a Composing Stick in my Hand to see how I work'd, and then said

<sup>8</sup> Samuel Keimer (1688–c. 1749), an eccentric and radical printer, who had emigrated to Philadelphia and set up his shop in 1721.

he would employ me soon, tho' he had just then nothing for me to do. And taking old Bradford whom he had never seen before, to be one of the Towns People that had a Good Will for him, enter'd into a Conversation on his present Undertaking and Prospects; while Bradford not discovering that he was the other Printer's Father, on Keimer's saying he expected soon to get the greatest Part of the Business into his own Hands, drew him on by artful Questions and starting little Doubts, to explain all his Views, 10 and what Interest he rely'd on, and in what manner he intended to proceed.—I who stood by and heard all, saw immediately that one of them was a crafty old Sophister, and the other a mere Novice. Bradford left me with Keimer, who was greatly surpriz'd when I told him who the old Man was.

Keimer's Printing House I found, consisted of an old shatter'd Press, and one small worn-out Fount of English, which he was then using himself, composing in it an Elegy on Aquila Rose<sup>9</sup> before-mentioned, an 20 ingenious young Man of excellent Character much respected in the Town, Clerk of the Assembly, and a pretty Poet. Keimer made Verses, too, but very indifferently. He could not be said to write them, for his Manner was to compose them in the Types directly out of his Head; so there being no Copy, but one Pair of Cases, and the Elegy likely to require all the Letter[s], no one could help him.—I endeavour'd to put his Press (which he had not yet us'd, and of which he understood nothing) into Order fit 30 to be work'd with; and promising to come and print off his Elegy as soon as he should have got it ready, I return'd to Bradford's who gave me a little Job to do for the present. [and] there I lodged and dieted. A few Days after[,] Keimer sent for me to print off the Elegy. And now he had got another Pair of Cases, and a Pamphlet to reprint, on which he set me to work.—

These two Printers I found poorly Qualified for their Business. Bradford had not been bred to it, and 40 was very illiterate; and Keimer tho' something of a Scholar, was a mere Compositor, knowing nothing of Presswork. He had been one of the French Prophets and could act their enthusiastic Agitations. At this time he did not profess any particular religion, but something of all on occasion; was very ignorant of the World, and had, as I afterward found, a good

deal of the Knave in his Composition. He did not like my Lodging at Bradford's while I work'd with him. He had a House indeed, but without Furniture, so he could not lodge me: But he got me a Lodging at Mr. Read's beforementioned, who was the Owner of his House. And my Chest and Clothes being come by this time, I made rather a more respectable Appearance in the Eyes of Miss Read than I had done when she first happen'd to see me eating my Roll in the Street.—

I began now to have some Acquaintance among the young People of the town, that were Lovers of Reading with whom I spent my Evenings very pleasantly and gaining Money by my Industry and Frugality, I lived very agreeably, forgetting Boston as much as I could, and not desiring that any there should know where I resided, except my Friend Collins who was in my Secret, and kept it when I wrote to him. At length an Incident happened that sent me back again much sooner than I had intended.—

I had a Brother-in-law, Robert Holmes, Master of a Sloop, that traded between Boston and Delaware. He being at New Castle<sup>10</sup> 40 Miles below Philadelphia, heard there of me, and wrote me a Letter, mentioning the Concern of my Friends in Boston at my abrupt Departure, assuring me of their Good will to me, and that every thing would be accommodated to my Mind if I would return, to which he exhorted me very earnestly. I wrote an Answer to his Letter, thank'd him for his Advice, but stated my Reasons for quitting Boston fully, and in such a Light as to convince him I was not so wrong as he had apprehended. Sir William Keith<sup>11</sup> Governor of the Province, was then at New Castle, and Capt. Holmes happening to be in Company with him when my Letter came to hand, spoke to him of me, and show'd him the Letter. The Governor read it, and seem'd surpriz'd when he was told my Age. He said I appear'd a young Man of promising Parts, and therefore should be encouraged: The Printers at Philadelphia were wretched ones, and if I would set up there, he made no doubt I should succeed; for his Part, he would procure me the publick Business, and do me every other Service in his Power. This my Brother-in-Law afterwards told me in Boston. But I knew as

<sup>9</sup> Aquila Rose (1695–1723), a poet, author of *Poems on Several Occasions*, Philadelphia, 1740.

<sup>10</sup> New Castle, Delaware.

<sup>11</sup> Sir William Keith (1680–1749), Governor of Pennsylvania, 1717–1726.

yet nothing of it; when one Day Keimer and I being at Work together near the Window, we saw the Governor and another Gentleman (which prov'd to be Col. French, of New Castle) finely dress'd, come directly across the Street to our House, and heard them at the Door. Keimer ran down immediately, thinking it a Visit to him. But the Governor enquir'd for me, came up, and with a Condescension and Politeness I had been quite unus'd to, made me many Compliments, desired to be acquainted with me, blam'd me kindly for not having made myself known to him when I first came to the Place, and would have me away with him to the Tavern where he was going with Col. French to taste as he said some excellent Madeira. I was not a little surpriz'd, and Keimer star'd like a Pig poison'd. I went however with the Governor and Col. French, to a Tavern [at] the Corner of Third Street, and over the Madeira he propos'd my Setting up my Business, laid before me the Probabilities of Success, and both he and Col. French, assur'd me I should have their Interest and Influence in procuring the Publick Business of both Governments. On my doubting whether my Father would assist me in it, Sir William said he would give me a Letter to him, in which he would state the Advantages, and he did not doubt of prevailing with him. So it was concluded I should return to Boston in the first Vessel with the Governor's Letter recommending me to my Father. In the mean time the Intention was to be kept secret, and I went on working with Keimer as usual, the Governor sending for me now and then to dine with him, a very great Honour I thought it, and conversing with me in the most affable, familiar, and friendly manner imaginable. About the End of April 1724 a little Vessel offer'd for Boston. I took leave of Keimer as going to see my Friends. The Governor gave me an ample Letter, saying many flattering things of me to my Father, and strongly recommending the Project of my setting up at Philadelphia, as a Thing that must make 40 my Fortune. . . .

*(Visit to Boston; failure to secure his father's consent and financial support for setting up in business on his own before attaining the age of twenty-one; return to Philadelphia.)*

. . . Sir William [Keith], on reading his <sup>12</sup> letter, said he was too prudent. There was a great Difference in Persons, and Discretion did not always accompany

<sup>12</sup> Franklin's father's.

Years, nor was Youth always without it. And since he will not set you up, says he, I will do it myself. Give me an Inventory of the Things necessary to be had from England, and I will send for them. You shall repay me when you are able; I am resolv'd to have a good Printer here, and I am sure you must succeed. This was spoken with such an Appearance of Cordiality, that I had not the least doubt of his meaning what he said. I had hitherto kept the Proposition of my Setting up[,] a Secret in Philadelphia, and I still kept it. Had it been known that I depended on the Governor, probably some Friend that knew him better would have advis'd me not to rely on him, as I afterwards heard it as his known Character to be liberal of Promises which he never meant to keep.—Yet unsolicited as he was by me, how could I think his generous Offers insincere? I believ'd him one of the best Men in the World.—

I presented him an Inventory of a little Print<sup>g</sup> House, amounting by my Computation to about 100£ Sterling. He lik'd it, but ask'd me if my being on the Spot in England to chuse the Types and see that every thing was good of the kind, might not be of some Advantage. Then, says he, when there, you may make Acquaintances and establish Correspondencies in the Bookselling and Stationary Way. I agreed that this might be advantageous. Then, says he, get yourself ready to go with Annis; which was the annual Ship, and the only one at that Time usually passing between London and Philadelphia. But it would be some Months before Annis sail'd, so I continu'd working with Keimer. . . .

I believe I have omitted mentioning that in my first Voyage from Boston, being becalm'd off Block Island, our People set about catching Cod and haul'd up a great many. Hitherto I had stuck to my Resolution of not eating animal Food; and on this Occasion, I consider'd with my Master Tryon, the taking every Fish as a kind of unprovoked Murder, since none of them had or ever could do us any Injury that might justify the Slaughter. All this seem'd very reasonable.—But I had formerly been a great Lover of Fish, and when this came hot out of the Frying Pan, it smelt admirably well. I balanc'd some time between Principle and Inclination: till I recollected, that when the Fish were opened, I saw smaller Fish taken out of their Stomachs: Then thought I, if you eat one another, I don't see why we mayn't eat you. So I din'd upon Cod very heartily and continu'd to

eat with other People, returning only now and then occasionally to a vegetable Diet. So convenient a thing it is to be a *reasonable Creature*, since it enables one to find or make a Reason for every thing one has a mind to do.

Keimer and I liv'd on a pretty good familiar Footing and agreed tolerably well: for he suspected nothing of my Setting up. He retain'd a great deal of his old Enthusiasms, and lov'd Argumentation. We therefore had many Disputations. I used to work with him so with my Socratic Method, and had trepann'd him so often by Questions apparently so distant from any Point we had in hand, and yet by degrees led to the Point, and brought him into Difficulties and Contradictions that at last he grew ridiculously cautious, and would hardly answer me the most common Question, without asking first, *What do you intend to infer from that?* However it gave him so high an Opinion of my Abilities in the Confuting Way, that he seriously propos'd my being his Colleague in a <sup>20</sup> Project he had of setting up a new Sect. He was to preach the Doctrines, and I was to confound all Opponents. When he came to explain with me upon the Doctrines, I found several Conundrums which I objected to, unless I might have my Way a little too, and introducc some of mine. Keimer wore his Beard at full Length, because somewhere in the Mosaic Law it is said, *thou shalt not mar the Corners of thy beard*. He likewise kept the seventh day Sabbath; and these two Points were Essentials with him. I dislik'd both, <sup>30</sup> but agreed to admit them upon Condition of his adopting the Doctrine of using no animal Food. I doubt, says he, my Constitution will not bear that. I assur'd him it would, and that he would be the better for it. He was usually a great Glutton, and I promis'd myself some Diversion in half-starving him. He agreed to try the Practice if I would keep him Company. I did so and we held it for three Months. We had our Victuals dress'd and brought to us regularly by a Woman in the Neighbourhood, who had <sup>40</sup> from me a List of 40 Dishes to be prepar'd for us at different times, in all which there was neither Fish Flesh nor Fowl, and the whim suited me the better at this time from the Cheapness of it, not costing us above 18<sup>d</sup> Sterling each, per Week. I have since kept several Lents most strictly, leaving the common Diet for that, and that for the common, abruptly, without the least Inconveniencce: So that I think there is little in the Advice of making those Changes by easy Gra-

dations. I went on pleasantly, but Poor Keimer suffer'd grievously, tir'd of the Project, long'd for the Flesh Pots of Egypt, and order'd a roast Pig. He invited me and two Women Friends to dinc with him, but it being brought too soon upon the table, he could not resist the Temptation, and ate it all up before we came.—

I had made some Courtship during this time to Miss Read. I had a great Respect and Affection for her, and had some Reason to believe she had the same for me: but as I was about to take a long Voyage, and we were both very young, only a little above 18, it was thought most prudent by her Mother to prevent our going too far at present, as a Marriage if it was to take place would be more convenient after my Return, when I should be as I expected set up in my Business. Perhaps too she thought my Expectations not so well founded as I imagined them to be. . . .

*[Account of his efforts, with his closest companions in Philadelphia—Charles Osborne, Joseph Watson, and James Ralph—to cultivate the arts of conversation and composition.]*

The Governor, seeming to like my Company, had me frequently to his House; and his Setting me up was always mention'd as a fix'd thing. I was to take with me Letters recommendatory to a Number of his Friends, besides the Letter of Credit to furnish me with the necessary Money for purchasing the Press and Types, Paper, etc. For these Letters I was appointed to call at different times, when they were to be ready, but a future time was still named.—Thus we went on till the Ship whose Departure too had been several times postponed was on the Point of sailing. Then when I call'd to take my Leave and receive the Letters, his Secretary, Dr. Bard, came out to me and said the Governor was extreamly busy, in writing, but would be down at Newcastle before the Ship, and there the Letters would be delivered to me. Ralph,<sup>13</sup> tho' married and having one Child, had determined to accompany me in this Voyage. It was thought he intended to establish a Correspondence, and obtain Goods to sell on Commission. But I found afterwards, that thro' some Discontent with his Wife's Relations, he purposed to leave her on their Hands, and never return again.—Having taken leave of my Friends, and interchang'd some Promises with

<sup>13</sup> James Ralph (c. 1705–1762), a minor poet, satirized by Pope in *The Dunciad*, III, 165–166.

Miss Read, I left Philadelphia in the Ship, which anchor'd at Newcastle. The Governor was there. But when I went to his Lodging, the Secretary came to me from him with the civillest Message in the World, that he could not then see me being engag'd in Business of the utmost Importance, but should send the Letters to me on board, wish'd me heartily a good Voyage and a speedy Return, etc. I return'd on board, a little puzzled, but still not doubting. . . .

¶[Account of voyage to London.]

When we came into the Channel, the Captain kept his Word with me, and gave me an Opportunity of examining the Bag for the Governor's Letters. I found none upon which my Name was put, as under my Care; I pick'd out 6 or 7 that by the Hand writing I thought might be the promis'd Letters, especially as one of them was directed to Basket the King's printer, and another to some Stationer. We arriv'd in London the 24<sup>th</sup> of December, 1724. I waited upon the Stationer who came first in my Way, delivering the Letter as from Gov. Keith. I don't know such a Person, says he: but opening the Letter, O, this is from Riddlesden; I have lately found him to be a compleat Rascal, and I will have nothing to do with him, nor receive any Letters from him. So putting the Letter into my Hand, he turn'd on his Heel and left me to serve some Customer. I was surprized to find these were not the Governor's Letters. And after recollecting and comparing Circumstances, I began to doubt his Sincerity.—I found my Friend Denham, 30 and opened the whole Affair to him. He let me into Keith's Character, told me there was not the least Probability that he had written any Letters for me, that no one who knew him had the smallest Dependence on him, and he laugh'd at the Notion of the Governor's giving me a Letter of Credit, having as he said no Credit to give.—On my expressing some Concern about what I should do: He advis'd me to endeavour getting some Employment in the Way of my Business. Among the Printers here, says he, you 40 will improve yourself; and when you return to America, you will set up to greater Advantage. . . .

¶[More to the same general effect.]

But what shall we think of a Governor's playing such pitiful Tricks, and imposing so grossly on a poor ignorant Boy! It was a Habit he had acquired. He wish'd to please every body; and, having little to

give, he gave Expectations. He was otherwise an ingenious sensible Man, a pretty good Writer, and a good Governor for the People, tho' not for his Constituents the Proprietaries, whose Instructions he sometimes disregarded.—Several of our best Laws were of his Planning, and pass'd during his Administration. . . .

¶[Brief account of his friend Ralph's unsuccessful efforts to find employment.]

10 I immediately got into Work at Palmer's then a famous Printing House in Bartholomew Close; and here I continu'd near a Year. I was pretty diligent; but spent with Ralph a good deal of my Earnings in going to Plays and other Places of Amusement. We had together consum'd all my Pistols, and now just rubb'd on from hand to mouth. He seem'd quite to forget his Wife and Child, and I by degrees my Engagements w<sup>th</sup> Miss Read, to whom I never wrote more than one Letter, and that was to let her know 20 I was not likely soon to return. This was another of the great Errata of my Life, which I should wish to correct if I were to live it over again.—In fact, by our Expences, I was constantly kept unable to pay my Passage.

At Palmer's I was employ'd in composing for the second Edition of Woollaston's [*sic*] Religion of Nature.<sup>14</sup> Some of his Reasonings not appearing to me well-founded, I wrote a little metaphysical Piece, in which I made Remarks on them. It was entitled, 30 *A Dissertation on Liberty and Necessity, Pleasure and pain*. I inscrib'd it to my Friend Ralph.—I printed a small Number. It occasion'd my being more consider'd by Mr. Palmer, as a young Man of some Ingenuity, tho' he seriously Expostulated with me upon the Principles of my Pamphlet which to him appear'd abominable. My printing this Pamphlet was another Erratum.

In our House there lodg'd a young Woman; a Millner, who I think had a Shop in the Cloisters. She had been genteely bred, was sensible and lively, and of most pleasing Conversation. Ralph read Plays to her in the Evnings, they grew intimate, she took another Lodging, and he follow'd her. They liv'd together some time, but he being still out of Business, and her Income not sufficient to maintain them with

<sup>14</sup> That is, William Woollaston's *The Religion of Nature Delineated* (1724), which established him as one of the foremost deists of his time.

her Child, he took a Resolution of going from London, to try for a Country School, which he thought himself well qualify'd to undertake, as he wrote an excellent Hand, and was a Master of Arithmetic and Accounts.—This however he deem'd a Business below him, and confident of future better Fortune when he should be unwilling to have it known that he once was so meanly employ'd, he chang'd his Name, and did me the Honour to assume mine.—For I soon after had a Letter from him, acquainting me, that he was settled in a small Village in Berkshire, I think it was, where he taught reading and writing to 10 or a dozen Boys at 6 pence each p[er] Week, recommending Mrs. T. to my Care, and desiring me to write to him directing for Mr. Franklin Schoolmaster at such a Place. He continu'd to write frequently, sending me large Specimens of an Epic Poem, which he was then composing, and desiring my Remarks and Corrections.—These I gave him from time to time, but endeavour'd rather to discourage his Proceeding. One of Young's Satires was then just publish'd. I copy'd and sent him a great Part of it, which set in a strong Light the Folly of pursuing the Muses with any Hope of Advancement by them. All was in vain. Sheets of the Poem continu'd to come by every Post. In the mean time Mrs. T. having on his Account lost her Friends and Business, was often in Distresses, and us'd to send for me, and borrow what I could spare to help her out of them. I grew fond of her Company, and being 30 at this time under no Religious Restraints, and presuming on my Importance to her, I attempted Familiarities, (another Erratum) which she repuls'd with a proper Resentment, and acquainted him with my Behaviour. This made a Breach between us, and when he return'd again to London, he let me know he thought I had cancell'd all the Obligations he had been under to me.—So I found I was never to expect his Repaying me what I lent to him or advanc'd for him. This was however not then of much Consequence, as he was totally unable: And in the Loss of his Friendship I found myself reliev'd from a Burthen. I now began to think of getting a little Money beforehand; and expecting better Work, I left Palmer's to work at Watts's near Lincoln's Inn Fields, a still greater Printing House. Here I continu'd all the rest of my Stay in London.

While I lodg'd in Little Britain I made an Acquaintance with one Wilcox a Bookseller, whose

Shop was at the next Door. He had an immense Collection of second-hand Books. Circulating Libraries were not then in Use; but we agreed that on certain reasonable Terms which I have now forgotten, I might take, read and return any of his Books. This I esteem'd a great Advantage, and I made as much use of it as I could.—

My Pamphlet by some means falling into the Hands of one Lyons, a Surgeon, Author of a Book intitled *The Infallibility of Human Judgment*, it occasioned an Acquaintance between us; he took great Notice of me, call'd on me often, to converse on those Subjects, carried me to the Horns a pale Alehouse in — Lane, Cheapside, and introduc'd me to Dr. Mandevill<sup>15</sup>, Author of the Fable of the Bees who had a Club there, of which he was the Soul, being a most facetious entertaining Companion. Lyons too introduc'd me to Dr. Pemberton,<sup>16</sup> at Batson's Coffee House, who promis'd to give me an Opportunity some time or other of seeing Sir Isaac Newton, of which I was extremely desirous; but this never happened.

I had brought over a few Curiosities among which the principal was a Purse made of the Asbestos, which purifies by Fire. Sir Hans Sloane heard of it, came to see me, and invited me to his House in Bloomsbury Square; where he show'd me all his Curiosities, and persuaded me to let him add that to the Number, for which he paid me handsomely.<sup>17</sup>

At my first Admission into this Printing House, I took to working at Press, imagining I felt a Want of the Bodily Exercise I had been us'd to in America, where Presswork is mix'd with Composing, I drank only Water; the other Workmen, near 50 in Number, were great Guzzlers of Beer. On occasion I carried up and down Stairs a large Form of Types in each hand, when others carried but one in both Hands. They wonder'd to see from this and several Instances that the water-American as they call'd me was stronger than themselves who drank strong beer. We had an Alehouse Boy who attended always in the House to supply the Workmen. My Companion at the Press, drank every day a Pint before Breakfast, a Pint at Breakfast with his Bread and Cheese; a Pint

<sup>15</sup> Bernard Mandeville (1670–1733), author of *The Fable of the Bees* (1714, 1729).

<sup>16</sup> Henry Pemberton (1694–1771), editor of the third edition of Sir Isaac Newton's *Principia*.

<sup>17</sup> Sir Hans Sloane (1660–1753), famous botanist and physician, and president of the Royal Society, 1727–1741.

between Breakfast and Dinner; a Pint at Dinner; a Pint in the Afternoon about Six o'Clock, and another when he had done his Day's-Work. I thought it a detestable Custom.—But it was necessary, he suppos'd to drink *strong* Beer that he might be *strong* to labour. I endeavour'd to convince him that the Bodily Strength afforded by Beer could only be in proportion to the Grain or Flour of the Barley dissolved in the Water of which it was made; that there was more Flour in a Penny-worth of Bread, and therefore if he would eat that with a Pint of Water, it would give him more Strength than a Quart of Beer.—He drank on however, and had 4 or 5 Shillings to pay out of his Wages every Saturday Night for that muddling Liquor; an Expence I was free from.—And thus these poor Devils keep themselves always under. . . .

¶[Further accounts of his work and of acquaintances in London.]

Thus I spent about 18 Months in London. Most Part of the Time, I work'd hard at my Business, and spent but little upon myself except in seeing Plays, and in Books.—My Friend Ralph had kept me poor. He owed me about 27 Pounds; which I was now never likely to receive; a great Sum out of my small Earnings. I lov'd him notwithstanding, for he had many amiable Qualities.—Tho' I had by no means improv'd my Fortune. But I had pick'd up some very ingenious Acquaintance whose Conversation was of great Advantage to me, and I had read considerably.

We sail'd from Gravesend on the 23<sup>d</sup> of July 1726. For the Incidents of the Voyage, I refer you to my Journal, where you will find them all minutely related. Perhaps the most important Part of that Journal is the *Plan*<sup>18</sup> to be found in it which I formed at Sea, for regulating my future Conduct in Life. It is the more remarkable, as being formed when I was so young, and yet being pretty faithfully adhered to quite thro' to old Age.—We landed in Philadelphia on the 11th of October, where I found sundry Alterations. Keith was no longer Governor, being succeeded by Major Gordon: I met him walking the Streets as a common Citizen. He seem'd a little asham'd at seeing me, but pass'd without saying any

thing. I should have been as much asham'd at seeing Miss Read, had not her Fr<sup>ds</sup>, despairing with Reason of my Return, after the Receipt of my Letter, persuaded her to marry another, one Rogers, a Potter, which was done in my Absence. With him however she was never happy, and soon parted from him, refusing to cohabit with him, or bear his Name[,] it being now said that he had another Wife. He was a worthless Fellow tho' an excellent Workman[,] which was the Temptation to her Friends. He got into Debt, ran away in 1727 or 28, and went to the West Indies, and died there. Keimer had got a better House, a Shop well supply'd with Stationary[,] plenty of new Types, a number of Hands tho' none good, and seem'd to have a great deal of Business. . . .

¶[Various employments in Philadelphia; return to Keimer's shop, where the improvements Franklin instituted soon made him "quite a Factotum," at the same time that he put Keimer's printing establishment in good order.]

But however serviceable I might be, I found that my Services became every Day of less Importance, as the other Hands improv'd in the Business. And when Keimer paid my second Quarter's Wages, he let me know that he felt them too heavy, and thought I should make an Abatement. He grew by degrees less civil, put on more of the Master, frequently found Fault, was captious and seem'd ready for an Out-breaking. I went on nevertheless with a good deal of Patience, thinking that his incumber'd Circumstances were partly the Cause. At length a Trifle snapt our Connexion. For a great Noise happening near the Courthouse, I put my Head out of the Window to see what was the Matter. Keimer being in the Street look'd up and saw me, call'd out to me in a loud voice and angry Tone to mind my Business, adding some reproachful Words, that nettled me the more for their Publicity, all the Neighbours who were looking out on the same Occasion being Witnesses how I was treated. He came up immediately into the Printing-House, continu'd the Quarrel, high Words pass'd on both Sides, he gave me the Quarter's Warning we had stipulated, expressing a Wish that he had not been oblig'd to do so long a Warning. I told him his Wish was unnecessary for I would leave him that Instant; and so taking my Hat walk'd out of Doors; desiring Meredith whom I saw below to take care of some Things I left, and bring them to my Lodging. . . .

<sup>18</sup> This Plan is not found in the *Journal* as printed in Franklin's *Writings*, II, 53–86.

[(Preliminary plans for setting up an independent printing establishment with Hugh Meredith for a partner; employment as a printer in Burlington, N. J.; formation of valuable friendships there.]

Before I enter upon my public Appearance in Business it may be well to let you know the then State of my Mind, with regard to my Principles and Morals, that you may see how far those influenc'd the future Events of my Life. My Parent's [sic] had early given me religious Impressions, and brought me through my Childhood piously in the Dissenting Way. But I was scarce 15 when, after doubting by turns of several Points as I found them disputed in the different Books I read, I began to doubt of Revelation it self. Some Books against Deism fell into my Hands; they were said to be the Substance of Sermons preached at Boyle's Lectures.<sup>19</sup> It happened that they wrought an Effect on me quite contrary to what was intended by them: For the Arguments of the Deists which were quoted to be refuted, appeared to me much Stronger than the Refutations.<sup>20</sup> In short I soon became a thorough Deist. My Arguments perverted some others, particularly Collins and Ralph: but each of them having afterwards wrong'd me greatly without the least Compunction and recollecting Keith's Conduct towards me, (who was another Freethinker) and my own towards Vernon and Miss Read, which at Times gave me great Trouble, I began to suspect that this Doctrine tho' it might be true, was not very useful.—My London Pamphlet, which had for its Motto these Lines of Dryden

*Whatever is, is right. Tho' purblind Man  
Sees but a Part of the Chain, the nearest Link,  
His Eyes not carrying to the equal Beam,  
That poises all, above.*

And from the Attributes of God, his infinite Wisdom, Goodness and Power concluded that nothing could possibly be wrong in the World, and that Vice and Virtue were empty Distinctions, no such Things existing; appear'd now not so clever a Performance as I once thought it; and I doubted whether some Error had not insinuated itself unperceiv'd, into my Argument, so as to infect all that follow'd, as is common in metaphysical Reasonings.—I grew convinc'd that Truth, Sincerity and Integrity in Dealings between Man and Man, were of the utmost Importance to the Felicity of Life, and I form'd written Resolutions,

<sup>19</sup> A course of lectures instituted in 1692 by the gift of money made by Robert Boyle (1627–1691), the design being to defend Christianity against skepticism and infidelity.

(w<sup>ch</sup> still remain in my Journal Book) to practice them everwhile I lived. Revelation had indeed no weight with me as such; but I entertain'd an Opinion, that tho' certain Actions might not be bad *because* they were forbidden by it, or good *because* it commanded them; yet probably those Actions might be forbidden *because* they were bad for us, or commanded *because* they were beneficial to us, in their own Natures, all the Circumstances of things considered. And this Persuasion, with the kind hand of Providence, or some guardian Angel, or accidental favourable Circumstances and Situations, or all together, preserved me (thro' this dangerous Time of Youth and the hazardous Situations I was sometimes in among Strangers, remote from the Eye and Advice of my Father) without any wilful gross Immorality or Injustice that might have been expected from my Want of Religion. I say *wilful*, because the Instances I have mention'd, had something of *Necessity* in them, from my Youth, Inexperience, and the Knavery of others. I had therefore a tolerable Character to begin the World with, I valued it properly, and determin'd to preserve it. . . .

[(Establishment of printing business by Franklin and Meredith in 1728.)]

I should have mention'd before, that in the Autumn of the preceeding Year I had formed most of my ingenious Acquaintance into a Club of mutual Improvement, which we called the Junto. We met on Friday Evenings. The Rules I drew up required that every Member in his Turn should produce one or more Queries on any Point of Morals, Politics or Natural Philosophy, to be discussed by the Company, and once in three Months produce and read an Essay of his own Writing on any Subject he pleased. Our Debates were to be under the Direction of a President and to be conducted in the sincere Spirit of Enquiry after Truth, without Fondness for Dispute, or Desire of Victory; and to prevent Warmth all Expressions of Positiveness in Opinions or direct Contradiction, were after some time made contraband and prohibited under small pecuniary Penalties.—The first Members were Joseph Breintnal,<sup>20</sup> a Copyer of Deeds for the Scriveners; a good-natur'd friendly middle-ag'd Man, a great Lover of Poetry, reading all he could meet with, and writing some that was tolerable; very ingenious in many little Nicknackeries, and of

<sup>20</sup> Collaborator with Franklin in the *Busy-Body* essays published in Bradford's *American Weekly Mercury* in 1729.

sensible Conversation. Thomas Godfrey,<sup>21</sup> a self-taught Mathematician, great in his Way, and afterwards Inventor of what is now call'd Hadley's Quadrant. But he knew little out of his way, and was not a pleasing Companion, as like most Great Mathematicians I have met with, he expected universal Precision in every thing said, or was forever denying or distinguishing upon Trifles, to the Disturbance of all Conversation. He soon left us. Nicholas Scull, a Surveyor, afterwards Surveyor-General, who lov'd Books, 10 and sometimes made a few Verses. William Parsons,<sup>22</sup> bred a Shoemaker, but loving Reading, had acquir'd a considerable Share of Mathematics, which he first studied with a View to Astrology that he afterwards laugh'd at. He also became Surveyor General. William Maugridge, a Joiner, a most exquisite Mechanic and a solid sensible Man. Hugh Meredith, Stephen Potts, and George Webb, I have Characteris'd before. Robert Grace, a young Gentleman of some Fortune, generous, lively and witty, a Lover of 20 Punning and of his Friends. And William Coleman, then a Merchant's Clerk, about my Age, who had the coolest clearest Head, the best Heart, and the exactest Morals, of almost any Man I ever met with. He became afterwards a Merchant of great Note, and one of our Provincial Judges. Our Friendship continued without Interruption to his death upwards of 40 Years. And the club continu'd almost as long[,] and was the best School of Philosophy, and Politics that then existed in the Province; for our Queries 30 which were read the Week preceding their Discussion, put us on reading with Attention upon the several Subjects, that we might speak more to the purpose: and here too we acquired better Habits of Conversation, every thing being studied in our Rules which might prevent our disgusting each other. From hence the long Continuance of the Club, which I shall have frequent Occasion to speak farther of hereafter; But my giving this Account of it here, is to show something of the Interest I had, every one 40 of these exerting themselves in recommending Business to us. . . .

[[Details of Franklin's industrious and prudential manner of conducting his thriving business.]]

<sup>21</sup> Author of *The Prince of Parthia*, the first regular American tragedy. Godfrey learned Latin in order to read Newton's *Principia*.

<sup>22</sup> For a more detailed account of this junto of friends, see James Parton's *Life and Times of Benjamin Franklin*, I, 154-167.

George Webb, who had found a Friend that lent him wherewith to purchase his Time of Keimer, now came to offer himself as a Journeyman to us. We could not then employ him, but I foolishly let him know, as a Secret, that I soon intended to begin a Newspaper, and might then have Work for him. My Hopes of Success as I told him were founded on this, that the then only Newspaper [the *American Weekly Mercury*], printed by Bradford was a paltry thing, 10 wretchedly manag'd, no way entertaining; and yet was profitable to him.—I therefore thought a good Paper could scarcely fail of good Encouragement. I requested Webb not to mention it, but he told it to Keimer, who immediately, to be beforehand with me, published Proposals for Printing one himself, on which Webb was to be employ'd.—I resented this, and to counteract them, as I could not yet begin our Paper, I wrote several Pieces of Entertainment for Bradford's Paper, under the Title of the Busy Body 20 which Brientnal continu'd some Months. By this means the Attention of the Publick was fix'd on that Paper, and Keimer's Proposals which we burlesqu'd and ridicul'd, were disregarded. He began his Paper however, and after carrying it on three Quarters of a Year with at most only 90 Subscribers, he offer'd it to me for a Trifle, and I having been ready some time to go on with it, took it in hand directly, and it prov'd in a few years extremely profitable to me.

I perceive that I am apt to speak in the singular Number, though our Partnership still continu'd. The Reason may be, that in fact the whole Management of the Business lay upon me. Meredith was no Compositor, a poor Pressman, and seldom sober. My Friends lamented my Connection with him, but I was to make the best of it. . . .

[[Further details of business; purchase of Meredith's share, July 14, 1730.]]

About this Time there was a Cry among the People for more Paper-Money, only 15,000£ being extant in the Province and that soon to be sunk. The wealthy Inhabitants oppos'd any Addition, being against all Paper Currency, from an Apprehension that it would depreciate as it had done in New England to the Prejudice of all Creditors.—We had discuss'd this Point in our Junto, where I was on the Side of an Addition, being persuaded that the first small Sum struck in 1723 had done much good, by increasing the Trade[,] Employment, and Number of

Inhabitants in the Province, since I now saw all the old Houses inhabited, and many new ones building, where as I remember'd well, that when I first walk'd about the Streets of Philadelphia, eating my Roll, I saw most of the Houses in Walnut Street between Second and Front Streets with Bills on their Doors, to be let; and many likewise in Chestnut Street, and other Streets; which made me then think the Inhabitants of the City were deserting it, one after another.—Our Debates possess'd me so fully of the Subject, that I wrote and printed an anonymous Pamphlet on it, entituled, *The Nature and Necessity of a Paper Currency*. It was well receiv'd by the common People in general; but the Rich Men dislik'd it; for it increas'd and strengthen'd the Clamour for more Money; and they happening to have no Writers among them that were able to answer it, their Opposition slacken'd, and the Point was carried by a Majority in the House. My Friends there, who conceiv'd I had been of some Service, thought fit to reward me, by employing me in printing the Money, a very profitable Jobb, and a great Help to me.—This was another Advantage gain'd by my being able to write[.] The Utility of this Currency became by Time and Experience so evident, as never afterwards to be much disputed, so that it grew soon to 55000,£ and in 1739 to 80,000£ since which it arose during War to upwards of 350,000£. Trade, Building and Inhabitants all the while increasing. Tho' I now think there are Limits beyond which the Quantity may be hurtful.—

I soon after obtain'd, thro' my Friend Hamilton, the Printing of the New Castle Paper Money, another profitable Jobb, as I then thought it; small Things appearing great to those in small Circumstances. And these to me were really great Advantages, as they were great Encouragements. He procur'd me also the Printing of the Laws and Votes of that Government which continu'd in my Hands as long as I follow'd the Business.—

I now open'd a little Stationer's Shop. I had in it Blanks of all Sorts[,] the correctest that ever appear'd among us, being assisted in that by my Friend Brientnal; I had also Paper, Parchment, Chapmen's Books, etc. One Whitena[r]sh[,] a Compositor I had known in London, an excellent Workman[,] now came to me and work'd with me constantly and diligently, and I took an Apprentice[,] the Son of Aquila Rose. I began now gradually to pay off the Debt I

was under for the Printing-House. In order to secure my Credit and Character as a Tradesman, I took care not only to be in *Reality* Industrious and frugal, but to avoid all *Appearances* of the Contrary. I drest plainly; I was seen at no Places of idle Diversion; I never went out a fishing or Shooting; a Book, indeed, sometimes debauch'd me from my Work; but that was seldom, snug, and gave no Scandal: and to show that I was not above my Business, I sometimes brought home the Paper I purchas'd at the Stores, thro' the Streets on a Wheelbarrow. Thus being esteem'd an industrious thriving young Man, and paying duly for what I bought, the Merchants who imported Stationary solicited my Custom, others propos'd supplying me with Books, I went on swimmingly.—In the mean time Keimer's Credit and Business declining daily, he was at last forc'd to sell his Printing-house to satisfy his Creditors. He went to Barbadoes, there lived some Years, in very poor Circumstances. . . .

([Further details of business; also brief accounts of emotional entanglements, courtship, and marriage on September 1, 1730.]

About [th]is Time our Club meeting, not at a Tavern, but in a little Room of Mr. Grace's set apart for that Purpose; a Proposition was made by me that since our Books were often referr'd to in our Disquisitions upon the Queries, it might be convenient to us to have them all together where we met, that upon Occasion they might be consulted; and by thus clubbing our Books to a common Library, we should, while we lik'd to keep them together, have each of us the Advantage of using the Books of all the other Members, which would be nearly as beneficial as if each owned the whole. It was lik'd and agreed to, and we fill'd one End of the Room with such Books as we could best spare. The Number was not so great as we expected; and tho' they had been of great Use, yet some Inconveniencies occurring for want of due Care of them, the Collection after about a Year was separated, and each took his Books home again.

And now I set on foot my first Project of a public Nature, [th]at for a Subscription Library. [I] drew up the Proposals, got them put into Form by our great Scrivener Brockden, and by the help of my Friends in the Junto, procur'd Fifty Subscribers of 40/ each to begin with and 10/ a Year for 50 Years, the Term our Company was to continue. We after-

wards obtain'd a Charter, the Company being increas'd to 100. This was the Mother of all the N American Subscription Libraries now so numerous, is become a great thing itself, and continually increasing.—These Libraries have improv'd the general Conversation of the Americans, made the common Tradesmen and Farmers as intelligent as most Gentlemen from other Countries, and perhaps have contributed in some degree to the Stand so generally made throughout the Colonies in Defence of their Privileges.<sup>23</sup>

[(Lack of good book shops and libraries in the colonies; further account of the organization of subscription libraries.]

This library afforded me the means of improvement by constant study, for which I set apart an hour or two each day, and thus repair'd in some degree the loss of the learned education my father once intended for me. Reading was the only amusement I allow'd myself. I spent no time in taverns, games, or frolicks of any kind; and my industry in my business continu'd as indefatigable as it was necessary. I was indebted for my printing-house; I had a young family coming on to be educated, and I had to contend with for business two printers, who were established in the place before me. My circumstances, however, grew daily easier. My original habits of frugality continuing, and my father having, among his instructions to me when a boy, frequently repeated a proverb of Solomon, "Seest thou a man diligent in his calling, he shall stand before kings, he shall not stand before mean men," I from thence considered industry as a means of obtaining wealth and distinction, which encourag'd me, tho' I did not think that I should ever literally *stand before kings*, which, however, has since happened; for I have stood before *five*, and even had the honour of sitting down with one, the King of Denmark, to dinner.

We have an English proverb that says, "*He that would thrive, must ask his wife.*" It was lucky for me that I had one as much dispos'd to industry and frugality as myself. She assisted me chearfully in my

business, folding and stitching pamphlets, tending shop, purchasing old linen rags for the paper-makers, etc., etc. We kept no idle servants, our table was plain and simple, our furniture of the cheapest. For instance, my breakfast was a long time bread and milk (no tea), and I ate it out of a twopenny earthen porringer, with a pewter spoon. But mark how luxury will enter families, and make a progress, in spite of principle: being call'd one morning to breakfast, I found it in a China bowl, with a spoon of silver! They had been bought for me without my knowledge by my wife, and had cost her the enormous sum of three-and-twenty shillings, for which she had no other excuse or apology to make, but that she thought *her* husband deserv'd a silver spoon and China bowl as well as any of his neighbors. This was the first appearance of plate and China in our house, which afterward, in a course of years, as our wealth increas'd, augmented gradually to several hundred pounds in value.

I had been religiously educated as a Presbyterian; and tho' some of the dogmas of that persuasion, such as *the eternal decrees of God, election, reprobation, etc.*, appeared to me unintelligible, others doubtful, and I early absented myself from the public assemblies of the sect, Sunday being my studying day, I never was without some religious principles. I never doubted, for instance, the existence of the Deity; that he made the world, and govern'd it by his Providence; that the most acceptable service of God was the doing good to man; that our souls are immortal; and that all crime will be punished, and virtue rewarded, either here or hereafter. These I esteem'd the essentials of every religion; and, being to be found in all the religions we had in our country, I respected them all, tho' with different degrees of respect, as I found them more or less mix'd with other articles, which, without any tendency to inspire, promote, or confirm morality, serv'd principally to divide us, and make us unfriendly to one another. This respect to all, with an opinion that the worst had some good effects, induc'd me to avoid all discourse that might tend to lessen the good opinion another might have of his own religion; and as our province increas'd in people, and new places of worship were continually wanted, and generally erected by voluntary contribution, my mite for such purpose, whatever might be the sect, was never refused.

Tho' I seldom attended any public worship, I had

<sup>23</sup> Here ends the first portion of the *Autobiography*, dated Twyford, 1771, when the "affairs of the Revolution occasioned the interruption." The text up to this point follows the manuscript deposited in the Henry E. Huntington Library. What follows is taken from Franklin's *Writings*, as edited by A. H. Smyth, following the transcription from the manuscripts as made by John Bigelow. The next section of the *Autobiography*, carrying the account beyond 1730, was written at Passy, near Paris, in 1784.

still an opinion of its propriety, and of its utility when rightly conducted, and I regularly paid my annual subscription for the support of the only Presbyterian minister or meeting we had in Philadelphia. He us'd to visit me sometimes as a friend, and admonish me to attend his administrations, and I was now and then prevail'd on to do so, once for five Sundays successively. Had he been in my opinion a good preacher, perhaps I might have continued, notwithstanding the occasion I had for the Sunday's 10 leisure in my course of study; but his discourses were chiefly either polemic arguments, or explications of the peculiar doctrines of our sect, and were all to me very dry, uninteresting, and unedifying, since not a single moral principle was inculcated or enforc'd, their aim seeming to be rather to make us Presbyterians than good citizens.

At length he took for his text that verse of the fourth chapter of Philippians, "*Finally, brethren, whatsoever things are true, honest, just, pure, lovely, 20 or of good report, if there be any virtue, or any praise, think on these things.*" And I imagin'd, in a sermon on such a text, we could not miss of having some morality. But he confin'd himself to five points only, as meant by the apostle, viz: 1. Keeping holy the Sabbath day. 2. Being diligent in reading the holy Scriptures. 3. Attending duly the publick worship. 4. Partaking of the Sacrament. 5. Paying a due respect to God's ministers. These might be all good things; but, as they were not the kind of good things 30 that I expected from that text, I despaired of ever meeting with them from any other, was disgusted, and attended his preaching no more. I had some years before compos'd a little Liturgy, or form of prayer, for my own private use (viz., in 1728), entitled *Articles of Belief and Acts of Religion*. I return'd to the use of this, and went no more to the public assemblies. My conduct might be blameable, but I leave it, without attempting further to excuse it; my present purpose being to relate facts, and not 40 to make apologies for them.

It was about this time I conceiv'd the bold and arduous project of arriving at moral perfection. I wish'd to live without committing any fault at any time; I would conquer all that either natural inclination, custom, or company might lead me into. As I knew, or thought I knew, what was right and wrong, I did not see why I might not always do the one and avoid the other. But I soon found I had undertaken

a task of more difficulty than I had imagined. While my care was employ'd in guarding against one fault, I was often surprised by another; habit took the advantage of inattention; inclination was sometimes too strong for reason. I concluded, at length, that the mere speculative conviction that it was our interest to be completely virtuous, was not sufficient to prevent our slipping; and that the contrary habits must be broken, and good ones acquired and established, before we can have any dependence on a steady, uniform rectitude of conduct. For this purpose I therefore contrived the following method.

In the various enumerations of the moral virtues I had met with in my reading, I found the catalogue more or less numerous, as different writers included more or fewer ideas under the same name. Temperance, for example, was by some confined to eating and drinking, while by others it was extended to mean the moderating every other pleasure, appetite, inclination, or passion, bodily or mental, even to our avarice and ambition. I propos'd to myself, for the sake of clearness, to use rather more names, with fewer ideas annex'd to each, than a few names with more ideas; and I included under thirteen names of virtues all that at that time occur'd to me as necessary or desirable, and annexed to each a short precept, which fully express'd the extent I gave to its meaning.

These names of virtues, with their precepts, were:

#### 1. TEMPERANCE

Eat not to dullness; drink not to elevation.

#### 2. SILENCE

Speak not but what may benefit others or yourself; avoid trifling conversation.

#### 3. ORDER

Let all your things have their places; let each part of your business have its time.

#### 4. RESOLUTION

Resolve to perform what you ought; perform without fail what you resolve.

#### 5. FRUGALITY

Make no expense but to do good to others or yourself; *i. e.*, waste nothing.

#### 6. INDUSTRY

Lose no time; be always employ'd in something useful; cut off all unnecessary actions.

7. SINCERITY

Use no hurtful deceit; think innocently and justly, and, if you speak, speak accordingly.

8. JUSTICE

Wrong none by doing injuries, or omitting the benefits that are your duty.

9. MODERATION

Avoid extremes; forbear resenting injuries so much as you think they deserve.

10. CLEANLINESS

Tolerate no uncleanness in body, cloaths, or habitation.

11. TRANQUILLITY

Be not disturbed at trifles, or at accidents common or unavoidable.

12. CHASTITY

Rarely use venery but for health or offspring, never to dulness, weakness, or the injury of your own or another's peace or reputation.

13. HUMILITY

Imitate Jesus and Socrates.

My intention being to acquire the *habitude* of all these virtues, I judg'd it would be well not to distract my attention by attempting the whole at once, but to fix it on one of them at a time; and, when I should be master of that, then to proceed to another, and so on, till I should have gone thro' the thirteen; and, as the previous acquisition of some might facilitate the acquisition of certain others, I arrang'd them with that view, as they stand above. Temperance first, as it tends to procure that coolness and clearness of head, which is so necessary where constant vigilance was to be kept up, and guard maintained against the unremitting attraction of ancient habits, and the force of perpetual temptations. This being acquir'd and establish'd, Silence would be more easy; and my desire being to gain knowledge at the same time that I improv'd in virtue, and considering that in conversation it was obtain'd rather by the use of the ears than of the tongue, and therefore wishing to break a habit I was getting into of prattling, punning, and joking, which only made me acceptable to

trifling company, I gave *Silence* the second place. This and the next, *Order*, I expected would allow me more time for attending to my project and my studies. *Resolution*, once become habitual, would keep me firm in my endcavours to obtain all the subsequent virtues; *Frugality* and Industry freeing me from my remaining debt, and producing affluence and independence, would make more easy the practice of Sincerity and Justice, etc., etc. Conceiving then, that, agreeably to the advice of Pythagoras in his *Golden Verses*, daily examination would be necessary, I contrived the following method for conducting that examination.

I made a little book,<sup>24</sup> in which I allotted a page for each of the virtues. I rul'd each page with red ink, so as to have seven columns, one for each day of the week, marking each column with a letter for the day. I cross'd these columns with thirteen red lines, marking the beginning of each line with the first letter of one of the virtues, on which line, and in its proper column, I might mark, by a little black spot, every fault I found upon examination to have been committed respecting that virtue upon that day.

<sup>24</sup> Dated July 1, 1733.

I determined to give a week's strict attention to each of the virtues successively. Thus, in the first week, my great guard was to avoid every the least offence against *Temperance*, leaving the other virtues to their ordinary chance, only marking every evening the faults of the day. Thus, if in the first week I could keep my first line, marked T, clear of spots, I suppos'd the habit of that virtue so much strengthen'd, and its opposite weaken'd, that I might venture extending my attention to include the next, and for the following week keep both lines clear of spots. Proceeding thus to the last, I could go thro' a course compleat in thirteen weeks, and four courses in a year. And like him who, having a garden to weed, does not attempt to eradicate all the bad herbs at once, which would exceed his reach and his strength, but works on one of the beds at a time, and, having accomplish'd the first, proceeds to a second, so I should have, I hoped, the encouraging pleasure of seeing on my pages the progress I made in virtue, by clearing successively my lines of their spots, till in the end, by a number of courses, I should be happy in viewing a clean book, after a thirteen weeks' daily examination.

This my little book had for its motto these lines from Addison's *Cato*:

Here will I hold. If there's a power above us  
(And that there is, all nature cries aloud  
Thro' all her works), He must delight in virtue;  
And that which he delights in must be happy.

30

Another from Cicero,

O vitæ Philosophia dux! O virtutum indagatrix expul-  
trixque vitiorum! Unus dies, bene et ex præceptis tuis actus,  
peccanti immortalitati est anteponeendus.<sup>25</sup>

Another from the Proverbs of Solomon, speaking of wisdom or virtue:

Length of days is in her right hand, and in her left hand riches and honour. Her ways are ways of pleasantness, and all her paths are peace.—iii. 16, 17.

And conceiving God to be the fountain of wisdom, I thought it right and necessary to solicit his assistance for obtaining it; to this end I formed the following little prayer, which was prefix'd to my tables of examination, for daily use.

<sup>25</sup> "O, Philosophy, guide of life! O, investigator and expeller of crimes! A single day, lived well and in accordance with your precepts, is to be preferred to sinful immortality."

*O powerful Goodness! bountiful Father! merciful Guide! Increase in me that wisdom which discovers my truest interest. Strengthen my resolutions to perform what that wisdom dictates. Accept my kind offices to thy other children as the only return in my power for thy continual favours to me.*

I used also sometimes a little prayer which I took from Thomson's *Poems*, viz.:

Father of light and life, thou Good Supreme!  
O teach me what is good; teach me Thyself!  
Save me from folly, vanity, and vice,  
From every low pursuit; and fill my soul  
With knowledge, conscious peace, and virtue pure;  
Sacred, substantial, never-fading bliss!

The precept of *Order* requiring that *every part of my business should have its allotted time*, one page in my little book contain'd the following scheme of employment for the twenty-four hours of a natural day.

THE MORNING Question. What good shall I do this day?	{	5	Rise, wash, and address
		6	Powerful Goodness! Contrive day's business, and take the resolution of the day; prosecute the present study, and breakfast.
		7	
		8	
		9	Work.
NOON.	{	10	
		11	
		12	Read, or overlook my ac-
		1	counts, and dine.
		2	
EVENING. Question. What good have I done to-day?	{	3	Work.
		4	
		5	
		6	Put things in their places.
		7	Supper. Music or diversion,
NIGHT.	{	8	or conversation. Examination of the day.
		9	
		10	
		11	
		12	
	{	1	Sleep.
		2	
		3	
		4	

I enter'd upon the execution of this plan for self-examination, and continu'd it with occasional intermissions for some time. I was surpris'd to find myself so much fuller of faults than I had imagined; but I had the satisfaction of seeing them diminish. To avoid

the trouble of renewing now and then my little book, which, by scraping out the marks on the paper of old faults to make room for new ones in a new course, became full of holes, I transferr'd my tables and precepts to the ivory leaves of a memorandum book, on which the lines were drawn with red ink, that made a durable stain, and on those lines I mark'd my faults with a black-lead pencil, which marks I could easily wipe out with a wet sponge. After a while I went thro' one course only in a year, and afterward only one in several years, till at length I omitted them entirely, being employ'd in voyages and business abroad, with a multiplicity of affairs that interfered; but I always carried my little book with me.

My scheme of ORDER gave me the most trouble; and I found that, tho' it might be practicable where a man's business was such as to leave him the disposition of his time, that of a journeyman printer, for instance, it was not possible to be exactly observed by a master, who must mix with the world, and often receive people of business at their own hours. *Order*, too, with regard to places for things, papers, etc., I found extremely difficult to acquire. I had not been early accustomed to it, and, having an exceeding good memory, I was not so sensible of the inconvenience attending want of method. This article, therefore, cost me so much painful attention, and my faults in it vexed me so much, and I made so little progress in amendment, and had such frequent relapses, that I was almost ready to give up the attempt, and content myself with a faulty character in that respect, like the man who, in buying an ax of a smith, my neighbour, desired to have the whole of its surface as bright as the edge. The smith consented to grind it bright for him if he would turn the wheel; he turn'd, while the smith press'd the broad face of the ax hard and heavily on the stone, which made the turning of it very fatiguing. The man came every now and then from the wheel to see how the work went on, and at length would take his ax as it was, without farther grinding. "No," said the smith, "turn on, turn on; we shall have it bright by-and-by; as yet, it is only speckled." "Yes," says the man, "*but I think I like a speckled ax best.*" And I believe this may have been the case with many, who, having, for want of some such means as I employ'd, found the difficulty of obtaining good and breaking bad habits in other points of vice and virtue,

have given up the struggle, and concluded that "*a speckled ax was best*"; for something, that pretended to be reason, was every now and then suggesting to me that such extream nicety as I exacted of myself might be a kind of foppery in morals, which, if it were known, would make me ridiculous; that a perfect character might be attended with the inconvenience of being envied and hated; and that a benevolent man should allow a few faults in himself, to keep his friends in countenance.

In truth, I found myself incorrigible with respect to Order; and now I am grown old, and my memory bad, I feel very sensibly the want of it. But, on the whole, tho' I never arrived at the perfection I had been so ambitious of obtaining, but fell far short of it, yet I was, by the endeavour, a better and a happier man than I otherwise should have been if I had not attempted it; as those who aim at perfect writing by imitating the engraved copies, tho' they never reach the wish'd-for excellence of those copies, their hand is mended by the endeavour, and is tolerable while it continues fair and legible.

It may be well my posterity should be informed that to this little artifice, with the blessing of God, their ancestor ow'd the constant felicity of his life, down to his 79th year in which this is written. What reverses may attend the remainder is in the hand of Providence; but, if they arrive, the reflection on past happiness enjoy'd ought to help his bearing them with more resignation. To Temperance he ascribes his long-continued health, and what is still left to him of a good constitution; to Industry and Frugality, the early casiness of his circumstances and acquisition of his fortune, with all that knowledge that enabled him to be a useful citizen, and obtained for him some degree of reputation among the learned; to Sincerity and Justice, the confidence of his country, and the honorable employs it conferred upon him; and to the joint influence of the whole mass of the virtues, even in the imperfect state he was able to acquire them, all that evenness of temper, and that cheerfulness in conversation, which makes his company still sought for, and agreeable even to his younger acquaintance. I hope, therefore, that some of my descendants may follow the example and reap the benefit.

It will be remark'd that, tho' my scheme was not wholly without religion, there was in it no mark of any of the distinguishing tenets of any particular

sect. I had purposely avoided them; for, being fully persuaded of the utility and excellency of my method, and that it might be servicable to people in all religions, and intending some time or other to publish it, I would not have any thing in it that should prejudice any one, of any sect, against it. I purposed writing a little comment on each virtue, in which I would have shown the advantages of possessing it, and the mischiefs attending its opposite vice; and I should have called my book *THE ART OF VIRTUE*,\* 10 because it would have shown the means and manner of obtaining virtue, which would have distinguished it from the mere exhortation to be good, that does not instruct and indicate the means, but is like the apostle's man of verbal charity, who only, without showing to the naked and hungry how or where they might get clothes or victuals, exhorted them to be fed and clothed.—James ii. 15, 16.

But it so happened that my intention of writing and publishing this comment was never fulfilled. I 20 did, indeed, from time to time, put down short hints of the sentiments, reasonings, etc., to be made use of in it, some of which I have still by me; but the necessary close attention to private business in the earlier part of my life, and public business since, have occasioned my postponing it; for, it being connected in my mind with a *great and extensive project*, that required the whole man to execute, and which an unforeseen succession of employs prevented my attending to, it has hitherto remain'd unfinish'd. 30

In this piece it was my design to explain and enforce this doctrine, that vicious actions are not hurtful because they are forbidden, but forbidden because they are hurtful, the nature of man alone considered; that it was, therefore, every one's interest to be virtuous who wish'd to be happy even in this world; and I should, from this circumstance (there being always in the world a number of rich merchants, nobility, states, and princes, who have need of honest instruments for the management of their affairs, and 40 such being so rare), have endeavoured to convince young persons that no qualities were so likely to make a poor man's fortune as those of probity and integrity.

My list of virtues contain'd at first but twelve; but a Quaker friend having kindly informed me that I was generally thought proud; that my pride show'd itself frequently in conversation; that I was not con-

tent with being in the right when discussing any point, but was overbearing, and rather insolent, of which he convinc'd me by mentioning several instances; I determin'd endeavouring to cure myself, if I could, of this vice or folly among the rest, and I added *Humility* to my list, giving an extensive meaning to the word.

I cannot boast of much success in acquiring the *reality* of this virtue, but I had a good deal with regard to the *appearance* of it. I made it a rule to forbear all direct contradiction to the sentiments of others, and all positive assertion of my own. I even forbid myself, agreeably to the old laws of our Junto, the use of every word or expression in the language that import'd a fix'd opinion, such as *certainly*, *undoubtedly*, etc. and I adopted, instead of them, *I conceive*, *I apprehend*, or *I imagine* a thing to be so or so; or it *so appears to me at present*. When another asserted something that I thought an error, I deny'd myself the pleasure of contradicting him abruptly, and of showing immediately some absurdity in his proposition; and in answering I began by observing that in certain cases or circumstances his opinion would be right, but in the present case there *appear'd* or *seem'd* to me some difference, etc. I soon found the advantage of this change in my manner; the conversations I engag'd in went on more pleasantly. The modest way in which I propos'd my opinions procur'd them a readier reception and less contradiction; I had less mortification when I was found to be in the wrong, and I more easily prevail'd with others to give up their mistakes and join with me when I happen'd to be in the right.

And this mode, which I at first put on with some violence to natural inclination, became at length so easy, and so habitual to me, that perhaps for these fifty years past no one has ever heard a dogmatical expression escape me. And to this habit (after my character of integrity) I think it principally owing that I had early so much weight with my fellow-citizens when I proposed new institutions, or alterations in the old, and so much influence in public councils when I became a member; for I was but a bad speaker, never eloquent, subject to much hesitation in my choice of words, hardly correct in language, and yet I generally carried my points.

In reality, there is, perhaps, no one of our natural passions so hard to subdue as *pride*. Disguise it, struggle with it, beat it down, stifle it, mortify it

\* Nothing so likely to make a man's fortune as virtue.

as much as one pleases, it is still alive, and will every now and then peep out and show itself; you will see it, perhaps, often in this history; for, even if I could conceive that I had compleatly overcome it, I should probably be proud of my humility.<sup>26</sup>

Having mentioned *a great and extensive project* which I had conceiv'd, it seems proper that some account should be here given of that project and its object. Its first rise in my mind appears in the following little paper, accidentally preserv'd, viz.:

*Observations on my reading history, in Library,*  
May 19th, 1731.

That the great affairs of the world, the wars, revolutions, etc., are carried on and effected by parties.

That the view of these parties is their present general interest, or what they take to be such.

That the different views of these different parties occasion all confusion.

That while a party is carrying on a general design, each man has his particular private interest in view.

That as soon as a party has gain'd its general point, each member becomes intent upon his particular interest; which, thwarting others, breaks that party into divisions, and occasions more confusion.

That few in public affairs act from a meer view of the good of their country, whatever they may pretend; and, tho' their actings bring real good to their country, yet men primarily considered that their own and their country's interest was united, and did not act from a principle of benevolence.

That fewer still, in public affairs, act with a view to the good of mankind.

There seems to me at present to be great occasion for raising a United Party for Virtue, by forming the virtuous and good men of all nations into a regular body, to be govern'd by suitable good and wise rules, which good and wise men may probably be more unanimous in their obedience to, than common people are to common laws.

I at present think that whoever attempts this aright, and is well qualified, can not fail of pleasing God, and of meeting with success.

B. F.

Revolving this project in my mind, as to be undertaken hereafter, when my circumstances should afford me the necessary leisure, I put down from time to time, on pieces of paper, such thoughts as occur'd to me respecting it. Most of these are lost; but I find

one purporting to be the substance of an intended creed, containing, as I thought, the essentials of every known religion, and being free of every thing that might shock the professors of any religion. It is express'd in these words, viz.:

That there is one God, who made all things.

That he governs the world by his providence.

That he ought to be worshiped by adoration, prayer, and thanksgiving.

10 But that the most acceptable service of God is doing good to man.

That the soul is immortal.

And that God will certainly reward virtue and punish vice, either here or hereafter.

My ideas at that time were, that the sect should be begun and spread at first among young and single men only; that each person to be initiated should not only declare his assent to such creed, but should have exercised himself with the thirteen weeks' examination and practice of the virtues, as in the before-mention'd model; that the existence of such a society should be kept a secret, till it was become considerable, to prevent solicitations for the admission of improper persons, but that the members should each of them search among his acquaintance for ingenuous, well-disposed youths, to whom, with prudent caution, the scheme should be gradually communicated; that the members should engage to afford their advice, assistance, and support to each other in promoting one another's interests, business, and advancement in life; that, for distinction, we should be call'd *The Society of the Free and Easy*: free, as being, by the general practice and habit of the virtues, 20 free from the dominion of vice; and particularly by the practice of industry and frugality, free from debt, which exposes a man to confinement, and a species of slavery to his creditors.

This is as much as I can now recollect of the project, except that I communicated it in part to two young men, who adopted it with some enthusiasm; but my then narrow circumstances, and the necessity I was under of sticking close to my business, occasion'd my postponing the further prosecution of it 30 at that time; and my multifarious occupations, public and private, induc'd me to continue postponing, so that it has been omitted till I have no longer strength or activity left sufficient for such an enterprise; tho' I am still of opinion that it was a practicable scheme, and might have been very useful, by 40

<sup>26</sup> At this point Franklin wrote the following memoranda in the margin: "Thus far written at Passy, 1784." "I am now about to write at home, August, 1788, but cannot have the help expected from my papers, many of them being lost in the war. I have, however, found the following."

The final section, covering the years 1757-1759, was added in 1789.

forming a great number of good citizens; and I was not discourag'd by the seeming magnitude of the undertaking, as I have always thought that one man of tolerable abilities may work great changes, and accomplish great affairs among mankind, if he first forms a good plan, and, cutting off all amusements or other employments that would divert his attention, makes the execution of that same plan his sole study and business.

In 1732 I first publish'd my Almanack, under the 10 name of *Richard Saunders*; it was continu'd by me about twenty-five years, commonly call'd *Poor Richard's Almanack*. I endeavour'd to make it both entertaining and useful, and it accordingly came to be in such demand, that I reap'd considerable profit from it, vending annually near ten thousand. And observing that it was generally read, scarce any neighborhood in the province being without it, I consider'd it as a proper vehicle for conveying instruction among the common people, who bought scarcely any other 20 books; I therefore filled all the little spaces that occur'd between the remarkable days in the calendar with proverbial sentences, chiefly such as inculcated industry and frugality, as the means of procuring wealth, and thereby securing virtue; it being more difficult for a man in want, to act always honestly, as, to use here one of those proverbs, *it is hard for an empty sack to stand upright*.

These proverbs, which contained the wisdom of many ages and nations, I assembled and form'd into 30 a connected discourse prefix'd to the Almanack of 1757, as the harangue of a wise old man to the people attending an auction. The bringing all these scatter'd counsels thus into a focus enabled them to make greater impression. The piece, being universally approved, was copied in all the newspapers of the Continent; reprinted in Britain on a broad side, to be stuck up in houses; two translations were made of it in French, and great numbers bought by the clergy and gentry, to distribute gratis among their poor 40 parishioners and tenants. In Pennsylvania, as it discouraged useless expense in foreign superfluities, some thought it had its share of influence in producing that growing plenty of money which was observable for several years after its publication.

I considered my newspaper, also, as another means of communicating instruction, and in that view frequently reprinted in it extracts from the *Spectator*, and other moral writers; and sometimes publish'd

little pieces of my own, which had been first compos'd for reading in our Junto. Of these are a Socratic dialogue, tending to prove that, whatever might be his parts and abilities, a vicious man could not properly be called a man of sense; and a discourse on self-denial, showing that virtue was not secure till its practice became a habitude, and was free from the opposition of contrary inclinations. These may be found in the papers about the beginning of 1735.

In the conduct of my newspaper, I carefully excluded all libelling and personal abuse, which is of late years become so disgraceful to our country. Whenever I was solicited to insert any thing of that kind, and the writers pleaded, as they generally did, the liberty of the press, and that a newspaper was like a stage-coach, in which any one who would pay had a right to a place, my answer was, that I would print the piece separately if desired, and the author might have as many copies as he pleased to distribute himself, but that I would not take upon me to spread his detraction; and that, having contracted with my subscribers to furnish them with what might be either useful or entertaining, I could not fill their papers with private altercation, in which they had no concern, without doing them manifest injustice. Now, many of our printers make no scruple of gratifying the malice of individuals by false accusations of the fairest characters among ourselves, augmenting animosity even to the producing of duels; and are, moreover, so indiscreet as to print scurrilous reflections on the government of neighboring states, and even on the conduct of our best national allies, which may be attended with the most pernicious consequences. These things I mention as a caution to young printers, and that they may be encouraged not to pollute their presses and disgrace their profession by such infamous practices, but refuse steadily, as they may see by my example that such a course of conduct will not, on the whole, be injurious to their interests. . . .

¶[*Expansion of business interests.*]

I had begun in 1733 to study languages; I soon made myself so much a master of the French as to be able to read the books with ease. I then undertook the Italian. An acquaintance, who was also learning it, us'd often to tempt me to play chess with him. Finding this took up too much of the time I had to spare for study, I at length refus'd to play any more,

unless on this condition, that the victor in every game should have a right to impose a task, either in parts of the grammar to be got by heart, or in translations, etc., which tasks the vanquish'd was to perform upon honour, before our next meeting. As we play'd pretty equally, we thus beat one another into that language. I afterwards with a little painstaking, acquir'd as much of the Spanish as to read their books also.

I have already mention'd that I had only one year's instruction in a Latin school, and that when very young, after which I neglected that language entirely. But, when I had attained an acquaintance with the French, Italian, and Spanish, I was surpriz'd to find, on looking over a Latin Testament, that I understood so much more of that language than I had imagined, which encouraged me to apply myself again to the study of it, and I met with more success, as those preceding languages had greatly smooth'd my way.

From these circumstances, I have thought that there is some inconsistency in our common mode of teaching languages. We are told that it is proper to begin first with the Latin, and, having acquir'd that, it will be more easy to attain those modern languages which are deriv'd from it; and yet we do not begin with the Greek, in order more easily to acquire the Latin. It is true that, if you can clamber and get to the top of a staircase without using the steps, you will more easily gain them in descending; but certainly, if you begin with the lowest you will with more ease ascend to the top; and I would therefore offer it to the consideration of those who superintend the education of our youth, whether, since many of those who begin with the Latin quit the same after spending some years without having made any great proficiency, and what they have learnt becomes almost useless, so that their time has been lost, it would not have been better to have begun with the French, proceeding to the Italian, etc.; for, tho', after spending the same time, they should quit the study of languages and never arrive at the Latin, they would, however, have acquired another tongue or two, that, being in modern use, might be serviceable to them in common life. . . .

[*Another visit to Boston; death of a son by smallpox in 1736.*]

Our club, the Junto, was found so useful, and afforded such satisfaction to the members, that sev-

eral were desirous of introducing their friends, which could not well be done without exceeding what we had settled as a convenient number, viz., twelve. We had from the beginning made it a rule to keep our institution a secret, which was pretty well observ'd; the intention was to avoid applications of improper persons for admittance, some of whom, perhaps, we might find it difficult to refuse. I was one of those who were against any addition to our number, but, instead of it, made in writing a proposal, that every member separately should endeavour to form a subordinate club, with the same rules respecting queries, etc., and without informing them of the connection with the Junto. The advantages proposed were, the improvement of so many more young citizens by the use of our institutions; our better acquaintance with the general sentiments of the inhabitants on any occasion, as the Junto member might propose what queries we should desire, and was to report to the Junto what pass'd in his separate club; the promotion of our particular interests in business by more extensive recommendation, and the increase of our influence in public affairs, and our power of doing good by spreading thro' the several clubs the sentiments of the Junto.

The project was approv'd, and every member undertook to form his club, but they did not all succeed. Five or six only were compleated, which were called by different names, as the Vine, the Union, the Band, etc. They were useful to themselves, and afforded us a good deal of amusement, information, and instruction, besides answering, in some considerable degree, our views of influencing the public opinion on particular occasions, of which I shall give some instances in course of time as they happened. . . .

[*Chosen Clerk of the General Assembly of Pennsylvania in 1736; business further expanded; appointed postmaster in Philadelphia in 1737.*]

I began now to turn my thoughts a little to public affairs, beginning, however, with small matters. The city watch was one of the first things that I conceiv'd to want regulation. It was managed by the constables of the respective wards in turn; the constable warned a number of housekeepers to attend him for the night. Those who chose never to attend, paid him six shillings a year to be excus'd, which was suppos'd to be for hiring substitutes, but was, in reality, much

more than was necessary for that purpose, and made the constableness a place of profit; and the constable, for a little drink, often got such ragamuffins about him as a watch, that respectable housekeepers did not choose to mix with. Walking the rounds, too, was often neglected, and most of the nights spent in tippling. I thereupon wrote a paper to be read in Junto, representing these irregularities, but insisting more particularly on the inequality of this six-shilling tax of the constables, respecting the circumstances of those who paid it, since a poor widow housekeeper, all whose property to be guarded by the watch did not perhaps exceed the value of fifty pounds, paid as much as the wealthiest merchant, who had thousands of pounds' worth of goods in his stores.

On the whole, I proposed as a more effectual watch, the hiring of proper men to serve constantly in that business; and as a more equitable way of supporting the charge, the levying a tax that should be proportion'd to the property. This idea, being approv'd by the Junto, was communicated to the other clubs, but as arising in each of them; and though the plan was not immediately carried into execution, yet, by preparing the minds of people for the change, it paved the way for the law obtained a few years after, when the members of our clubs were grown into more influence.

About this time I wrote a paper (first to be read in Junto, but it was afterward publish'd) on the different accidents and carelessnesses by which houses were set on fire, with cautions against them, and means proposed of avoiding them. This was much spoken of as a useful piece, and gave rise to a project, which soon followed it, of forming a company for the more ready extinguishing of fires, and mutual assistance in removing and securing of goods when in danger. Associates in this scheme were presently found, amounting to thirty. Our articles of agreement oblig'd every member to keep always in good order, and fit for use, a certain number of leather buckets, with strong bags and baskets (for packing and transporting of goods), which were to be brought to every fire; and we agreed to meet once a month and spend a social evening together, in discoursing and communicating such ideas as occurred to us upon the subject of fires, as might be useful in our conduct on such occasions.

The utility of this institution soon appeared, and many more desiring to be admitted than we thought

convenient for one company, they were advised to form another, which was accordingly done; and this went on, one new company being formed after another, till they became so numerous as to include most of the inhabitants who were men of property; and now, at the time of my writing this, tho' upward of fifty years since its establishment, that which I first formed, called the Union Fire Company, still subsists and flourishes, tho' the first members are all deceas'd but myself and one, who is older by a year than I am. The small fines that have been paid by members for absence at the monthly meetings have been apply'd to the purchase of fire-engines, ladders, fire-hooks, and other useful implements for each company, so that I question whether there is a city in the world better provided with the means of putting a stop to beginning conflagrations; and, in fact, since these institutions, the city has never lost by fire more than one or two houses at a time, and the flames have often been extinguished before the house in which they began has been half consumed.

In 1739 arrived among us from Ireland the Reverend Mr. Whitefield, who had made himself remarkable there as an itinerant preacher. He was at first permitted to preach in some of our churches; but the clergy, taking a dislike to him, soon refus'd him their pulpits, and he was oblig'd to preach in the fields. The multitudes of all sects and denominations that attended his sermons were enormous, and it was matter of speculation to me, who was one of the number, to observe the extraordinary influence of his oratory on his hearers, and how much they admir'd and respected him, notwithstanding his common abuse of them, by assuring them they were naturally *half beasts and half devils*. It was wonderful to see the change soon made in the manners of our inhabitants. From being thoughtless or indifferent about religion, it seem'd as if all the world were growing religious, so that one could not walk thro' the town in an evening without hearing psalms sung in different families of every street. . . .

¶[Account of Whitefield's religious and charitable activities.]

I happened soon after to attend one of his sermons, in the course of which I perceived he intended to finish with a collection, and I silently resolved he should get nothing from me. I had in my pocket a handful of copper money, three or four silver dollars,

and five pistoles in gold. As he proceeded I began to soften, and concluded to give the coppers. Another stroke of his oratory made me asham'd of that, and determin'd me to give the silver; and he finish'd so admirably, that I empty'd my pocket wholly into the collector's dish, gold and all. At this sermon there was also one of our club, who, being of my sentiments respecting the building in Georgia and, suspecting a collection might be intended, had, by precaution, emptied his pockets before he came from home. Towards the conclusion of the discourse, however, he felt a strong desire to give, and apply'd to a neighbour, who stood near him, to borrow some money for the purpose. The application was unfortunately [made] to perhaps the only man in the company who had the firmness not to be affected by the preacher. His answer was, "*At any other time, Friend Hopkinson, I would lend to thee freely; but not now, for thee seems to be out of thy right senses.*" . . .

¶[Further account of Whitefield.]

He [Whitefield] us'd, indeed, sometimes to pray for my conversion, but never had the satisfaction of believing that his prayers were heard. Ours was a mere civil friendship, sincere on both sides, and lasted to his death.

The following instance will show something of the terms on which we stood. Upon one of his arrivals from England at Boston, he wrote to me that he should come soon to Philadelphia, but knew not where he could lodge when there, as he understood his old friend and host, Mr. Benezet was removed to Germantown. My answer was, "You know my house; if you can make shift with its scanty accommodations, you will be most heartily welcome." He reply'd, that if I made that kind offer for Christ's sake, I should not miss of a reward. And I returned, "*Don't let me be mistaken; it was not for Christ's sake, but for your sake.*" One of our common acquaintance jocosely remark'd, that, knowing it to be the custom of the saints, when they received any favour, to shift the burden of the obligation from off their own shoulders, and place it in heaven, I had contriv'd to fix it on earth.

The last time I saw Mr. Whitefield was in London, when he consulted me about his Orphan House concern, and his purpose of appropriating it to the establishment of a college.

He had a loud and clear voice, and articulated his

words and sentences so perfectly, that he might be heard and understood at a great distance, especially as his auditorics, however numerous, observ'd the most exact silence. He preach'd one evening from the top of the Court-house steps, which are in the middle of Market-street, and on the west side of Second-street, which crosses it at right angles. Both streets were fill'd with his hearers to a considerable distance. Being among the hindmost in Market-street, I had the curiosity to learn how far he could be heard, by retiring backwards down the street towards the river; and I found his voice distinct till I came near Front-street, when some noise in that street obscur'd it. Imagining then a semicircle, of which my distance should be the radius, and that it were fill'd with auditors, to each of whom I allow'd two square feet, I computed that he might well be heard by more than thirty thousand. This reconcil'd me to the newspaper accounts of his having preach'd to twenty-five thousand people in the fields, and to the antient histories of generals haranguing whole armies, of which I had sometimes doubted. . . .

¶[Further account of Whitefield; expansions of Franklin's business interests.]

I had, on the whole, abundant reason to be satisfied with my being established in Pennsylvania. There were, however, two things that I regretted, there being no provision for defense, nor for a complete education of youth; no militia, nor any college. I therefore, in 1743, drew up a proposal for establishing an academy; and at that time, thinking the Reverend Mr. Peters, who was out of employ, a fit person to superintend such an institution, I communicated the project to him; but he, having more profitable views in the service of the proprietaries, which succeeded, declin'd the undertaking; and, not knowing another at that time suitable for such a trust, I let the scheme lie a while dormant. I succeeded better the next year, 1744, in proposing and establishing a Philosophical Society. The paper I wrote for that purpose will be found among my writings, when collected. . . .

¶[Franklin's efforts in behalf of concerted colonial measures for military defense; his thoughts upon Quaker doctrine and practice; invention of the Franklin stove.]

Peace being concluded, and the association business therefore at an end, I turn'd my thoughts again to

the affair of establishing an academy. The first step I took was to associate in the design a number of active friends, of whom the Junto furnished a good part; the next was to write and publish a pamphlet, entitled *Proposals Relating to the Education of Youth in Pennsylvania*. This I distributed among the principal inhabitants gratis; and as soon as I could suppose their minds a little prepared by the perusal of it, I set on foot a subscription for opening and supporting an academy; it was to be paid in quotas yearly for five years; by so dividing it, I judg'd the subscription might be larger, and I believe it was so, amounting to no less, if I remember right, than five thousand pounds.

In the introduction to these proposals, I stated their publication, not as an act of mine, but of some *publick-spirited gentlemen*, avoiding as much as I could, according to my usual rule, the presenting myself to the publick as the author of any scheme for their benefit.

The subscribers, to carry the project into immediate execution, chose out of their number twenty-four trustees, and appointed Mr. Francis, then attorney-general, and myself to draw up constitutions for the government of the academy; which being done and signed, a house was hired, masters engag'd, and the schools opened, I think, in the same year, 1749. . . .

*(Early history of the academy, later to become the University of Pennsylvania; appointments as deputy postmaster general of the colonies in 1753; M.A. degrees from Harvard and Yale; Franklin's proposal of the Albany Plan of Union for the colonies in 1754; his assistance to General Braddock, 1755-1756; observations on Moravians.)*

In 1746, being at Boston, I met there with a Dr. Spence, who was lately arrived from Scotland, and show'd me some electric experiments. They were imperfectly perform'd, as he was not very expert; but, being on a subject quite new to me, they equally surpris'd and pleased me. Soon after my return to Philadelphia, our library company receiv'd from Mr. P. Collinson, Fellow of the Royal Society of London, a present of a glass tube, with some account of the use of it in making such experiments. I eagerly seized the opportunity of repeating what I had seen at Boston; and, by much practice, acquir'd great readiness in performing those, also, which we had an account of from England, adding a number of new ones. I say much practice, for my house was con-

tinually full, for some time, with people who came to see these new wonders.

To divide a little this incumbrance among my friends, I caused a number of similar tubes to be blown at our glass-house, with which they furnish'd themselves, so that we had at length several performers. Among these, the principal was Mr. Kinnersley, an ingenious neighbor, who, being out of business, I encouraged to undertake showing the experiments for money, and drew up for him two lectures, in which the experiments were rang'd in such order, and accompanied with such explanations in such method, as that the foregoing should assist in comprehending the following. He procur'd an elegant apparatus for the purpose, in which all the little machines that I had roughly made for myself were nicely form'd by instrument-makers. His lectures were well attended, and gave great satisfaction; and after some time he went thro' the colonies, exhibiting them in every capital town, and pick'd up some money. In the West India Islands, indeed, it was with difficulty the experiments could be made, from the general moisture of the air.

Oblig'd as we were to Mr. Collinson for his present of the tube, etc., I thought it right he should be inform'd of our success in using it, and wrote him several letters containing accounts of our experiments. He got them read in the Royal Society, where they were not at first thought worth so much notice as to be printed in their Transactions. One paper, which I wrote for Mr. Kinnersley, on the sameness of lightning with electricity, I sent to Dr. Mitchel, an acquaintance of mine, and one of the members also of that society, who wrote me word that it had been read, but was laugh'd at by the connoisseurs. The papers, however, being shown to Dr. Fothergill, he thought them of too much value to be stifled, and advis'd the printing of them. Mr. Collinson then gave them to Cave for publication in his *Gentleman's Magazine*; but he chose to print them separately in a pamphlet, and Dr. Fothergill wrote the preface. Cave, it seems, judg'd rightly for his profit, for by the additions that arriv'd afterward they swell'd, to a quarto volume, which has had five editions, and cost him nothing for copy-money.

It was, however, some time before those papers were much taken notice of in England. A copy of them happening to fall into the hands of the Count de Buffon, a philosopher deservedly of great reputa-

tion in France, and, indeed, all over Europe, he prevailed with M. Dalibard to translate them into French, and they were printed at Paris. The publication offended the Abbé Nollet, preceptor in Natural Philosophy to the royal family, and an able experimenter, who had form'd and publish'd a theory of electricity, which then had the general vogue. He could not at first believe that such a work came from America, and said it must have been fabricated by his enemies at Paris, to décry his system. Afterwards, having been assur'd that there really existed such a person as Franklin at Philadelphia, which he had doubted, he wrote and published a volume of Letters, chiefly address'd to me, defending his theory, and denying the verity of my experiments, and of the positions deduc'd from them.

I once purpos'd answering the abbé, and actually began the answer; but, on consideration that my writings contain'd a description of experiments which any one might repeat and verify, and if not to be verifi'd, could not be defended; or of observations offer'd as conjectures, and not delivered dogmatically, therefore not laying me under any obligation to defend them; and reflecting that a dispute between two persons, writing in different languages, might be lengthened greatly by mistranslations, and thence misconceptions of one another's meaning, much of one of the abbé's letters being founded on an error in the translation, I concluded to let my papers shift for themselves, believing it was better to spend what time I could spare from public business in making new experiments, than in disputing about those already made. I therefore never answered M. Nollet, and the event gave me no cause to repent my silence; for my friend M. le Roy, of the Royal Academy of Sciences, took up my cause and refuted him; my book was translated into the Italian, German, and Latin languages; and the doctrine it contain'd was by degrees universally adopted by the philosophers of Europe, in preference to that of the abbé; so that he lived to see himself the last of his sect, except Monsieur B——, of Paris, his élève<sup>27</sup> and immediate disciple.

<sup>27</sup> Student.

What gave my book the more sudden and general celebrity, was the success of one of its proposed experiments, made by Messrs. Dalibard and De Lor at Marly, for drawing lightning from the clouds. This engag'd the public attention every where. M. de Lor, who had an apparatus for experimental philosophy, and lectur'd in that branch of science, undertook to repeat what he called the *Philadelphia Experiments*; and, after they were performed before the king and court, all the curious of Paris flocked to see them. I will not swell this narrative with an account of that capital experiment, nor of the infinite pleasure I receiv'd in the success of a similar one I made soon after with a kite at Philadelphia, as both are to be found in the histories of electricity.

Dr. Wright, an English physician, when at Paris, wrote to a friend, who was of the Royal Society, an account of the high esteem my experiments were in among the learned abroad, and of their wonder that my writings had been so little noticed in England. The Society, on this, resum'd the consideration of the letters that had been read to them; and the celebrated Dr. Watson drew up a summary account of them, and of all I had afterwards sent to England on the subject, which he accompanied with some praise of the writer. This summary was then printed in their Transactions; and some members of the Society in London, particularly the very ingenious Mr. Canton, having verified the experiment of procuring lightning from the clouds by a pointed rod, and acquainting them with the success, they soon made me more than amends for the slight with which they had before treated me. Without my having made any application for that honour, they chose me a member, and voted that I should be excus'd the customary payments, which would have amounted to twenty-five guineas; and ever since have given me their Transactions gratis. They also presented me with the gold medal of Sir Godfrey Copley for the year 1753, the delivery of which was accompanied by a very handsome speech of the president, Lord Macclesfield, wherein I was highly honoured. . . .

[Account of his second trip to England, 1757, as colonial agent for Pennsylvania, in the midst of which the Autobiography abruptly ends.]

*Dogood Papers*

## NO. V

(From Monday May 21. to Monday May 28. 1722.)

*Mulier Muliere magis congruet.* TER.<sup>28</sup>*To the Author of the New-England Courant.*

Sir,

I shall here present your Readers with a Letter from one, who informs me that I have begun at the wrong End of my Business, and that I ought to begin at Home, and censure the Vices and Follies of my own Sex, before I venture to meddle with your's: Nevertheless, I am resolved to dedicate this Speculation to the Fair Tribe, and endeavour to show, that Mr. Ephraim charges Women with being particularly guilty of Pride, Idleness, &c. wrongfully, inasmuch as the Men have not only as great a Share in those Vices as the Women, but are likewise in a great Measure the Cause of that which the Women are guilty of. I think it will be best to produce my Antagonist, before I encounter him.

*To Mrs. Dogood.*

Madam,

My Design in troubling you with this Letter is, to desire you would begin with your own Sex first: Let the first Volley of your Resentments be directed against *Female Vice*; let Female Idleness, Ignorance and Folly, (which are Vices more peculiar to your Sex than to our's,) be the Subject of your Satyrs, but more especially Female Pride, which I think is intolerable. Here is a large Field that wants Cultivation, and which I believe you are able (if willing) to improve with Advantage; and when you have once reformed the Women, you will find it a much easier Task to reform the Men, because Women are the prime Causes of a great many Male Enormities. This is all at present from

*Your Friendly Wellwisher,*

Ephraim Censorious.

After Thanks to my Correspondent for his Kindness in cutting out Work for me, I must assure him, that I find it a very difficult Matter to reprove Women separate from the Men; for what Vice is

<sup>28</sup> "A woman deals much better with a woman."—Terence, *Phormio*, V, i, 1.

there in which the Men have not as great a Share as the Women? and in some have they not a far greater, as in Drunkenness, Swearing, &c.? And if they have, then it follows, that when a Vice is to be reprov'd, Men, who are most culpable, deserve the most Reprehension, and certainly therefore, ought to have it. But will wave this point at present, and proceed to a particular Consideration of what my Correspondent calls *Female Vice*.

As for Idleness, if I should *Quære*,<sup>29</sup> Where are the greatest Number of its Votaries to be found, with us or the Men? it might I believe be easily and truly answer'd, *With the latter*. For, notwithstanding the Men are commonly complaining how hard they are forc'd to labour, only to maintain their Wives in Pomp and Idleness, yet if you go among the Women, you will learn, that *they have always more Work upon their Hands than they are able to do*, and that *a Woman's Work is never done*, &c. But however,

<sup>20</sup> Suppose we should grant for once, that we are generally more idle than the Men, (without making any Allowance for the *Weakness of the Sex*,) I desire to know whose Fault it is? Are not the Men to blame for their Folly in maintaining us in Idleness? Who is there that can be handsomely supported in Affluence, Ease and Pleasure by another, that will chuse rather to earn his Bread by the Sweat of his own Brows? And if a Man will be so fond and so foolish, as to labour hard himself for a Livelihood, and suffer his Wife in the mean Time to sit in Ease and Idleness, let him not blame her if she does so, for it is in a great Measure his own Fault.

And now for the Ignorance and Folly which he reproaches us with, let us see (if we are Fools and Ignoramus's) whose is the Fault, the Men's or our's. An ingenious Writer, having this Subject in Hand, has the following Words, wherein he lays the Fault wholly on the Men, for not allowing Women the Advantages of Education.

<sup>40</sup> "I have (says he) often thought of it as one of the most barbarous Customs in the World, considering us as a civiliz'd and Christian Country, that we deny the Advantages of Learning to Women. We reprove the Sex every Day with Folly and Impertinence, while I am confident, had they the Advantages

<sup>29</sup> Ask or inquire.

of Education equal to us, they would be guilty of less than our selves. One would wonder indeed how it should happen that Women are conversible at all, since they are only beholding to natural Parts for all their Knowledge. Their Youth is spent to teach them to stitch and sow, or make Baubles. They are taught to read indeed, and perhaps to write their Names, or so; and that is the Height of a Womans Education. And I would but ask any who slight the Sex for their Understanding, What is a Man (a Gentleman, I <sup>10</sup> mean) good for that is taught no more? If Knowledge and Understanding had been useless Additions to the Sex, God Almighty would never have given them Capacities, for he made nothing Needless. What has the Woman done to forfeit the Privilege of being taught? Does she plague us with her Pride and Impertinence? Why did we not let her learn, that she might have had more Wit? Shall we upraid Women with Folly, when 'tis only the Error of this inhumane Custom that hindred them being made wiser."

So much for Female Ignorance and Folly; and now let us a little consider the Pride which my Correspondent thinks is *intolerable*. By this Expression of his, one would think he is some dejected Swain, tyranniz'd over by some cruel haughty Nymph, who (perhaps he thinks) has no more Reason to be proud than himself. *Alas-a-day!* What shall we say in this Case! Why truly, if Women are proud, it is certainly owing to the Men still; for if they will be such *Simpletons* as to humble themselves at their Feet, and fill <sup>30</sup> their credulous Ears with extravagant Praises of their Wit, Beauty, and other Accomplishments (perhaps where there are none too,) and when Women are by this Means perswaded that they are Something more than humane, what Wonder is it, if they carry themselves haughtily, and live extravagantly. Notwithstanding, I believe there are more Instances of extravagant Pride to be found among Men than among Women, and this Fault is certainly more hainous in the former than in the latter.

Upon the whole, I conclude, that it will be impossible to lash any Vice, of which the Men, are not equally guilty with the Women, and consequently deserve an equal (if not a greater) Share in the Censure. However, I exhort both to amend, where both are culpable, otherwise they may expect to be severely handled by Sir,

Your Humble Servant,  
Silence Dogood.

N. B. Mrs. Dogood has lately left her Seat in the Country, and come to Boston, where she intends to tarry for the Summer Season, in order to compleat her Observations of the present reigning Vices of the Town.

NO. VII

(From Monday June 18. to Monday June 25. 1722.)

*Give me the Muse, whose generous Force,  
Impatient of the Reins,  
Pursues an unattempted Course,  
Breaks all the Criticks Iron Chains.*

WATTS.

To the Author of the New-England Courant.

Sir,

It has been the Complaint of many Ingenious Foreigners, who have travell'd amongst us, *That good Poetry is not to be expected in New-England*. I am apt to Fancy, the Reason is, not because our Countrymen are altogether void of a Poetical Genius, nor yet because we have not those Advantages of Education which other Countries have, but purely because we do not afford that Praise and Encouragement which is merited, when any thing extraordinary of this Kind is produc'd among us: Upon which Consideration I have determin'd, when I meet with a Good Piece of *New-England Poetry*, to give it a suitable Encomium, and thereby endeavour to discover to the World some of its Beautys, in order to encourage the Author to go on, and bless the World with more, and more Excellent Productions.

There has lately appear'd among us a most Excellent Piece of Poetry, entituled, *An Elegy upon the much Lamented Death of Mrs. Mchitbell Kitel, Wife of Mr. John Kitel of Salem, Etc.* It may justly be said in its Praise, without Flattery to the Author, that it is the most *Extraordinary* Piece that was ever wrote in *New-England*. The Language is so soft and Easy, the Expression so moving and pathetick, but <sup>40</sup> above all, the Verse and Numbers so Charming and Natural, that it is almost beyond Comparison.

*The Muse disdains \*  
Those Links and Chains,  
Measures and Rules of Vulgar Strains,  
And o'er the Laws of Harmony a Sovereign  
Queen she reigns.*

I find no English Author, Ancient or Modern, whose Elegies may be compar'd with this, in respect

\* Watts.

to the Elegance of Stile, or Smoothness of Rhime; and for the affecting Part, I will leave your Readers to judge, if ever they read any Lincs, that would sooner make them *draw their Breath* and Sigh, if not shed Tears, than these following.

*Come let us mourn, for we have lost a  
Wife, a Daughter, and a Sister,  
Who has lately taken Flight, and  
greatly we have mist her.*

In another place,

*Some little Time before she yielded up her Breath,  
She said, I ne'er shall hear one Sermon more on Earth.  
She kist her Husband some little Time before she expir'd,  
Then lean'd her Head the Pillow on, just out of Breath  
and tir'd.*

But the Threecfold Appellation in the first Line

—A Wife, a Daughter, and a Sister,

must not pass unobserved. That Line in the celebrated *Watts*,

*GUNSTON, the Just, the Generous, and the Young.*

is nothing Comparable to it. The latter only mentions three Qualifications of *one* Person who was deceased, which therefore could raise Grief and Compassion but for *One*. Whereas the former, (*our most excellent Poet*) gives his Reader a Sort of an Idea of the Death of *Three Persons*, viz.

—A Wife, a Daughter, and a Sister,

which is *Three Times* as great a Loss as the Death of *One*, and consequently must raise *Three Times* as much Grief and Compassion in the Reader.

I should be very much straitened for Room, if I should attempt to discover even half the Excellencies of this Elegy which are obvious to me. Yet I cannot omit one Observation, which is, that the Author has (to his Honour) invented a new Species of Poetry, which wants a Name, and was never before known. His muse scorns to be confin'd to the old Measures<sup>40</sup> and Limits, or to observe the dull Rules of Criticks;

*Nor Rapin gives her Rules to fly, nor Purcell  
Notes to Sing.*

WATTS.

Now 'tis Pity that such an Excellent Piece should not be dignify'd with a particular Name; and seeing it cannot justly be called, either *Epic*, *Sapphic*, *Lyric*, or *Pindaric*, nor any other Name yet invented, I pre-

sume it may, (in Honour and Remembrance of the Dead) be called the *KITELIC*. Thus much in the Praise of *Kitelic Poetry*.

It is certain, that those Elegies which are of our own Growth, (and our Soil seldom produces any other sort of Poetry) are by far the greatest part, wretchedly Dull and Ridiculous. Now since it is imagin'd by many, that our Poets are honest, well-meaning Fellows, who do their best, and that if they had but some Instructions how to govern Fancy with Judgment, they would make indifferent good Elegies; I shall here subjoin a Receipt for that purpose, which was left me as a Legacy, (among other valuable Rarities) by my Reverend Husband. It is as follows,

#### A RECEIPT to make a New-England Funeral ELEGY.

For the Title of your Elegy. *Of these you may have  
20 enough ready made to your Hands; but if you should  
chuse to make it your self, you must be sure not to  
omit the words Ætatis Suæ,<sup>30</sup> which will Beautify it  
exceedingly.*

For the Subject of your Elegy. *Take one of your  
Neighbours who has lately departed this Life; it is no  
great matter at what Age the Party dy'd, but it will  
be best if he went away suddenly, being Kill'd,  
Drown'd, or Frosc to Death.*

*Having chose the Person, take all his Virtues, Ex-  
30 cellencies, &c. and if he have not enough, you may  
borrow some to make up a sufficient Quantity: To  
these add his last Words, dying Expressions, &c. if  
they are to be had; mix all these together, and be sure  
you strain them well. Then season all with a Handful  
or two of Melancholly Expressions, such as, Dreadful,  
Deadly, cruel cold Death, unhappy Fate, weeping  
Eyes, &c. Have mixed all these Ingredients well, put  
them into the empty Scull of some young Harvard;  
(but in Case you have ne'er a One at Hand, you may  
use your own,) there let them Ferment for the Space  
of a Fortnight, and by that Time they will be incor-  
porated into a Body, which take out, and having pre-  
pared a sufficient Quantity of double Rhimes, such  
as Power, Flower; Quiver, Shiver; Grieve us, Leave  
us; tell you, excel you; Expeditions, Physicians;  
Fatigue him, Intrigue him; &c. you must spread all  
upon Paper, and if you can procure a Scrap of Latin  
to put at the End, it will garnish it mightily; then*

<sup>30</sup> "Of his (or her) age."

having affixed your Name at the Bottom, with a *Mæstus Composuit*,<sup>31</sup> you will have an Excellent *Elegy*.

N. B. *This Receipt will serve when a Female is the*

<sup>31</sup> "Sorrowfully composed."

*Subject of your Elegy, provided you borrow a greater Quantity of Virtues, Excellencies, &c.*

Sir,

Your Servant,

Silence Dogood.

FROM

## *Articles of Belief and Acts of Religion*

IN TWO PARTS <sup>32</sup>

*Here will I hold. If there is a Pow'r above us,  
(And that there is, all Nature cries aloud,  
Thro' all her Works) He must delight in Virtue;  
And that which he delights in must be Happy.*

CATO.

PART I

Philad<sup>a</sup>, Nov. 20: 1728

### First Principles

I believe there is one supreme, most perfect Being, Author and Father of the Gods themselves. For I believe that Man is not the most perfect Being but one, rather that as there are many Degrees of Beings his Inferiors, so there are many Degrees of Beings superior to him.

Also, when I stretch my Imagination thro' and beyond our System of Planets, beyond the visible fix'd Stars themselves, into that Space that is every Way infinite, and conceive it fill'd with Suns like ours, each with a Chorus of Worlds forever moving round him, then this little Ball on which we move, seems, even in my narrow Imagination, to be almost Nothing, and myself less than nothing, and of no sort of Consequence.

When I think thus, I imagine it great Vanity in me to suppose, that the *Supremely Perfect* does in the least regard such an inconsiderable Nothing as Man. More especially, since it is impossible for me to have any positive clear idea of that which is infinite and incomprehensible, I cannot conceive otherwise than that he *the Infinite Father* expects or requires no Worship or Praise from us, but that he is even infinitely above it.

But, since there is in all Men something like a

<sup>32</sup> No second part has been found.

natural principle, which inclines them to DEVOTION, or the Worship of some unseen Power;

And since Men are endued with Reason superior to all other Animals, that we are in our World acquainted with;

Therefore I think it seems required of me, and my Duty as a Man, to pay Divine Regards to SOMETHING.

I conceive then, that the INFINITE has created many beings or Gods, vastly superior to Man, who can better conceive his Perfections than we, and return him a more rational and glorious Praise.

As, among Men, the Praise of the Ignorant or of Children is not regarded by the ingenious Painter or Architect, who is rather honour'd and pleas'd with the approbation of Wise Men & Artists.

It may be that these created Gods are immortal; or it may be that after many Ages, they are changed, and others Supply their Places.

Howbeit, I conceive that each of these is exceeding wise and good, and very powerful; and that Each has made for himself one glorious Sun, attended with a beautiful and admirable System of Planets.

It is that particular Wise and good God, who is the author and owner of our System, that I propose for the object of my praise and adoration.

For I conceive that he has in himself some of those Passions he has planted in us, and that, since he has given us Reason whereby we are capable of observing his Wisdom in the Creation, he is not above caring for us, being pleas'd with our Praise, and offended when we slight Him, or neglect his Glory.

I conceive for many Reasons, that he is a good *Being*, and as I should be happy to have so wise, good, and powerful a Being my Friend, let me consider in what manner I shall make myself most acceptable to him.

Next to the Praise resulting from and due to his Wisdom, I believe he is pleas'd and delights in the Happiness of those he has created; and since without

Virtue Man can have no Happiness in this World, I firmly believe he delights to see me Virtuous, because he is pleased when he sees Me Happy.

And since he has created many Things, which seem purely design'd for the Delight of Man, I believe he is not offended, when he sees his Children solace themselves in any manner of pleasant exercises and Innocent Delights; and I think no Pleasure innocent, that is to Man hurtful.

I love him therefore for his Goodness, and I adore <sup>10</sup> him for his Wisdom.

Let me then not fail to praise my God continually, for it is his Due, and it is all I can return for his many Favours and great Goodness to me; and let me resolve to be virtuous, that I may be happy, that I may please Him, who is delighted to see me happy. Amen!

### *A Witch Trial at Mount Holly* <sup>33</sup>

Saturday last, at Mount-Holly, about 8 Miles from this Place [Burlington, N. J.] near 300 People were gathered together to see an Experiment or two tried on some Persons accused of Witchcraft. It seems the Accused had been charged with making their Neighbours' Sheep dance in an uncommon Manner, and with causing Hogs to speak and sing Psalms, etc., to the great Terror and Amazement of the king's good and peaceable Subjects in this Province; and the Accusers, being very positive that if the Accused were weighed in Scales against a Bible, the Bible would prove too heavy for them; or that, if they were bound and put into the River they would swim; the said Accused, desirous to make Innocence appear, voluntarily offered to undergo the said Trials if 2 of the most violent of their Accusers would be tried with them. Accordingly the Time and Place was agreed on and advertised about the Country; The Accusers were 1 Man and 1 Woman: and the Accused the same. The Parties being met and the People got together, a <sup>40</sup> grand Consultation was held, before they proceeded to Trial; in which it was agreed to use the Scales first; and a Committee of Men were appointed to search the Men, and a Committee of Women to search the Women, to see if they had any Thing of Weight about them, particularly Pins. After the Scrutiny was over a huge great Bible belonging to the

Justice of the Place was provided, and a Lane through the Populace was made from the Justice's House to the Scales, which were fixed on a Gallows erected for that Purpose opposite to the House, that the Justice's Wife and the rest of the Ladies might see the Trial without coming amongst the Mob, and after the Manner of Moorfields a large Ring was also made. Then came out of the House a grave, tall Man carrying the Holy Writ before the supposed Wizard etc, (as solemnly as the Sword-bearer of London before the Lord Mayor) the Wizard was first put in the Scale, and over him was read a Chapter out of the Books of Moses, and then the Bible was put in the other Scale, (which, being kept down before) was immediately let go; but, to the great Surprise of the Spectators, Flesh and Bones came down plump, and outweighed that great good Book by abundance. After the same Manner the others were served, and their Lumps of Mortality severally were too heavy for <sup>20</sup> Moses and all the Prophets and Apostles. This being over, the Accusers and the rest of the Mob, not satisfied with this Experiment, would have the Trial by Water. Accordingly a most solemn Procession was made to the Mill-pond, where both Accused and Accusers being stripped (saving only to the Women their Shifts) were bound Hand and Foot and severally placed in the Water, lengthways, from the Side of a Barge or Flat, having for Security only a Rope about the Middle of each, which was held by some in the Flat. The accused man being thin and spare with some Difficulty began to sink at last; but the rest, every one of them, swam very light upon the Water. A Sailor in the Flat jump'd out upon the Back of the Man accused thinking to drive him down to the Bottom; but the Person bound, without any Help, came up some time before the other. The Woman Accuser being told that she did not sink, would be duck'd a second Time; when she swam again as light as before. Upon which she declared, <sup>30</sup> That she believed the Accused had bewitched her to make her so light, and that she would be duck'd again a Hundred Times but she would duck the Devil out of her. The Accused Man, being surpriz'd at his own Swimming, was not so confident of his Innocence as before, but said, 'If I am a Witch, it is more than I know.' The more thinking Part of the Spectators were of Opinion that any Person so bound and placed in the Water (unless they were mere Skin and Bones) would swim, till their Breath was gone, and

<sup>33</sup> Originally printed in the *Pennsylvania Gazette*, October 22, 1730.

their Lungs fill'd with Water. But it being the general Belief of the Populace that the Women's shifts and the Garters with which they were bound help'd to support them, it is said they are to be tried again the next warm Weather, naked.

### *The Speech of Polly Baker* <sup>34</sup>

The Speech of Miss Polly Baker before a Court of Judicature, at Connecticut near Boston in New Eng-<sup>10</sup> land; where she was prosecuted the fifth time, for having a Bastard Child: Which influenced the Court to dispense with her Punishment, and which induced one of her Judges to marry her the next Day—by whom she had fifteen Children.

"May it please the honourable bench to indulge me in a few words: I am a poor, unhappy woman, who have no money to fee lawyers to plead for me, being hard put to it to get a living. I shall not trouble your honours with long speeches; for I have not the<sup>20</sup> presumption to expect that you may, by any means, be prevailed on to deviate in your Sentence from the law, in my favour. All I humbly hope is, that your honours would charitably move the governor's goodness on my behalf, that my fine may be remitted. This is the fifth time, gentlemen, that I have been dragg'd before your court on the same account; twice I have paid heavy fines, and twice have been brought to publick punishment, for want of money to pay those fines. This may have been agreeable to the laws,<sup>30</sup> and I don't dispute it; but since laws are sometimes unreasonable in themselves, and therefore repealed; and others bear too hard on the subject in particular circumstances, and therefore there is left a power somewhere to dispense with the execution of them; I take the liberty to say, that I think this law, by which I am punished, both unreasonable in itself, and particularly severe with regard to me, who have always lived an inoffensive life in the neighbourhood where I was born, and defy my enemies (if I have any) to<sup>40</sup> say I ever wrong'd any man, woman, or child. Abstracted from the law, I cannot conceive (may it please your honours) what the nature of my offense is. I have brought five fine children into the world, at the risque of my life; I have maintain'd them well by my own industry, without burthening the township,

and would have done it better, if it had not been for the heavy charges and fines I have paid. Can it be a crime (in the nature of things, I mean) to add to the king's subjects, in a new country, that really wants people? I own it, I should think it rather a praiseworthy than a punishable action. I have debauched no other woman's husband, nor enticed any other youth; these things I never was charg'd with; nor has any one the least cause of complaint against me, unless, perhaps, the ministers of justice, because I have had children without being married, by which they have missed a wedding fee. But can this be a fault of mine? I appeal to your honours. You are pleased to allow I don't want sense; but I must be stupified to the last degree, not to prefer the honourable state of wedlock to the condition I have lived in. I always was, and still am willing to enter into it; and doubt not my behaving well in it, having all the industry, frugality, fertility, and skill in economy appertaining to a good wife's character. I defy any one to say I ever refused an offer of that sort: on the contrary, I readily consented to the only proposal of marriage that ever was made me, which was when I was a virgin, but too easily confiding in the person's sincerity that made it, I unhappily lost my honour by trusting to his; for he got me with child, and then forsook me.

"That very person, you all know, he is now become a magistrate of this country; and I had hopes he would have appeared this day on the bench, and have endcavoured to moderate the Court in my favour; then I should have scorn'd to have mentioned it; but I must now complain of it, as unjust and unequal, that my betrayer and undoer, the first cause of all my faults and miscarriages (if they must be deemed such), should be advanced to honour and power in this government that punishes my misfortunes with stripes and infamy. I should be told, 'tis like, that were there no act of Assembly in the case, the precepts of religion are violated by my transgressions. If mine is a religious offense, leave it to religious punishments. You have already excluded me from the comforts of your church communion. Is not that sufficient? You believe I have offended heaven, and must suffer eternal fire: Will not that be sufficient? What need is there then of your additional fines and whipping? I own I do not think as you do, for, if I thought what you call a sin was really such, I could not presumptuously commit it. But, how can it be believed that heaven is angry at my having chil-

<sup>34</sup> Printed in the *Gentleman's Magazine* for April, 1747; this *jeu d'esprit* of Franklin's was several times reprinted as an authentic document.

dren, when to the little done by me towards it, God has been pleased to add his divine skill and admirable workmanship in the formation of their bodies, and crowned the whole by furnishing them with rational and immortal souls?

"Forgive me, gentlemen, if I talk a little extravagantly on these matters; I am no divine, but if you, gentlemen, must be making laws, do not turn natural and useful actions into crimes by your prohibitions. But take into your wise consideration the great and growing number of batchelors in the country, many of whom, from the mean fear of the expences of a family, have never sincerely and honourably courted a woman in their lives; and by their manner of living leave unproduced (which is little better than murder) hundreds of their posterity to the thousandth generation. Is not this a greater offense against the publick good than mine? Compel them, then, by law, either to marriage, or to pay double the fine of fornication every year. What must poor young women do, whom customs and nature forbid to solicit the men, and who cannot force themselves upon husbands when the laws take no care to provide them any, and yet severely punish them if they do their duty without them; the duty of the first and great command of nature and nature's God, *encrease and multiply*; a duty, from the steady performance of which nothing has been able to deter me, but for its sake I have hazarded the loss of the publick esteem, and have frequently endured publick disgrace and punishment; and therefore ought, in my humble opinion, instead of a whipping, to have a statue erected to my memory."

### *To Peter Collinson*<sup>35</sup>

Electrical Kite

[Philadelphia] Oct. 19, 1752.

Sir,

As frequent mention is made in public papers from *Europe* of the success of the *Philadelphia* experiment for drawing the electric fire from clouds by means of pointed rods of iron erected on high buildings, &c., it may be agreeable to the curious to be

<sup>35</sup> This communication was read before the Royal Society on December 21, 1752, and printed in the *Gentleman's Magazine* for December, 1752. The identification of electricity and lightning is what was chiefly responsible for Franklin's receiving the Copley Medal in 1753 and his election as Fellow of the Royal Society in 1756. See Franklin's own account at the conclusion of the *Autobiography*.

informed, that the same experiment has succeeded in *Philadelphia*, though made in a different and more easy manner, which is as follows:

Make a small cross of two light strips of cedar, the arms so long as to reach to the four corners of a large thin silk handkerchief when extended; tie the corners of the handkerchief to the extremities of the cross, so you have the body of a kite; which being properly accommodated with a tail, loop, and string, will rise in the air, like those made of paper; but this being of silk, is fitter to bear the wet and wind of a thunder-gust without tearing. To the top of the upright stick of the cross is to be fixed a very sharp-pointed wire, rising a foot or more above the wood. To the end of the twine, next the hand, is to be tied a silk ribbon, and where the silk and twine join, a key may be fastened. This kite is to be raised when a thunder-gust appears to be coming on, and the person who holds the string must stand within a door or window, or under some cover, so that the silk ribbon may not be wet; and care must be taken that the twine does not touch the frame of the door or window. As soon as any of the thunder-clouds come over the kite, the pointed wire will draw the electric fire from them, and the kite, with all the twine, will be electrified, and the loose filaments of the twine will stand out every way, and be attracted by an approaching finger. And when the rain has wet the kite and twine, so that it can conduct the electric fire freely, you will find it stream out plentifully from the key on the approach of your knuckle. At this key the phial may be charged; and from electric fire thus obtained, spirits may be kindled, and all the other electric experiments be performed, which are usually done by the help of a rubbed glass globe or tube, and thereby the sameness of the electric matter with that of lightning completely demonstrated.

B. Franklin.

### *The Way to Wealth*<sup>36</sup>

Courteous Reader,

I have heard that nothing gives an Author so great Pleasure, as to find his Works respectfully quoted by

<sup>36</sup> First published as the Preface to *Poor Richard's Almanac* for 1758, this clever compilation of Poor Richard's sayings is at once the best known and in many respects the most characteristic of Franklin's writings. It has been said that it is "the American classic *par excellence*," and that it shares with Mrs. Stowe's *Uncle Tom's Cabin* the honor of having been translated into more tongues than any other piece of American writing.

other learned Authors. This Pleasure I have seldom enjoyed; for tho' I have been, if I may say it without Vanity, an *eminent Author* of Almanacks annually now a full Quarter of a Century, my Brother Authors in the same Way, for what Reason I know not, have ever been very sparing in their Applauses; and no other Author has taken the least Notice of me, so that did not my Writings produce me some solid *Pudding*, the great Deficiency of *Praise* would have quite discouraged me.

I concluded at length, that the People were the best Judges of my Merit; for they buy my Works; and besides, in my Rambles, where I am not personally known, I have frequently heard one or other of my Adages repeated, with, as *Poor Richard* says, at the End on't; this gave me some Satisfaction, as it showed not only that my Instructions were regarded, but discovered likewise some Respect for my Authority; and I own, that to encourage the Practice of remembering and repeating those wise Sentences, 20 I have sometimes *quoted* myself with great Gravity.

Judge then how much I must have been gratified by an Incident I am going to relate to you. I stopt my Horse lately where a great Number of People were collected at a Vendue of Merchant Goods. The Hour of Sale not being come, they were conversing on the Badness of the Times, and one of the Company call'd to a plain clean old Man, with white Locks, *Pray, Father Abraham, what think you of the Times? Won't these heavy Taxes quite ruin the Country? How shall we ever be able to pay them? What would you advise us to?*—Father Abraham stood up, and reply'd, If you'd have my Advice, I'll give it you in short, for a *Word to the Wise is enough*, and *many Words won't fill a Bushel*, as *Poor Richard* says. They join'd in desiring him to speak his Mind, and gathering round him, he proceeded as follows;

"Friends, says he, and Neighbours, the Taxes are 40 indeed very heavy, and if those laid on by the Government were the only Ones we had to pay, we might more easily discharge them; but we have many others, and much more grievous to some of us. We are taxed twice as much by our *Idleness*, three times as much by our *Pride*, and four times as much by our *Folly*, and from these Taxes the Commissioners cannot ease or deliver us by allowing an Abatement. However let us hearken to good Advice, and something may be

done for us; *God helps them that help themselves*, as *Poor Richard* says, in his Almanack of 1733.

It would be thought a hard Government that should tax its People one tenth Part of their *Time*, to be employed in its Service. But *Idleness* taxes many of us much more, if we reckon all that is spent in absolute *Sloth*, or doing of nothing, with that which is spent in idle Employments or Amusements, that amount to nothing. *Sloth*, by bringing on Dis- 10 cases, absolutely shortens Life. *Sloth, like Rust, consumes faster than Labour wears, while the used Key is always bright*, as *Poor Richard* says. But *dost thou love Life, then do not squander Time, for that's the Stuff Life is made of*, as *Poor Richard* says.—How much more than is necessary do we spend in Sleep! forgetting that *The sleeping Fox catches no Poultry*, and that *there will be sleeping enough in the Grave*, as *Poor Richard* says. If Time be of all Things the most precious, *wasting Time* must be, as *Poor Richard* says, *the greatest Prodigality*, since, as he else- 20 where tells us, *Lost Time is never found again*; and what we call *Time-enough*, always proves little enough: Let us then up and be doing, and doing to the Purpose; so by Diligence shall we do more with less Perplexity. *Sloth makes all Things difficult, but Industry all easy*, as *Poor Richard* says; and *He that riseth late, must trot all Day, and shall scarce overtake his Business at Night*. While *Laziness travels so slowly, that Poverty soon overtakes him*, as we read in *Poor Richard*, who adds, *Drive thy Business, let not that drive thee*; and *Early to Bed, and early to rise, makes a Man healthy, wealthy and wise*.

So what signifies *wishing* and *hoping* for better Times. We may make these Times better if we bestir ourselves. *Industry need not wish*, as *Poor Richard* says, and *He that lives upon Hope will die fasting*. *There are no Gains, without Pains*; then *Help Hands, for I have no Lands*, or if I have, they are smartly taxed. And, as *Poor Richard* likewise observes, *He that hath a Trade hath an Estate*, and *He that hath a Calling, hath an Office of Profit and Honour*; but then the *Trade* must be worked at, and the *Calling* well followed, or neither the *Estate*, nor the *Office*, will enable us to pay our Taxes.—If we are industrious we shall never starve; for, as *Poor Richard* says, *At the working Man's House Hunger looks in, but dares not enter*. Nor will the Bailiff or the Constable enter, for *Industry pays Debts, while Despair encreaseth them*, says *Poor Richard*.—What though

you have found no Treasure, nor has any rich Relation left you a Legacy, *Diligence is the Mother of Good luck*, as Poor Richard says, and God gives all Things to Industry. Then *plough deep, while Sluggards sleep, and you shall have Corn to sell and to keep*, says Poor Dick. Work while it is called To-day, for you know not how much you may be hindered To-morrow, which makes Poor Richard say, *One To-day is worth two To-morrows*; and farther, *Have you somewhat to do To-morrow, do it To-day*. If <sup>10</sup> you were a Servant, would you not be ashamed that a good Master should catch you idle? Are you then your own Master, *be ashamed to catch yourself idle*, as Poor Dick says. When there is so much to be done for yourself, your Family, your Country, and your gracious King, be up by Peep of Day; *Let not the Sun look down and say, Inglorious here he lies*. Handle your Tools without Mittens; remember that *the Cat in Gloves catches no Mice*, as Poor Richard says. 'Tis true there is much to be done, and perhaps <sup>20</sup> you are weak handed, but stick to it steadily, and you will see great Effects, for *constant Dropping wears away Stones*, and by *Diligence and Patience the Mouse ate in two the Cable*; and *little Strokes fell great Oaks*, as Poor Richard says in his Almanack, the Year I cannot just now remember.

Methinks I hear some of you say, *Must a Man afford himself no Leisure?*—I will tell thee, my Friend, what Poor Richard says, *Employ thy Time well if thou meanest to gain Leisure*; and *since thou art not sure of a Minute, throw not away an Hour*. Leisure, is Time for doing something useful; this Leisure the diligent Man will obtain, but the lazy Man never; so that, as Poor Richard says, *a Life of Leisure and a Life of Laziness are two Things*. Do you imagine that Sloth will afford you more Comfort than Labour? No, for as Poor Richard says, *Trouble springs from Idleness, and grievous Toil from needless Ease*. Many without Labour, would live by <sup>30</sup> their wits only, but they break for want of Stock. <sup>40</sup> Whereas Industry gives Comfort, and Plenty, and Respect: *Fly Pleasures, and they'll follow you*. *The diligent Spinner has a large Shift*; and now I have a Sheep and a Cow, every Body bids me Good morrow; all which is well said by Poor Richard.

But with our Industry, we must likewise be steady, settled and careful, and oversee our own Affairs with our own Eyes, and not trust too much to others; for, as Poor Richard says,

*I never saw an oft removed Tree,  
Nor yet an oft removed Family,  
That throve so well as those that settled be.*

And again, *Three Removes is as bad as a Fire*; and again, *Keep thy Shop, and thy Shop will keep thee*; and again, *If you would have your Business done, go; If not, send*. And again,

*He that by the Plough would thrive,  
Himself must either hold or drive.*

And again, *The Eye of a Master will do more Work than both his Hands*; and again, *Want of Care does us more Damage than Want of Knowledge*; and again, *Not to oversee Workmen, is to leave them your Purse open*. Trusting too much to others Care is the Ruin of many; for, as the Almanack says, *In the Affairs of this World, Men are saved, not by Faith, but by the Want of it*; but a Man's own Care is profitable; for, saith Poor Dick, *Learning is to the Studious, and Riches to the Careful*, as well as *Power to the Bold, and Heaven to the Virtuous*. And farther, *If you would have a faithful Servant, and one that you like, serve yourself*. And again, he adviseth to Circumspection and Care, even in the smallest Matters, because sometimes *a little Neglect may breed great Mischief*; adding, *For want of a Nail the Shoe was lost; for want of a Shoe the Horse was lost; and for want of a Horse the Rider was lost*, being overtaken and slain by the Enemy, all for want of Care about a Horse shoe Nail.

So much for Industry, my Friends, and Attention to one's own Business; but to these we must add Frugality, if we would make our Industry more certainly successful. A Man may, if he knows not how to save as he gets, *keep his Nose all his Life to the Grindstone*, and die not worth a Groat at last. *A fat Kitchen makes a lean Will*, as Poor Richard says; and,

*Many Estates are spent in the Getting,  
Since Women for Tea forsook Spinning and Knitting,  
And Men for Punch forsook Hewing and Splitting.*

If you would be wealthy, says he, in another Almanack, *think of Saving as well as of Getting*: *The Indies have not made Spain rich, because her Out-goes are greater than her Incomes*. Away then with your expensive Follies, and you will not have so much Cause to complain of hard Times, heavy Taxes, and chargeable Families; for, as Poor Dick says,

*Women and Wine, Game and Deceit,  
Make the Wealth small, and the Wants great.*

And farther, *What maintains one Vice, would bring up two Children.* You may think perhaps, That a little Tea, or a little Punch now and then, Diet a little more costly, Clothes a little finer, and a little Entertainment now and then, can be no great Matter; but remember what *Poor Richard* says, *Many a Little makes a Mickle*; and farther, *Beware of little Expences; a small Leak will sink a great Ship*; and again, *Who Dainties love, shall Beggars prove*; and moreover, *Fools make Feasts, and wise Men eat them.*

Here you are all got together at this Vendue of *Fineries* and *Knicknacks*. You call them *Goods*, but if you do not take Care, they will prove *Evils* to some of you. You expect they will be sold *cheap*, and perhaps they may for less than they cost; but if you have no Occasion for them, they must be *dear* to you. Remember what *Poor Richard* says, *Buy what thou hast no Need of, and ere long thou shalt sell thy Necessaries.* And again, *At a great Pennyworth pause a while*: He means, that perhaps the Cheapness is *apparent* only, and not *real*; or the Bargain, by straitning thee in thy Business, may do thee more Harm than Good. For in another place he says, *Many have been ruined by buying good Pennyworths.* Again, *Poor Richard* says, *'Tis foolish to lay out Money in a Purchase of Repentance*; and yet this Folly is practised every Day at Vendues, for want of minding the Almanack. *Wise Men*, as *Poor Dick* says, *learn by others Harms, Fools scarcely by their own*; but *Felix quem faciunt aliena Pericula cautum*.<sup>37</sup> Many a one, for the Sake of Finery on the Back, have gone with a hungry Belly, and half starved their Families; *Silks and Sattins, Scarlet and Velvets*, as *Poor Richard* says, *put out the Kitchen Fire*. These are not the *Necessaries* of Life; they can scarcely be called the *Conveniencies*, and yet only because they look pretty, how many *want* to have them. The *artificial* Wants of Mankind thus become more numerous than the *natural*; and, as *Poor Dick* says, *For one poor Person, there are an hundred indigent*. By these, and other Extravagancies, the Genteel are reduced to Poverty, and forced to borrow of those whom they formerly despised, but who through In-

*dustry and Frugality* have maintained their Standing; in which Case it appears plainly, that a *Ploughman on his Legs is higher than a Gentleman on his Knees*, as *Poor Richard* says. Perhaps they have had a small Estate left them which they knew not the Getting of; they think *'tis Day, and will never be Night*; that a little to be spent out of so much, is not worth minding; (*a Child and a Fool*, as *Poor Richard* says, *imagine Twenty Shillings and Twenty Years can never be spent*) but, *always taking out of, the Meat-tub, and never putting in, soon comes to the Bottom*; then, as *Poor Dick* says, *When the Well's dry, they know the Worth of Water*. But this they might have known before, if they had taken his Advice; *If you would know the Value of Money, go and try to borrow some*; for, *he that goes a borrowing goes a sorrowing*; and indeed so does he that lends to such People, when he goes to get it in again.—*Poor Dick* farther advises, and says,

*Fond Pride of Dress is sure a very Curse;  
E'er Fancy you consult, consult your Purse.*

And again, *Pride is as loud a Beggar as Want, and a great deal more saucy*. When you have bought one fine Thing you must buy ten more, that your Appearance may be all of a Piece; but *Poor Dick* says, *'Tis easier to suppress the first Desire, than to satisfy all that follow it*. And 'tis as truly Folly for the Poor to ape the Rich, as for the Frog to swell, in order to equal the Ox.

*Great Estates may venture more,  
But little Boats should keep near Shore.*

'Tis however a Folly soon punished; for *Pride that dines on Vanity sups on Contempt*, as *Poor Richard* says. And in another Place, *Pride breakfasted with Plenty, dined with Poverty, and supped with Infamy*. And after all, of what Use is this *Pride of Appearance*, for which so much is risked, so much is suffered? It cannot promote Health, or ease Pain; it makes no Increase of Merit in the Person, it creates Envy, it hastens Misfortune.

*What is a Butterfly? At best  
He's but a Caterpillar drest.  
The gaudy Fop's his Picture just,*

as *Poor Richard* says.

<sup>37</sup> Fortunate is he who is made wary by the mistakes of others.

But what Madness must it be to *run in Debt* for these Superfluities! We are offered, by the Terms of this Vendue, *Six Months Credit*; and that perhaps has induced some of us to attend it, because we cannot spare the ready Money, and hope now to be fine without it. But, ah, think what you do when you run in Debt; *You give to another, Power over your Liberty*. If you cannot pay at the Time, you will be ashamed to see your Creditor; you will be in Fear when you speak to him; you will make poor pitiful sneaking Excuses, and by Degrees come to lose your Veracity, and sink into base downright lying; for, as *Poor Richard* says, *The second Vice is Lying, the first is running in Debt*. And again, to the same Purpose, *Lying rides upon Debt's Back*. Whereas a freeborn *Englishman* ought not to be ashamed or afraid to see or speak to any Man living. But Poverty often deprives a Man of all Spirit and Virtue: *'Tis hard for an empty Bag to stand upright*, as *Poor Richard* truly says. What would you think of that Prince, or that Government, who should issue an Edict forbidding you to dress like a Gentleman or a Gentlewoman, on Pain of Imprisonment or Servitude? Would you not say, that you are free, have a Right to dress as you please, and that such an Edict would be a Breach of your Privileges, and such a Government tyrannical? And yet you are about to put yourself under that Tyranny when you run in Debt for such Dress! Your Creditor has Authority at his Pleasure to deprive you of your Liberty, by confining you in Goal [*sic*] for Life, or to sell you for a Servant, if you should not be able to pay him! When you have got your Bargain, you may, perhaps, think little of Payment; but *Creditors, Poor Richard* tells us, *have better Memories than Debtors*; and in another Place says, *Creditors are a superstitious Sect, great Observers of set Days and Times*. The Day comes round before you are aware, and the Demand is made before you are prepared to satisfy it. Or if you bear your Debt in Mind, the Term which at first seemed so long, will, as it lessens, appear extremely short. *Time* will seem to have added Wings to Heels as well as Shoulders. *Those have a short Lent*, saith *Poor Richard*, *who owe Money to be paid at Easter*. Then since, as he says, *The Borrower is a Slave to the Lender, and the Debtor to the Creditor*, disdain the Chain, preserve your Freedom; and maintain your Independency: *Be industrious and free; be frugal and free*. At pres-

ent, perhaps, you may think yourself in thriving Circumstances, and that you can bear a little Extravagance [*sic*] without Injury;

*For Age and Want, save while you may;  
No Morning Sun lasts a whole Day,*

as *Poor Richard* says—Gain may be temporary and uncertain, but ever while you live, Expence is constant and certain; and *'tis easier to build two Chimnies than to keep one in Fuel*, as *Poor Richard* says. So rather go to Bed supperless than rise in Debt.

*Get what you can, and what you get hold;  
'Tis the Stone that will turn all your Lead into Gold,*

as *Poor Richard* says. And when you have got the Philosopher's Stone, sure you will no longer complain of bad Times, or the Difficulty of paying Taxes.

This Doctrine, my Friends, is *Reason* and *Wisdom*; but after all, do not depend too much upon your own *Industry*, and *Frugality*, and *Prudence*, though excellent Things, for they may all be blasted without the Blessing of Heaven; and therefore ask that Blessing humbly, and be not uncharitable to those that at present seem to want it, but comfort and help them. Remember *Job* suffered, and was afterwards prosperous.

And now to conclude, *Experience keeps a dear School, but Fools will learn in no other, and scarce in that*; for it is true, *we may give Advice, but we cannot give Conduct*, as *Poor Richard* says: However, remember this, *They that won't be counselled, can't be helped*, as *Poor Richard* says: And farther, *That if you will not hear Reason, she'll surely rap your Knuckles*.

Thus the old Gentleman ended his Harangue. The People heard it, and approved the Doctrine and immediately practised the contrary, just as if it had been a common Sermon; for the Vendue opened, and they began to buy extravagantly, notwithstanding all his Cautions, and their own Fear of Taxes.—I found the good Man had thoroughly studied my Almanacks, and digested all I had dropt on those Topicks during the Course of Five-and-twenty Years. The frequent Mention he made of me must have tired any one else, but my Vanity was wonderfully delighted with it, though I was conscious that not a tenth Part of the Wisdom was my own which he ascribed to me, but rather the *Gleanings* I had made

of the Sense of all Ages and Nations. However, I resolved to be the better for the Echo of it; and though I had at first determined to buy Stuff for a new Coat, I went away resolved to wear my old One a little longer. *Reader*, if thou wilt do the same, thy Profit will be as great as mine.

*I am, as ever,*

*Thine to serve thee,*

July 7, 1757.

Richard Saunders.

### *An Edict by the King of Prussia*<sup>38</sup>

Dantzic, Sept. 5, [1773].

We have long wondered here at the supineness of the English nation, under the Prussian impositions upon its trade entering our port. We did not, till lately, know the claims, ancient and modern, that hang over that nation; and therefore could not suspect that it might submit to those impositions from a sense of duty or from principles of equity. The following Edict, just made publick, may, if serious, throw some light upon this matter.

"FREDERIC, by the grace of God, King of Prussia, &c. &c. &c., to all present and to come, (*à tous présens et à venir*,) Health. The peace now enjoyed throughout our dominions, having afforded us leisure to apply ourselves to the regulation of commerce, the improvement of our finances, and at the same time the easing our domestic subjects in their taxes: For these causes, and other good considerations us thereunto moving, we hereby make known, that, after having deliberated these affairs in our council, present our dear brothers, and other great officers of the state, members of the same, we, of our certain knowledge, full power, and authority royal, have made and issued this present Edict, viz.

"Whereas it is well known to all the world, that the first German settlements made in the Island of Britain, were by colonics of people, subject to our renowned ducal ancestors, and drawn from their dominions, under the conduct of Hengist, Horsa, Hella, Uff, Cerdicus, Ida,<sup>39</sup> and others; and that the said colonies have flourished under the protection of

our august house for ages past; have never been emancipated therefrom; and yet have hitherto yielded little profit to the same: And whereas we ourself have in the last war fought for and defended the said colonies, against the power of France, and thereby enabled them to make conquests from the said power in America, for which we have not yet received adequate compensation: And whereas it is just and expedient that a revenue should be raised from the said colonies in Britain, towards our indemnification; and that those who are descendants of our ancient subjects, and thence still owe us due obedience, should contribute to the replenishing of our royal coffers as they must have done, had their ancestors remained in the territories now to us appertaining: We do therefore hereby ordain and command, that, from and after the date of these presents, there shall be levied and paid to our officers of the *customs*, on all goods, wares, and merchandizes, and on all grain and other produce of the earth, exported from the said Island of Britain, and on all goods of whatever kind imported into the same, a duty of four and a half per cent *ad valorem*,<sup>40</sup> for the use of us and our successors. And that the said duty may more effectually be collected, we do hereby ordain, that all ships or vessels bound from Great Britain to any other part of the world, or from any other part of the world to Great Britain, shall in their respective voyages touch at our port of Königsberg,<sup>41</sup> there to be unladen, searched, and charged with the said duties.

"And whereas there hath been from time to time discovered in the said island of Great Britain, by our colonists there, many mines or beds of iron-stone; and sundry subjects, of our ancient dominion, skilful in converting the said stone into metal, have in time past transported themselves thither, carrying with them and communicating that art; and the inhabitants of the said island, presuming that they had a natural right to make the best use they could of the natural productions of their country for their own benefit, have not only built furnaces for smelting the said stone into iron, but have erected plating-forges, slitting-mills, and steel-furnaces, for the more convenient manufacturing of the same; thereby endangering a diminution of the said manufacture in our ancient dominion;—we do therefore hereby farther ordain, that, from and after the date hereof, no mill

<sup>38</sup> This *jeu d'esprit*, appearing first in the *Gentleman's Magazine* for October, 1773, is a fine illustration of Franklin's use of Swiftian hoax and irony. Franklin, as he explains in his letter to William Franklin (see pp. 143-44), has the pleasure of observing that it made "a fair hit" among the British reading public.  
<sup>39</sup> Early Germanic leaders who took part in the conquest of Britain.

<sup>40</sup> "According to value."

<sup>41</sup> That is, Königsberg, in East Prussia.

or other engine for slitting or rolling of iron, or any plating-forge to work with a tilt-hammer, or any furnace for making steel, shall be erected or continued in the said island of Great Britain: And the Lord Lieutenant of every county in the said island is hereby commanded, on information of any such erection within his county, to order and by force to cause the same to be abated and destroyed; as he shall answer the neglect thereof to us at his peril. But we are nevertheless graciously pleased to permit 10 the inhabitants of the said island to transport their iron into Prussia, there to be manufactured, and to them returned; they paying our Prussian subjects for the workmanship, with all the costs of commission, freight, and risk, coming and returning; any thing herein contained to the contrary notwithstanding.

"We do not, however, think fit to extend this our indulgence to the article of wool; but, meaning to encourage, not only the manufacturing of woollen cloth, but also the raising of wool, in our ancient 20 dominions, and to prevent both, as much as may be, in our said island, we do hereby absolutely forbid the transportation of wool from thence, even to the mother country, Prussia; and that those islanders may be farther and more effectually restrained in making any advantage of their own wool in the way of manufacture, we command that none shall be carried out of one county into another; nor shall any worsted, bay, or woollen yarn, cloth, says, bays, 30 kerseys, serges, frizes, druggets, cloth-serges, shalloons, or any other drapery stuffs, or woollen manufactures whatsoever, made up or mixed with wool in any of the said counties, be carried into any other county, or be water-borne even across the smallest river or creek, on penalty of forfeiture of the same, together with the boats, carriages, horses, &c., that shall be employed in removing them. Nevertheless, our loving subjects there are hereby permitted (if they think proper) to use all their wool as manure for the improvement of their lands.

"And whereas the art and mystery of making hats hath arrived at great perfection in Prussia, and the making of hats by our remoter subjects ought to be as much as possible restrained: And forasmuch as the islanders before mentioned, being in possession of wool, beaver and other furs, have presumptuously conceived they had a right to make some advantage thereof, by manufacturing the same into hats, to the prejudice of our domestic manufacture: We do there-

fore hereby strictly command and ordain, that no hats or felts whatsoever, dyed or undyed, finished or unfinished, shall be loaded or put into or upon any vessel, cart, carriage, or horse, to be transported or conveyed out of one county in the said island into another county, or to any other place whatsoever, by any person or persons whatsoever; on pain of forfeiting the same, with a penalty of five hundred pounds sterling for every offence. Nor shall any hat-maker, in any of the said counties, employ more than two apprentices, on penalty of five pounds sterling per month; we intending hereby, that such hat-makers, being so restrained, both in the production and sale of their commodity, may find no advantage in continuing their business. But, lest the said islanders should suffer inconveniency by the want of hats, we are farther graciously pleased to permit them to send their beaver furs to Prussia; and we also permit hats made thereof to be exported from Prussia to Britain; the people thus favoured to pay all costs and charges of manufacturing, interest, commission to our merchants, insurance and freight going and returning, as in the case of iron.

"And, lastly, being willing farther to favour our said colonies in Britain, we do hereby also ordain and command, that all the *thieves*, highway and street robbers, house-breakers, forgerers, murderers, s—d—tes, and villains of every denomination, who have forfeited their lives to the law in Prussia; but whom we, in our great clemency, do not think fit here to hang, shall be emptied out of our gaols into the said island of Great Britain, for the better peopling of that country.

"We flatter ourselves, that these our royal regulations and commands will be thought just and reasonable by our much-favoured colonists in England; the said regulations being copied from their statutes of 10 and 11 William III. c. 10, 5 Geo. II. c. 22, 23, Geo. II. c. 29, 4 Geo. I. c. 11, and from other 40 equitable laws made by their parliaments; or from instructions given by their Princes; or from resolutions of both Houses, entered into for the good government of their own colonies in *Ireland and America*.

"And all persons in the said island are hereby cautioned not to oppose in any wise the execution of this our Edict, or any part thereof, such opposition being high treason; of which all who are suspected shall be transported in fetters from Britain to Prussia,

there to be tried and executed according to the Prussian law.

"Such is our pleasure.

"Given at Potsdam, this twenty-fifth day of the month of August, one thousand seven hundred and seventy-three, and in the thirty-third year of our reign.

"By the King, in his Council.

"Rechtsmaessig,<sup>42</sup> Sec."

Some take this Edict to be merely one of the King's *Jeux d'Esprit*:<sup>43</sup> others suppose it serious, and that he means a quarrel with England; but all here think the assertion it concludes with, "that these regulations are copied from acts of the English parliament respecting their colonics," a very injurious one; it being impossible to believe, that a people distinguished for their love of liberty, a nation so wise, so liberal in its sentiments, so just and equitable towards its neighbours, should, from mean and injudicious views of petty immediate profit, treat its own children in a manner so arbitrary and tyrannical!

### *Rules by Which a Great Empire May Be Reduced to a Small One*<sup>44</sup>

PRESENTED TO A LATE MINISTER, WHEN HE ENTERED UPON HIS ADMINISTRATION

An ancient Sage boasted, that, tho' he could not fiddle, he knew how to make a *great city* of a *little one*. The science that I, a modern simpleton, am about to communicate, is the very reverse.

I address myself to all ministers who have the management of extensive dominions, which from their very greatness are become troublesome to govern, because the multiplicity of their affairs leaves no time for *fiddling*.

I. In the first place, gentlemen, you are to consider, that a great empire, like a great cake, is most easily diminished at the edges. Turn your attention, therefore, first to your *remotest* provinces; that, as you get rid of them, the next may follow in order.

II. That the possibility of this separation may always exist, take special care the provinces are never incorporated with the mother country; that they do not enjoy the same common rights, the same privileges in commerce; and that they are governed by

<sup>42</sup> German for "legal."

<sup>43</sup> Literally, play of mind; i.e., a sally giving play to cleverness or wit.

<sup>44</sup> Published in the *Gentleman's Magazine*, September, 1773.

*severer* laws, all of your *enacting*, without allowing them any share in the choice of the legislators. By carefully making and preserving such distinctions, you will (to keep to my simile of the cake) act like a wise ginger-bread-baker, who, to facilitate a division, cuts his dough half through in those places where, when baked, he would have it *broken to pieces*.

III. Those remote provinces have perhaps been acquired, purchased, or conquered, at the *sole expence* of the settlers, or their ancestors, without the aid of the mother country. If this should happen to increase her *strength*, by their growing numbers, ready to join in her wars; her *commerce*, by their growing demand for her manufactures; or her *naval power*, by greater employment for her ships and seamen, they may probably suppose some merit in this, and that it entitles them to some favour; you are therefore to *forget it all, or resent it*, as if they had done you injury. If they happen to be zealous whigs, friends of liberty, nurtured in revolution<sup>45</sup> principles, *remember all that* to their prejudice, and resolve to punish it; for such principles, after a revolution is thoroughly established, are of *no more use*; they are even *odious* and *abominable*.

IV. However peaceably your colonies have submitted to your government, shewn their affection to your interests, and patiently borne their grievances; you are to *suppose* them always inclined to revolt, and treat them accordingly. Quarter troops among them, who by their insolence may *provoke* the rising of mobs, and by their bullets and bayonets *suppress* them. By this means, like the husband who uses his wife ill *from suspicion*, you may in time convert your *suspensions* into *realities*.

V. Remote provinces must have *Governors* and *Judges*, to represent the Royal Person, and execute everywhere the delegated parts of his office and authority. You ministers know, that much of the strength of government depends on the *opinion* of the people; and much of that opinion on the *choice of rulers* placed immediately over them. If you send them wise and good men for governors, who study the interest of the colonists, and advance their prosperity, they will think their King wise and good, and that he wishes the welfare of his subjects. If you send them learned and upright men for Judges, they will think him a lover of justice. This may attach

<sup>45</sup> A reference to the Whig leadership in the Glorious Revolution of 1688.

your provinces more to his government. You are therefore to be careful whom you recommend for those offices. If you can find prodigals, who have ruined their fortunes, broken gamesters or stock-jobbers, these may do well as *governors*; for they will probably be rapacious, and provoke the people by their extortions. Wrangling proctors and pettifogging lawyers, too, are not amiss; for they will be for ever disputing and quarrelling with their little parliaments. If withal they should be ignorant, wrong-headed, and insolent, so much the better. Attornies' clerks and Newgate solicitors <sup>46</sup> will do for *Chief Justices*, especially if they hold their places *during your pleasure*; and all will contribute to impress those ideas of your government, that are proper for a people you would wish to renounce it.

VI. To confirm these impressions, and strike them deeper, whenever the injured come to the capital with complaints of maladministration, oppression, or injustice, punish such suitors with long delay, enormous expence, and a final judgment in favour of the oppressor. This will have an admirable effect every way. The trouble of future complaints will be prevented, and Governors and Judges will be encouraged to farther acts of oppression and injustice; and thence the people may become more disaffected, and at length desperate.

VII. When such Governors have crammed their coffers, and made themselves so odious to the people that they can no longer remain among them, with safety to their persons, *recall and reward* them with pensions. You may make them *baronets* <sup>47</sup> too, if that respectable order should not think fit to resent it. All will contribute to encourage new governors in the same practice, and make the supreme government, *detestable*.

VIII. If, when you are engaged in war, your colonies should vie in liberal aids of men and money against the common enemy, upon your simple requisition, and give far beyond their abilities, reflect that <sup>48</sup> a penny taken from them by your power is more honourable to you, than a pound presented by their benevolence; despise therefore their voluntary grants, and resolve to harass them with novel taxes. They will probably complain to your parliaments, that they are taxed by a body in which they have no repre-

sentative, and that this is contrary to common right. They will petition for redress. Let the Parliaments flout their claims, reject their petitions, refuse even to suffer the reading of them, and treat the petitioners with the utmost contempt. Nothing can have a better effect in producing the alienation proposed; for though many can forgive injuries, *none ever forgave contempt*.

IX. In laying these taxes, never regard the heavy burthens those remote people already undergo, in defending their own frontiers, supporting their own provincial governments, making new roads, building bridges, churches, and other public edifices, which in old countries have been done to your hands by your ancestors, but which occasion constant calls and demands on the purses of a new people. Forget the *restraints* you lay on their trade for *your own* benefit, and the advantage a *monopoly* of this trade gives your exacting merchants. Think nothing of the wealth those merchants and your manufacturers acquire by the colony commerce; their increased ability thereby to pay taxes at home; their accumulating, in the price of their commodities, most of those taxes, and so levying them from their consuming customers; all this, and the employment and support of thousands of your poor by the colonists, you are *intirely to forget*. But remember to make your arbitrary tax more grievous to your provinces, by public declarations importing that your power of taxing them has *no limits*; so that when you take from them without their consent one shilling in the pound, you have a clear right to the other nineteen. This will probably weaken every idea of *security in their property*, and convince them, that under such a government they *have nothing they can call their own*; which can scarce fail of producing the *happiest consequences*!

X. Possibly, indeed, some of them might still comfort themselves, and say, "Though we have no property, we have yet *something* left that is valuable; we have constitutional *liberty*, both of person and of conscience. This King, these Lords, and these Commons, who it seems are too remote from us to know us, and feel for us, cannot take from us our *Habeas Corpus* <sup>48</sup> right, or our right of trial *by a jury of our neighbours*; they cannot deprive us of the exercise of our religion, alter our ecclesiastical constitution, and compel us to be Papists, if they please,

<sup>48</sup> Any of several common-law writs having for their object to bring the accused before a court or judge.

<sup>46</sup> Shyster lawyers; of low rank.

<sup>47</sup> Governor Francis Bernard (1714-1779), by whose recommendation British troops had been quartered in Boston, was made a baronet upon his recall from Massachusetts.

or Mahometans." To annihilate this comfort, begin by laws to perplex their commerce with infinite regulations, impossible to be remembered and observed; ordain seizures of their property for every failure; take away the trial of such property by Jury, and give it to arbitrary Judges of your own appointing, and of the lowest characters in the country, whose salaries and emoluments are to arise out of the duties or condemnations, and whose appointments are *during pleasure*. Then let there be a formal declaration of 10 both Houses, that opposition to your edicts is *treason*, and that any person suspected of treason in the provinces may, according to some obsolete law, be seized and sent to the metropolis of the empire for trial; and pass an act, that those there charged with certain other offences, shall be sent away in chains from their friends and country to be tried in the same manner for felony. Then erect a new Court of Inquisition among them, accompanied by an armed force, with instructions to transport all such suspected persons; 20 to be ruined by the expence, if they bring over evidences to prove their innocence, or be found guilty and hanged, if they cannot afford it. And, lest the people should think you cannot possibly go any farther, pass another solemn declaratory act,<sup>49</sup> "that King, Lords, Commons had, hath, and of right ought to have, full power and authority to make statutes of sufficient force and validity to bind the unrepresented provinces IN ALL CASES WHATSOEVER." This will include *spiritual* with temporal, and, taken together, 30 must operate wonderfully to your purpose; by convincing them, that they are at present under a power something like that spoken of in the scriptures, which can not only *kill their bodies*, but *damn their souls* to all eternity, by compelling them, if it pleases, to *worship the Devil*.

XI. To make your taxes more odious, and more likely to procure resistance, send from the capital a board of officers to superintend the collection, composed of the most *indiscreet, ill-bred, and insolent* 40 you can find. Let these have large salaries out of the extorted revenue, and live in open, grating luxury upon the sweat and blood of the industrious; whom they are to worry continually with groundless and expensive prosecution before the abovementioned arbitrary revenue Judges; *all at the cost of the party prosecuted*, tho' acquitted, because *the King is to pay*

*no costs*. Let these men, *by your order*, be exempted from all the common taxes and burthens of the province, though they and their property are protected by its laws. If any revenue officers are *suspected* of the least tenderness for the people, discard them. If others are justly complained of, protect and reward them. If any of the under officers behave so as to provoke the people to drub them, promote those to better offices: this will encourage others to procure for themselves such profitable drubbings, by multiplying and enlarging such provocations, and *all will work towards the end you aim at*.

XII. Another way to make your tax odious, is to misapply the produce of it. If it was originally appropriated for the *defence* of the provinces, the better support of government, and the administration of justice, where it may be *necessary*, then apply none of it to that *defence*, but bestow it where it is *not necessary*, in augmented salaries or pensions to every governor, who has distinguished himself by his enmity to the people, and by calumniating them to their sovereign. This will make them pay it more unwillingly, and be more apt to quarrel with those that collect it and those that imposed it, who will quarrel again with them, and all shall contribute to your *main purpose*, of making them *weary of your government*.

XIII. If the people of any province have been accustomed to support their own Governors and Judges to satisfaction, you are to apprehend that such Governors and Judges may be thereby influenced to treat the people kindly, and to do them justice. This is another reason for applying part of that revenue in larger salaries to such Governors and Judges, given, as their commissions are, *during your pleasure* only; forbidding them to take any salaries from their provinces; that thus the people may no longer hope any kindness from their Governors, or (in Crown cases)<sup>50</sup> any justice from their Judges. And, as the money thus misapplied in one province is extorted from all, probably *all will resent the misapplication*.

XIV. If the parliaments of your provinces should dare to claim rights, or complain of your administration, order them to be harrassed with *repeated dissolutions*. If the same men are continually returned by new elections, adjourn their meetings to some country village, where they cannot be accommodated, and

<sup>49</sup> The Declaratory Act of 1766 was passed immediately after the Stamp Act was repealed.

<sup>50</sup> Equity cases in law, which formerly were appealed directly to the king.

there keep them *during pleasure*; for this, you know, is your *PREROGATIVE*; and an excellent one it is, as you may manage it to promote discontents among the people, diminish their respect, and *increase their disaffection*.

XV. Convert the brave, honest officers of your navy into pimping tide-waiters and colony officers of the *customs*. Let those, who in time of war fought gallantly in defence of the commerce of their countrymen, in peace be taught to prey upon it. Let them learn to be corrupted by great and real smugglers; but (to shew their diligence) scour with armed boats every bay, harbour, river, creek, cove, or nook throughout the coast of your colonies; stop and detain every coaster, every wood-boat, every fisherman, tumble their cargoes and even their ballast inside out and upside down; and, if a penn'orth of pins is found unentered, let the whole be seized and confiscated. Thus shall the trade of your colonists suffer more from their friends in time of peace, than it did from their enemies in war. Then let these boat crews land upon every farm in their way, rob the orchards, steal the pigs and the poultry, and insult the inhabitants. If the injured and exasperated farmers, unable to procure other justice, should attack the aggressors, drub them, and burn their boats;<sup>51</sup> you are to call this *high treason and rebellion*, order fleets and armies into their country, and threaten to carry all the offenders three thousand miles to be hanged, drawn, and quartered. *O! this will work admirably!*<sup>30</sup>

XVI. If you are told of discontents in your colonies, never believe that they are general, or that you have given occasion for them; therefore do not think of applying any remedy, or of changing any offensive measure. Redress no grievance, lest they should be encouraged to demand the redress of some other grievance. Grant no request that is just and reasonable, lest they should make another that is unreasonable. Take all your informations of the state of the colonies from your Governors and officers in enmity<sup>40</sup> with them. Encourage and reward these *leasing-makers*; secrete their lying accusations, lest they should be confuted; but act upon them as the clearest evidence; and believe nothing you hear from the friends of the people: suppose all *their* complaints to be invented and promoted by a few factious demagogues, whom if you could catch and hang, all would

<sup>51</sup> A reference to the burning of the schooner *Gaspée*, June 10, 1772, which called forth the threats mentioned.

be quiet. Catch and hang a few of them accordingly; and the *blood of the Martyrs* shall *work miracles* in favour of your purpose.

XVII. If you see *rival nations* rejoicing at the prospect of your disunion with your provinces, and endeavouring to promote it; if they translate, publish, and applaud all the complaints of your discontented colonists, at the same time privately stimulating you to severer measures, let not that *alarm* or offend you. Why should it, since you all mean *the same thing*?

XVIII. If any colony should at their own charge erect a fortress<sup>52</sup> to secure their port against the fleets of a foreign enemy, get your Governor to betray that fortress into your hands. Never think of paying what it cost the country, for that would look, at least, like some regard for justice; but turn it into a citadel to awe the inhabitants and curb their commerce. If they should have lodged in such fortress the very arms they bought and used to aid you in your conquests, seize them all; it will provoke like *ingratitude* added to *robbery*. One admirable effect of these operations will be, to discourage every other colony from erecting such defences, and so your enemies may more easily invade them; to the great disgrace of your government, and of course *the furtherance of your project*.

XIX. Send armies into their country under pretence of protecting the inhabitants; but, instead of garrisoning the forts on their frontiers with those troops, to prevent incursions, demolish those forts, and order the troops into the heart of the country, that the savages may be encouraged to attack the frontiers, and that the troops may be protected by the inhabitants. This will seem to proceed from your ill will or your ignorance, and contribute farther to produce and strengthen an opinion among them, *that you are no longer fit to govern them*.

XX. Lastly, invest the General of your army in the provinces, with great and unconstitutional powers, and free him from the controul of even your own Civil Governors. Let him have troops now under his command, with all the fortresses in his possession; and who knows but (like some provincial Generals in the Roman empire, and encouraged by the universal discontent you have produced) he may take

<sup>52</sup> Castle William in the harbor of Boston, delivered to the British by order of Governor Thomas Hutchinson (1711-1780), in September, 1770.

it into his head to set up for himself? If he should, and you have carefully practised these few *excellent rules* of mine, take my word for it, all the provinces will immediately join him; and you will that day (if you have not done it sooner) get rid of the trouble of governing them, and all the *plagues* attending their *commerce* and connection from henceforth and for ever.

Q. E. D.<sup>53</sup>

### To William Franklin

London, October 6, 1773.

Dear Son,

I wrote to you the 1st of last month, since which I have received yours of July 29, from New York. I know not what letters of mine Governor H[utchinson] could mean, as advising the people to insist on their independency. But whatever they were, I suppose he has sent copies of them hither, having heard 20 some whisperings about them. I shall however, be able at any time to justify every thing I have written; the purport being uniformly this, that they should carefully avoid all tumults and every violent measure, and content themselves with verbally keeping up their claims, and holding forth their rights whenever occasion requires; secure, that, from the growing importance of America, those claims will ere long be attended to and acknowledged.

From a long and thorough consideration of the 30 subject, I am indeed of opinion, that the parliament has no right to make any law whatever, binding on the colonies; that the king, and not the king, lords, and commons collectively, is their sovereign; and that the king, with their respective parliaments, is their only legislator. I know your sentiments differ from mine on these subjects. You are a thorough government man, which I do not wonder at, nor do I aim at converting you. I only wish you to act uprightly and steadily, avoiding that duplicity, which in Hutch- 40 inson, adds contempt to indignation. If you can promote the prosperity of your people, and leave them happier than you found them, whatever your political principles are, your memory will be honoured.

I have written two pieces here lately for the *Public Advertiser*, on American affairs, designed to expose the conduct of this country towards the colonies in a

short, comprehensive, and striking view, and stated, therefore, in out-of-the-way forms, as most likely to take the general attention. The first was called "*Rules by which a Great Empire may be reduced to a small one*;" the second, "*An Edict of the King of Prussia*." I sent you one of the first, but could not get enough of the second to spare you one, though my clerk went the next morning to the printer's, and wherever they were sold. They were all gone but two. In my 10 own mind I preferred the first, as a composition for the quantity and variety of the matter contained, and a kind of spirited ending of each paragraph. But I find that others here generally prefer the second.

I am not suspected as the author, except by one or two friends; and have heard the latter spoken of in the highest terms, as the keenest and severest piece that has appeared here for a long time. Lord Mansfield, I hear, said of it, that it was *very ABLE and very ARTFUL indeed*; and would do mischief by giving here a bad impression of the measures of government; and in the colonies, by encouraging them in their contumacy. It is reprinted in the *Chronicle*, where you will see it, but stripped of all the capitalizing and italicizing, that intimate the allusions and mark the emphasis of written discourses, to bring them as near as possible to those spoken: printing such a piece all in one even small character, seems to be like repeating one of Whitefield's sermons in the monotony of a schoolboy.

What made it the more noticed here was, that people in reading it were, as the phrase is, *taken in*, till they had got half through it, and imagined it a real edict, to which mistake I suppose the King of Prussia's *character* must have contributed. I was down at Lord Le Despencer's when the post brought that day's papers. Mr. Whitehead was there, too, (Paul Whitehead, the author of "*Manners*,") who runs early through all the papers, and tells the company what he finds remarkable. He had them in another room, and we were chatting in the breakfast parlour, when he came running in to us, out of breath, with the paper in his hand. Here! says he, here's news for ye! *Here's the King of Prussia, claiming a right to this kingdom!* All stared, and I as much as anybody; and he went on to read it. When he had read two or three paragraphs, a gentleman present said, *Damn his impudence, I dare say, we shall hear by next post that he is upon his march with one hundred thousand men to back this.* Whitehead, who is very

<sup>53</sup> *Quod Erat Demonstrandum*, "which was to be demonstrated." The usual conclusion to a problem in geometry.

shrewd, soon after began to smoke it, and looking in my face said, *I'll be hanged if this is not some of your American jokes upon us.* The reading went on, and ended with abundance of laughing, and a general verdict that it was a fair hit: and the piece was cut out of the paper and preserved in my Lord's collection.

I do not wonder that Hutchinson should be dejected. It must be an uncomfortable thing to live among people who he is conscious universally detest <sup>10</sup> him. Yet I fancy he will not have leave to come home, both because they know not well what to do with him, and because they do not very well like his conduct. I am ever your affectionate father,

B. Franklin.

### *To William Strahan* <sup>54</sup>

Philad<sup>a</sup> July 5, 1775.

Mr. Strahan,

You are a Member of Parliament, and one of that Majority which has doomed my Country to Destruction.—You have begun to burn our Towns, and murder our People.—Look upon your Hands! They are stained with the Blood of your Relations!—You and I were long Friends:—You are now my Enemy,—and **I am**

Yours,

B. Franklin.

### *To Joseph Priestley* <sup>55</sup>

Philadelphia, 3 October, 1775.

Dear Sir:—I am set out to-morrow for the camp, and, having just heard of this opportunity, can only write a line to say that I am well and hearty. Tell our dear good friend [Dr. Price],<sup>56</sup> who sometimes has his doubts and despondencies about our firmness, that America is determined and unanimous; a very few Tories and placement excepted, who will prob-<sup>40</sup> ably soon export themselves. Britain, at the expense of three millions, has killed one hundred and fifty Yankees this campaign, which is twenty thousand

<sup>54</sup> Franklin's writing but never sending this letter illustrates his prudence even in matters that aroused his strongest feelings.

<sup>55</sup> Priestley (1733–1804), famous English clergyman, chemist, physicist, and intimate friend of Franklin's, was a skillful propagandist for the American cause.

<sup>56</sup> Dr. Richard Price (1723–1791), like Priestley, was a clever pamphleteer and one of the intellectual radicals in England who espoused revolutionary doctrines.

pounds a head; and at Bunker's Hill she gained a mile of ground, half of which she lost again by our taking post on Ploughed Hill. During the same time sixty thousand children have been born in America. From these *data* his mathematical head will easily calculate the time and expense necessary to kill us all, and conquer our whole territory. My sincere respects to —, and to the club of honest Whigs at —. Adieu. I am ever your most affectionately,

B. Franklin.

### *To a Friend in England* <sup>57</sup>

Philadelphia, Oct. 3, 1775.

Dear Sir,

I wish as ardently as you can do for peace, and should rejoice exceedingly in cooperating with you to that end. But every ship from Britain brings some intelligence of new measures that tend more and more <sup>20</sup> to exasperate; and it seems to be, that until you have found by dear experience the reducing us by force impracticable, you will think of nothing fair and reasonable.

We have as yet resolved only on defensive measures. If you would recall your forces and stay at home, we should meditate nothing to injure you. A little time so given for cooling on both sides would have excellent effects. But you will goad and provoke us. You despise us too much; and you are insensible of <sup>30</sup> the Italian adage, that there is no *little enemy*. I am persuaded that the body of the British people are our friends; but they are changable, and by your lying gazettes may soon be made our enemies. Our respect for them will proportionably diminish, and I see clearly we are on the high road to mutual Enmity[,] hatred and detestation. A separation of course will be inevitable. 'Tis a million of pities so fair a plan as we have hitherto been engaged in, for increasing strength and empire with *public felicity*, should be destroyed by the mangling hands of a few blundering ministers. It will not be destroyed; God will protect and prosper it, you will only exclude yourselves from any share in it. We hear, that more ships and troops are coming out. We know, that you may do us a great deal of mischief, and are determined to bear it patiently as

<sup>57</sup> It is generally held that this friend was David Hartley (1732–1813), son of the English physicist and philosopher by the same name. Franklin had met the younger Hartley about 1759. He opposed the war with the colonies. He and Franklin drew up the Peace Treaty of 1783.

long as we can. But, if you flatter yourselves with beating us into submission, you know neither the people nor the country. The Congress are still sitting, and will wait the result of their *last* petition. Yours, &c.

B. Franklin.

*The Sale of the Hessians*<sup>58</sup>

*From the Count de Schaumbergh to the Baron  
Hohendorf, Commanding the Hessian  
Troops in America*

Rome, February 18, 1777.

Monsieur Le Baron:—

On my return from Naples, I received at Rome your letter of the 27th December of last year. I have learned with unspeakable pleasure the courage our troops exhibited at Trenton, and you cannot imagine my joy on being told that of the 1,950 Hessians engaged in the fight, but 345 escaped. There were just 1,605 men killed, and I cannot sufficiently commend your prudence in sending an exact list of the dead to my minister in London. This precaution was the more necessary, as the report sent to the English ministry does not give but 1,455 dead. This would make 483,450 florins instead of 643,500 which I am entitled to demand under our convention. You will comprehend the prejudice which such an error would work in my finances; and I do not doubt you will take the necessary pains to prove that Lord North's list is false and yours correct.

The court of London objects that there were a hundred wounded who ought not to be included in the list, nor paid for as dead; but I trust you will not overlook my instructions to you on quitting Cassel, and that you will not have tried by human succor to recall the life of the unfortunates whose days could not be lengthened but by the loss of a leg or an arm. That would be making them a pernicious present, and I am sure they would rather die than live in a condition no longer fit for my service. I do not mean by this that you should assassinate them; we should be humane, my dear Baron, but you may insinuate to the surgeons with entire propriety that a crippled man is a reproach to their profession, and that there

is no wiser course than to let every one of them die when he ceases to be fit to fight.

I am about to send to you some new recruits. Don't economize them. Remember glory before all things. Glory is true wealth. There is nothing degrades the soldier like the love of money. He must care only for honour and reputation, but this reputation must be acquired in the midst of dangers. A battle gained without costing the conqueror any blood is an inglorious success, while the conquered cover themselves with glory by perishing with their arms in their hands. Do you remember that of the 300 Lacedæmonians who defended the defile of Thermopylæ, not one returned? How happy should I be could I say the same of my brave Hessians!

It is true that their king, Leonidas, perished with them: but things have changed, and it is no longer the custom for princes of the empire to go and fight in America for a cause with which they have no concern. And besides, to whom should they pay the thirty guineas per man if I did not stay in Europe to receive them? Then, it is necessary also that I be ready to send recruits to replace the men you lose. For this purpose I must return to Hesse. It is true, grown men are becoming scarce there, but I will send you boys. Besides, the scarcer the commodity the higher the price. I am assured that the women and little girls have begun to till our lands, and they get on not badly. You did right to send back to Europe that Dr. Crumerus who was so successful in curing dysentery. Don't bother with a man who is subject to looseness of the bowels. That disease makes bad soldiers. One coward will do more mischief in an engagement than ten brave men will do good. Better that they burst in their barracks than fly in a battle, and tarnish the glory of our arms. Besides, you know that they pay me as killed for all who die from disease, and I don't get a farthing for runaways. My trip to Italy, which has cost me enormously, makes it desirable that there should be a great mortality among them. You will therefore promise promotion to all who expose themselves; you will exhort them to seek glory in the midst of dangers; you will say to Major Maundorff that I am not at all content with his saving the 345 men who escaped the massacre of Trenton. Through the whole campaign he has not had ten men killed in consequence of his orders. Finally, let it be your principal object to prolong the war and avoid a decisive engagement on either side, for I have made

<sup>58</sup> Time and place of first publication unknown. A little masterpiece of irony, this letter made a hit no less in England than in the colonies.

arrangements for a grand Italian opera, and I do not wish to be obliged to give it up. Meantime I pray God, my dear Baron de Hohendorf, to have you in his holy and gracious keeping.

### *Model of a Letter of Recommendation*<sup>59</sup>

Paris, April 2, 1777.

Sir:—

The bearer of this, who is going to America, presses 10 me to give him a Letter of Recommendation, tho' I know nothing of him, not even his Name. This may seem extraordinary, but I assure you it is not uncommon here. Sometimes, indeed one unknown Person brings another equally unknown, to recommend him; and sometimes they recommend one another! As to this Gentleman, I must refer you to himself for his Character and Merits, with which he is certainly better acquainted than I can possibly be. I recom- 20 mend him however to those Civilitics, which every Stranger, of whom one knows no Harm, has a Right to; and I request you will do him all the good Offices, and show him all the Favour that, on further Acquaintance, you shall find him to deserve. I have the Honour to be, etc.

[B. F.]

### *The Ephemera*<sup>60</sup>

AN EMBLEM OF HUMAN LIFE

You may remember, my dear friend, that when we lately spent that happy day in the delightful garden and sweet society of the Moulin Joly, I stopt a little in one of our walks, and staid some time behind the company. We had been shown numberless skeletons of a kind of little fly, called an ephemera, whose successive generations, we were told, were bred and expired within the day. I happened to see a living com- 40 pany of them on a leaf, who appeared to be engaged in conversation. You know I understand all the inferior animal tongues: my too great application to the study of them is the best excuse I can give for

<sup>59</sup> Franklin repeatedly complained, especially during his years in Europe, when many planning to emigrate to America sought his help, of the "perpetual torment" which these applicants provided for him.

<sup>60</sup> Written in 1778. The scene is laid on Moulin Joly, the country-seat of Claude-Henri Watelet, forming a little island in the Seine, where Franklin enjoyed the company of a number of distinguished French men and women, among them Madame Brillou de Jouy, the "ever amicable *Brillante*" referred to at the end of the essay.

the little progress I have made in your charming language. I listened through curiosity to the discourse of these little creatures; but as they, in their national vivacity, spoke three or four together, I could make but little of their conversation. I found, however, by some broken expressions that I heard now and then, they were disputing warmly on the merit of two foreign musicians, one a *cousin*,<sup>61</sup> the other a *moscheto*;<sup>62</sup> in which dispute they spent their time, seemingly as regardless of the shortness of life as if they had been sure of living a month. Happy people! thought I, you live certainly under a wise, just, and mild government, since you have no public grievances to complain of, nor any subject of contention but the perfections and imperfections of foreign music. I turned my head from them to an old grey-headed one, who was single on another leaf, and talking to himself. Being amused with his soliloquy, I put it down in writing, in hopes it will likewise amuse her to whom I am so much indebted for the most pleasing of all amusements, her delicious company and heavenly harmony.

"It was," said he, "the opinion of learned philosophers of our race, who lived and flourished long before my time, that this vast world, the Moulin Joly, could not itself subsist more than eighteen hours; and I think there was some foundation for that opinion, since, by the apparent motion of the great luminary that gives life to all nature, and which in my time 30 has evidently declined considerably towards the ocean at the end of our earth, it must then finish its course, be extinguished in the waters that surround us, and leave the world in cold and darkness, necessarily producing universal death and destruction. I have lived seven of those hours, a great age, being no less than four hundred and twenty minutes of time. How very few of us continue so long! I have seen generations born, flourish, and expire. My present friends are the children and grandchildren of the friends of my youth, who are now, alas, no more! And I must soon follow them; for, by the course of nature, though still in health, I cannot expect to live above seven or eight minutes longer. What now avails all my toil and labor, in amassing honey-dew on this leaf, which I cannot live to enjoy! What the political struggles I have been engaged in, for the good of my compatriot inhabitants of this bush, or my philosophical

<sup>61</sup> Gnat.

<sup>62</sup> Mosquito.

studies for the benefit if our race in general! for, in politics, what can laws do without morals? Our present race of ephemera will in a course of minutes become corrupt, like those of other and older bushes, and consequently as wretched. And in philosophy how small our progress! Alas! art is long, and life is short. My friends would comfort me with the idea of a name, they say, I shall leave behind me; and they tell me I have lived long enough to nature and to glory. But what will fame be to an ephemera who no longer exists? And what will become of all history in the eighteenth hour, when the world itself, even the whole Moulin Joly, shall come to its end, and be buried in universal ruin?"

To me, after all my eager pursuits, no solid pleasures now remain, but the reflection of a long life spent in meaning well, the sensible conversation of a few good lady ephemera, and now and then a kind smile and a tune from the ever amiable *Brillante*.<sup>63</sup>

B. Franklin. 20 much for my folly, that I cried with vexation; and the reflection gave me more chagrin than the *whistle* gave me pleasure.

### *The Whistle*<sup>64</sup>

*To Madame Brillon*

Passy, November 10, 1779.

I received my dear friend's two letters, one for Wednesday and one for Saturday. This is again Wednesday. I do not deserve one for to-day, because I have not answered the former. But, indolent as I am, and averse to writing, the fear of having no more of your pleasing epistles, if I do not contribute to the correspondence, obliges me to take up my pen; and as Mr. B. has kindly sent me word, that he sets out to-morrow to see you, instead of spending this Wednesday evening as I have done its namesakes, in your delightful company, I sit down to spend it in thinking of you, in writing to you, and in reading over and over again your letters.

I am charmed with your description of Paradise, 40 and with your plan of living there; and I approve much of your conclusion, that, in the mean time, we should draw all the good we can from this world. In my opinion, we might all draw more good from it

than we do, and suffer less evil, if we would take care not to give too much for *whistles*. For to me it seems, that most of the unhappy people we meet with, are become so by neglect of that caution.

You ask what I mean? You love stories, and will excuse my telling one of myself.

When I was a child of seven years old, my friends, on a holiday, filled my pocket with coppers. I went directly to a shop where they sold toys for children; and, being charmed with the sound of a *whistle*, that I met by the way in the hands of another boy, I voluntarily offered and gave all my money for one. I then came home, and went whistling all over the house, much pleased with my *whistle*, but disturbing all the family. My brothers, and sisters, and cousins, understanding the bargain I had made, told me I had given four times as much for it as it was worth; put me in mind what good things I might have bought with the rest of the money; and laughed at me so

much for my folly, that I cried with vexation; and the reflection gave me more chagrin than the *whistle* gave me pleasure.

This however was afterwards of use to me, the impression continuing on my mind; so that often, when I was tempted to buy some unnecessary thing, I said to myself, *Don't give too much for the whistle*; and I saved my money.

As I grew up, came into the world, and observed the actions of men, I thought I met with many, very many, who *gave too much for the whistle*.

When I saw one too ambitious of court favour, sacrificing his time in attendance on levees, his repose, his liberty, his virtue, and perhaps his friends, to attain it, I have said to myself, *This man gives too much for his whistle*.

When I saw another fond of popularity, constantly employing himself in political bustles, neglecting his own affairs, and ruining them by that neglect, *He pays, indeed*, said I, *too much for his whistle*.

If I knew a miser, who gave up every kind of comfortable living, all the pleasure of doing good to others, all the esteem of his fellow-citizens, and the joys of benevolent friendship, for the sake of accumulating wealth, *Poor man*, said I, *you pay too much for your whistle*.

When I met with a man of pleasure, sacrificing every laudable improvement of the mind, or of his fortune, to mere corporeal sensations, and ruining his health in their pursuit, *Mistaken man*, said I, *you*

<sup>63</sup> A Franklinian play on words: Madame Brillon = *Brillante*.

<sup>64</sup> "The Whistle," like "The Ephemera," is an example of the bagatelles (French, from the Italian *Bagata*, meaning a trifle), in which Franklin sought to imitate the accomplished grace and easy manner for which, as he observed, "the French are so remarkable."

*are providing pain for yourself, instead of pleasure; you give too much for your whistle.*

If I see one fond of appearance, or fine clothes, fine houses, fine furniture, fine equipages, all above his fortune, for which he contracts debts, and ends his career in a prison, *Alas! say I, he has paid dear, very dear, for his whistle.*

When I see a beautiful, sweet-tempered girl married to an ill-natured brute of a husband, *What a pity, say I, that she should pay so much for a whistle!*

In short, I conceive that great part of the miseries of mankind are brought upon them by the false estimates they have made of the value of things, and by their *giving too much for their whistles.*

Yet I ought to have charity for these unhappy people, when I consider, that, with all this wisdom of which I am boasting, there are certain things in the world so tempting, for example, the apples of King John, which happily are not to be bought; for if they were put to sale by auction, I might very easily be led to ruin myself in the purchase, and find that I had once more given too much for the *whistle.*

Adieu, my dear friend, and believe me ever yours very sincerely and with unalterable affection,

B. Franklin.

### *An Economical Project*

*To the Authors of the Journal of Paris*

[March 20, 1784?] 30

Messieurs,

You often entertain us with accounts of new discoveries. Permit me to communicate to the public, through your paper, one that has lately been made by myself, and which I conceive may be of great utility.

I was the other evening in a grand company, where the new lamp of Messrs. Quinquet and Lange was introduced, and much admired for its splendour; but a general inquiry was made, whether the oil it consumed was not in proportion to the light it afforded, in which case there would be no saving in the use of it. No one present could satisfy us in that point, which all agreed ought to be known, it being a very desirable thing to lessen, if possible, the expense of lighting our apartments, when every other article of family expense was so much augmented.

I was pleased to see this general concern for economy, for I love economy exceedingly.

I went home, and to bed, three or four hours after midnight, with my head full of the subject. An accidental sudden noise waked me about six in the morning, when I was surprised to find my room filled with light; and I imagined at first, that a number of those lamps had been brought into it; but, rubbing my eyes, I perceived the light came in at the windows. I got up and looked out to see what might be the occasion of it, when I saw the sun just rising above the horizon, from whence he poured his rays plentifully into my chamber, my domestic having negligently omitted, the preceding evening, to close the shutters.

I looked at my watch, which goes very well, and found that it was but six o'clock; and still thinking it something extraordinary that the sun should rise so early, I looked into the almanac, where I found it to be the hour given for his rising on that day. I looked forward, too, and found he was to rise still earlier every day till towards the end of June; and that at no time in the year he retarded his rising so long as till eight o'clock. Your readers, who with me have never seen any signs of sunshine before noon, and seldom regard the astronomical part of the almanac, will be as much astonished as I was, when they hear of his rising so early; and especially when I assure them, *that he gives light as soon as he rises.* I am convinced of this. I am certain of my fact. One cannot be more certain of any fact. I saw it with my own eyes. And, having repeated this observation the three following mornings, I found always precisely the same result.

Yet it so happens, that when I speak of this discovery to others, I can easily perceive by their countenances, though they forbear expressing it in words, that they do not quite believe me. One, indeed, who is a learned natural philosopher, has assured me that I must certainly be mistaken as to the circumstance of the light coming into my room; for it being well known, as he says, that there could be no light abroad at that hour, it follows that none could enter from without; and that of consequence, my windows being accidentally left open, instead of letting in the light, had only served to let out the darkness; and he used many ingenious arguments to show me how I might, by that means, have been deceived. I owned that he puzzled me a little, but he did not satisfy me; and the subsequent observations I made, as above mentioned, confirmed me in my first opinion.

This event has given rise in my mind to several serious and important reflections. I considered that, if I had not been awakened so early in the morning, I should have slept six hours longer by the light of the sun, and in exchange have lived six hours the following night by candle-light; and, the latter being a much more expensive light than the former, my love of economy induced me to muster up what little arithmetic I was master of, and to make some calculations, which I shall give you, after observing <sup>10</sup> that utility is, in my opinion the test of value in matters of invention, and that a discovery which can be applied to no use, or is not good for something, is good for nothing.

I took for the basis of my calculation the supposition that there are one hundred thousand families in Paris, and that these families consume in the night half a pound of bougies, or candles, per hour. I think this is a moderate allowance, taking one family with another; for though I believe some consume less, I <sup>20</sup> know that many consume a great deal more. Then estimating seven hours per day as a medium quantity between the time of the sun's rising and ours, he rising during the six following months from six to eight hours before noon, and there being seven hours of course per night in which we burn candles, the account will stand thus;—

In the six months between the 20th of March and the 20th of September, there are

Nights .....	183
Hours of each night in which we burn candles .....	7
Multiplication gives for the total number of hours .....	1,281
These 1,281 hours multiplied by 100,000, the number of inhabitants, give.....	128,100,000
One hundred twenty-eight millions and one hundred thousand hours, spent at Paris by candle-light, which, at half a pound of wax and tallow per hour, gives the weight of .....	64,050,000
Sixty-four millions and fifty thousand of pounds, which, estimating the whole at the medium price of thirty sols the pound, makes the sum of ninety-six millions and seventy-five thousand livres tournois.....	96,075,000

An immense sum! that the city of Paris might save every year, by the economy of using sunshine instead of candles.

If it should be said, that people are apt to be obstinately attached to old customs, and that it will be difficult to induce them to rise before noon, consequently my discovery can be of little use: I answer, *Nil desperandum*.<sup>65</sup> I believe all who have common sense, as soon as they have learnt from this paper that it is daylight when the sun rises, will contrive to rise with him; and, to compel the rest, I would propose the following regulations;

First. Let a tax be laid of a louis per window, on every window that is provided with shutters to keep out the light of the sun.

Second. Let the same salutary operation of police be made use of, to prevent our burning candles, that inclined us last winter to be more economical in burning wood; that is, let guards be placed in the shops of the wax and tallow chandlers, and no family be permitted to be supplied with more than one pound of candles per week.

Third. Let guards also be posted to stop all the coaches, &c. that would pass the streets after sun-set, except those of physicians, surgeons, and midwives.

Fourth. Every morning, as soon as the sun rises, let all the bells in every church be set ringing; and if that is not sufficient, let cannon be fired in every street, to wake the sluggards effectually, and make them open their eyes to see their true interest.

All the difficulty will be in the first two or three days; after which the reformation will be as natural <sup>30</sup> and easy as the present irregularity; for, *ce n'est que le premier pas qui coûte*.<sup>66</sup> Oblige a man to rise at four in the morning, and it is more than probable he will go willingly to bed at eight in the evening; and, having had eight hours sleep, he will rise more willingly at four in the morning following. But this sum of ninety-six millions and seventy-five thousand livres is not the whole of what may be saved by my economical project. You may observe, that I have calculated upon only one half of the year, and much may be <sup>40</sup> saved in the other, though the days are shorter. Besides, the immense stock of wax and tallow left unconsumed during the summer, will probably make candles much cheaper for the ensuing winter, and continue them cheaper as long as the proposed reformation shall be supported.

For the great benefit of this discovery, thus freely communicated and bestowed by me on the public, I

<sup>65</sup> "Nothing is to be despaired of."

<sup>66</sup> It is only the first step that costs.

demand neither place, pension, exclusive privilege, nor any other reward whatever. I expect only to have the honour of it. And yet I know there are little, envious minds, who will, as usual, deny me this, and say, that my invention was known to the ancients, and perhaps they may bring passages out of the old books in proof of it. I will not dispute with these people, that the ancients knew not the sun would rise at certain hours; they possibly had, as we have, almanacs that predicted it; but it does not follow <sup>10</sup> thence, that they knew *he gave light as soon as he rose*. This is what I claim as my discovery. If the ancients knew it, it might have been long since forgotten; for it certainly was unknown to the moderns, at least to the Parisians, which to prove, I need use but one plain simple argument. They are as well instructed, judicious, and prudent a people as exist anywhere in the world, all professing, like myself, to be lovers of economy; and, from the many heavy taxes required from them by the necessities of the <sup>20</sup> state, have surely an abundant reason to be economical. I say it is impossible that so sensible a people, under such circumstances, should have lived so long by the smoky, unwholesome, and enormously expensive light of candles, if they had really known, that they might have had as much pure light of the sun for nothing. I am, &c.

A Subscriber.

To Samuel Mather

Passy, May 12, 1784.

Rev<sup>d</sup> Sir,

I received your kind letter, with your excellent advice to the people of the United States, which I read with great pleasure, and hope it will be duly regarded. Such writings, though they may be lightly passed over by many readers, yet, if they make a deep impression on one active mind in a hundred, the effects may be considerable. Permit me to mention <sup>40</sup> one little instance, which, though it relates to myself, will not be quite uninteresting to you. When I was a boy, I met with a book, entitled "*Essays to do Good*," which I think was written by your father. It had been so little regarded by a former possessor, that several leaves of it were torn out; but the remainder gave me such a turn of thinking, as to have an influence on my conduct through life; for I have always set a greater value on the character of a *doer of good*,

than on any other kind of reputation; and if I have been, as you seem to think, a useful citizen, the public owes the advantage of it to that book.

You mention your being in your 78<sup>th</sup> year; I am in my 79<sup>th</sup>; we are grown old together. It is now more than 60 years since I left Boston, but I remember well both your father and grandfather, having heard them both in the pulpit, and seen them in their houses. The last time I saw your father was in the beginning of 1724, when I visited him after my first trip to Pennsylvania. He received me in his library, and on my taking leave showed me a shorter way out of the house through a narrow passage, which was crossed by a beam over head. We were still talking as I withdrew, he accompanying me behind, and I turning partly towards him, when he said hastily, "*Stoop, stoop!*" I did not understand him, till I felt my head hit against the beam. He was a man that never missed any occasion of giving instruction, and upon this he said to me, "*You are young, and have the world before you; stoop as you go through it, and you will miss many hard thumps.*" This advice, thus beat into my head, has frequently been of use to me; and I often think of it, when I see pride mortified, and misfortunes brought upon people by their carrying their heads too high.

I long much to see again my native place, and to lay my bones there. I left it in 1723; I visited it in 1733, 1743, 1753, and 1763. In 1773 I was in Eng-  
<sup>30</sup> land; in 1775 I had a sight of it, but could not enter, it being in possession of the enemy. I did hope to have been there in 1783, but could not obtain my dismissal from this employment here; and now I fear I shall never have that happiness. My best wishes however attend my dear country. *Esto perpetua.*<sup>67</sup> It is now blest with an excellent constitution; may it last for ever!

This powerful monarchy continues its friendship for the United States. It is a friendship of the utmost importance to our security, and should be carefully cultivated. Britain has not yet well digested the loss of its dominion over us, and has still at times some flattering hopes of recovering it. Accidents may increase those hopes, and encourage dangerous attempts. A breach between us and France would infallibly bring the English again upon our backs; and yet we have some wild heads among our countrymen, who are endeavouring to weaken that connexion! Let

<sup>67</sup> May she be perpetual.

us preserve our reputation by performing our engagements; our credit by fulfilling our contracts; and friends by gratitude and kindness; for we know not how soon we may again have occasion for all of them. With great and sincere esteem, I have the honour to be, &c.

B. Franklin.

To Thomas Paine<sup>68</sup> [?]

Phila. July 3, 1786[?].

Dear Sir,

I have read your Manuscript with some Attention. By the Argument it contains against the Doctrines of a particular Providence, tho' you allow a general Providence, you strike at the Foundation of all Religion. For without the Belief of a Providence, that takes Cognizance of, guards, and guides, and may favour particular Persons, there is no Motive to Worship a Deity, to fear its Displeasure, or to pray for its Protection. I will not enter into any Discussion of your Principles, tho' you seem to desire it. At present I shall only give you my Opinion, that, though your Reasonings are subtle, and may prevail with some Readers, you will not succeed so as to change the general Sentiments of Mankind on that Subject, and the Consequence of printing this Piece will be, a great deal of Odium drawn upon yourself, Mischief to you, and no Benefit to others. He that spits against the Wind, spits in his own Face.

But, were you to succeed, do you imagine any Good would be done by it? You yourself may find it easy to live a virtuous Life, without the Assistance afforded by Religion; you having a clear Perception of the Advantages of Virtue, and the Disadvantages of Vice, and possessing a Strength of Resolution sufficient to enable you to resist common Temptations. But think how great a Proportion of Mankind consists of weak and ignorant Men and Women, and of inexperience'd, and inconsiderate Youth of both Sexes, who have need of the Motives of Religion to restrain them from Vice, to support their Virtue, and retain them in the Practice of it till it becomes

<sup>68</sup> While it has been pointed out that Paine's deistical writings were not published until after this letter was presumably written, it has also been observed that a part of *The Age of Reason* (1793-1795) was composed before 1781. It is altogether likely that Paine sent Franklin his manuscript for a preview. At any rate, Franklin's letter contains just such prudential advice as he would have offered an old friend to prevent his committing an indiscretion.

*habitual*, which is the great Point for its Security. And perhaps you are indebted to her originally, that is, to your Religious Education, for the Habits of Virtue upon which you now justly value yourself. You might easily display your excellent Talents of reasoning upon a less hazardous subject, and thereby obtain a Rank with our most distinguish'd Authors. For among us it is not necessary, as among the Hottentots, that a Youth, to be receiv'd into the Company of men, should prove his Manhood by beating his Mother.

I would advise you, therefore, not to attempt unchaining the Tyger, but to burn this Piece before it is seen by any other Person; whereby you will save yourself a great deal of Mortification from the Enemies it may raise against you, and perhaps a good deal of Regret and Repentance. If men are so wicked as we now see them *with religion*, what would they be *if without it*. I intend this Letter itself as a *Proof* of my Friendship, and therefore add no *Professions* to it; but subscribe simply yours,

B. F.

On the Slave-Trade<sup>69</sup>

To the Editor of the Federal Gazette

March 23d, 1790.

Sir,

Reading last night in your excellent Paper the speech of Mr. Jackson in Congress against their meddling with the Affair of Slavery, or attempting to mend the Condition of the Slaves, it put me in mind of a similar One made about 100 Years since by Sidi Mehemet Ibrahim, a member of the Divan of Algiers, which may be seen in Martin's Account of his Consulship, anno 1687. It was against granting the Petition of the Sect called *Erika*, or Purists, who pray'd for the Abolition of Piracy and Slavery as being unjust. Mr. Jackson does not quote it; perhaps he has

<sup>69</sup> This pretended African speech was an excellent parody of one delivered by Mr. Jackson, of Georgia, in the House of Representatives a few days before. Franklin not only wrote against slavery but, as President of the Pennsylvania Society for the Abolition of Slavery, he was active in trying to prevent the importation of slaves. Considering his life-long humanitarian efforts, it was altogether fitting that his last public act was to appear before the House of Representatives on February 12, 1789, to present a memorial urging the Congress to exert its full powers to discourage the traffic in human beings. His ironic letter on the slave-trade, in which the African Musselmen turn the tables on the American Christians, was written early in 1790. He died on April 17 of the same year.

not seen it. If, therefore, some of its Reasonings are to be found in his eloquent Speech, it may only show that men's Interests and Intellects operate and are operated on with surprising similarity in all Countries and Climates, when under similar Circumstances. The African's Speech, as translated, is as follows.

*"Allah Bismillah, &c. God is great, and Mahomet is his Prophet.*

"Have these *Erika* considered the Consequences of 10 granting their Petition? If we cease our Cruises against the Christians, how shall we be furnished with the Commodities their Countries produce, and which are so necessary for us? If we forbear to make Slaves of their People, who in this hot Climate are to cultivate our Lands? Who are to perform the common Labours of our City, and in our Families? Must we not then be our own Slaves? And is there not more Compassion and more Favour due to us as Mussulmen, than to these Christian Dogs? We have 20 now above 50,000 Slaves in and near Algiers. This Number, if not kept up by fresh Supplies, will soon diminish, and be gradually annihilated. If we then cease taking and plundering the Infidel Ships, and making Slaves of the Seamen and Passengers, our Lands will become of no Value for want of Cultivation; the Rents of Houses in the City will sink one half; and the Revenues of Government arising from its Share of Prizes be totally destroy'd! And for what? To gratify the whims of a whimsical Sect, who would 30 have us, not only forbear making more Slaves, but even to manumit those we have.

"But who is to indemnify their Masters for the Loss? Will the State do it? Is our Treasury sufficient? Will the *Erika* do it? Can they do it? Or would they, to do what they think Justice to the Slaves, do a greater Injustice to the Owners? And if we set our Slaves free, what is to be done with them? Few of them will return to their Countries; they know too well the greater Hardships they must there be sub-40 ject to; they will not embrace our holy Religion; they will not adopt our Manners; our People will not pollute themselves by intermarrying with them. Must we maintain them as Beggars in our Streets, or suffer our Properties to be the Prey of their Pillage? For Men long accusom'd to Slavery will not work for a Livelihood when not compell'd. And what is there so pitiable in their present Condition? Were they not Slaves in their own Countries?

"Are not Spain, Portugal, France, and the Italian states govern'd by Despots, who hold all their Subjects in Slavery, without Exception? Even England treats its Sailors as Slaves; for they are, whenever the Government pleases, seiz'd, and confin'd in Ships of War, condemn'd not only to work, but to fight, for small Wages, or a mere Subsistence, not better than our Slaves are allow'd by us. Is their Condition then made worse by their falling into our Hands? No; they have only exchanged one Slavery for another, and I may say a better; for here they are brought into a Land where the Sun of Islamism gives forth its Light, and shines in full Splendor, and they have an Opportunity of making themselves acquainted with the true Doctrine, and thereby saving their immortal Souls. Those who remain at home have not that Happiness. Sending the Slaves home then would be sending them out of Light into Darkness.

"I repeat the Question, What is to be done with them? I have heard it suggested, that they may be planted in the Wilderness, where there is plenty of Land for them to subsist on, and where they may flourish as a free State; but they are, I doubt, too little dispos'd to labour without Compulsion, as well as too ignorant to establish a good government, and the wild Arabs would soon molest and destroy or again enslave them. While serving us, we take care to provide them with every thing, and they are treated with Humanity. The Labourers in their own Country are, as I am well informed, worse fed, lodged, and cloathed. The Condition of most of them is therefore already mended, and requires no further Improvement. Here their Lives are in Safety. They are not liable to be impress'd for Soldiers, and forc'd to cut one another's Christian Throats, as in the Wars of their own Countries. If some of the religious mad Bigots, who now teaze us with their silly Petitions, have in a Fit of blind Zeal freed their Slaves, it was not Generosity, it was not Humanity, that mov'd them to the Action; it was from the conscious Burthen of a Load of Sins, and Hope, from the supposed Merits of so good a Work, to be excus'd Damnation.

"How grossly are they mistaken in imagining Slavery to be disallow'd by the Alcoran! Are not the two Precepts, to quote no more, '*Masters, treat your Slaves with kindness; Slaves, serve your Masters with Cheerfulness and Fidelity*,' clear Proofs to the contrary? Nor can the Plundering of Infidels be in that sacred Book forbidden, since it is well known from

it, that God has given the World, and all that it contains, to his faithful Mussulmen, who are to enjoy it of Right as fast as they conquer it. Let us then hear no more of this detestable Proposition, the Manu- mission of Christian Slaves, the Adoption of which would, by depreciating our Lands and Houses, and thereby depriving so many good Citizens of their Properties, create universal Discontent, and provoke Insurrections, to the endangering of Government and producing general Confusion. I have therefore no doubt, but this wise Council will prefer the Comfort and Happiness of a whole Nation of true Believers to the Whim of a few *Erika*, and dismiss their Petition."

The Result was, as Martin tells us, that the Divan

came to this Resolution; "The Doctrine, that Plundering and Enslaving the Christians is unjust, is at best *problematical*; but that it is the Interest of this State to continue the Practice, is clear; therefore let the Petition be rejected."

And it was rejected accordingly.

And since like Motives are apt to produce in the Minds of Men like Opinions and Resolutions, may we not, Mr. Brown, venture to predict, from this Account, that the Petitions to the Parliament of England for abolishing the Slave-Trade, to say nothing of other Legislatures, and the Debates upon them, will have a similar Conclusion? I am, Sir, your constant Reader and humble Servant,

Historicus.

## THOMAS PAINE (1737-1809)

Variously apostrophized as the "Author-Hero of the American Revolution," "the ragged philosopher," "the Creator of Independent Democracy in America," and "a drunken infidel," Thomas Paine is "the epitome of a world in revolution." No American author did more for America by his writings than he, and none of his generation suffered greater ingratitude and calumny at the hands of his fellow citizens. A citizen of three nations, he came to be a man without a country. His native England outlawed him; as a citizen of France, he was imprisoned and long in danger of execution; the United States of America, which no one labored more than he to bring into being, subsequently denied him citizenship and heaped obloquy upon him. Yet his writings, which netted him little profit, were the most influential in the era of the American Revolution, and he must be rated as one of the three or four most powerful propagandists of ideas in the history of the world. His philosophy was as simple as it was broad: "The world is my country; to do good, my religion." Republicanism and deism have had more erudite, profound, and subtle proponents, but they never had a more eloquent, forthright, and sincere advocate than Tom Paine. Much of the odium that still attaches to his name and memory is owing to his religious creed, enunciated in *The Age of Reason* (1794-1795). Published at the height of the conservative reaction against the French Revolution, its outspokenly deistic attack on Christianity alienated the conservatives; his name became anathema to succeeding generations who were led by prejudice or ignorance to repeat with John Adams and Theodore Roosevelt the charge of "filthy little atheist." Actually his religion was no more reprehensible than was Franklin's. Both were scientific deists who derived their religious beliefs from the scientific principles current in their day. Their chief difference lay in the fact that Franklin prudently kept his religious opinions private, while Paine, bent on converting mankind to what he conceived as the true religion, boldly published his views and drew upon himself the hatred of "right-thinking Christians," Franklin, for his part, becoming enshrined in their memories as a saint.

When, on the last day of November, 1774, Thomas Paine arrived in Philadelphia, he was (except for Franklin's letter of recommendation that he carried in his pocket) far worse off than Franklin had been some fifty years earlier when he walked down Market Street with a roll of bread under each arm. Nearly thirty-eight years of age, he was already what the world called a failure. Since his birth in 1737, the son of a poor stay-maker in Thetford, England, Paine had encountered little good fortune in life beyond acquiring from his Quaker father and Anglican mother "a good moral education" and picking up "a tolerable stock of useful learning," though he knew no language but his own. Born a Friend, he became an independent rationalist and humanitarian, practicing Quaker doctrines. Although he laughed when he thought of the sad world the Quakers would have made of the creation if they had been consulted, and reproved them for their pacifistic refusal to fight for principle, his last will requested that his body be interred in a Quaker burying-ground if they would admit "a person who does not belong to their society."

Tiring of his father's trade of corset-making, and lusting for adventure, he tried, as a lad of seventeen, to enlist on Captain Death's privateer, the *Terrible*; but this first independent venture ended ingloriously when he was nabbed by his father just before the ship could sail and put back to stay-making. Shortly thereafter, however, he shipped on the *King of Prussia*, but one cruise on a licensed pirate ship was enough for him, and disconsolately he settled back to making stays.

He pursued the trade for several years at various places with indifferent success, while devoting his leisure time to studying philosophy and astronomy. In 1759 he married Mary Lambert, only to lose her by death the next year. Again tiring of stay-making, he secured a government appointment as an exciseman in 1764, and two years later was dismissed, reputedly for neglect of duty. Next he turned schoolteacher, served as usher in an academy, practiced stay-making for brief periods, turned an honest penny by occasionally ascending some pulpit or other to preach his gospel to such saints and sinners as would hear him, and

at one time considered taking holy orders. After a prayerful petition and a promise to do better, he was reappointed to the excise in 1768. In 1771, still an exciseman, he married Elizabeth Ollive, a young lady with whom he was already in partnership as grocer and tobacconist. Three years later he was again dismissed from the excise on the charges that he had neglected his duties without leave of the Board, and that he had not paid his debts. Another complication appears to have been his writing in 1773 of an appeal addressed to Parliament asking better pay for excisemen. A few days after his dismissal, all his effects personal and otherwise, were sold at auction for the benefit of his creditors; and about the same time he signed papers of separation from his wife, the arrangement apparently being entirely amicable, since neither party had found their union either profitable or particularly happy.

A disconsolate bankrupt, he betook himself to London, where he consulted with Franklin about prospects in America. Something in the young man impressed Franklin sufficiently to give him a letter of introduction commending Paine as "an ingenious and worthy young man" and recommending him as "a clerk, or assistant in a school, or assistant surveyor." Franklin's letter opened to him pleasant relations with some of the best people in Philadelphia. He went to work for Robert Aitken, then about to launch the *Pennsylvania Magazine or American Museum*, and soon became its editor. A complete failure in England, he resolved to make something of himself in America. He worked diligently as a journalist, haunted the bookshops, adroitly pushed his way into an acquaintance with the leading citizens just then congregating in Philadelphia, and kept eyes and ears open to gather all facts, impressions, and opinions then being generated by the quarrel between his native country and the land of his adoption. His contribution to the first number of the *Pennsylvania Magazine* started him on his successful career as a propagandist, the collected results of which fill ten volumes. His essays soon established him as one of the moral pioneers of his generation. He advocated international arbitration, attacked dueling, suggested rational ideas of marriage and divorce, pleaded for mercy to animals, argued for the need of international copyright, demanded justice for women, and assailed Negro slavery. His articles against slavery are reputed to have led directly to the formation of the first antislavery society in Philadelphia. Indeed, the abolition of slavery was a cause for which he fought constantly; and when, years later, he became the target of religious persecution, it was in their dual

capacity as Christians and slaveholders that Americans reviled him.

Keeping his finger on the pulse of the people and training his ear to catch the shifting winds of popular feeling and opinion, he guardedly kept his peace until he was sure of himself and of the people whom he hoped to lead if given half a chance. He familiarized himself with what James Otis had said in opposition to the Writs of Assistance in 1762, and he reviewed the legalistic arguments of John Dickinson and of Samuel Adams protesting the Stamp Act while taking care not to deny the right of Parliament to levy taxes. He familiarized himself with the issues involved in the Declaratory Acts of 1766, the Boston Massacre (March, 1770), the Boston Tea Party (December 16, 1773), the acts and resolutions of the First Continental Congress (1774), and the flood of pamphlets, essays, and public letters that followed in their wake. He carefully gauged the rise of feeling following the skirmishes at Lexington and Concord on April 19, 1775. He watched the Second Continental Congress, which began its session on May 10; he tried to interpret the effect of the Battle of Bunker Hill (June 17), of the selection of Washington as commander of the Army (June 15), and of the final breakdown of arbitration when England rejected American petitions and the colonies refused proffered compromises during the latter part of 1775. Six months after the fiery Virginian, Patrick Henry, made the speech about "Liberty or Death" (urging armed resistance but saying nothing about independence), Tom Paine had made up his mind to take the next step, highly treasonable though he knew it to be. He would propose not merely resistance, but independence. On October 18, 1775, writing in the *Pennsylvania Journal*, he said: "I hesitate not for a moment to believe that the Almighty will finally separate America from Britain. Call it Independence or what you will, if it is the cause of God and humanity, it will go on." This was nine months before the Declaration of Independence.

Few were ready for the idea of separation. The revolt had begun with a limited object. Very few realized whither they were heading; none knew what the outcome would be. They still argued over legalities and constitutional rights and loyalties. It would require a severe jolt to jar them out of their accustomed modes of thinking. Paine had had enough experience as a propagandist to realize, as he said, "It is necessary to be bold. Some people can be reasoned into sense, and others must be shocked into it. Say a bold thing that will stagger them and they will begin to think. . . . I deal not in hints and inti-

mations. . . . I bring reason to your ears, and in language as plain as A, B, C, hold up truth to your eyes."

Lexington and Concord had prepared the people to be receptive and ready for anything, and Paine, waiting just so long as was necessary but no longer, seized exactly the right moment to publish *Common Sense* on January 10, 1776, to show that any man who used his common sense could do nothing other than demand separation and fight for independence. The time had come to act.

Friends and enemies agree in ascribing to Paine's pamphlet an unexampled effect. In three months, 120,000 copies were sold—an event hitherto unequalled in the history of American printing. So that it might have the widest possible circulation, Paine put the price of *Common Sense* so low that while some 500,000 copies were disposed of, he found himself in the end indebted to the printer. But he achieved his purpose: the little pamphlet inspired a rebellion and created a nation.

The essay is happily entitled *Common Sense* because that was all Paine had to bring to bear on the subject, concerning whose legal points he knew nothing. Instead of arguing the legalistic issues involved in the contest, he brushed aside as irrelevant all technical questions and appealed his case to the tribunal of common sense—to the rank and file who knew no law, but who felt nonetheless strongly. He always maintained, law or no law, that what a whole people chooses to do it has a right to do. While professing to address only the common sense and reason of men, he never lost an opportunity to rouse also their feelings and passions. Employing exaggeration, misrepresentation, invective, and satire, Paine used all the tricks of the political agitator to break down traditional loyalty to England and to build up a spirit of active rebellion. It was ridiculous, he argued, for free men in America to remain any longer bound subjects of Great Britain: that they were free men and should assume the rights of independent American citizens, and that nothing stood in their way but the trash of a few pedants like John Dickinson, who still argued about legalities and constitutionality, and other timid souls who still respected the authority of certain ruffians and brutes called kings.

Accordingly Part I of his epoch-making pamphlet begins with a rhapsodical and sword-rattling overture of sweeping affirmations and pungent observations concerning government in general and of the English government in particular—all intended to rid the colonial mind of any undue reverence it still had for

organized or legal authority and to convince the people that the hour had arrived "to legalize disobedience to law."

"Society is produced by our wants," Paine begins, "and government by our wickedness. . . . Society in every state is a blessing, but government, even in its best state, is but a necessary evil; in its worst state, an intolerable one. . . . Government, like dress, is the badge of lost innocence; the palaces of kings are built on the ruins of the bowers of paradise." Such, says Paine, is the origin of government. Its objects are twofold: freedom and security. But the British government affords us neither.

Part II is a discussion of monarchy and hereditary succession. In reply to the query about the true form of government, Paine answers that whatever it is, it is not monarchy. The government which rests on "the distinction of men into kings and subjects" is one for which no "natural or religious reason can be assigned."

Male and female are the distinctions of nature, good and bad, the distinctions of heaven; but how a race of men came into the world so exalted above the rest, and distinguished like some new species, is worth inquiring into, and whether they are the means of happiness or misery to mankind. . . . The nearer any government approaches to a republic, the less business there is for a king. . . .

In England a king hath little more to do than to make war and give away places; which in plain terms is to impoverish the nation and set it together by the ears. A pretty business indeed for a man to be allowed eight hundred thousand sterling a year for, and worshipped into the bargain! Of more worth is one honest man to society, and in the sight of God, than all the crowned ruffians that ever lived.

Part III presents some "thoughts on the Present State of the American Affairs" to show that "the period of debate is closed. Arms as the last recourse, must decide the contest. . . . All plans, proposals, &c. [for reconciliation] prior to the nineteenth of April [1775], i. e., to the commencement of hostilities [at Lexington and Concord], are like the almanacs of the last year."

Aside from the fact that America has nothing to gain by her continued connection with England, but much to lose, Paine argued that it is "repugnant to reason, to the universal order of things, to all examples from former ages, to suppose that this continent can long remain subject to any external power." There is something preposterous in the idea that a great nation on one side of the Atlantic shall remain in a state of permanent vassalage to a small island on the other side; while to be "always running

three or four thousand miles with a tale or a petition, waiting four or five months for an answer, which, when obtained, requires five or six more to explain it in, will in a few years be looked upon as folly and childishness. There was a time when it was proper, and there is a proper time for it to cease."

Small islands not capable of protecting themselves are the proper objects for governments to take under their care; but there is something absurd in supposing a continent to be perpetually governed by an island. In no instance hath nature made the satellite larger than its primary planet; and as England and America, with respect to each other, reverse the common order of nature, it is evident that they belong to different systems. England to Europe: America to itself.

After offering a plan by which the thirteen colonies can effectively unite in a representative democratic form of government, Paine proceeds to the fourth and last part, "On the Present Ability of America, with Some Miscellaneous Reflections," designed to convince the people that armed resistance will be attended by success. "Nothing," he concludes, "can settle our affairs so expeditiously as an open and determined DECLARATION OF INDEPENDENCE." "O ye that love mankind! Ye that dare oppose, not only the tyranny but the tyrant, stand forth!" In an appendix added to later editions, Paine closed with the declaration: "We have it in our power to begin the world over again. . . . The birthday of a new world is at hand . . . the FREE AND INDEPENDENT STATES OF AMERICA."

Paine's challenge at the strategic moment "proved to be the deciding word." Dr. Benjamin Rush acknowledged the pamphlet's effect such as had been "rarely produced by types and paper, in any age or country." Major General Lee, writing to Washington, called it "the *coup-de-grace* to Great Britain"; and Washington himself, fighting an undeclared war since June of the preceding year and wanting a decisive declaration, wrote on January 31, 1776:

A few more such flaming arguments as we exhibited at Falmouth and Norfolk, added to the sound doctrine and unanswerable reasoning contained in the pamphlet *Common Sense*, will not leave numbers at a loss to decide on the propriety of a separation.

The separation came five months later, on July 4, 1776.

Despite its crudities of thought, its superficiality, its rashness of assertion, the pamphlet was a master-stroke. Its smattering of historical lore, its cheap display of statistics, and its clumsy attempts at a political philosophy were no deterrents either to Tom

Paine or to the people, who just then cared more about imperiled rights than about either learning or philosophy.

Not content to fight with his pen alone, Paine shouldered a musket as a private and was soon raised to the position of aide-de-camp to General Greene. The fortunes of war turned against the patriots. By the end of 1776 the desertion of soldiers, encouraged by short-term enlistment, had grown to alarming proportions, and Washington's retreat across the Delaware seemed catastrophic. General Washington himself confided to his brother on December 18, 1776: "Between you and me, I think our affairs are in a very bad situation. . . . If every nerve is not strained up to the utmost to recruit the new army with all possible expedition, I think the game is very near up."

Again, Paine's pen came to the rescue. In January he had opened the immortal year of '76 with *Common Sense*, a call to decision; in December, he closed the year with the first of a series of sixteen papers called *The Crisis*, a call to action. It opened with the stirring lines:

These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of his country; but he that stands it *now*, deserves the love and thanks of man and woman. Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph.

The first of the *Crisis* papers attempts to reconstruct American confidence in its own powers. It stimulated enlistment in the new army, and Washington ordered a copy read to every regiment. By January 13, 1777, the second installment appeared in the form of a letter to Lord Howe, commiserating with the noble lord, enumerating his insuperable difficulties in attempting a conquest of a vast country with a handful of soldiers. Next he charges Howe with being a wanton marauder and pillager, and returns to sympathize with him in the hopelessness and folly of his undertaking—mocking, advising, and blasting him all at once. It is good propaganda, and it provoked many a chuckle round the campfires of weary, disheartened American soldiers. The third paper, issued on the anniversary of Lexington and Concord, returns to a discussion of the principles at stake in the contest, and so on until the last number appeared on December 9, 1783, seven years (lacking a day) from the time No. 1 had appeared.

The sixteen papers fall into three time groups: seven in the first two years, three between March and October, 1780, and six in the last twenty-one months

of the war. The first are divided between defiance of British power and denunciation of political doctrine. The middle three aim at discouraging the British and inspiring Americans with renewed zeal and effort. The last six press the offensive and lead up to the discussion of peace. Thus he kept up, throughout the war years, his incessant harangue and irresistible bombardment of the American conscience (military and civilian), playing with matchless skill and power upon all the springs of human anxiety, resolution, anger, fear, contempt, hatred, fortitude, duty, honor, patriotism, self-interest, and love of fame. How he found time to do it remains a mystery, for during the early years of the war he shared every service, action, and privation of the army, even to enduring the winter at Valley Forge with Washington.

In 1777 he was elected secretary to the Committee of Foreign Affairs of the Continental Congress, a post which he resigned in 1779; and later in the same year he was elected clerk of the Pennsylvania Assembly. During 1781 he sailed for France and successfully negotiated a large loan for the American cause. For his services as penman, soldier, and diplomat, he was awarded several sizable gifts of money and a confiscated Royalist estate at New Rochelle, N. Y. At the conclusion of the war he went to Bordentown, N. J., to devote himself to his inventions, which included a smokeless candle and the perfection of an iron bridge without piers.

But these were tame pursuits. Franklin had declared, "Wherever is liberty, there is my home"; Paine countered, "Wherever is not liberty, there is my home." Accordingly, when the political struggle for greater liberty in France and England became intense, Paine, having fomented one rebellion by a pamphlet, and looking for a new revolution, hied himself off to France in 1787. During 1787-1792 he shuttled back and forth between Paris and London, arranging for the patenting and building of his bridge and promoting political rebellion. Shortly after the fall of the Bastille, he went to Paris to observe the Revolution. It was then that Lafayette entrusted to him the key of the Bastille, bidding him to bear it safely to America as a symbol of despotism overthrown in France as it had been in America. Paine became the natural link of the revolutionary spirit that had already succeeded in the New World, that was in progress in France, and, as was ardently hoped, that would soon sweep England also. Back in London by February of 1791, he published the first part of his *Rights of Man*, in reply to Burke's *Reflections on the French Revolution* (1790), followed by a second part a year later. Both breathed political radi-

calism of a kind not countenanced in England, just then experiencing a strong feeling of revulsion at the excesses of the French Revolution. Paine was summoned to stand trial as the author of a libelous work. During the ensuing delays and postponements, he made good his opportunities to make his way secretly to France—and none too soon, for a half hour after he sailed from Dover the order for his arrest arrived.

In France he was welcomed warmly. He was chosen as a representative from Calais in the General Assembly, and the title of Citizen of France was conferred upon him. In the meantime he enjoyed informing the London judges, who had ordered him to return and stand trial, that he was too busy in Paris with important matters to accommodate their wishes, but that they might proceed against him during his absence—which is what they did, and would have done in any case.

A leader from the first, he exercised a powerful influence for moderation while the Girondin party was in power, speaking against the guillotine and holding out for humane and just procedures. In the end, however, as the power passed more and more into the hands of the more radical Jacobins and the mob, he lost influence. His valiant efforts to save the life of the King and Queen brought him under suspicion, and on December 23, 1793, he was confined in the Luxembourg Prison.

Seeing atheism making great gains on every hand in France, and having conceived the idea of checking it by giving the French people his rationale of a deistic, moral, and natural religion, he wrote furiously to complete Part I of *The Age of Reason*, and a few hours before he was carted off to prison he managed to put the manuscript into the hands of Joel Barlow, who arranged for its publication in January, 1794. Declaring his American citizenship, he demanded to be released, but the American government did nothing to help him, and he languished in prison until after the fall of Robespierre. He was marked for the guillotine several times. Once he escaped because the guard chalked the mark designating him for execution on the inside of his cell door while it stood open. Paine lost no time erasing the fatal mark. At another time he was saved because when the guards came to carry him before the tribunal, he was lying in a state of insensibility from fever occasioned by poor care and prison food. On November 4, 1794, James Monroe, the American Ambassador to France, finally secured his release, and took him into his home for the next eighteen months to give him a chance to recuperate. During the ten months that he had lain in prison he had employed

his time, whenever he was able, to write portions of Part II of *The Age of Reason*, published in 1795. This book brought down upon him the attacks of the orthodox, and the ill will toward him was intensified in 1796 when he published his *Letter to George Washington*, upbraiding him for folding his arms as President in America while his erstwhile comrade-in-arms languished in prison in France.

Paine's truculent attack upon the British had endeared him to all patriots in America, but when he turned to attack Christianity with the same ferocity, many of his friends shrank from him. And it must be admitted that he drove his points home with reckless abandon, as when, on the first page of *The Age of Reason*, he wrote:

I believe in one God, and no more. . . . I do not believe in the creed professed by the Jewish church, by the Roman church, by the Greek church, by the Turkish church, by the Protestant church, nor by any church that I know of. My own mind is my own church.

Part I is a destructive inquiry into the bases of Christianity, its theology, its mysteries, miracles, prophecies, and revelations; and Part II is a critical examination of the Old and New Testaments to support the negative conclusions and inferences of the first part. Concluding that the "Word of God is the creation we behold," he reiterates the charge that "the bible and testament are impositions and forgeries," and that "of all the religions that ever were invented, there is none more derogatory to the Almighty, more unedifying to men, more repugnant to reason, and more contradictory in itself, than this thing called Christianity."

Too absurd for belief, too impossible to convince, and too inconsistent for practice, it renders the heart torpid or produces only atheists and fanatics. As an engine of power, it serves the purpose of despotism; and as a means of wealth, the avarice of priests; but so far as respects the good of man in general, it leads to nothing here or hereafter.

Despite all its shortcomings, weaknesses of argument, and crudities of style, the writing of *The Age of Reason* was the bravest thing Paine ever did, for he must have known that it would gain him nothing. On the other hand, he must have known that his "going through the Bible," as he put it, "as a man would go through a wood with an axe on his shoulder to fell trees," would bring down upon him the wrath

of orthodox Christendom. Slaveholders, royalists, and fanatics of orthodoxy combined to condemn the man who had dared to deny the inspiration of the Bible, while the grandsons of Puritans who had hanged witches and flogged Quakers denied him a place on the stagecoach lest an offended God should strike it with lightning. Bishops in England and "Pope" Dwight at Yale fulminated against him. The consternation became complete when in 1802 Jefferson dispatched a man-of-war to France to conduct this arch-infidel safely to America, where he got a sorry reception indeed. Fanatics accosted him and damned him in public, and in 1805 an attempt was made on his life at New Rochelle, where he was denied the right to vote on the ground that he was not an American citizen.

Yet all this hubbub was beside the point. Thomas Paine's work was done. Ostracized, broken in health, and in desperate financial straits, he died on June 8, 1809. A few days later a funeral cortège of six persons, including a Frenchwoman and her two sons, a Quaker, and two Negroes, accompanied his remains and laid him away where he would do no more harm.

But, as Tom Paine himself had observed, "reason, like time, will make its own way," and the passage of the years has brought him justice and renown. Not many years after his death, in a log hut out in Illinois a lad named Abe Lincoln sat up all night to read *The Age of Reason* by the flickering light of the fireplace, and trudged twelve miles the next morning to return the book to its owner; today no other American of the Revolutionary age is so much the object of biographical and historical research as Tom Paine; and the world is coming to realize that in an age of bold men he was the bravest. He could rouse the passions, and he could brave them. He used his gifts not only in defense of democracy, but also for women, slaves, and animals. Poverty never left him, for though he made fortunes by his pen, he gave everything to the great cause he served. His fault as a man was a kind of naïve vanity that often dogs men of large mold. In a fight he often forgot the principle he recommended to all others—common sense. No half-way measures served him. It was his fate to escape the gallows in England and the guillotine in France, and either would have supplied the crown of martyrdom that he merited. Certainly a better democrat never fought tyranny, and a better Christian never assailed orthodoxy.

*Common Sense*<sup>1</sup>

## Introduction

Perhaps the sentiments contained in the following pages are not *yet* sufficiently fashionable to procure them general favor; a long habit of not thinking a thing *wrong* gives it a superficial appearance of being *right*, and raises at first a formidable outcry in defense of custom. But the tumult soon subsides. Time makes more converts than reason.

As a long and violent abuse of power is generally the means of calling the right of it in question (and in matters too which might never have been thought of, had not the sufferers been aggravated into the inquiry), and as the king of England hath undertaken in his *own right* to support the parliament in what he calls *theirs*, and as the good people of this country are grievously oppressed by the combination, they have an undoubted privilege to inquire into the pretensions of both, and equally to reject the usurpation of *either*.

In the following sheets, the author has studiously avoided everything which is personal among ourselves. Compliments as well as censure to individuals make no part thereof. The wise and the worthy need not the triumph of a pamphlet; and those whose sentiments are injudicious or unfriendly will cease of themselves, unless too much pains is bestowed upon their conversions.

<sup>1</sup> Published January 10, 1776.

The cause of America is, in a great measure, the cause of all mankind. Many circumstances have, and will arise, which are not local, but universal, and through which the principles of all lovers of mankind are affected, and in the event of which their affections are interested. The laying a country desolate with fire and sword, declaring war against the natural rights of all mankind, and extirpating the defenders thereof from the face of the earth, is the concern of every man to whom nature hath given the power of feeling; of which class, regardless of party censure, is

The Author.

I. On the Origin and Design of Government in General, with Concise Remarks on the English Constitution

Some writers have so confounded society with government as to leave little or no distinction between them; whereas they are not only different, but have different origins. Society is produced by our wants and government by our wickedness; the former promotes our happiness *positively* by uniting our affections, the latter *negatively* by restraining our vices. The one encourages intercourse, the other creates distinctions. The first is a patron, the last a punisher.

Society in every state is a blessing, but government, even in its best state, is but a necessary evil; in its worst state an intolerable one; for when we suffer or

are exposed to the same miseries *by a government*, which we might expect in a country *without government*, our calamity is heightened by reflecting that we furnish the means by which we suffer. Government, like dress, is the badge of lost innocence; the palaces of kings are built upon the ruins of the bowers of paradise. For were the impulses of conscience clear, uniform, and irresistibly obeyed, man would need no other lawgiver; but that not being the case, he finds it necessary to surrender up a part of his 10 property to furnish means for the protection of the rest; and this he is induced to do by the same prudence which in every other case advises him out of two evils to choose the least. *Wherefore*, security being the true design and end of government, it unanswerably follows that whatever *form* thereof appears most likely to ensure it to us, with the least expense and greatest benefit, is preferable to all others.

In order to gain a clear and just idea of the design 20 and end of government, let us suppose a small number of persons settled in some sequestered part of the earth, unconnected with the rest; they will then represent the first peopling of any country, or of the world. In this state of natural liberty, society will be their first thought. A thousand motives will excite them thereto; the strength of one man is so unequal to his wants, and his mind so unfitted for perpetual solitude, that he is soon obliged to seek assistance and relief of another, who in his turn requires the same. 30 Four or five united would be able to raise a tolerable dwelling in the midst of a wilderness, but *one* man might labor out the common period of life without accomplishing anything; when he had felled his timber he could not remove it, nor erect it after it was removed; hunger in the meantime would urge him to quit his work, and every different want would call him a different way. Disease, nay even misfortune, would be death; for though neither might be mortal, yet either would disable him from living, and 40 reduce him to a state in which he might rather be said to perish than to die.

Thus necessity, like a gravitating power, would soon form our newly arrived emigrants into society, the reciprocal blessings of which would supersede and render the obligations of law and government unnecessary while they remained perfectly just to each other; but as nothing but heaven is impregnable to vice, it will unavoidably happen that in proportion

as they surmount the first difficulties of emigration, which bound them together in a common cause, they will begin to relax in their duty and attachment to each other; and this remissness will point out the necessity of establishing some form of government to supply the defect of moral virtue.

Some convenient tree will afford them a state-house, under the branches of which the whole colony may assemble to deliberate on public matters. It is more than probable that their first laws will have the title only of *REGULATIONS* and be enforced by no other penalty than public disesteem. In this first parliament every man by natural right will have a seat.

But as the colony increases, the public concerns will increase likewise, and the distance at which the members may be separated will render it too inconvenient for all of them to meet on every occasion as at first, when their number was small, their habitations near, and the public concerns few and trifling. This will point out the convenience of their consenting to leave the legislative part to be managed by a select number chosen from the whole body, who are supposed to have the same concerns at stake which those have who appointed them, and who will act in the same manner as the whole body would act were they present. If the colony continue increasing, it will become necessary to augment the number of representatives, and that the interest of every part of the colony may be attended to, it will be found best to divide the whole into convenient parts, each part sending its proper number; and that the *elected* might never form to themselves an interest separate from the *electors*, prudence will point out the propriety of having elections often, because as the *elected* might by that means return and mix again with the general body of the *electors* in a few months, their fidelity to the public will be secured by the prudent reflection of not making a rod for themselves. And as this frequent interchange will establish a common interest with every part of the community, they will mutually and naturally support each other, and on this (not on the unmeaning name of king) depends the *strength of government and the happiness of the governed*.

Here then is the origin and rise of government; namely, a mode rendered necessary by the inability of moral virtue to govern the world; here too is the design and end of government, viz., freedom and

security. And however our eyes may be dazzled with show or our ears deceived by sound; however prejudice may warp our wills or interest darken our understanding, the simple voice of nature and reason will say, it is right.

I draw my idea of the form of government from a principle in nature which no art can overturn, viz. that the more simple anything is, the less liable it is to be disordered, and the easier repaired when disordered; and with this maxim in view, I offer a few remarks on the so much boasted constitution of England. That it was noble for the dark and slavish times in which it was erected, is granted. When the world was overrun with tyranny, the least remove therefrom was a glorious rescue. But that it is imperfect, subject to convulsions, and incapable of producing what it seems to promise, is easily demonstrated.

Absolute governments (though the disgrace of human nature) have this advantage with them, they are simple; if the people suffer, they know the head from which their suffering springs; know likewise the remedy; and are not bewildered by a variety of causes and cures. But the constitution of England is so exceedingly complex that the nation may suffer for years together without being able to discover in which part the fault lies; some will say in one and some in another, and every political physician will advise a different medicine.

I know it is difficult to get over local or long standing prejudices, yet if we will suffer ourselves to examine the component parts of the English constitution, we shall find them to be the base remains of two ancient tyrannies, compounded with some new republican materials.

*First.*—The remains of monarchical tyranny in the person of the King.

*Secondly.*—The remains of aristocratical tyranny in the persons of the Peers.

*Thirdly.*—The new republican materials, in the persons of the Commons, on whose virtue depends the freedom of England.

The two first, by being hereditary, are independent of the people; wherefore in a *constitutional sense* they contribute nothing towards the freedom of the state.

To say that the constitution of England is a *union* of three powers, reciprocally *checking*<sup>2</sup> each other, is

<sup>2</sup> Montesquieu had put such an interpretation upon the British constitution.

farcical; either the words have no meaning, or they are flat contradictions.

To say that the commons is a check upon the king, presupposes two things.

*First.*—That the king is not to be trusted without being looked after; or in other words, that a thirst for absolute power is the natural disease of monarchy.

*Secondly.*—That the commons, by being appointed for that purpose, are either wiser or more worthy of confidence than the crown.

But as the same constitution which gives the commons a power to check the king by withholding the supplies, gives afterwards the king a power to check the commons, by empowering him to reject their other bills; it again supposes that the king is wiser than those whom it has already supposed to be wiser than him. A mere absurdity!

There is something exceedingly ridiculous in the composition of monarchy; it first excludes a man from the means of information, yet empowers him to act in cases where the highest judgment is required. The state of a king shuts him from the world, yet the business of a king requires him to know it thoroughly; wherefore the different parts, by unnaturally opposing and destroying each other, prove the whole character to be absurd and useless.

Some writers have explained the English constitution thus: the king, say they, is one, the people another; the peers are a house in behalf of the king, the commons in behalf of the people; but this hath all the distinctions of a house divided against itself; and though the expressions be pleasantly arranged, yet when examined they appear idle and ambiguous; and it will always happen that the nicest construction that words are capable of, when applied to the description of something which either cannot exist or is too incomprehensible to be within the compass of description, will be words of sound only, and though they may amuse the ear, they cannot inform the mind; for this explanation includes a previous question, viz. *how came the king by a power which the people are afraid to trust, and always obliged to check?* Such a power could not be the gift of a wise people, neither can any power, *which needs checking*, be from God; yet the provision which the constitution makes supposes such a power to exist.

But the provision is unequal to the task; the means either cannot or will not accomplish the end, and the

whole affair is a *felo de se*; <sup>3</sup> for as the greater weight will always carry up the less, and as all the wheels of a machine are put in motion by one, it only remains to know which power in the constitution has the most weight, for that will govern; and though the others, or a part of them, may clog, or check the rapidity of its motion, yet so long as they cannot stop it, their endeavors will be ineffectual; the first moving power will at last have its way, and what it wants in speed is supplied by time.

That the crown is this overbearing part in the English constitution needs not be mentioned, and that it derives its whole consequence merely from being the giver of places and pensions is self-evident; wherefore, though we have been wise enough to shut and lock a door against absolute monarchy, we at the same time have been foolish enough to put the crown in possession of the key.

The prejudice of Englishmen in favor of their own government by king, lords, and commons, arises as <sup>20</sup> much or more from national pride than reason. Individuals are undoubtedly safer in England than in some other countries: but the *will* of the king is as much the *law* of the land in Britain as in France, with this difference, that instead of proceeding directly from his mouth, it is handed to the people under the formidable shape of an act of parliament. For the fate of Charles the First hath only made kings more subtle—not more just.

Wherefore, laying aside all national pride and <sup>30</sup> prejudice in favor of modes and forms, the plain truth is that *it is wholly to the constitution of the people, and not to the constitution of the government* that the crown is not as oppressive in England as in Turkey.

An inquiry into the *constitutional errors* in the English form of government is at this time highly necessary; for as we are never in a proper condition of doing justice to others while we continue under the influence of some leading partiality, so neither are <sup>40</sup> we capable of doing it to ourselves while we remain fettered by any obstinate prejudice. And as a man who is attached to a prostitute is unfitted to choose or judge of a wife, so any prepossession in favor of a rotten constitution of government will disable us from discerning a good one.

<sup>3</sup> Murderer of itself.

## II. Of Monarchy and Hereditary Succession

Mankind being originally equals in the order of creation, the equality could only be destroyed by some subsequent circumstance: the distinctions of rich and poor may in a great measure be accounted for, and that without having recourse to the harsh, ill-sounding names of oppression and avarice. Oppression is often the *consequence*, but seldom or never <sup>10</sup> the *means* of riches; and though avarice will preserve a man from being necessitously poor, it generally makes him too timorous to be wealthy.

But there is another and greater distinction for which no truly natural or religious reason can be assigned, and that is the distinction of men into *kings* and *subjects*. Male and female are the distinctions of nature, good and bad the distinctions of heaven; but how a race of men came into the world so exalted above the rest, and distinguished like some new species, is worth inquiring into, and whether they are the means of happiness or of misery to mankind.

In the early ages of the world, according to the Scripture chronology there were no kings; the consequence of which was there were no wars; it is the pride of kings which throws mankind into confusion. Holland without a king hath enjoyed more peace for this last century than any of the monarchical governments in Europe. Antiquity favors the same remark; for the quiet and rural lives of the first patriarchs have a happy something in them, which vanishes when we come to the history of Jewish royalty.

Government by kings was first introduced into the world by the heathens, from whom the children of Israel copied the custom. It was the most prosperous invention the Devil ever set on foot for the promotion of idolatry. The heathens paid divine honors to their deceased kings, and the Christian world has improved on the plan by doing the same to their living ones. How impious is the title of sacred Majesty applied to a worm, who in the midst of his splendor is crumbling into dust!

As the exalting one man so greatly above the rest cannot be justified on the equal rights of nature, so neither can it be defended on the authority of Scripture; for the will of the Almighty, as declared by Gideon <sup>4</sup> and the prophet Samuel, <sup>5</sup> expressly disapproves of government by kings. All anti-monarchi-

<sup>4</sup> See Judges 8:22-25.

<sup>5</sup> See I Samuel 8:5-22.

cal parts of Scripture have been very smoothly glossed over in monarchical governments, but they undoubtedly merit the attention of countries which have their governments yet to form. "*Render unto Cæsar the things which are Cæsar's,*" is the scripture doctrine of courts, yet it is no support of monarchical government, for the Jews at that time were without a king, and in a state of vassalage to the Romans.

Near three thousand years passed away, from the Mosaic account of the creation, till the Jews under a national delusion requested a king. Till then their form of government (except in extraordinary cases where the Almighty interposed) was a kind of republic, administered by a judge and the elders of the tribes. Kings they had none, and it was held sinful to acknowledge any being under that title but the Lord of Hosts. And when a man seriously reflects on the idolatrous homage which is paid to the persons of kings, he need not wonder that the Almighty, ever jealous of his honor, should disapprove a form of government which so impiously invades the prerogative of heaven.

Monarchy is ranked in scripture as one of the sins of the Jews, for which a course in reserve is denounced against them. The history of that transaction is worth attending to.

The children of Israel being oppressed by the Midianites, Gideon marched against them with a small army, and victory through the Divine interposition decided in his favor. The Jews elate with success and attributing it to the generalship of Gideon, proposed making him a king, saying, *Rule thou over us, thou and thy son, and thy son's son.* Here was temptation in its fullest extent; not a kingdom only, but an hereditary one; but Gideon in the piety of his soul replied, *I will not rule over you, neither shall my son rule over you.* THE LORD SHALL RULE OVER YOU. Words need not be more explicit; Gideon doth not decline the honor, but denieth their right to give it; neither doth he compliment them with invented declarations of his thanks, but in the positive style of a prophet charges them with disaffection to their proper sovereign, the King of Heaven.

About one hundred and thirty years after this, they fell again into the same error. The hankering which the Jews had for the idolatrous customs of the heathens is something exceedingly unaccountable; but so it was that laying hold of the misconduct of

Samuel's two sons who were intrusted with some secular concerns, they came in an abrupt and clamorous manner to Samuel, saying, *Behold thou art old, and thy sons walk not in thy ways, now make us a king to judge us like all the other nations.* And here we cannot but observe that their motives were bad, viz. that they might be like unto other nations, i.e. the heathens, whereas their true glory lay in being as much unlike them as possible. *But the thing displeased Samuel when they said, give us a king to judge us; and Samuel prayed unto the Lord, and the Lord said unto Samuel, hearken unto the voice of the people in all that they say unto thee, for they have not rejected thee, but they have rejected me, THAT I SHOULD NOT REIGN OVER THEM.* According to all the works which they have done since the day that I brought them up out of Egypt even unto this day, wherewith they have forsaken me, and served other Gods: so do they also unto thee. Now therefore hearken unto their voice, howbeit, protest solemnly unto them and show them the manner of the king that shall reign over them, i.e. not of any particular king, but the general manner of the kings of the earth whom Israel was so eagerly copying after. And notwithstanding the great distance of time and difference of manners, the character is still in fashion. *And Samuel told all the words of the Lord unto the people, that asked of him a king. And he said, This shall be the manner of the king that shall reign over you. He will take your sons and appoint them for himself for his chariots and to be his horsemen, and some shall run before his chariots (this description agrees with the present mode of impressing men) and he will appoint him captains over thousands and captains over fifties, will set them to ear his ground and to reap his harvest, and to make his instruments of war, and instruments of his chariots. And he will take your daughters to be confectionaries, and to be cooks, and to be bakers (this describes the expence and luxury as well as the oppression of kings) and he will take your fields and your vineyards, and your olive yards, even the best of them, and give them to his servants. And he will take the tenth of your seed, and of your vineyards, and give them to his officers and to his servants (by which we see that bribery, corruption, and favoritism are the standing vices of kings) and he will take the tenth of your men servants, and your maid servants, and your goodliest young men, and your asses, and put them to his*

*work: and he will take the tenth of your sheep, and ye shall be his servants, and ye shall cry out in that day because of your king which ye shall have chosen, AND THE LORD WILL NOT HEAR YOU IN THAT DAY.*

This accounts for the continuation of monarchy; neither do the characters of the few good kings which have lived since, either sanctify the title, or blot out the sinfulness of the origin; the high encomium given of David <sup>6</sup> takes no notice of him *officially as a king*, but only as a *man* after God's own heart. *Nevertheless the People refused to obey the voice of Samuel, and they said, Nay but we will have a king over us, that we may be like all the nations, and that our king may judge us, and go out before us and fight our battles.* Samuel continued to reason with them, but to no purpose; he set before them their ingratitude, but all would not avail; and seeing them fully bent on their folly, he cried out, *I will call unto the Lord, and he shall send thunder and rain* (which was then a punishment, being in the time of wheat harvest) <sup>10</sup> *that ye may perceive and see that your wickedness is great which ye have done in the sight of the Lord, IN ASKING YOU A KING. So Samuel called unto the Lord, and the Lord sent thunder and rain that day, and all the people greatly feared the Lord and Samuel. And all the people said unto Samuel, Pray for thy servants unto the Lord thy God that we die not, for WE HAVE ADDED UNTO OUR SINS THIS EVIL, TO ASK A KING.* These portions of scripture are direct and positive. They admit of no equivocal construction. That <sup>30</sup> the Almighty hath here entered his protest against monarchical government is true, or the scripture is false. And a man hath good reason to believe that there is as much of kingcraft as priestcraft in withholding the scripture from the public in popish countries. For monarchy in every instance is the popery of government.

To the evil of monarchy we have added that of hereditary succession; and as the first is a degradation and lessening of ourselves, so the second, <sup>40</sup> claimed as a matter of right, is an insult and imposition on posterity. For all men being originally equals, no *one* by *birth* could have a right to set up his own family in perpetual preference to all others forever, and though himself might deserve *some* decent degree of honors of his contemporaries, yet his descendants might be far too unworthy to inherit them. One of the strongest *natural* proofs of the

folly of hereditary right in kings, is that nature disapproves it, otherwise she would not so frequently turn it into ridicule by giving mankind an *ass* for a *lion*.

Secondly, as no man at first could possess any other public honors than were bestowed upon him, so the givers of those honors could have no power to give away the right of posterity, and though they might say "we choose you for our head," they could not without manifest injustice to their children say "that your children and your children's children shall reign over our's forever." Because such an unwise, unjust, unnatural compact might (perhaps) in the next succession put them under the government of a rogue or a fool. Most wise men in their private sentiments have ever treated hereditary right with contempt; yet it is one of those evils which when once established is not easily removed; many submit from fear, others from superstition, and the more powerful part shares with the king the plunder of the rest.

This is supposing the present race of kings in the world to have had an honorable origin; whereas it is more than probable that, could we take off the dark covering of antiquity and trace them to their first rise, we should find the first of them nothing better than the principal ruffian of some restless gang, whose savage manners of pre-eminence in subtlety obtained him the title of chief among plunderers; and who by increasing in power, and extending his depredations, overawed the quiet and defenseless to purchase their safety by frequent contributions. Yet his electors could have no idea of giving hereditary right to his descendants, because such a perpetual exclusion of themselves was incompatible with the free and unrestrained principles they professed to live by. Wherefore, hereditary succession in the early ages of monarchy could not take place as a matter of claim, but as something casual or complemental; but as few or <sup>no</sup> records were extant in those days, and traditionary history stuffed with fables, it was very easy, after the lapse of a few generations, to trump up some superstitious tale conveniently timed, Mahomet-like,<sup>7</sup> to cram hereditary right down the throats of the vulgar. Perhaps the disorders which threatened, or seemed to threaten, on the decease of a leader and the choice of a new one (for elections among ruffians could not

<sup>6</sup> See I Kings 2:4.

<sup>7</sup> Paine suggests that Mohammed carefully timed for his political purposes the revelations upon which the Koran is based.

be very orderly) induced many at first to favor hereditary pretensions; by which means it happened, as it hath happened since, that what at first was submitted to as a convenience was afterwards claimed as a right.

England, since the conquest, hath known some few good monarchs, but groaned beneath a much larger number of bad ones; yet no man in his senses can say that their claim under William the Conqueror is a very honorable one. A French bastard, landing with an armed banditti and establishing himself king of England against the consent of the natives, is in plain terms a very paltry rascally original. It certainly hath no divinity in it. However it is needless to spend much time in exposing the folly of hereditary right; if there are any so weak as to believe it, let them promiscuously worship the Ass and the Lion, and welcome. I shall neither copy their humility, nor disturb their devotion.

Yet I should be glad to ask how they suppose kings came at first? The question admits but of three answers, viz., either by lot, by election, or by usurpation. If the first king was taken by lot, it establishes a precedent for the next, which excludes hereditary succession. Saul was by lot,<sup>8</sup> yet the succession was not hereditary, neither does it appear from that transaction that there was any intention it ever should be. If the first king of any country was by election that likewise establishes a precedent for the next; for to say that the right of all future generations is taken away by the act of the first electors in their choice not only of a king, but of a family of kings forever, hath no parallel in or out of scripture but the doctrine of original sin, which supposes the free will of all men lost in Adam; and from such comparison, and it will admit of no other, hereditary succession can derive no glory. For as in Adam all sinned, and as in the first electors all men obeyed; as in the one all mankind were subjected to Satan, and in the other to sovereignty; as our innocence was lost in the first, and our authority in the last; and as both disable us from reassuming some former state and privilege, it unanswerably follows that original sin and hereditary succession are parallels. Dishonorable rank! inglorious connection! yet the most subtle sophist cannot produce a juster simile.

As to usurpation, no man will be so hardy as to defend it; and that William the Conqueror was a

usurper is a fact not to be contradicted. The plain truth is, that the antiquity of English monarchy will not bear looking into.

But it is not so much the absurdity as the evil of hereditary succession which concerns mankind. Did it insure a race of good and wise men it would have the seal of divine authority, but as it opens a door to the *foolish*, the *wicked*, and the *improper*, it hath in it the nature of oppression. Men who look upon themselves born to reign, and others to obey, soon grow insolent. Selected from the rest of mankind, their minds are early poisoned by importance; and the world they act in differs so materially from the world at large that they have but little opportunity of knowing its true interest, and when they succeed to the government are frequently the most ignorant and unfit of any throughout the dominions.

Another evil which attends hereditary succession is, that the throne is subject to be possessed by a minor at any age; all which time the regency, acting under the cover of a king, have every opportunity and inducement to betray their trust. The same national misfortune happens when a king, worn out with age and infirmity, enters the last stage of human weakness. In both these cases the public becomes a prey to every miscreant who can temper successfully with the follies either of age or infancy.

The most plausible plea which hath ever been offered in favor of hereditary succession is that it preserves a nation from civil wars; and were this true, it would be weighty; whereas, it is the most barefaced falsity ever imposed upon mankind. The whole history of England disowns the fact. Thirty kings and two minors have reigned in that distracted kingdom since the conquest, in which time there have been (including the Revolution) no less than eight civil wars and nineteen rebellions. Wherefore instead of making for peace, it makes against it, and destroys the very foundation it seems to stand upon.

The contest for monarchy and succession between the houses of York and Lancaster<sup>9</sup> laid England in a scene of blood for many years. Twelve pitched battles, besides skirmishes and sieges, were fought between Henry and Edward. Twice was Henry prisoner to Edward, who in his turn was prisoner to Henry. And so uncertain is the fate of war and the

<sup>8</sup> See I Kings 10:17-24.

<sup>9</sup> York and Lancaster represent the two houses or factions that fought for the rule of England after the deposition of Richard II in 1399.

temper of a nation, when nothing but personal matters are the ground of a quarrel, that Henry was taken in triumph from a prison to a palace, and Edward obliged to fly from a palace to a foreign land; yet, as sudden transitions of temper are seldom lasting, Henry in his turn was driven from the throne, and Edward recalled to succeed him. The parliament always following the strongest side.

This contest began in the reign of Henry the Sixth, and was not entirely extinguished till Henry the Seventh, in whom the families were united. Including a period of sixty-seven years, viz., from 1422 to 1489.

In short, monarchy and succession have laid (not this or that kingdom only) but the world in blood and ashes. 'Tis a form of government which the word of God bears testimony against, and blood will attend it.

If we inquire into the business of a king, we shall find (in some countries they may have none) that after sauntering away their lives without pleasure to themselves or advantages to the nation, they withdraw from the scene, and leave their successors to tread the same idle round. In absolute monarchies the whole weight of business, civil and military, lies on the king; the children of Israel in their request for a king urged this plea, "that he may judge us, and go out before us and fight our battles." But in countries where he is neither a judge nor a general, as in England, a man would be puzzled to know what is his business.

The nearer any government approaches to a republic, the less business there is for a king. It is somewhat difficult to find a proper name for the government of England. Sir William Meredith<sup>10</sup> calls it a republic; but in its present state it is unworthy of the name, because the corrupt influence of the crown, by having all the places in its disposal, hath so effectually swallowed up the power, and eaten out the virtue of the House of Commons (the republican part in the constitution) that the government of England is nearly as monarchical as that of France or Spain. Men fall out with names without understanding them. For 'tis the republican and not the monarchical part of the constitution of England which Englishmen glory in, viz. the liberty of choosing a house of commons from out of their own

body—and it is easy to see that when republican virtues fail, slavery ensues. Why is the constitution of England sickly but because monarchy hath poisoned the republic, the crown has engrossed the commons?

In England a king hath little more to do than to make war and give away places; which in plain terms is to impoverish the nation and set it together by the ears. A pretty business indeed for a man to be allowed eight hundred thousand sterling a year for, and worshipped into the bargain! Of more worth is one honest man to society, and in the sight of God, than all the crowned ruffians that ever lived.

### III. Thoughts on the Present State of American Affairs

In the following pages I offer nothing more than simple facts, plain arguments, and common sense; and have no other preliminaries to settle with the reader, than that he will divest himself of prejudice and prepossession, and suffer his reason and his feelings to determine for themselves; that he will put on, or rather that he will not put off, the true character of a man, and generously enlarge his views beyond the present day.

Volumes have been written on the subject of the struggle between England and America. Men of all ranks have embarked in the controversy, from different motives, and with various designs; but all have been ineffectual, and the period of debate is closed. Arms as the last resource decide the contest; the appeal was the choice of the king, and the continent has accepted the challenge.

It hath been reported of the late Mr. Pelham<sup>11</sup> (who though an able minister was not without his faults) that on his being attacked in the House of Commons on the score that his measures were only of a temporary kind, replied, "*They will last my time.*" Should a thought so fatal and unmanly possess the colonies in the present contest, the name of ancestors will be remembered by future generations with detestation.

The sun never shined on a cause of greater worth. 'Tis not the affair of a city, a county, a province, or a kingdom; but of a continent—of at least one-eighth part of the habitable globe. 'Tis not the concern of a day, a year, or an age; posterity are virtually in-

<sup>10</sup> Sir William Meredith (1725?–1790), an English political leader.

<sup>11</sup> Henry Pelham (1695?–1754), Prime Minister of England (1744–1754).

volved in the contest, and will be more or less affected even to the end of time by the proceedings now. Now is the seedtime of continental union, faith, and honor. The least fracture now will be like a name engraved with the point of a pin on the tender rind of a young oak; the wound would enlarge with the tree, and posterity read it in full grown characters.

By referring the matter from argument to arms, a new era for politics is struck—a new method of thinking has arisen. All plans, proposals, &c. prior to the nineteenth of April,<sup>12</sup> i.e. to the commencement of hostilities, are like the almanacks of the last year; which though proper then, are superseded and useless now. Whatever was advanced by the advocates on either side of the question then, terminated in one and the same point, viz. a union with Great Britain; the only difference between the parties was the method of effecting it; the one proposing force, the other friendship; but it has so far happened that the first has failed, and the second has withdrawn her 20 influence.

As much has been said of the advantages of reconciliation, which, like an agreeable dream, has passed away and left us as we were, it is but right that we should examine the contrary side of the argument, and inquire into some of the many material injuries which these colonies sustain, and always will sustain, by being connected with and dependent on Great Britain. To examine that connection and dependence on the principles of nature and common sense; to see 30 what we have to trust to, if separated, and what we are to expect, if dependent.

I have heard it asserted by some, that as America has flourished under her former connection with Great Britain, the same connection is necessary towards her future happiness, and will always have the same effect. Nothing can be more fallacious than this kind of argument. We may as well assert that because a child has thrived upon milk, that it is never to have meat, or that the first twenty years of our lives is 40 to become a precedent for the next twenty. But even this is admitting more than is true; for I answer roundly that America would have flourished as much, and probably much more, had no European power taken any notice of her. The commerce by which she hath enriched herself are the necessaries of life, and will always have a market while eating is the custom of Europe.

<sup>12</sup> The date of the Battle of Lexington.

But she has protected us, say some. That she hath engrossed us is true, and defended the continent at our expense as well as her own is admitted; and she would have defended Turkey from the same motive, viz. for the sake of trade and dominion.

Alas! we have been long led away by ancient prejudices and made large sacrifices to superstition. We have boasted the protection of Great Britain without considering that her motive was *interest*, not *attachment*; and that she did not protect us from *our enemies on our account*, but from her enemies on her own account, from those who had no quarrel with us on any *other account*, and who will always be our enemies on the *same account*. Let Britain waive her pretensions to the continent, or the continent throw off the dependence, and we should be at peace with France and Spain were they at war with Britain. The miseries of Hanover's<sup>13</sup> last war ought to warn us against connections.

It hath lately been asserted in parliament, that the colonies have no relation to each other but through the parent country, i.e. that Pennsylvania and the Jerseys, and so on for the rest, are sister colonies by the way of England; this is certainly a very roundabout way of proving relationship, but it is the nearest and only true way of proving enmity (or enmityship, if I may so call it). France and Spain never were, nor perhaps ever will be, our enemies as *Americans*, but as our being the *subjects of Great Britain*.

But Britain is the parent country, say some. Then the more shame upon her conduct. Even brutes do not devour their young, nor savages make war upon their families; wherefore, the assertion, if true, turns to her reproach; but it happens not to be true, or only partly so, and the phrase *parent* or *mother country* hath been jesuitically adopted by the king and his parasites, with a low papistical design of gaining an unfair bias on the credulous weakness of our minds. Europe, and not England, is the parent country of America. This new world hath been the asylum for the persecuted lovers of civil and religious liberty from *every part* of Europe. Hither have they fled, not from the tender embraces of the mother, but from the cruelty of the monster; and it is so far true of England, that the same tyranny which drove the first emigrants from home pursues their descendants still.

<sup>13</sup> Hanover was the principal scene of the Seven Years' War (1756–1763), especially the campaigns of 1757.

In this extensive quarter of the globe, we forget the narrow limits of three hundred and sixty miles (the extent of England) and carry our friendship on a larger scale; we claim brotherhood with every European Christian, and triumph in the generosity of the sentiment.

It is pleasant to observe by what regular gradations we surmount the force of local prejudices as we enlarge our acquaintance with the world. A man born in any town in England divided into parishes, will naturally associate most with his fellow parishioners (because their interests in many cases will be common) and distinguish him by the name of *neighbor*; if he meet him but a few miles from home, he drops the narrow idea of a street, and salutes him by the name of *townsman*; if he travel out of the county and meet him in any other, he forgets the minor divisions of street and town, and calls him *country-man*, *i.e.* *county-man*; but if in their foreign excursions they should associate in France, or any other part of *Europe*, their local remembrance would be enlarged into that of *Englishman*. And by a just parity of reasoning, all Europeans meeting in America, or any other quarter of the globe, are *countrymen*; for England, Holland, Germany, or Sweden, when compared with the whole, stand in the same places on the larger scale, which the divisions of street, town, and county do on the smaller ones; distinctions too limited for continental minds. Not one third of the inhabitants, even of this province, are of English descent. Wherefore, I reprobate the phrase of parent or mother country applied to England only, as being false, selfish, narrow, and ungenerous.

But, admitting that we were all of English descent, what does it amount to? Nothing. Britain, being now an open enemy, extinguishes every other name and title; and to say that reconciliation is our duty, is truly farcical. The first king of England, of the present line (William the Conqueror) was a Frenchman, and half the peers of England are descendants from the same country; wherefore, by the same method of reasoning, England ought to be governed by France.

Much hath been said of the united strength of Britain and the colonies, that in conjunction they might bid defiance to the world. But this is mere presumption, the fate of war is uncertain; neither do the expressions mean anything, for this continent would never suffer itself to be drained of inhabitants

to support the British arms in either Asia, Africa, or Europe.

Besides, what have we to do with setting the world at defiance? Our plan is commerce, and that, well attended to, will secure us the peace and friendship of all Europe; because it is the interest of all Europe to have America a *free port*. Her trade will always be a protection, and her barrenness of gold and silver secure her from invaders.

I challenge the warmest advocate for reconciliation to show a single advantage that this continent can reap, by being connected with Great Britain. I repeat the challenge, not a single advantage is derived. Our corn will fetch its price in any market in Europe, and our imported goods must be paid for, buy them where we will.

But the injuries and disadvantages which we sustain by that connection are without number; and our duty to mankind at large, as well as to ourselves, instruct us to renounce the alliance: because any submission to, or dependence on, Great Britain, tends directly to involve this continent in European wars and quarrels, and set us at variance with nations who would otherwise seek our friendship, and against whom we have neither anger nor complaint. As Europe is our market for trade, we ought to form no partial connection with any part of it. 'Tis the true interest of America to steer clear of European contentions, which she never can do while by her dependence on Britain she is made the makeweight in the scale of British politics.

Europe is too thickly planted with kingdoms to be long at peace, and whenever a war breaks out between England and any foreign power, the trade of America goes to ruin, *because of her connection with Britain*. The next war may not turn out like the last, and should it not, the advocates for reconciliation now will be wishing for separation then, because neutrality in that case would be a safer convoy than a man of war. Everything that is right or reasonable pleads for separation. The blood of the slain, the weeping voice of nature cries, 'TIS TIME TO PART. Even the distance at which the Almighty hath placed England and America is a strong and natural proof that the authority of the one over the other, was never the design of heaven. 'The time likewise at which the continent was discovered, adds weight to the argument, and the manner in which it was peopled, increases the force of it. The Reformation was pre-

ceded by the discovery of America, as if the Almighty graciously meant to open a sanctuary to the persecuted in future years, when home should afford neither friendship nor safety.

The authority of Great Britain over this continent is a form of government which sooner or later must have an end. And a serious mind can draw no true pleasure by looking forward, under the painful and positive conviction that what he calls "the present constitution" is merely temporary. As parents, we can have no joy, knowing that *this government* is not sufficiently lasting to insure anything which we may bequeath to posterity; and by a plain method of argument, as we are running the next generation into debt, we ought to do the work of it, otherwise we use them meanly and pitifully. In order to discover the line of our duty rightly, we should take our children in our hand, and fix our station a few years farther into life; that eminence will present a prospect which a few present fears and prejudices conceal 20 from our sight.

Though I would carefully avoid giving unnecessary offense, yet I am inclined to believe that all those who espouse the doctrine of reconciliation may be included within the following descriptions: Interested men, who are not to be trusted, weak men who *cannot* see, prejudiced men who *will not* see, and a certain set of moderate men who think better of the European world than it deserves; and this last class, by an ill-judged deliberation, will be the cause of 30 more calamities to this continent than all the other three.

It is the good fortune of many to live distant from the scene of present sorrow; the evil is not sufficiently brought to *their* doors to make *them* feel the precariousness with which all American property is possessed. But let our imaginations transport us a few moments to Boston;<sup>14</sup> that seat of wretchedness will teach us wisdom, and instruct us forever to renounce a power in whom we can have no trust. The 40 inhabitants of that unfortunate city, who but a few months ago were in ease and affluence, have now no other alternative than to stay and starve, or turn out to beg. Endangered by the fire of their friends if they continue within the city, and plundered by the soldiery if they leave it, in their present situation they are prisoners without the hope of redemption, and in

<sup>14</sup> Besieged from July, 1775, until March, 1776.

a general attack for their relief they would be exposed to the fury of both armies.

Men of passive tempers look somewhat lightly over the offenses of Great Britain, and, still hoping for the best, are apt to call out, *Come, come, we shall be friends again for all this*. But examine the passions and feelings of mankind; bring the doctrine of reconciliation to the touchstone of nature, and then tell me whether you can hereafter love, honor, and faithfully serve the power that hath carried fire and sword into your land? If you cannot do all these, then are you only deceiving yourselves, and by your delay bringing ruin upon posterity. Your future connection with Britain, whom you can neither love nor honor, will be forced and unnatural, and being formed only on the plan of present convenience, will in a little time fall into a relapse more wretched than the first. But if you say you can still pass the violations over, then I ask, Hath your house been burnt? Hath your property been destroyed before your face? Are your wife and children destitute of a bed to lie on, or bread to live on? Have you lost a parent or child by their hands, and yourself the ruined and wretched survivor? If you have not, then are you not a judge of those who have. But if you have, and can still shake hands with the murderers, then are you unworthy the name of husband, father, friend, or lover; and whatever may be your rank or title in life, you have the heart of a coward, and the spirit of a sycophant.

This is not inflaming or exaggerating matters, but trying them by those feelings and affections which nature justifies, and without which we should be incapable of discharging the social duties of life, or enjoying the felicities of it. I mean not to exhibit horror for the purpose of provoking revenge, but to awaken us from fatal and unmanly slumbers, that we may pursue determinately some fixed object. 'Tis not in the power of Britain or of Europe to conquer America, if she doth not conquer herself by *delay* and 50 *timidity*. The present winter is worth an age if rightly employed, but if lost or neglected the whole continent will partake of the misfortune; and there is no punishment which that man doth not deserve, be he who, or what, or where he will, that may be the means of sacrificing a season so precious and useful.

It is repugnant to reason, to the universal order of things, to all examples from former ages, to suppose

that this continent can long remain subject to any external power. The most sanguine in Britain doth not think so. The utmost stretch of human wisdom cannot, at this time, compass a plan, short of separation, which can promise the continent even a year's security. Reconciliation is *now* a fallacious dream. Nature has deserted the connection, and art cannot supply her place. For, as Milton wisely expresses, "Never can true reconcilment grow where wounds of deadly hate have pierced so deep."<sup>15</sup>

Every quiet method for peace hath been ineffectual. Our prayers have been rejected with disdain; and have tended to convince us that nothing flatters vanity or confirms obstinacy in kings more than repeated petitioning—and nothing hath contributed more than that very measure to make the kings of Europe absolute. Witness Denmark and Sweden.<sup>16</sup> Wherefore, since nothing but blows will do, for God's sake let us come to a final separation, and not leave the next generation to be cutting throats under the violated unmeaning names of parent and child.

To say they will never attempt it again is idle and visionary; we thought so at the repeal of the stamp act, yet a year or two undeceived us; as well may we suppose that nations which have been once defeated will never renew the quarrel.

As to government matters, it is not in the power of Britain to do this continent justice: the business of it will soon be too weighty and intricate to be managed with any tolerable degree of convenience, by a power so distant from us, and so very ignorant of us; for if they cannot conquer us they cannot govern us. To be always running three or four thousand miles with a tale or a petition, waiting four or five months for an answer, which, when obtained, requires five or six more to explain it in, will in a few years be looked upon as folly and childishness. There was a time when it was proper, and there is a proper time for it to cease.

Small islands not capable of protecting themselves are the proper objects for government to take under their care; but there is something absurd in supposing a continent to be perpetually governed by an island. In no instance hath nature made the satellite larger than its primary planet; and as England and America,

<sup>15</sup> *Paradise Lost*, IV, 98–9.

<sup>16</sup> Quarrels among the nobility had led to the establishment of a monarchy in Denmark under Frederick III in 1660 and in Sweden under Gustavus in 1772.

with respect to each other, reverse the common order of nature, it is evident that they belong to different systems. England to Europe: America to itself.

I am not induced by motives of pride, party, or resentment to espouse the doctrine of separation and independence; I am clearly, positively, and conscientiously persuaded that 'tis the true interest of this continent to be so; that everything short of *that* is mere patchwork, that it can afford no lasting felicity—that it is leaving the sword to our children, and shrinking back at a time when a little more, a little further, would have rendered this continent the glory of the earth.

As Britain hath not manifested the least inclination towards a compromise, we may be assured that no terms can be obtained worthy the acceptance of the continent, or any ways equal to the expense of blood and treasure we have been already put to.

The object contended for ought always to bear some just proportion to the expense. The removal of North<sup>17</sup> or the whole detestable junto,<sup>18</sup> is a matter unworthy the millions we have expended. A temporary stoppage of trade was an inconvenience which would have sufficiently balanced the repeal of all the acts complained of, had such repeals been obtained; but if the whole continent must take up arms, if every man must be a soldier, 'tis scarcely worth our while to fight against a contemptible ministry only. Dearly, dearly do we pay for the repeal of the acts, if that is all we fight for; for, in a just estimation, 'tis as great a folly to pay a Bunker-hill price<sup>19</sup> for law as for land. As I have always considered the independency of this continent an event which sooner or later must arrive, so from the late rapid progress of the continent to maturity, the event cannot be far off. Wherefore, on the breaking out of hostilities, it was not worth the while to have disputed a matter which time would have finally redressed, unless we meant to be in earnest; otherwise it is like wasting an estate on a suit at law, to regulate the trespasses of a tenant whose lease is just expiring. No man was a warmer wisher for a reconciliation than myself, before the fatal nineteenth of April, 1775,<sup>20</sup> but the

<sup>17</sup> Lord North was held responsible by the Colonists for the British policy of taxation, *i.e.*, for the principle rather than the burden of taxation.

<sup>18</sup> That is, an intriguing political group or faction.

<sup>19</sup> Nearly one-third of the troops engaged in the battle were killed or wounded.

<sup>20</sup> That is, the date of the British march on Concord.

moment the event of that day was made known, I rejected the hardened, sullen-tempered Pharaoh of England<sup>21</sup> forever; and disdain the wretch, that with the pretended title of FATHER OF HIS PEOPLE can unfeelingly hear of their slaughter, and composedly sleep with their blood upon his soul.

But admitting that matters were now made up, what would be the event? I answer, the ruin of the continent. And that for several reasons.

*First.* The powers of governing still remaining in the hands of the king, he will have a negative over the whole legislation of this continent. And as he hath shown himself such an inveterate enemy to liberty, and discovered such a thirst for arbitrary power, is he, or is he not, a proper person to say to these colonies, *You shall make no laws but what I please!* And is there any inhabitant of America so ignorant as not to know, that according to what is called the *present constitution*, this continent can make no laws but what the king gives leave to; and is there any man so unwise as not to see, that (considering what has happened) he will suffer no law to be made here but such as suits *his* purpose? We may be as effectually enslaved by the want of laws in America, as by submitting to laws made for us in England. After matters are made up (as it is called), can there be any doubt but the whole power of the crown will be exerted to keep this continent as low and humble as possible? Instead of going forward we shall go backward, or be perpetually quarrelling, or ridiculously petitioning. We are already greater than the king wishes us to be, and will he not hereafter endeavor to make us less? To bring the matter to one point, Is the power who is jealous of our prosperity, a proper power to govern us? Whoever says No to this question is an independent, for independency means no more than this, whether we shall make our own laws, or whether the king, the greatest enemy this continent hath, or can have, shall tell us, *There shall be no laws but such as I like.*

But the king, you'll say, has a negative in England; the people there can make no laws without his consent. In point of right and good order, it is something very ridiculous that a youth of twenty-one (which hath often happened) shall say to several millions of people older and wiser than himself, "I forbid this or that act of yours to be law." But in this place I decline this sort of reply, though I will never cease

<sup>21</sup> George III.

to expose the absurdity of it, and only answer that England being the king's residence, and America not so, makes quite another case. The king's negative here is ten times more dangerous and fatal than it can be in England; for *there* he will scarcely refuse his consent to a bill for putting England into as strong a state of defense as possible, and in America he would never suffer such a bill to be passed.

America is only a secondary object in the system of British politics, England consults the good of *this* country no further than it answers her *own* purpose. Wherefore, her own interest leads her to suppress the growth of *ours* in every case which doth not promote *her* advantage, or in the least interfere with it. A pretty state we should soon be in under such a secondhand government, considering what has happened! Men do not change from enemies to friends by the alteration of a name: and in order to show that reconciliation *now* is a dangerous doctrine, I affirm *that it would be policy in the king at this time to repeal the acts for the sake of reinstating himself in the government of the provinces*; in order that HE MAY ACCOMPLISH BY CRAFT AND SUBTLETY, IN THE LONG RUN, WHAT HE CANNOT DO BY FORCE AND VIOLENCE IN THE SHORT ONE. Reconciliation and ruin are nearly related.

*Secondly.* That as even the best terms which we can expect to obtain can amount to no more than a temporary expedient, or a kind of government by guardianship, which can last no longer than till the colonies come of age, so the general face and state of things in the interim will be unsettled and unpromising. Emigrants of property will not choose to come to a country whose form of government hangs but by a thread, and who is every day tottering on the brink of commotion and disturbance; and numbers of the present inhabitants would lay hold of the interval to dispose of their effects, and quit the continent.

But the most powerful of all arguments is, that nothing but independence, i.e. a continental form of government, can keep the peace of the continent and preserve it inviolate from civil wars. I dread the event of a reconciliation with Britain *now*, as it is more than probable that it will be followed by a revolt somewhere or other, the consequences of which may be far more fatal than all the malice of Britain.

Thousands are already ruined by British barbarity; (thousands more will probably suffer the same fate).

Those men have other feelings than us who have nothing suffered. All they *now* possess is liberty; what they before enjoyed is sacrificed to its service, and having nothing more to lose they disdain submission. Besides, the general temper of the colonies towards a British government will be like that of a youth who is nearly out of his time; they will care very little about her. And a government which cannot preserve the peace is no government at all, and in that case we pay our money for nothing; and pray 10 what is it that Britain can do, whose power will be wholly on paper, should a civil tumult break out the very day after reconciliation? I have heard some men say, many of whom I believe spoke without thinking, that they dreaded an independence, fearing that it would produce civil wars. It is but seldom that our first thoughts are truly correct, and that is the case here; for there is ten times more to dread from a patched up connection than from independence. I make the sufferer's case my own, and I protest, that 20 were I driven from house and home, my property destroyed, and my circumstances ruined, that as a man, sensible of injuries, I could never relish the doctrine of reconciliation, or consider myself bound thereby.

The colonies have manifested such a spirit of good order and obedience to continental government as is sufficient to make every reasonable person easy and happy on that head. No man can assign the least pretense for his fears on any other grounds than such 30 as are truly childish and ridiculous, viz., that one colony will be striving for superiority over another.

Where there are no distinctions there can be no superiority; perfect equality affords no temptation. The republics of Europe are all (and we may say always) in peace. Holland and Switzerland<sup>22</sup> are without wars, foreign or domestic. Monarchical governments, it is true, are never long at rest: the crown itself is a temptation to enterprising ruffians at *home*; and that degree of pride and insolence ever attendant 40 on regal authority, swells into a rupture with foreign powers in instances where a republican government, by being formed on more natural principles, would negotiate the mistake.

If there is any true cause of fear respecting independence, it is because no plan is yet laid down.

<sup>22</sup> Holland (the United Netherlands) remained a republic until 1814. Both Holland and Switzerland were often named as examples of countries thriving under republican forms of government.

Men do not see their way out. Wherefore, as an opening into that business I offer the following hints; at the same time modestly affirming that I have no other opinion of them myself than that they may be the means of giving rise to something better. Could the straggling thoughts of individuals be collected, they would frequently form materials for wise and able men to improve into useful matter.

Let the assemblies be annual, with a president only. The representation more equal, their business wholly domestic, and subject to the authority of a continental congress.

Let each colony be divided into six, eight, or ten, convenient districts, each district to send a proper number of delegates to congress, so that each colony send at least thirty. The whole number in congress will be at least 390. Each congress to sit and to choose a president by the following method. When the delegates are met, let a colony be taken from the whole thirteen colonies by lot, after which let the congress choose (by ballot) a president from out of the delegates of that province. In the next congress, let a colony be taken by lot from twelve only, omitting that colony from which the president was taken in the former congress, and so proceeding on till the whole thirteen shall have had their proper rotation. And in order that nothing may pass into a law but what is satisfactorily just, not less than three fifths of the congress to be called a majority. He that will promote discord, under a government so equally formed as this, would have joined Lucifer in his revolt.

But as there is a peculiar delicacy from whom, or in what manner, this business must first arise, and as it seems most agreeable and consistent that it should come from some intermediate body between the governed and the governors, that is, between the congress and the people, let a CONTINENTAL CONFERENCE be held in the following manner, and for the following purpose:

A committee of twenty-six members of congress, viz., two for each colony. Two members from each house of assembly, or provincial convention; and five representatives of the people at large, to be chosen in the capital city or town of each province, for, and in behalf of the whole province, by as many qualified voters as shall think proper to attend from all parts of the province for that purpose; or, if more convenient, the representatives may be chosen in two or

three of the most populous parts thereof. In this CONFERENCE, thus assembled, will be united the two grand principles of business, *knowledge* and *power*. The members of congress, assemblies, or conventions, by having had experience in national concerns, will be able and useful counsellors, and the whole, being empowered by the people, will have a truly legal authority.

The conferring members being met, let their business be to frame a CONTINENTAL CHARTER, or Charter of the United Colonies (answering to what is called the Magna Charta of England); fixing the number and manner of choosing members of congress, members of assembly, with their date of sitting, and drawing the line of business and jurisdiction between them (always remembering, that our strength is continental, not provincial); securing freedom and property to all men, and above all things the free exercise of religion, according to the dictates of conscience; with such other matter as it is necessary for a charter to contain. Immediately after which, the said conference to dissolve, and the bodies which shall be chosen conformable to the said charter, to be the legislators and governors of this continent for the time being: Whose peace and happiness, may God preserve. AMEN.

Should any body of men be hereafter delegated for this or some similar purpose, I offer them the following extracts from that wise observer on governments, Dragonetti. "The science," says he, "of the politician consists in fixing the true point of happiness and freedom. Those men would deserve the gratitude of ages, who should discover a mode of government that contained the greatest sum of individual happiness, with the least national expense." \*

But where, say some, is the king of America? I'll tell you, friend, he reigns above, and doth not make havoc of mankind like the Royal Brute of Great Britain. Yet that we may not appear to be defective even in earthly honors, let a day be solemnly set apart for proclaiming the charter; let it be brought forth placed on the divine law, the Word of God; let a crown be placed thereon, by which the world may know, that so far as we approve of monarchy, that in America THE LAW IS KING. For as in absolute governments the king is law, so in free countries the law *ought* to BE

king, and there ought to be no other. But lest any ill use should afterwards arise, let the crown at the conclusion of the ceremony be demolished, and scattered among the people whose right it is.

A government of our own is our natural right; and when a man seriously reflects on the precariousness of human affairs, he will become convinced, that it is infinitely wiser and safer to form a constitution of our own in a cool deliberate manner, while we have it in our power, than to trust such an interesting event to time and chance. If we omit it now, some Massanello \* may hereafter arise, who, laying hold of popular disquietudes, may collect together the desperate and the discontented, and by assuming to themselves the powers of government, finally sweep away the liberties of the continent like a deluge. Should the government of America return again into the hands of Britain, the tottering situation of things will be a temptation for some desperate adventurer to try his fortune; and in such a case, what relief can Britain give? Ere she could hear the news, the fatal business might be done; and ourselves suffering like the wretched Britons under the oppression of the conqueror. Ye that oppose independence now, ye know not what ye do; ye are opening a door to eternal tyranny by keeping vacant the seat of government. There are thousands and tens of thousands who would think it glorious to expel from the continent that barbarous and hellish power which hath stirred up the Indians and the Negroes to destroy us; the cruelty hath a double guilt, it is dealing brutally by us, and treacherously by them.

To talk of friendship with those in whom our reason forbids us to have faith, and our affections wounded through a thousand pores instruct us to detest, is madness and folly. Every day wears out the little remains of kindred between us and them; and can there be any reason to hope that as the relationship expires the affection will increase, or that we shall agree better when we have ten times more and greater concerns to quarrel over than ever?

Ye that tell us of harmony and reconciliation, can ye restore to us the time that is past? Can ye give to prostitution its former innocence? Neither can ye reconcile Britain and America. The last cord now is

\* Dragonetti on "Virtues and Rewards." [Giacinto Dragonetti (1738-1818), author of *Le Virtù ed i Premi* (1767).]

\* Thomas Anello, otherwise Massanello, a fisherman of Naples, who after spiriting up his countrymen in the public market place, against the oppression of the Spaniards, to whom the place was then subject, prompted them to revolt, and in the space of a day became king.

broken, the people of England are presenting addresses against us. There are injuries which nature cannot forgive; she would cease to be nature if she did. As well can the lover forgive the ravisher of his mistress, as the continent forgive the murders of Britain. The Almighty hath implanted in us these inextinguishable feelings for good and wise purposes. They are the guardians of his image in our hearts. They distinguish us from the herd of common animals. The social compact would dissolve, and justice 10 should be extirpated from the earth, or have only a casual existence, were we callous to the touches of affection. The robber and the murderer would often escape unpunished, did not the injuries which our tempers sustain, provoke us into justice.

O ye that love mankind! Ye that dare oppose not only the tyranny but the tyrant, stand forth! Every spot of the old world is overrun with oppression. Freedom hath been hunted round the globe. Asia and Africa have long expelled her. Europe regards her like 20 a stranger, and England hath given her warning to depart. O receive the fugitive, and prepare in time an asylum for mankind.

#### IV. Of the Present Ability of America, with Some Miscellaneous Reflections

I have never met a man either in England or America who hath not confessed his opinion that a separation between the countries would take place, one time or other. And there is no instance in which 30 we have shown less judgment than in endeavoring to describe what we call the ripeness or fitness of the continent for independence.

As all men allow the measure, and vary only in their opinion of the time, let us, in order to remove mistakes, take a general survey of things, and endeavor if possible to find out the very time. But I need not go far, the inquiry ceases at once, for the *time hath found us*. The general concurrence, the glorious union of all things, proves the fact. 40

It is not in numbers but in unity that our great strength lies; yet our present numbers are sufficient to repel the force of all the world. The continent has at this time the largest body of armed and disciplined men of any power under heaven; and is just arrived at that pitch of strength, in which no single colony is able to support itself, and the whole, when united, is able to do anything. Our land force is more than sufficient, and as to naval affairs, we cannot be insensible

that Britain would never suffer an American man of war to be built while the continent remained in her hands. Wherefore, we should be no forwarder a hundred years hence in that branch than we are now; but the truth is, we should be less so, because the timber of the country is every day diminishing.

Were the continent crowded with inhabitants, her sufferings under the present circumstances would be intolerable. The more seaport-towns we had, the more 10 should we have both to defend and to lose. Our present numbers are so happily proportioned to our wants that no man need be idle. The diminution of trade affords an army, and the necessities of an army create a new trade.

Debts we have none; and whatever we may contract on this account will serve as a glorious memento of our virtue. Can we but leave posterity with a settled form of government, an independent constitution of its own, the purchase at any price will be 20 cheap. But to expend millions for the sake of getting a few vile acts repealed, and routing the present ministry only, is unworthy the charge, and is using posterity with the utmost cruelty; because it is leaving them the great work to do, and a debt upon their backs from which they derive no advantage. Such a thought is unworthy a man of honor, and is the true characteristic of a narrow heart and a piddling politician.

The debt we may contract doth not deserve our regard, if the work be but accomplished. No nation ought to be without a debt. A national debt is a national bond; and when it bears no interest, it is in no case a grievance. Britain is oppressed with a debt of upwards of one hundred and forty millions sterling, for which she pays upwards of four millions interest. And as a compensation for her debt, she has a large navy. America is without a debt, and without a navy; yet for a twentieth part of the English national debt, could have a navy as large again. The navy of England 40 is not worth at this time more than three million and a half sterling.

No country on the globe is so happily situated, or so internally capable of raising a fleet as America. Tar, timber, iron, and cordage are her natural produce. We need go abroad for nothing. Whereas the Dutch, who make large profits by hiring out their ships of war to the Spaniards and Portuguese, are obliged to import most of the materials they use. We ought to view the building a fleet as an article of

commerce, it being the natural manufacture of this country. It is the best money we can lay out. A navy when finished is worth more than it cost and is that nice point in national policy in which commerce and protection are united. Let us build; if we want them not, we can sell; and by that means replace our paper currency with ready gold and silver.

In point of manning a fleet, people in general run into great errors; it is not necessary that one-fourth part should be sailors. The Terrible privateer, Captain 10 Death,<sup>23</sup> stood the hottest engagement of any ship last war, yet had not twenty sailors on board, though her complement of men was upwards of two hundred. A few able and social sailors will soon instruct a sufficient number of active landsmen in the common work of a ship. Wherefore we never can be more capable of beginning on maritime matters than now, while our timber is standing, our fisheries blocked up, and our sailors and shipwrights out of employ. Men of war of seventy and eighty guns were built forty 20 years ago in New England, and why not the same now? Shipbuilding is America's greatest pride, and in which she will, in time, excel the whole world. The great empires of the east are mostly inland and consequently excluded from the possibility of rivalling her. Africa is in a state of barbarism; and no power in Europe hath either such an extent of coast or such an internal supply of materials. Where nature hath given the one, she hath withheld the other; to America only hath she been liberal of both. The vast 30 empire of Russia is almost shut out from the sea; wherefore her boundless forests, her tar, iron, and cordage are only articles of commerce.

In point of safety, ought we to be without a fleet? We are not the little people now which we were sixty years ago; at that time we might have trusted our property in the streets, or fields rather, and slept securely without locks or bolts to our doors and windows. The case is now altered, and our methods of defense ought to improve with our increase of 40 property. A common pirate, twelve months ago, might have come up the Delaware and laid the city of Philadelphia under contribution for what sum he pleased; and the same might have happened to other places. Nay, any daring fellow in a brig of 14 or 16 guns might have robbed the whole continent, and

carried off half a million of money. These are circumstances which demand our attention, and point out the necessity of naval protection.

Some perhaps will say that after we have made it up with Britain, she will protect us. Can they be so unwise as to mean that she will keep a navy in our harbors for that purpose? Common sense will tell us that the power which hath endeavored to subdue us is, of all others, the most improper to defend us. Conquest may be effected under the pretense of friendship; and ourselves, after a long and brave resistance, be at last cheated into slavery. And if her ships are not to be admitted into our harbors, I would ask, how is she to protect us? A navy three or four thousand miles off can be of little use, and on sudden emergencies, none at all. Wherefore if we must hereafter protect ourselves, why not do it for ourselves? Why do it for another?

The English list of ships of war is long and formidable, but not a tenth part of them are at any one time fit for service, numbers of them are not in being; yet their names are pompously continued in the list, if only a plank be left of the ship: and not a fifth part of such as are fit for service can be spared on any one station at one time. The East and West Indies, Mediterranean, Africa, and other parts over which Britain extends her claim, make large demands upon her navy. From a mixture of prejudice and inattention, we have contracted a false notion respecting the navy of England, and have talked as if we should have the whole of it to encounter at once, and for that reason supposed that we must have one as large; which not being instantly practicable, has been made use of by a set of disguised Tories to discourage our beginning thereon. Nothing can be further from truth than this; for if America had only a twentieth part of the naval force of Britain, she would be by far an overmatch for her; because, as we neither have nor claim any foreign dominion, our whole force would be employed on our own coast, where we should in the long run have two to one the advantage of those who had three or four thousand miles to sail over before they could attack us, and the same distance to return in order to refit and recruit. And although Britain, by her fleet, hath a check over our trade to Europe, we have as large a one over her trade to the West Indies which, by lying in the neighborhood of the continent, lies entirely at its mercy.

Some method might be fallen on to keep up a

<sup>23</sup> Captain Death, commander of the *Terrible*, a British privateer captured by the French on December 28, 1756, after a terrific battle.

naval force in time of peace, if we should not judge it necessary to support a constant navy. If premiums were to be given to merchants to build and employ in their service ships mounted with twenty, thirty, forty, or fifty guns (the premiums to be in proportion to the loss of bulk to the merchant), fifty or sixty of those ships, with a few guardships on constant duty, would keep up a sufficient navy, and that without burdening ourselves with the evil so loudly complained of in England of suffering their fleet in time of peace to lie rotting in the docks. To unite the sinews of commerce and defense is sound policy; for when our strength and our riches play into each other's hands, we need fear no external enemy.

In almost every article of defense we abound. Hemp flourishes even to rankness, so that we need not want cordage. Our iron is superior to that of other countries. Our small arms equal to any in the world. Cannon we can cast at pleasure. Saltpeter and gunpowder we are every day producing. Our knowledge is hourly improving. Resolution is our inherent character, and courage has never yet forsaken us. Wherefore, what is it that we want? Why is it that we hesitate? From Britain we can expect nothing but ruin. If she is once admitted to the government of America again, this continent will not be worth living in. Jealousies will be always arising; insurrections will be constantly happening; and who will go forth to quell them? Who will venture his life to reduce his own countrymen to a foreign obedience? The difference between Pennsylvania and Connecticut, respecting some unlocated lands, shows the insignificance of a British government, and fully proves that nothing but continental authority can regulate continental matters.

Another reason why the present time is preferable to all others is that the fewer our numbers are, the more land there is yet unoccupied which, instead of being lavished by the king on his worthless dependents, may be hereafter supplied not only to the discharge of the present debt but to the constant support of government. No nation under heaven hath such an advantage as this.

The infant state of the colonies, as it is called, so far from being against, is an argument in favor of independence. We are sufficiently numerous, and were we more so we might be less united. It is a matter worthy of observation that the more a country is peopled the smaller their armies are. In military

numbers, the ancients far exceeded the moderns; and the reason is evident, for trade being the consequence of population men became too much absorbed thereby to attend to anything else. Commerce diminishes the spirit both of patriotism and military defense. And history sufficiently informs us that the bravest achievements were always accomplished in the nonage of a nation. With the increase of commerce England hath lost its spirit. The city of London, notwithstanding its numbers, submits to continued insults with the patience of a coward. The more men have to lose, the less willing are they to venture. The rich are in general slaves to fear, and submit to courtly power with the trembling duplicity of a spaniel.

Youth is the seedtime of good habits, as well in nations as in individuals. It might be difficult, if not impossible, to form the continent into one government half a century hence. The vast variety of interests, occasioned by an increase of trade and population, would create confusion. Colony would be against colony. Each, being able, would scorn each other's assistance; and while the proud and foolish gloried in their little distinctions, the wise would lament that the union had not been formed before. Wherefore the present time is the true time for establishing it. The intimacy which is contracted in infancy and the friendship which is formed in misfortune are of all others the most lasting and unalterable. Our present union is marked with both these characters; we are young, and we have been distressed; but our concord hath withstood our troubles, and fixes a memorable era for posterity to glory in.

The present time, likewise, is that peculiar time which never happens to a nation but once, viz. the time of forming itself into a government. Most nations have let slip the opportunity, and by that means have been compelled to receive laws from their conquerors instead of making laws for themselves. First they had a king, and then a form of government; whereas the articles or charter of government should be formed first, and men delegated to execute them afterwards: but from the errors of other nations let us learn wisdom and lay hold of the present opportunity—to begin government at the right end.

When William the Conqueror subdued England, he gave them law at the point of the sword; and until we consent that the seat of government in America be legally and authoritatively occupied, we shall be

in danger of having it filled by some fortunate ruffian who may treat us in the same manner, and then where will be our freedom? where our property?

As to religion, I hold it to be the indispensable duty of government to protect all conscientious professors thereof, and I know of no other business which government has to do therewith. Let a man throw aside that narrowness of soul, that selfishness of principle, which the niggards of all professions are so unwilling to part with, and he will be at once delivered of his fears on that head. Suspicion is the companion of mean souls and the bane of all good society. For myself, I fully and conscientiously believe that it is the will of the Almighty that there should be a diversity of religious opinions among us. It affords a larger field for your Christian kindness. Were we all of one way of thinking, our religious dispositions would want matter for probation; and on this liberal principle I look on the various denominations among us to be like children of the same family, differing only in what is called their Christian names.

In pages [173-4] I threw out a few thoughts on the propriety of a continental charter (for I only presume to offer hints, not plans) and in this place I take the liberty of re-mentioning the subject by observing that a charter is to be understood as a bond of solemn obligation, which the whole enters into, to support the right of every separate part, whether of religion, professional freedom, or property. A right reckoning makes long friends.

I have heretofore, likewise, mentioned the necessity of a large and equal representation: and there is no political matter which more deserves our attention. A small number of electors, or a small number of representatives, are equally dangerous. But if the number of the representatives be not only small, but unequal, the danger is increased. As an instance of this I mention the following; when the petition of the associates was before the house of assembly of Pennsylvania, twenty-eight members only were present; all the Bucks county members, being eight, voted against it, and had seven of the Chester members done the same, this whole province had been governed by two counties only; and this danger it is always exposed to. The unwarrantable stretch, likewise, which the house made in their last sitting to gain an undue authority over the delegates of that province, ought to warn the people at large, how they trust power out of their hands. A set of in-

structions for their delegates were put together, which in point of sense and business would have dishonored a schoolboy, and after being approved by a few, a very few, without doors, were carried into the house, and there passed in behalf of the whole colony; whereas, did the whole colony know with what ill-will that house had entered on some necessary public measures, they would not hesitate a moment to think them unworthy of such a trust.

Immediate necessity makes many things convenient, which if continued would grow into oppressions. Expedience and right are different things. When the calamities of America required a consultation, there was no method so ready, or at that time so proper, as to appoint persons from the several houses of assembly for that purpose; and the wisdom with which they have proceeded hath preserved this continent from ruin. But as it is more than probable that we shall never be without a CONGRESS, every well-wisher to good order must own that the mode for choosing members of that body deserves consideration. And I put it as a question to those who make a study of mankind, whether representation and election is not too great a power for one and the same body of men to possess? When we are planning for posterity, we ought to remember that virtue is not hereditary.

It is from our enemies that we often gain excellent maxims, and are frequently surprised into reason by their mistakes. Mr. Cornwall<sup>24</sup> (one of the lords of the treasury) treated the petition of the New York assembly with contempt, because *that* house, he said, consisted but of twenty-six members, which trifling number, he argued, could not with decency be put for the whole. We thank him for his involuntary honesty.\*

TO CONCLUDE. However strange it may appear to some, or however unwilling they may be to think so, matters not, but many strong and striking reasons may be given to show that nothing can settle our affairs so expeditiously as an open and determined DECLARATION FOR INDEPENDENCE. Some of which are:

\* Those who would fully understand of what great consequence a large and equal representation is to a State should read Burgh's *Political Disquisitions*. [The allusion is to *Political Disquisitions* (3 vols., London, 1774-1775) by James Burgh (1714-1775), a British reformer friendly to the colonial cause.]

<sup>24</sup> Charles Wolfram Cornwall (1735-1789), Lord of the Treasury in North's cabinet, 1774-1780, and Speaker of the House of Commons, 1780-1789.

*First.* It is the custom of nations, when any two are at war, for some other powers not engaged in the quarrel to step in as mediators, and bring about the preliminaries of a peace; but while America calls herself the Subject of Great Britain, no power, however well disposed she may be, can offer her mediation. Wherefore, in our present state we may quarrel on forever.

*Secondly.* It is unreasonable to suppose that France or Spain will give us any kind of assistance if we mean only to make use of that assistance for the purpose of repairing the breach and strengthening the connection between Britain and America; because those powers would be sufferers by the consequences.

*Thirdly.* While we profess ourselves the subjects of Britain, we must, in the eyes of foreign nations, be considered as rebels. The precedent is somewhat dangerous to *their peace*, for men to be in arms under the name of subjects: we, on the spot, can solve the paradox; but to unite resistance and subjection requires an idea much too refined for common understanding.

*Fourthly.* Were a manifesto to be published and despatched to foreign courts, setting forth the miseries we have endured and the peaceful methods

which we have ineffectually used for redress; declaring at the same time that, not being able any longer to live happily or safely under the cruel disposition of the British court, we have been driven to the necessity of breaking off all connections with her; at the same time assuring all such courts of our peaceable disposition towards them, and of our desire of entering into trade with them: such a memorial would produce more good effects to this continent, than if a ship were freighted with petitions to Britain.

Under our present denomination of British subjects, we can neither be received nor heard abroad: the custom of all courts is against us, and will be so until by an independence we take rank with other nations.

These proceedings may at first seem strange and difficult, but like all other steps which we have already passed over, will in a little time become familiar and agreeable; and until an Independence is declared, the continent will feel itself like a man who continues putting off some unpleasant business from day to day, yet knows it must be done, hates to set about it, wishes it over, and is continually haunted with the thoughts of its necessity.

1776

## *The Crisis* <sup>25</sup>

### NUMBER I

These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of his country; but he that stands it *now*, deserves the love and thanks of man and woman. Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph. What we obtain too cheap, we esteem too lightly: it is dearness only that gives everything its value. Heaven knows how to put a proper price upon its goods; and it would be strange indeed if so celestial an article as FREEDOM should not be highly rated. Britain, with an army to enforce her tyranny, has declared that she has a right (*not only to TAX*) but "to BIND us in ALL CASES WHATSOEVER"; and if being

*bound in that manner* is not slavery, then is there not such a thing as slavery upon earth. Even the expression is impious; for so unlimited a power can belong only to God.

Whether the independence of the continent was declared too soon, or delayed too long, I will not now enter into as an argument; my own simple opinion is, that had it been eight months earlier it would have been much better. We did not make a proper use of last winter; neither could we, while we were in a dependent state. However, the fault, if it were one, was all our own; we have none to blame but ourselves. But no great deal is lost yet. All that Howe has been doing for this month past is rather a ravage than a conquest, which the spirit of the Jerseys <sup>26</sup> a year ago would have quickly repulsed, and which time and a little resolution will soon recover.

I have as little superstition in me as any man living; but my secret opinion has ever been, and still

<sup>26</sup> East and West Jersey.

<sup>25</sup> The first number of *The Crisis* appeared on December 19, 1776. The sixteenth and last number was published on December 9, 1783.

is, that God Almighty will not give up a people to military destruction, or leave them unsupportedly to perish, who have so earnestly and so repeatedly sought to avoid the calamities of war, by every decent method which wisdom could invent. Neither have I so much of the infidel in me as to suppose that he has relinquished the government of the world, and given us up to the care of devils; and as I do not, I cannot see on what grounds the king of Britain can look up to heaven for help against us: a common murderer, a highwayman, or a housebreaker, has as good a pretense as he.

It is surprising to see how rapidly a panic will sometimes run through a country. All nations and ages have been subject to them: Britain has trembled like an ague at the report of a French fleet of flat-bottomed boats; and in the fourteenth century the whole English army, after ravaging the kingdom of France, was driven back like men petrified with fear; and this brave exploit was performed by a few broken forces collected and headed by a woman, Joan of Arc.<sup>27</sup> Would that heaven might inspire some Jersey maid to spirit up her countrymen, and save her fair fellow sufferers from ravage and ravishment! Yet panics, in some cases, have their uses; they produce as much good as hurt. Their duration is always short; the mind soon grows through them, and acquires a firmer habit than before. But their peculiar advantage is, that they are the touchstones of sincerity and hypocrisy, and bring things and men to light, which might otherwise have lain forever undiscovered. In fact, they have the same effect on secret traitors which an imaginary apparition would have upon a private murderer. They sift out the hidden thoughts of man, and hold them up in public to the world. Many a disguised tory has lately shown his head, that shall penitentially solemnize with curses the day on which Howe arrived upon the Delaware.

As I was with the troops at Fort Lee,<sup>28</sup> and marched with them to the edge of Pennsylvania, I am well acquainted with many circumstances which those who live at a distance know but little or nothing of. Our situation there was exceedingly cramped, the place being a narrow neck of land<sup>29</sup> between the

North River and the Hackensack. Our force was inconsiderable, being not one-fourth so great as Howe could bring against us. We had no army at hand to have relieved the garrison, had we shut ourselves up and stood on our defense. Our ammunition, light artillery, and the best part of our stores, had been removed, on the apprehension that Howe<sup>30</sup> would endeavor to penetrate the Jerseys, in which case Fort Lee could be of no use to us; for it must occur to every thinking man, whether in the army or not, that these kind of field forts are only for temporary purposes, and last in use no longer than the enemy directs his force against the particular object which such forts are raised to defend. Such was our situation and condition at Fort Lee on the morning of the 20th of November, when an officer arrived with information that the enemy with 200 boats had landed about seven miles above. Major General Green,<sup>31</sup> who commanded the garrison, immediately ordered them under arms, and sent express to General Washington at the town of Hackensack, distant by the way of the ferry, six miles. Our first object was to secure the bridge over the Hackensack, which laid up the river between the enemy and us, about six miles from us, three from them. General Washington arrived in about three-quarters of an hour, and marched at the head of the troops towards the bridge, which place I expected we should have a brush for; however, they did not choose to dispute it with us, and the greatest part of our troops went over the bridge, the rest over the ferry, except some which passed at a mill on a small creek between the bridge and the ferry, and made their way through some marshy grounds up to the town of Hackensack, and there passed the river. We brought off as much baggage as the wagons could contain, the rest was lost. The simple object was to bring off the garrison and march them on till they could be strengthened by the Jersey or Pennsylvania militia, so as to be enabled to make a stand. We staid four days at Newark, collected our outposts with some of the Jersey militia, and marched out twice to meet the enemy on being informed that they were advancing, though our numbers were greatly inferior to theirs. Howe, in my little opinion, committed a great error in generalship in not throwing a body of forces off

<sup>27</sup> Joan of Arc (1412-1431), led the French troops in the defeat of the British at Orléans in 1429.

<sup>28</sup> Greene, in charge of the troops at Fort Lee, New Jersey, on the Hudson opposite Manhattan Island, was surprised by Cornwallis on November 20, 1776, and forced to retreat, losing many stores and some men.

<sup>29</sup> That is, between the Hackensack and Hudson rivers.

<sup>30</sup> General William Howe, commander of the British forces during the first three years of the American Revolution. See Freneau's poem "On the Memory of Brave Americans."

<sup>31</sup> Major General Nathanael Greene (1742-1786).

from Staten Island through Amboy, by which means he might have seized all our stores at Brunswick and intercepted our march into Pennsylvania; but if we believe the power of hell to be limited, we must likewise believe that their agents are under some providential control.

I shall not now attempt to give all the particulars of our retreat to the Delaware; suffice it for the present to say that both officers and men, though greatly harassed and fatigued, frequently without rest, covering, or provision—the inevitable consequences of a long retreat—bore it with a manly and martial spirit. All their wishes centered in one; which was, that the country would turn out and help them to drive the enemy back. Voltaire<sup>32</sup> has remarked that King William never appeared to full advantage but in difficulties and in action; the same remark may be made on General Washington, for the character fits him. There is a natural firmness in some minds which cannot be unlocked by trifles, but which, when un-<sup>20</sup>locked, discovers a cabinet of fortitude; and I reckon it among those kinds of public blessings, which we do not immediately see, that God hath blessed him with uninterrupted health, and given him a mind that can even flourish upon care.

I shall conclude this paper with some miscellaneous remarks on the state of our affairs; and shall begin with asking the following question, Why is it that the enemy have left the New England provinces, and made these middle ones the seat of war? The answer is easy: New England is not infested with tories, and we are. I have been tender in raising the cry against these men, and used numberless arguments to show them their danger, but it will not do to sacrifice a world either to their folly or their baseness. The period is now arrived in which either they or we must change our sentiments, or one or both must fall. And what is a tory? Good God! what is he? I should not be afraid to go with a hundred Whigs against a thousand tories,<sup>33</sup> were they to<sup>40</sup> attempt to get into arms. Every tory is a coward; for servile, slavish, self-interested fear is the foundation of toryism; and a man under such influence, though he may be cruel, never can be brave.

But, before the line of irrecoverable separation be

drawn between us, let us reason the matter together: Your conduct is an invitation to the enemy, yet not one in a thousand of you have heart enough to join him. Howe is as much deceived by you as the American cause is injured by you. He expects you will all take up arms and flock to his standard with muskets on your shoulders. Your opinions are of no use to him unless you support him personally, for it is soldiers, and not tories, that he wants.

I once felt all that kind of anger, which a man ought to feel, against the mean principles that are held by the tories: A noted one, who kept a tavern at Amboy, was standing at his door, with as pretty a child in his hand, about eight or nine years old, as I ever saw, and after speaking his mind as freely as he thought was prudent, finished with this unfatherly expression, "*Well! give me peace in my day.*" Not a man lives on the continent but fully believes that a separation must some time or other finally take<sup>20</sup> place, and a generous parent should have said, "*If there must be trouble, let it be in my day, that my child may have peace;*" and this single reflection, well applied, is sufficient to awaken every man to duty. Not a place upon earth might be so happy as America. Her situation is remote from all the wrangling world, and she has nothing to do but to trade with them. A man can distinguish himself between temper and principle; and I am as confident as I am that God governs the world, that America will never<sup>30</sup> be happy till she gets clear of foreign dominion. Wars, without ceasing, will break out till that period arrives, and the continent must in the end be conquered; for though the flame of liberty may sometimes cease to shine, the coal can never expire.

America did not, nor does not want force; but she wanted a proper application of that force. Wisdom is not the purchase of a day, and it is no wonder that we should err at the first setting off. From an excess of tenderness, we were unwilling to raise an army, and trusted our cause to the temporary defense of a well-meaning militia. A summer's experience has now taught us better; yet with those troops, while they were collected, we were able to set bounds to the progress of the enemy, and thank God! they are again assembling. I always considered militia as the best troops in the world for a sudden exertion, but they will not do for a long campaign. Howe, it is probable, will make an attempt on this city;<sup>34</sup> should

<sup>32</sup> François Arouet (1694-1778) used the *nom de plume* "Voltaire."

<sup>33</sup> Tories and Whigs, English terms connoting conservative and liberal parties, came to stand for "Loyalist" and "Rebel," respectively, in the colonies.

<sup>34</sup> That is, Philadelphia.

he fail on this side the Delaware, he is ruined. If he succeeds, our cause is not ruined.<sup>35</sup> He stakes all on his side against a part on ours; admitting he succeeds, the consequences will be that armies from both ends of the continent will march to assist their suffering friends in the middle states; for he cannot go everywhere—it is impossible. I consider Howe as the greatest enemy the tories have; he is bringing a war into their country, which, had it not been for him and partly for themselves, they had been clear of. Should he now be expelled, I wish with all the devotion of a Christian, that the names of Whig and Tory may never more be mentioned; but should the tories give him encouragement to come, or assistance if he come, I as sincerely wish that our next year's arms may expel them from the continent, and the Congress appropriate their possessions to the relief of those who have suffered in well-doing. A single successful battle next year will settle the whole. America could carry on a two years' war by the confiscation of the property of disaffected persons, and be made happy by their expulsion. Say not that this is revenge; call it rather the soft resentment of a suffering people, who, having no object in view but the *good of all*, have staked their *own all* upon a seemingly doubtful event. Yet it is folly to argue against determined hardness; eloquence may strike the ear, and the language of sorrow draw forth the tear of compassion, but nothing can reach the heart that is steeled with prejudice.

Quitting this class of men, I turn with the warm ardor of a friend to those who have nobly stood, and are yet determined to stand the matter out: I call not upon a few, but upon all: not on *this* State or *that* State, but on *every* State: up and help us; lay your shoulders to the wheel; better have too much force than too little, when so great an object is at stake. Let it be told to the future world, that in the depth of winter, when nothing but hope and virtue could survive, that the city and the country, alarmed at one common danger, came forth to meet and to repulse it. Say not that thousands are gone—turn out your tens of thousands; throw not the burden of the day upon Providence, but “*show your faith by your works*,”<sup>36</sup> that God may bless you. It matters not

where you live, or what rank of life you hold, the evil or the blessing will reach you all. The far and the near, the home counties and the back, the rich and the poor, will suffer or rejoice alike. The heart that feels not now is dead; the blood of his children will curse his cowardice who shrinks back at a time when a little might have saved the whole and made *them* happy. I love the man that can smile in trouble, that can gather strength from distress and grow brave by reflection. It is the business of little minds to shrink; but he whose heart is firm, and whose conscience approves his conduct, will pursue his principles unto death. My own line of reasoning is to myself as straight and clear as a ray of light. Not all the treasures of the world, so far as I believe, could have induced me to support an offensive war, for I think it murder; but if a thief breaks into my house, burns and destroys my property, and kills or threatens to kill me or those that are in it, and to “*bind me in all cases whatsoever*” to his absolute will, am I to suffer it? What signifies it to me whether he who does it is a king or a common man; my countryman or not my countryman; whether it be done by an individual villain, or an army of them? If we reason to the root of things we shall find no difference; neither can any just cause be assigned why we should punish in the one case and pardon in the other. Let them call me rebel and welcome—I feel no concern from it; but I should suffer the misery of devils, were I to make a whore of my soul by swearing allegiance to one whose character is that of a sottish, stupid, stubborn, worthless, brutish man. I conceive likewise a horrid idea in receiving mercy from a being, who at the last day shall be shrieking to the rocks and mountains to cover him, and fleeing with terror from the orphan, the widow, and the slain of America.

There are cases which cannot be overdone by language, and this is one. There are persons, too, who see not the full extent of the evil which threatens them; they solace themselves with hopes that the enemy, if he succeed, will be merciful. It is the madness of folly, to expect mercy from those who have refused to do justice; and even mercy, where conquest is the object, is only a trick of war. The cunning of the fox is as murderous as the violence of the wolf, and we ought to guard equally against both. Howe's first object is, partly by threats and partly by promises, to terrify or seduce the people to deliver

<sup>35</sup> Paine's prediction materialized in September, 1777, but Howe's capture of Philadelphia so weakened the position of the British in the North that the Americans were able to defeat Burgoyne.

<sup>36</sup> See James 2:18.

up their arms and receive mercy. The ministry recommended the same plan to Gage,<sup>37</sup> and this is what the Tories call making their peace, "*a peace which passeth all understanding*,"<sup>38</sup> indeed! A peace which would be the immediate forerunner of a worse ruin than any we have yet thought of. Ye men of Pennsylvania, do reason upon these things! Were the back counties to give up their arms, they would fall an easy prey to the Indians, who are all armed: this perhaps is what some Tories would not be sorry for. Were the home counties to deliver up their arms, they would be exposed to the resentment of the back counties, who would then have it in their power to chastise their defection at pleasure. And were any one State to give up its arms, *that* State must be garrisoned by all Howe's army of Britons and Hessians<sup>39</sup> to preserve it from the anger of the rest. Mutual fear is the principal link in the chain of mutual love; and woe be to that State that breaks the compact. Howe is mercifully inviting you to barbarous destruction,<sup>40</sup> and men must be either rogues or fools that will not see it. I dwell not upon the vapors of imagination; I bring reason to your ears, and, in language as plain as A B C, hold up truth to your eyes.

I thank God that I fear not. I see no real cause for fear. I know our situation well, and can see the way out of it. While our army was collected, Howe dared not risk a battle; and it is no credit to him that he decamped from the White Plains,<sup>40</sup> and

waited a mean opportunity to ravage the defenseless Jerseys; but it is great credit to us, that with a handful of men, we sustained an orderly retreat for near a hundred miles, brought off our ammunition, all our fieldpieces, the greatest part of our stores, and had four rivers to pass. None can say that our retreat was precipitate; for we were near three weeks in performing it, that the country<sup>41</sup> might have time to come in. Twice we marched back to meet the enemy, and remained out till dark. The sign of fear was not seen in our camp, and had not some of the cowardly and disaffected inhabitants spread false alarms through the country, the Jerseys had never been ravaged. Once more we are again collected and collecting, our new army at both ends of the continent is recruiting fast, and we shall be able to open the next campaign with sixty thousand men, well-armed and clothed. This is our situation, and who will may know it. By perseverance and fortitude we have the prospect of a glorious issue; by cowardice and submission, the sad choice of a variety of evils: a ravaged country—a depopulated city—habitations without safety, and slavery without hope—our homes turned into barracks and bawdy-houses for Hessians—and a future race to provide for, whose fathers we shall doubt of. Look on this picture and weep over it! and if there yet remains one thoughtless wretch who believes it not, let him suffer it unlamented.

Common Sense

### *The Rights of Man*<sup>43</sup>

BEING AN ANSWER TO MR. BURKE'S ATTACK ON THE FRENCH REVOLUTION<sup>44</sup>

FROM PART I

[On the Nature and Origin of Rights]

Before anything can be reasoned upon to a conclusion, certain facts, principles, or data, to reason from, must be established, admitted, or denied. Mr. Burke, with his usual outrage, abuses the *declaration*

<sup>37</sup> Thomas Gage (1721–1787), Howe's successor.

<sup>38</sup> Philippians 4:7.

<sup>39</sup> Britain hired some 30,000 "mercenaries," chiefly from Hesse-Cassel, Hesse-Hanau, and Brunswick (German principalities).

<sup>40</sup> The battle of White Plains, north of New York City, between the Hudson River and Long Island Sound, was an indecisive encounter between Washington and Howe on October 28, 1776.

of the rights of man, published by the national assembly of France as the basis on which the constitution of France is built. This he calls "paltry and blurred sheets of paper about the rights of man." Does Mr. Burke mean to deny that *man* has any rights? If he does, then he must mean that there are no such things as rights anywhere, and that he has none himself; for who is there in the world but man?

<sup>41</sup> That is, the local militia.

<sup>42</sup> This first number appeared in the *Pennsylvania Journal* on December 19, although Paine dated it December 23.

<sup>43</sup> Published March 13, 1791.

<sup>44</sup> That is, upon Burke's *Reflections on the French Revolution*, which had appeared on November 1, 1790.

But if Mr. Burke means to admit that man has rights, the question then will be, what are those rights, and how came man by them originally?

The error of those who reason by precedents drawn from antiquity, respecting the rights of man, is that they do not go far enough into antiquity. They do not go the whole way. They stop in some of the intermediate stages of a hundred or a thousand years, and produce what was then done as a rule for the present day. This is no authority at all. If we travel 10 still further into antiquity, we shall find a directly contrary opinion and practice prevailing; and if antiquity is to be authority, a thousand such authorities may be produced, successively contradicting each other: but if we proceed on, we shall at last come out right: we shall come to the time when man came from the hand of his maker. What was he then? Man. Man was his high and only title, and a higher cannot be given him. But of titles I shall speak hereafter.

We have now arrived at the origin of man, and at the origin of his rights. As to the manner in which the world has been governed from that day to this, it is no further any concern of ours than to make a proper use of the errors or the improvements which the history of it presents. Those who lived a hundred or a thousand years ago were then moderns as we are now. They had *their* ancients and those ancients had others, and we also shall be ancients in our turn. If the mere name of antiquity is to govern in the affairs 30 of life, the people who are to live a hundred or a thousand years hence may as well take us for a precedent, as we make a precedent of those who lived a hundred or a thousand years ago. The fact is that portions of antiquity, by proving **everything**, establish nothing. It is authority against authority all the way till we come to the divine origin of the rights of man at the creation. Here our inquiries find a resting-place, and our reason finds a home. If a dispute about the rights of man had arisen at the 40 distance of a hundred years from the creation, it is to this source of authority they must have referred, and it is to the same source of authority that we must now refer.

Though I mean not to touch upon any sectarian principle of religion, yet it may be worth observing that the genealogy of Christ is traced to Adam. Why then not trace the rights of man to the creation of man? I will answer the question. Because there have

been an upstart of governments, thrusting themselves between, and presumptuously working to *un-make* man.

If any generation of men ever possessed the right of dictating the mode by which the world should be governed forever, it was the first generation that existed; and if that generation did not do it, no succeeding generation can show any authority for doing it, nor set any up. The illuminating and divine principles of the equal rights of man (for it has its origin from the maker of man) relates, not only to the living individuals, but to generations of men succeeding each other. Every generation is equal in rights to the generations which preceded it, by the same rule that every individual is born equal in rights with his contemporary.

Every history of the creation, and every traditional account, whether from the lettered or unlettered world, however they may vary in their opinion 20 or belief of certain particulars, all agree in establishing one point, *the unity of man*; by which I mean that man is all of *one degree*, and consequently that all men are born equal and with equal natural rights, in the same manner as if posterity had been continued by *creation* instead of *generation*, the latter being only the mode by which the former is carried forward; and consequently every child born into the world must be considered as deriving its existence from God. The world is as new to him as it was to the first man that existed, and his natural right in it is of the same kind.

The Mosaic account of the creation, whether taken as divine authority, or merely historical, is fully up to this point, *the unity or equality of man*. The expressions admit of no controversy. "And God said, let us make man in our own image. In the image of God created he him; male and female created he them." The distinction of sexes is pointed out, but no other distinction is even implied. If this be not divine authority, it is at least historical authority, and shows that the equality of man, so far from being a modern doctrine, is the oldest upon record.

It is also to be observed that all the religions known in the world are founded, so far as they relate to man, on the *unity of man* as being all of one degree. Whether in heaven or in hell or in whatever state man may be supposed to exist hereafter, the good and the bad are the only distinctions. Nay, even

the laws of governments are obliged to slide into this principle by making degrees to consist in crimes and not in persons.

It is one of the greatest of all truths, and of the highest advantage to cultivate. By considering man in this light, and by instructing him to consider himself in this light, it places him in a close connection with all his duties, whether to his creator, or to the creation of which he is a part; and it is only when he forgets his origin or, to use a more fashionable phrase, *his birth and family*, that he becomes dissolute. It is not among the least of the evils of the present existing governments in all parts of Europe, that man, considered as man, is thrown back to a vast distance from his maker, and the artificial chasm filled up by a succession of barriers, or a sort of turnpike gates, through which he has to pass. I will quote Mr. Burke's catalogue of barriers that he has set up between man and his maker. Putting himself in the character of a herald, he says, "We fear God—we look with awe to kings—with affection to parliaments—with duty to magistrates—with reverence to priests, and with respect to nobility." Mr. Burke has forgot to put in "chivalry." He has also forgot to put in Peter.

The duty of man is not a wilderness of turnpike gates through which he is to pass by tickets from one to the other. It is plain and simple, and consists but of two points. His duty to God, which every man must feel; and with respect to his neighbor, to do as he would be done by. If those to whom power is delegated do well, they will be respected; if not they will be despised; and with regard to those to whom no power is delegated, but who assume it, the rational world can know nothing of them.

Hitherto we have spoken only (and that but in part) of the natural rights of man. We have now to consider the civil rights of man, and to show how the one originates out of the other. Man did not enter into society to become worse than he was before, nor to have less rights than he had before, but to have those rights better secured. His natural rights are the foundation of all his civil rights. But in order to pursue this distinction with more precision, it is necessary to mark the different qualities of natural and civil rights.

A few words will explain this. Natural rights are those which always appertain to man in right of his existence. Of this kind are all the intellectual rights,

or rights of the mind, and also all those rights of acting as an individual for his own comfort and happiness, which are not injurious to the rights of others. Civil rights are those which appertain to man in right of his being a member of society. Every civil right has for its foundation some natural right pre-existing in the individual, but to which his individual power is not, in all cases, sufficiently competent. Of this kind are all those which relate to security and protection.

From this short review, it will be easy to distinguish between that class of natural rights which man retains after entering into society and those which he throws into common stock as a member of society.

The natural rights which he retains are all those in which the power to execute it is as perfect in the individual as the right itself. Among this class, as is before mentioned, are all the intellectual rights, or rights of the mind: consequently, religion is one of those rights. The natural rights which are not retained are all those in which, though the right is perfect in the individual, the power to execute them is defective. They answer not his purpose. A man, by natural right, has a right to judge in his own cause; and so far as the right of the mind is concerned, he never surrenders it: but what availeth it him to judge, if he has not power to redress? He therefore deposits this right in the common stock of society, and takes the arm of society, of which he is a part, in preference and in addition to his own. Society *grants* him nothing. Every man is a proprietor in society, and draws on the capital as a matter of right.

From these premises, two or three certain conclusions will follow.

1st, That every civil right grows out of a natural right; or, in other words, is a natural right exchanged.

2nd, That civil power, properly considered as such, is made up of the aggregate of that class of the natural rights of man which becomes defective in the individual in point of power, and answers not his purpose, but when collected to a focus, becomes competent to the purpose of everyone.

3d, That the power produced by the aggregate of natural rights, imperfect in power in the individual, cannot be applied to invade the natural rights which are retained in the individual, and in which the power to execute is as perfect as the right itself.

We have now, in a few words, traced man from a natural individual to a member of society, and shown, or endeavored to show, the quality of the natural rights retained and of those which are exchanged for civil rights. Let us now apply those principles to government.

In casting our eyes over the world, it is extremely easy to distinguish the governments which have arisen out of society, or out of the social compact, from those which have not: but to place this in a clearer light than what a single glance may afford, it will be proper to take a review of the several sources from which governments have arisen and on which they have been founded.

They may be all comprehended under three heads: 1st, superstition; 2d, power; 3d, the common interests of society, and the common rights of man.

The first was a government of priestcraft, the second of conquerors, and the third of reason.

When a set of artful men pretended, through the medium of oracles, to hold intercourse with the deity as familiarly as they now march up the back stairs in European courts, the world was completely under the government of superstition. The oracles were consulted, and whatever they were made to say became the law; and this sort of government lasted just as long as this sort of superstition lasted.

After these a race of conquerors arose, whose government, like that of William the Conqueror, was founded in power, and the sword assumed the name of a scepter. Governments thus established last as long as the power to support them lasts; but that they might avail themselves of every engine in their favor, they united fraud to force, and set up an idol which they called *divine right*, and which, in imitation of the pope who affects to be spiritual and temporal, and in contradiction to the founder of the Christian religion, twisted itself afterwards into an idol of another shape, called *church and state*. The key of St. Peter and the key of the treasury became quar-  
40

When I contemplate the natural dignity of man; when I feel (for nature has not been kind enough to me to blunt my feelings) for the honor and happiness of its character, I become irritated at the attempt to govern mankind by force and fraud as if they were all knaves and fools, and can scarcely avoid feeling disgust for those who are thus imposed upon.

We have now to review the governments which arise out of society, in contradistinction to those which arose out of superstition and conquest.

It has been thought a considerable advance towards establishing the principles of freedom, to say that government is a compact between those who govern and those who are governed: but this cannot be true, because it is putting the effect before the cause; for as man must have existed before governments existed, there necessarily was a time when governments did not exist, and consequently there could originally exist no governors to form such a compact with. The fact therefore must be that the *individuals themselves*, each in his own personal and sovereign right, *entered into a compact with each other* to produce a government: and this is the only mode in which governments have a right to be established; and the only principle on which they have a right to exist.

To possess ourselves of a clear idea of what government is or ought to be, we must trace it to its origin. In doing this we shall easily discover that governments must have arisen, either *out* of the people, or *over* the people. Mr. Burke has made no distinction. He investigates nothing to its source, and therefore he confounds everything: but he has signified his intention of undertaking, at some future opportunity, a comparison between the constitutions of England and France. As he thus renders it a subject of controversy by throwing the gauntlet, I take him up on his own ground. It is in high challenges that high truths have the right of appearing; and I accept it with the more readiness, because it affords me, at the same time, an opportunity of pursuing the subject with respect to governments arising out of society.

But it will be first necessary to define what is meant by a *constitution*. It is not sufficient that we adopt the word; we must fix also a standard signifi-  
40

A constitution is not a thing in name only, but in fact. It has not an ideal, but a real existence; and wherever it cannot be produced in a visible form there is none. A constitution is a thing antecedent to a government, and a government is only the creature of a constitution. The constitution of a country is not the act of its government, but of the people constituting a government. It is the body of elements, to which you can refer, and quote article by article; and

contains the principles on which the government shall be established, the form in which it shall be organized, the powers it shall have, the mode of elections, the duration of parliaments, or by what other name such bodies may be called; the powers which the executive part of the government shall have; and, in fine, everything that relates to the complete organization of a civil government, and the

principle on which it shall act, and by which it shall be bound. A constitution, therefore, is to a government what the laws made afterwards by that government are to a court of judicature. The court of judicature does not make laws, neither can it alter them; it only acts in conformity to the laws made; and the government is in like manner governed by the constitution.

### *The Age of Reason* <sup>45</sup>

BEING AN INVESTIGATION OF THE TRUE AND OF FABULOUS THEOLOGY

#### PART FIRST

#### [Dedication]

To My Fellow-Citizens of the  
UNITED STATES OF AMERICA

I put the following work under your protection. It contains my opinion upon religion. You will do me the justice to remember that I have always strenuously supported the right of every man to his own opinion, however different that opinion might be to mine. He who denies to another this right makes a slave of himself to his present opinion, because he <sup>20</sup> precludes himself the right of changing it.

The most formidable weapon against errors of every kind is reason. I have never used any other, and I trust I never shall.

Your affectionate friend and fellow-citizen.

Thomas Paine

*Paris, 8th Pluviose,  
Second Year of the French Republic, one and  
indivisible.  
January 27, O. S. 1794.*

#### [Credo]

It has been my intention for several years past to publish my thoughts upon Religion. I am well aware of the difficulties that attend the subject; and from that consideration had reserved it to a more advanced period of life. I intended it to be the last offering I should make to my fellow-citizens of all nations, and that at a time when the purity of the motive that

induced me to it could not admit of a question, even <sup>10</sup> by those who might disapprove the work.

The circumstance that has now taken place in France, <sup>46</sup> of the total abolition of the whole national order of priesthood and of everything appertaining to compulsive systems or religion and compulsive articles of faith, has not only precipitated my intention, but rendered a work of this kind exceedingly necessary; lest, in the general wreck of superstition, of false systems of government, and false theology, we lose sight of morality, of humanity, and of the theology that is true.

As several of my colleagues, and others of my fellow-citizens of France, have given me the example of making their voluntary and individual profession of faith, I also will make mine; and I do this with all that sincerity and frankness with which the mind of man communicates with itself.

I believe in one God, and no more; and I hope for happiness beyond this life.

I believe in the equality of man, and I believe that <sup>30</sup> religious duties consist in doing justice, loving mercy, and endeavoring to make our fellow-creatures happy.

But lest it should be supposed that I believe many other things in addition to these, I shall, in the progress of this work, declare the things I do not believe and my reasons for not believing them.

I do not believe in the creed professed by the Jewish church, by the Roman church, by the Greek church, by the Turkish church, by the Protestant church, nor by any church that I know of. My own <sup>40</sup> mind is my own church.

All national institutions of churches—whether Jewish, Christian, or Turkish—appear to me no other

<sup>45</sup> *The Age of Reason* appeared in two parts, 1794 and 1795. Numerous editions, showing marked variations, soon came into existence. The text here reprinted presents the first twelve chapters of Part I, following the first edition, which appeared in Paris in 1794. The chapter headings are translations of the first version that appeared in French.

<sup>46</sup> A reference to the actions of the National Convention since 1792.

than human inventions set up to terrify and enslave mankind and monopolize power and profit.

I do not mean by this declaration to condemn those who believe otherwise. They have the same right to their belief as I have to mine. But it is necessary to the happiness of man that he be mentally faithful to himself. Infidelity does not consist in believing or in disbelieving; it consists in professing to believe what he does not believe.

It is impossible to calculate the moral mischief, if I may so express it, that mental lying has produced in society. When a man has so far corrupted and prostituted the chastity of his mind as to subscribe his professional belief to things he does not believe, he has prepared himself for the commission of every other crime. He takes up the trade of a priest for the sake of gain, and, in order to *qualify* himself for that trade, he begins with a perjury. Can we conceive anything more destructive to morality than this?

Soon after I had published the pamphlet, *COMMON SENSE*, in America, I saw the exceeding probability that a revolution in the system of government would be followed by a revolution in the system of religion. The adulterous connection of church and state, wherever it had taken place, whether Jewish, Christian, or Turkish, had so effectually prohibited, by pains and penalties, every discussion upon established creeds and upon first principles of religion, that until the system of government should be changed those subjects could not be brought fairly 30 and openly before the world; but that whenever this should be done, a revolution in the system of religion would follow. Human inventions and priestcraft would be detected, and man would return to the pure, unmixed, and unadulterated belief of one God, and no more.

## [CHAPTER II.]

### Of Missions and Revelations]

Every national church or religion has established itself by pretending some special mission from God, communicated to certain individuals. The Jews have their Moses; the Christians their Jesus Christ, their apostles and saints; and the Turks their Mahomet—as if the way to God was not open to every man alike.

Each of those churches show certain books which they call *revelation*, or the word of God. The Jews

say that their word of God was given by God to Moses face to face; the Christians say that their word of God came by divine inspiration; and the Turks say that their word of God (the Koran) was brought by an angel from heaven. Each of those churches accuse the other of unbelief; and, for my own part, I disbelieve them all.

As it is necessary to affix right ideas to words, I will, before I proceed further into the subject, offer some observations on the word *revelation*. Revelation, when applied to religion, means something communicated *immediately* from God to man.

No one will deny or dispute the power of the Almighty to make such a communication, if he pleases. But admitting, for the sake of a case, that something has been revealed to a certain person, and not revealed to any other person, it is revelation to that person only. When he tells it to a second person, a second to a third, a third to a fourth, and so on, it ceases to be a revelation to all those persons. It is a revelation to the first person only, and *hearsay* to every other; and, consequently, they are not obliged to believe it.

It is a contradiction in terms and ideas to call anything a revelation that comes to us at second-hand, either verbally or in writing. Revelation is necessarily limited to the first communication. After this, it is only an account of something which that person says was a revelation made to him; and though he may find himself obliged to believe it, it cannot be incumbent upon me to believe it in the same manner, for it was not a revelation to *me*, and I have only his word for it that it was made to *him*.

When Moses told the children of Israel that he received the two tables of commandments from the hand of God, they were not obliged to believe him, because they had no other authority for it than his telling them so; and I have no other authority for it than some historian telling me so. The command- 40 ments carry no internal evidence of divinity with them. They contain some good moral precepts, such as any man qualified to be a lawgiver, or a legislator, could produce himself, without having recourse to supernatural intervention.\*

When I am told that the Koran was written in heaven, and brought to Mahomet by an angel, the

\* It is, however, necessary to except the declaration which says that God visits the sins of the fathers upon the children. This is contrary to every principle of moral justice.

account comes too near the same kind of hearsay evidence and secondhand authority as the former. I did not see the angel myself, and therefore I have a right not to believe it.

When also I am told that a woman, called the Virgin Mary, said, or gave out, that she was with child without any cohabitation with a man, and that her betrothed husband, Joseph, said that an angel told him so, I have a right to believe them or not; such a circumstance required a much stronger evi-<sup>10</sup> dence than their bare word for it; but we have not even this; for neither Joseph nor Mary wrote any such matter themselves. It is only reported by others that *they said so*. It is hearsay upon hearsay, and I do not choose to rest my belief upon such evidence.

It is, however, not difficult to account for the credit that was given to the story of Jesus Christ being the Son of God. He was born at a time when the heathen mythology had still some fashion and repute in the world, and that mythology had prepared the people<sup>20</sup> for the belief of such a story. Almost all the extraordinary men that lived under the heathen mythology were reputed to be the sons of some of their gods. It was not a new thing, at that time, to believe a man to have been celestially begotten; the intercourse of gods with women was then a matter of familiar opinion. Their Jupiter, according to their accounts, had cohabited with hundreds; the story therefore had nothing in it either new, wonderful, or obscene; it was conformable to the opinions that then prevailed<sup>30</sup> among the people called Gentiles, or mythologists, and it was those people only that believed it. The Jews, who had kept strictly to the belief of one God and no more, and who had always rejected the heathen mythology, never credited the story.

It is curious to observe how the theory of what is called the Christian church sprung out of the tail of the heathen mythology. A direct incorporation took place, in the first instance, by making the reputed founder to be celestially begotten. The trinity of gods<sup>40</sup> that then followed was no other than a reduction of the former plurality, which was about twenty or thirty thousand. The statue of Mary succeeded the statue of Diana of Ephesus.<sup>47</sup> The deification of heroes changed into the canonization of saints. The mythologists had gods for everything; the Christian mythologists had saints for everything. The church became

<sup>47</sup> The Shrine of Diana was one of the seven wonders of the ancient world. See Acts 19.

as crowded with the one as the pantheon had been with the other; and Rome was the place of both. The Christian theory is little else than the idolatry of the ancient mythologists, accommodated to the purposes of power and revenue; and it yet remains to reason and philosophy to abolish the amphibious fraud.

### [CHAPTER III.

#### Concerning the Character of Jesus Christ and His History]

Nothing that is here said can apply, even with the most distant disrespect, to the real character of Jesus Christ. He was a virtuous and an amiable man. The morality that he preached and practiced was of the most benevolent kind; and though similar systems of morality had been preached by Confucius,<sup>48</sup> and by some of the Greek philosophers, many years before, by the Quakers since, and by many good men in all ages, it has not been exceeded by any.

Jesus Christ wrote no account of himself, of his birth, parentage, or anything else. Not a line of what is called the New Testament is of his writing. The history of him is altogether the work of other people; and as to the account given of his resurrection and ascension, it was the necessary counterpart to the story of his birth. His historians, having brought him into the world in supernatural manner, were obliged to take him out again in the same manner, or the first part of the story must have fallen to the ground.

The wretched contrivance with which this latter part is told exceeds everything that went before it. The first part, that of the miraculous conception, was not a thing that admitted of publicity; and therefore the tellers of this part of the story had this advantage, that though they might not be credited they could not be detected. They could not be expected to prove it, because it was not one of those things that admitted of proof, and it was impossible that the person of whom it was told could prove it himself.

But the resurrection of a dead person from the grave, and his ascension through the air, is a thing very different, as to the evidence it admits of, to the invisible conception of a child in the womb. The resurrection and ascension, supposing them to have taken place, admitted of public and ocular demonstration, like that of the ascension of a balloon, or the sun at noonday, to all Jerusalem at least. A thing which everybody is required to believe requires that

<sup>48</sup> Confucius (551?-478 B.C.), Chinese philosopher.

the proof and evidence of it should be equal to all, and universal; and as the public visibility of this last related act was the only evidence that could give sanction to the former part, the whole of it falls to the ground because that evidence never was given. Instead of this, a small number of persons, not more than eight or nine, are introduced as proxies for the whole world, to say they *saw it*, and all the rest of the world are called upon to believe it. But it appears that Thomas did not believe the resurrection;<sup>49</sup> and, as they say, would not believe without having ocular and manual demonstration himself. *So neither will I*; and the reason is equally as good for me, and for every other person, as for Thomas. . . .

## [CHAPTER IX.]

## In What the True Revelation Consists]

But some perhaps will say: Are we to have no word of God—no revelation? I answer: Yes; there is a word of God; there is a revelation.

THE WORD OF GOD IS THE CREATION WE BEHOLD; and it is in *this word*, which no human invention can counterfeit or alter, that God speaketh universally to man.

Human language is local and changeable, and is therefore incapable of being used as the means of unchangeable and universal information. The idea that God sent Jesus Christ to publish, as they say, the glad tidings to all nations from one end of the earth unto the other, is consistent only with the ignorance of those who knew nothing of the extent of the world, and who believed, as those world-saviors believed and continued to believe for several centuries (and that in contradiction to the discoveries of philosophers and the experience of navigators), that the earth was flat like a trencher; and that a man might walk to the end of it.

But how was Jesus Christ to make anything known to all nations? He could speak but one language, which was Hebrew; and there are in the world several hundred languages. Scarcely any two nations speak the same language, or understand each other; and as to translations, every man who knows anything of languages knows that it is impossible to translate from one language into another, not only without losing a great part of the original but frequently of mistaking the sense; and, besides all this, the art of

<sup>49</sup> See John 20:24-29.

printing was wholly unknown at the time Christ lived.

It is always necessary that the means that are to accomplish any end be equal to the accomplishment of that end, or the end cannot be accomplished. It is in this that the difference between finite and infinite power and wisdom discovers itself. Man frequently fails in accomplishing his ends from a natural inability of the power to the purpose; and frequently from the want of wisdom to apply power properly. But it is impossible for infinite power and wisdom to fail as man faileth. The means it useth are always equal to the end; but human language, more especially as there is not a universal language, is incapable of being used as a universal means of unchangeable and uniform information; and therefore it is not the means that God useth in manifesting himself universally to man.

It is only in the CREATION that all our ideas and conceptions of a *word of God* can unite. The creation speaketh a universal language, independently of human speech or human languages, multiplied and various as they be. It is an ever existing original which every man can read. It cannot be forged; it cannot be counterfeited; it cannot be lost; it cannot be altered; it cannot be suppressed. It does not depend upon the will of man whether it shall be published or not; it publishes itself from one end of the earth to the other. It preaches to all nations and to all worlds; and this *word of God* reveals to man all that is necessary for man to know of God.

Do we want to contemplate his power? We see it in the immensity of the creation. Do we want to contemplate his wisdom? We see it in the unchangeable order by which the incomprehensible whole is governed. Do we want to contemplate his munificence? We see it in the abundance with which he fills the earth. Do we want to contemplate his mercy? We see it in his not withholding that abundance even from the unthankful. In fine, do we want to know what God is? Search not the book called the Scripture, which any human hand might make, but the scripture called the Creation.

## [CHAPTER X.]

## Concerning God, and the Lights Cast on His Existence and Attributes by the Bible]

The only idea man can affix to the name of God is that of a *first cause*, the cause of all things. And in-

comprehensibly difficult as it is for man to conceive what a first cause is, he arrives at the belief of it from the tenfold greater difficulty of disbelieving it. It is difficult beyond description to conceive that space can have no end; but it is more difficult to conceive an end. It is difficult beyond the power of man to conceive an eternal duration of what we call time; but it is more impossible to conceive a time when there shall be no time. In like manner of reasoning, everything we behold carries in itself the internal 10 evidence that it did not make itself. Every man is an evidence to himself that he did not make himself; neither could his father make himself, nor his grandfather, nor any of his race; neither could any tree, plant, or animal make itself; and it is the conviction arising from this evidence that carries us on, as it were, by necessity, to the belief of a first cause eternally existing, of a nature totally different to any material existence we know of, and by the power of which all things exist; and this first cause, man calls 20 God.

It is only by the exercise of reason that man can discover God. Take away that reason and he would be incapable of understanding anything; and, in this case, it would be just as consistent to read even the book called the Bible to a horse as to a man. How then is it that those people pretend to reject reason?

Almost the only parts of the book called the Bible that convey to us any idea of God are some chapters in Job, and the 19th Psalm; I recollect no other. 30 Those parts are true *deistical* compositions; for they treat of the *Deity* through his works. They take the book of Creation as the word of God; they refer to no other book; and all the inferences they make are drawn from that volume.

I insert, in this place, the 19th Psalm, as paraphrased into English verse by Addison. I recollect not the prose, and where I write this I have not the opportunity of seeing it.

The spacious firmament on high,  
With all the blue ethereal sky,  
And spangled heavens, a shining frame,  
Their great original proclaim.  
The unwearied sun, from day to day,  
Does his Creator's power display,  
And publishes to every land  
The work of an Almighty hand.

Soon as the evening shades prevail  
The moon takes up the wondrous tale,

And nightly to the listening earth  
Repeats the story of her birth;  
Whilst all the stars that round her burn,  
And all the planets in their turn,  
Confirm the tidings as they roll  
And spread the truth from pole to pole.

What though in solemn silence all  
Move round the dark terrestrial ball?  
What though nor real voice, nor sound,  
Amidst their radiant orbs be found?  
In reason's ear they all rejoice,  
And utter forth a glorious voice;  
Forever singing as they shine,  
THE HAND THAT MADE US IS DIVINE.

What more does man want to know than that the hand or power that made these things is divine, is omnipotent? Let him believe this with the force it is impossible to repel, if he permits his reason to act, and his rule of moral life will follow of course.

The allusions in Job have, all of them, the same tendency with this Psalm; that of deducing or proving a truth, that would otherwise be unknown, from truths already known.

I recollect not enough of the passages in Job to insert them correctly; but there is one that occurs to me that is applicable to the subject I am speaking upon: "Canst thou by searching find out God? Canst thou find out the Almighty to perfection?"

I know not how the printers have pointed this passage, for I keep no Bible; but it contains two distinct questions that admit of distinct answers.

First, Canst thou by *searching* find out God? Yes, because, in the first place, I know I did not make myself, and yet I have existence; and by *searching* into the nature of other things, I find that no other thing could make itself; and yet millions of other things exist; therefore it is that I know, by positive conclusion resulting from this search, that there is a power superior to all those things, and that power is God.

40 Secondly, Canst thou find out the Almighty to *perfection*? No, not only because the power and wisdom he had manifested in the structure of the Creation that I behold is to me incomprehensible; but because even this manifestation, great as it is, is probably but a small display of that immensity of power and wisdom by which millions of other worlds, to me invisible by their distance, were created and continue to exist.

It is evident that both these questions were put

to the reason of the person to whom they are supposed to have been addressed; and it is only by admitting the first question to be answered affirmatively that the second could follow. It would have been unnecessary, and even absurd, to have put a second question more difficult than the first, if the first question had been answered negatively. The two questions have different objects; the first refers to the existence of God, the second to his attributes. Reason can discover the one, but it falls infinitely short in 10 discovering the whole of the other.

I recollect not a single passage in all the writings ascribed to the men called apostles that conveys any idea of what God is. Those writings are chiefly controversial; and the gloominess of the subject they dwell upon, that of a man dying in agony on a cross, is better suited to the gloomy genius of a monk in a cell, by whom it is not impossible they were written, than to any man breathing the open air of the Creation. The only passage that occurs to me, that has any 20 reference to the works of God, by which only his power and wisdom can be known, is related to have been spoken by Jesus Christ as a remedy against distrustful care. "Consider the lilies of the field, how they grow; they toil not, neither do they spin." This, however, is far inferior to the allusions in Job and in the nineteenth Psalm; but it is similar in idea, and the modesty of the imagery is correspondent to the modesty of the man.

#### [CHAPTER XI.

#### Of the Theology of the Christians; and the True Theology]

As to the Christian system of faith, it appears to me as a species of atheism; a sort of religious denial of God. It professes to believe in a man rather than in God. It is a compound made up chiefly of manism, with but little deism, and is as near to atheism as twilight is to darkness. It introduces between man and his Maker an opaque body, which it calls a 40 Redeemer, as the moon introduces her opaque self between the earth and the sun; and it produces by this means a religious or an irreligious eclipse of light. It has put the whole orb of reason into shade.

The effect of this obscurity has been that of turning everything upside down and representing it in reverse; and among the revolutions it has thus magically produced, it has made a revolution in theology.

That which is now called natural philosophy, em-

bracing the whole circle of science of which astronomy occupied the chief place, is the study of the works of God, and of the power and wisdom of God and his works, and is the true theology.

As to the theology that is now studied in its place, it is the study of human opinions and of human fancies *concerning* God. It is not the study of God himself in the works that he has made, but in the works or writings that man has made; and it is not among the least of the mischiefs that the Christian system has done to the world that it has abandoned the original and beautiful system of theology, like a beautiful innocent, to distress and reproach, to make room for the hag of superstition.

The book of Job and the 19th Psalm, which even the church admits to be more ancient than the chronological order in which they stand in the book called the Bible, are theological orations conformable to the original system of theology. The internal evidence of those orations proves to a demonstration that the study and contemplation of the works of creation, and of the power and wisdom of God revealed and manifested in those works, make a great part of the religious devotion of the times in which they were written; and it was this devotional study and contemplation that led to the discovery of the principles upon which what are now called sciences are established; and it is to the discovery of these principles that almost all the arts that contribute to the convenience of human life owe their existence. Every 30 principal art has some science for its parent, though the person who mechanically performs the work does not always, and but very seldom, perceive the connection.

It is a fraud of the Christian system to call the sciences *human invention*; it is only the application of them that is human. Every science has for its basis a system of principles as fixed and unalterable as those by which the universe is regulated and governed. Man cannot make principles; he can only discover them.

For example. Every person who looks at an almanac sees an account when an eclipse will take place, and he sees also that it never fails to take place according to the account there given. This shows that man is acquainted with the laws by which the heavenly bodies move. But it would be something worse than ignorance were any church on earth to say that those laws are a human invention.

It would also be ignorance or something worse to say that the scientific principles, by the aid of which man is enabled to calculate and foreknow when an eclipse will take place, are a human invention. Man cannot invent anything that is eternal and immutable, and the scientific principles he employs for this purpose must be, and are, of necessity, as eternal and immutable as the laws by which the heavenly bodies move, or they could not be used as they are to ascertain the time when, and the manner how, an eclipse 10 will take place.

The scientific principles that man employs to obtain the foreknowledge of an eclipse, or of anything else relating to the motion of the heavenly bodies, are contained chiefly in that part of science that is called trigonometry, or the property of a triangle, which, when applied to the study of the heavenly bodies, is called astronomy; when applied to direct the course of a ship on the ocean, it is called navigation; when 20 applied to the construction of figures drawn by rule and compass, it is called geometry; when applied to the construction of plans of edifices, it is called architecture; when applied to the measurement of any portion of the surface of the earth, it is called land-surveying. In fine, it is the soul of science. It is an eternal truth; it contains the *mathematical demonstration* of which man speaks, and the extent of its uses is unknown.

It may be said that man can make or draw a triangle, and therefore a triangle is a human inven- 30 tion.

But the triangle, when drawn, is no other than the image of the principle; it is a delineation of the eye, and from thence to the mind, of a principle that would otherwise be imperceptible. The triangle does not make the principle any more than a candle, taken into a room that was dark, makes the chairs and tables that before were invisible. All the properties of a triangle exist independently of the figure, and existed before any triangle was drawn or thought of 40 by man. Man had no more to do in the formation of those properties, or principles, than he had to do in making the laws by which the heavenly bodies move; and therefore the one must have the same divine origin as the other.

In the same manner as it may be said that man can make a triangle so also may it be said he can make the mechanical instrument called a lever; but the principle by which the lever acts is a thing distinct

from the instrument and would exist if the instrument did not; it attaches itself to the instrument after it is made; the instrument, therefore, can act no otherwise than it does act; neither can all the efforts of human invention make it act otherwise. That which, in all such cases, man calls the *effect*, is no other than the principle itself rendered perceptible to the senses.

Since, then, man cannot make principles, from whence did he gain a knowledge of them, so as to be able to apply them not only to things on earth, but to ascertain the motion of bodies so immensely distant from him as all the heavenly bodies are? From whence, I ask, *could* he gain that knowledge but from the study of the true theology?

It is the structure of the universe that has taught this knowledge to man. That structure is an ever-existing exhibition of every principle upon which every part of mathematical science is founded. The offspring of this science is mechanics; for mechanics is no other than the principles of science applied practically. The man who proportions the several parts of a mill uses the same scientific principles as if he had the power of constructing a universe; but as he cannot give to matter that invisible agency by which all the component parts of the immense machine of the universe have influence upon each other and act in motional unison together without any apparent contact, and to which man has given the name of attraction, gravitation, and repulsion, he supplies the place of that agency by the humble imitation of teeth and cogs. All the parts of man's microcosm must visibly touch; but could he gain a knowledge of that agency so as to be able to supply it in practice, we might then say that another *canonical* book of the word of God had been discovered.

If man could alter the properties of the lever, so also could he alter the properties of the triangle; for a lever (taking that sort of lever which is called a steel-yard, for the sake of explanation) forms, when in motion, a triangle. The line it descends from (one point of that line being in the fulcrum), the line it descends to, and the chord of the arc which the end of the lever describes in the air, are the three sides of a triangle. The other arm of the lever describes also a triangle; and the corresponding sides of those two triangles, calculated scientifically or measured geometrically, and also the sines, tangents, and secants

generated from the angles and geometrically measured, have the same proportions to each other as the different weights have that will balance each other on the lever, leaving the weight of the lever out of the case.

It may also be said that man can make a wheel and axis; that he can put wheels of different magnitudes together and produce a mill. Still the case comes back to the same point, which is that he did not make the principle that gives the wheels those powers. That principle is as unalterable as in the former cases, or rather it is the same principle under a different appearance to the eye.

The power that two wheels of different magnitudes have upon each other is in the same proportion as if the semi-diameters of the two wheels were joined together and made into that kind of lever I have described, suspended at the part where the semi-diameters join; for the two wheels, scientifically considered, are no other than the two circles generated by the motion of the compound lever.

It is from the study of the true theology that all our knowledge of science is derived, and it is from that knowledge that all the arts have originated.

The Almighty lecturer, by displaying the principles of science in the structure of the universe, has invited man to study and to imitation. It is as if he had said

to the inhabitants of this globe that we call ours: "I rendered the starry heavens visible, to teach him science and the arts. He can now provide for his own comfort, AND LEARN FROM MY MUNIFICENCE TO BE KIND TO EACH OTHER."

Of what use is it, unless it be to teach man something, that his eye is endowed with the power of beholding to an incomprehensible distance an immensity of worlds revolving in the ocean of space? Of what use is it that this immensity of worlds is visible to man? What has man to do with the Pleiades, with Orion, with Sirius, with the star he calls the North star, with the moving orbs he has named Saturn, Jupiter, Mars, Venus, and Mercury, if no uses are to follow from their being visible? A less power of vision would have been sufficient for man, if the immensity he now possesses were only given to waste itself, as it were, on an immense desert space glittering with shows.

It is only by contemplating what he calls the starry heavens as the book and school of science that he discovers any use in their being visible to him, or any advantage resulting from his immensity of vision. But when he contemplates the subject in this light, he sees an additional motive for saying that *nothing was made in vain*; for in vain would be this power of vision if it taught man nothing. . . .

## PHILIP FRENEAU (1752-1832)

The title-makers have done so well by Philip Freneau that he passes today as (1) poet of the American Revolution, (2) journalist of Jeffersonian and French Democracy, (3) apostle of the Religion of Nature and Humanity, and (4) the father of American poetry. Aside from the fact that he merits these fine titles, they are important as indicating the wide range of his interests and as suggesting that, like other writers of his day, the times made him a propagandist first and a poet afterwards. Like Trumbull, Dwight, and Barlow, or David Humphreys, Lemuel Hopkins, and Francis Hopkinson, he lived in an age of political and social turmoil, and like them, he could not avoid the burning issues of the day. Three-fourths of his energy went into crusading, and only a fourth was available for the cultivation of the purer poetic vein.

Born of French Huguenot parents in New York on January 2, 1752, he enjoyed the advantages of a genteel rearing and a good education; for when the boy was ten, his father inherited an estate at Mount Pleasant, New Jersey, of a thousand acres, spacious buildings, and slaves. When Freneau entered Princeton in his sixteenth year, his knowledge of the English poets and the classics elicited a letter of congratulation from President Witherspoon.

Like the Hartford Wits at Yale, Freneau and his Princeton friends, who included Henry Hugh Brackenridge, Aaron Burr, Henry Lee, William Bradford, Henry B. Livingston, and his roommate James Madison, set themselves to cultivating polite letters. Like them, too, they turned rather too much toward the exotic and the grandiloquent, choosing historical subjects of the antique world or the epical themes of Holy Writ.

During his freshman year Freneau wrote a lengthy poem in well-turned rhymed pentameters on the discouraging subject, "The Prophet Jonah," followed the next year by a dramatic fragment in blank verse on "The Pyramids of Egypt." With Brackenridge he wrote several chapters of an unfinished, fantastic novel entitled *Father Bombo's Pilgrimage to Mecca in Arabia*. But, as at Yale, liberal, not to say deistic, currents were coming into vogue among the students

at Princeton. Freneau's "Power of Fancy," written in 1770 and reminiscent of Miltonic phrasology, reflects not only incipient romantic characteristics of fanciful figurativeness and musical elasticity of form but also Freneau's early deistic faith in nature as a divine revelation, by which the planets, suns, moons, and stars are regarded as—

But thoughts on reason's scale combin'd,  
Ideas of the Almighty mind!

Again, as on other college campuses of the day, the political opinions current among the students reflected the rising tide of colonial opposition to British measures, and Princeton especially acquired the reputation of being a "hotbed of Whiggism." In a letter written in 1770, Madison described a vivid night scene in the college yard where students, robed in black gowns, burned, amid the tolling of bells, the letters of merchants who had failed to keep their non-importation agreements. The Commencement poem on "The Rising Glory of America," in which Freneau and Brackenridge collaborated, is an expression of the same emerging spirit of independence and national self-consciousness that brought on the Revolution, and that inspired the epic flights of Trumbull and Dwight and the dramatic independence of Royall Tyler and William Dunlap.

Following his graduation in 1771, Freneau taught school on Long Island and in Maryland, and wrote poems like "The American Village" (in "rocking horse" Popean couplets), which was "damned by all good and judicious judges," but which foreshadows many of his poetic characteristics, such as his love for nature and for indigenous, rural themes, his kinship with Goldsmith, with "heav'nly Pope" and with "godlike Addison," as well as his scorn for luxury and civilization and his naturalistic glorification of primitive life and the noble savage.

In the summer of 1775 he appeared in New York to win fame through eight satirical verse pamphlets turning upon the battles of Lexington and Bunker Hill and the fate of Generals Gage and Howe, breathing defiance to British tyrants and marauders, and ending with the prayer:

*Libera Nos, Domine.*—Deliver us, O Lord, not only from British Dependence, but also,

. . . From a kingdom that bullies, and hectors, and swears,  
We send up to heaven our wishes and prayers  
That we, disunited, may freemen be still,  
And Britain go on—to be damned if she will.

Antedating as these do the Declaration of Independence by a full year and the first version of Trumbull's hit in *M'Fingal* by six months, Freneau's satires did in verse what Paine's *Common Sense* did in prose.

This marks the beginning of Freneau's rebellious career as "a volunteer in two revolutions"—in which he was judged patriotic or seditious depending on whether he was with or against the victorious party. In 1776 he fought with Hamilton, John Adams, and Washington for national independence, and won high praise from them and all other patriots. But in the revolution of 1793, breaking with Hamilton, Adams, and Washington, he joined Jefferson in the fight to hold the advantages won in '76 against the forces of special privilege, aristocracy, and monarchy, which he and Jefferson believed to be threatening republicanism in America. For him it was no new cause, but merely a continuation of the old fight for democratic liberty and individual freedom; but in his former friends' eyes it allied him with Jeffersonian democrats, insubordinate levelers, and Jacobin radicals, and it brought upon him the odium attaching the Federalist mind to a vulgar democrat and a rascally infidel that threw an ugly shadow over his old age.

But during the earlier revolution he was an honored compatriot, although he spent most of the war years in the West Indies, where the exotic luxuriance of the land and the tropical atmosphere of the sea stirred his fancy to the writing of such poems as "The Jamaica Funeral," "The Beauties of Santa Cruz," and the weird "House of Night." On his second return trip in 1778 he was captured by the British but was set free after a short detention, and upon his arrival in America he published a belated poem, "America Independent," celebrating the Declaration of Independence and calling upon his countrymen to avenge the "hell-born spite" of British bondage. On a third voyage to the West Indies he was again captured, after a bloody fight between the American *Aurora* and the British *Irís*, an engagement in which he participated as a civilian. He was kept for a while on a British prison ship, the *Scorpion*, and later transferred to the *Hunter*, a hospital ship lying in New York harbor. The brutal treatment which he experienced

there drove him to that frenzied hatred of everything British as expressed in his poem on "The British Prison Ship," written just after his release, when he tells us he "came home round through the woods, for fear of terrifying the neighbors with my ghastly looks had I gone through Mount Pleasant." Henceforth he devoted himself to war propaganda, sharpening and letting fly his "best arrows at these hell-hounds," as he came to characterize the British. His "wrathful muse" breathed defiance and hatred, sarcasm and invective, in hundreds of poems that were widely circulated and read, as were Paine's *Crisis* papers, at army campfires and wherever else patriots gathered. From 1781 to 1784, while employed in the Philadelphia Post Office, he became the leading contributor, if not editor, of the *Freeman's Journal*, and published in its columns such well-known pacans as "The Memorable Victory" of Paul Jones and "To the Memory of the Brave Americans" who died at Eutaw Springs, while mercilessly ridiculing the British in "The Fall of General Earl Cornwallis" and in "The Political Balance."

The sea, for which he developed a fondness during his first trip to the West Indies, and which supplied him with some of his best images and motifs ever afterwards, called him again in 1784. He sailed the Atlantic and Caribbean as captain of a brig until 1790, when he married Eleanor Forman, of a distinguished family, and left the sea to become editor of the *New York Daily Advertiser*. A year later he was mentioned by Aedanus Burke to James Madison as "struggling under difficulties," whereupon Jefferson, then Secretary of State, appointed him to a clerkship in his department on August 16, 1791. Nine days later Freneau announced his intention of publishing the *National Gazette*. It appeared on October 31, 1791, and lasted until October 23, 1793.

The first number of the *National Gazette* praised Thomas Paine and the French Revolutionists, and succeeding issues left no doubt that Freneau's periodical was the organ of Jeffersonian views designed to counteract the *United States Gazette*, the partisan organ of the Hamiltonian party.

Ever distrustful of a plutocratic aristocracy and alarmed at the centralizing powers of the government which Hamilton was building up, Freneau, with Jefferson, fought with all the means at his command to combat Hamilton's measures in public as Jefferson opposed them in Washington's Cabinet. It was a "grim, unsparing, deadly" battle of ruthless partisanship in which nothing less than scurrilous lampoon and sledge-hammer invective served the purpose. Freneau's training in that department during the war

period had made him a master of intense attack, and the Federalists were soon smarting under his whip-lash, despite the able defense of Federalism as promulgated by John Fenno, the editor of the *United States Gazette*.

Hamilton early recognized that the chief business of the *National Gazette* was to destroy him, and he resolved on desperate measures. Blinking the fact that Fenno and the *United States Gazette* were subsidized by the government in the form of fat printing contracts many times more lucrative than the annual salary of \$250 which the Secretary of State paid Freneau as Clerk for Foreign Languages, he published an anonymous attack in Fenno's *Gazette* for July, 1792, charging Jefferson with having "hired" Freneau to "bite the hand that puts bread in his mouth" and of using the patronage of his Federal office to encourage an anti-government periodical. Freneau was hamstringing the Federalists at every turn, rousing popular opposition to the funding scheme, the bank, the excise, the tariff, the ceremonialism in high places, and the drift toward monarchical forms and practices. He publicized every known case where a Federalist had toasted the King of England, and he recorded numerous instances when they had spoken contemptuously of "the people." He supported the popular Jacobin demonstrations following the execution of Louis XVI, and in the Genêt affair, he defended Genêt, while reminding President Washington, since he was only a "public servant," he should remember that "the people are sovereign in the United States."

It was more than even Washington could bear. He sent for Jefferson and charged him with employing "that rascal Freneau" who had abused not only him but every branch of the government, adding (according to Jefferson's account), "By God, he had rather be in his grave than in his present situation." Jefferson refused to fire Freneau, for he believed that his paper "saved our Constitution, which was galloping fast into monarchy." The question of whether Freneau was actually employed by Jefferson is still being debated, but there is no longer any question about Freneau's being as effective as was Jefferson himself in arousing the popular opposition to Federalist measures that destroyed the party a few years later. But his partisanship also served to break Freneau. Championing the cause of democracy and the principles of French republicanism at a time when the reaction against the excesses of the French Revolution had provoked a strong revulsion of feeling among conservatives in America, Freneau also advocated lesser causes, among them deism, Unitarianism, hu-

manitarian reforms (notably antislavery), and Americanism in education; and these, as much as his partisanship for Jeffersonian democracy, brought down upon him the resentment of the powerful forces of conservatism. In the rough work that he engaged in, he forsook poetry to turn journalist and to heap abuse and scurrility upon the men whom he believed to be the enemies of the people. They retaliated in kind, calling him "a hirling mouthpiece of Jefferson," "a writer of wretched and insolent doggerel," "a vulgar democrat," and "a disseminator of insubordination and infidelity." Timothy Dwight lectured his boys at Yale that Philip Freneau was no better than Tom Paine—"a mere incendiary, or rather . . . a despicable tool of bigger incendiaries, and his paper . . . a public nuisance." Even the gentle Irving, who took his Federalism in moderate doses, spoke of him as "a barking cur"; while the saintlike Washington, forgetful of the time when Freneau had been more essential to his cause, seemed, to a people who adored him, to give everybody leave to dub Freneau "that rascal." From this heaping up of abuse, his name and fame did not recover until the dawn of the twentieth century.

When Jefferson, his patron, left Washington's Cabinet, Freneau resigned his secretaryship and gave up the *National Gazette*. Discredited and disgusted, he retired from "knaves and fools" to Mount Pleasant, now reduced to "a couple of hundred acres of an old sandy patrimony," to reflect that he had reposed his trust too blindly in the faith that the age of reason had already arrived, and that the overthrow of tyranny in government and religion would follow as soon as men were shown the way to do it.

For a year (1795-96) he edited the *Jersey Chronicle*, "a free, independent, republican paper," devoted to "the natural and political rights of nations." In June of 1795 he printed, with his own hands, his collected poems, the first edition to receive his own supervision, for the two earlier ones (1786 and 1788) had been printed by a friend while he was at sea. After various changes of work and residence, poverty drove him back to his old calling as master of coast-line freight vessels during 1803-1809. In 1809, back at Mount Pleasant, he prepared the 1809 edition of his poems, in two volumes. The War of 1812 revived his old rancor against the British, and he wrote another notable series of spirited satirical and patriotic poems. The burning of his old home in 1815, poverty, foreclosures and mortgages, and a weakness for "the tavern and the flowing bowl" completed his misery; and one night, just a week before the Christmas of 1832, while going home, the old man of eighty lost

his way in a snowstorm and was found the next morning dying of exposure.

Freneau's literary output falls roughly into three classes: (1) his patriotic and political satires, songs, and invectives; (2) his fanciful or imaginative verse, lyrical, descriptive, or reflective; and (3) his prose writings. The last have been too much neglected and remain still largely uncollected. During the course of his long and active career as a journalist, he wrote countless editorials, attacks, commentaries, reports, and essays of many kinds. Like his poems, these are uneven in composition and worth, often hastily written (as they had to be), and colored by the party spirit of the times. But in a number of his familiar essays, a form to which he especially devoted himself after his retirement from Washington, he achieved often a pleasing combination of sentiment, humor, and discernment. One of his most successful essays is his characterization of Tomo Cheeki as a commentator on the white man's way of life. Among the more personal of his familiar essays is "A Speech on a New Subject," presenting an unforgettable sketch of a retired sea captain; while among his essays commenting on the follies and foibles of human nature there are several that Addison could readily have accepted for the *Spectator*.

Freneau's later verse of propaganda—whether patriotic, political, or religious—suffered no diminution of forcefulness. His poetic fame during his own day rested almost wholly upon his polemical verse, and it is freely admitted that in that genre he excelled all of his contemporaries. His moralizing verses on matters of general philosophical import and his poems on natural or universal religion are all good in their way, several of the latter being little behind Alexander Pope's famous "Universal Prayer" in quality.

But it is upon what he called his "Poems of Romantic Fancy" that his more enduring fame as a poet must rest—poems like "The Power of Fancy," "The Beauties of Santa Cruz," "The Indian Burying Ground," and "The Wild Honey Suckle." In these, he is the poet of the transition between the old neo-classic conventionality and the new romantic imaginativeness. His fondness for moralizing, his rationalism, his addiction to the pastoral and the sentimental, and his use of personification and poetic diction ally him with the school of Gray, Collins, and Cowper, whose inspirations in some of his verses are not hard to discover. His youthful poem on "The Power of Fancy" appears to have derived at once from Milton's "L'Allegro" and "Il Penseroso" and from Joseph Warton's "Ode to Fancy"; while "The House of

Night" shows parallelisms with the "Induction" to *Mirror for Magistrates* no less than with the graveyard poetry of Blair and Gray, at the same time that it foreshadows the Gothic vein of Mrs. Radcliffe and Charles Brockden Brown or the funereal morbidity of Edgar Allan Poe. In his Indian poems he exhibits some similarities to the antiquaries and the primitivists of the late eighteenth and the early nineteenth centuries, and in his lighter, brighter lyrical mood he reminds the reader of Marvell and of Herrick. His perfect combination of the wistful mood of transience with a rich coloration of the beautiful forms of nature in "The Wild Honey Suckle" produce a really fine poetic expression that reaches a climax in the closing lines:

The space between, is but an hour,  
The frail duration of a flower.

Often his excellence lies in individual lines or short passages, of the kind typified by "The Indian Burying Ground":

The hunter still the deer pursues,  
The hunter and the deer, a shade!

He was to be followed by many American poets who possessed a surer touch, a finer taste, and a firmer power; but it is to his credit that he could, on occasion, turn aside from rancorous political factionalism to write verse that is of value as poetry, rather than for what it theologically preaches, historically illustrates, or politically argues. He realized that in the America of his day—

Low in the dust is genius laid,  
The muses with the man in trade;

for

An age employed in edging steel,  
Can no poetic raptures feel.

As a wit who might have learned to restrain his muse in a way to develop his best powers under the stimulation of sympathetic criticism and the friendly rivalry of fellow poets, he had cause to complain—

Thrice happy Dryden, who could meet  
Some rival bard in every street!  
When all were bent on writing well,  
It was some credit to excel.

In the America of his time there was not that incentive. Moreover, he had the misfortune in his later years to see younger men like Halleck, Drake, and especially Bryant, writing under more favorable circumstances, surpassing him in his own lifetime—a

fate that the novelist Brown and the dramatist Dunlap happily escaped.

Nevertheless, he cultivated his faculty for pure poetry in a degree to produce the first considerable

body of authentic verse in America and to make him, rather than Michael Wigglesworth or Edward Taylor or John Trumbull, the Father of American Poetry.

## EDITIONS

*Poems of Philip Freneau, Poet of the American Revolution*, ed. by Fred L. Pattee, 3 vols., Princeton, N. J., 1902-1907. (The standard text; vol. I includes biography; bibliography in vol. III adds many items to Paltsits' bibliography.)

*Poems of Freneau*, ed. by Harry H. Clark, New York, 1929. (Selections; a fine critical introduction.)

*The Philosopher of the Forest*, ed. by Harry H. Clark, New York, 1929. (Selections of Freneau's prose, with an introduction.)

## BIOGRAPHY AND CRITICISM

Austin, Mary S., *Philip Freneau, the Poet of the Revolution. A History of His Life and Times*, ed. by Helen Kearny Vreeland, New York, 1901. (Still a primary source book.)

Leary, Lewis, *That Rascal Freneau: A Study in Literary Failure*, New Brunswick, N. J., 1941. (A good modern study.)

*The Power of Fancy*<sup>1</sup>

Wakeful, vagrant, restless thing,  
Ever wandering on the wing,  
Who thy wondrous source can find,  
Fancy, regent of the mind;  
A spark from Jove's resplendent throne,  
But thy nature all unknown.

This spark of bright, celestial flame,  
From Jove's seraphic altar came,  
And hence alone in man we trace,  
Resemblance to the immortal race.

Ah! what is all this mighty whole,  
These suns and stars that round us roll!  
What are they all, where'er they shine,  
But Fancies of the Power Divine!  
What is this globe, these lands, and seas,

And heat, and cold, and flowers, and trees,  
And life, and death, and beast, and man,  
And time—that with the sun began—  
But thoughts on reason's scale combin'd,  
Ideas of the Almighty mind! <sup>2</sup>

20

On the surface of the brain  
Night after night she walks unseen,  
Noble fabrics doth she raise  
In the woods or on the seas,  
On some high, steep, pointed rock,  
Where the billows loudly knock  
And the dreary tempests sweep  
Clouds along the uncivil deep.

Lo! she walks upon the moon,  
Listens to the chimy tune  
Of the bright, harmonious spheres,<sup>3</sup>  
And the song of angels hears;  
Sees this earth a distant star,<sup>4</sup>  
Pendant, floating in the air;  
Leads me to some lonely dome,  
Where Religion loves to come,

30

<sup>1</sup> Freneau's apostrophe to fancy as the "vagrant, restless" spirit of poesy seeking, not the normal or universal, but rather the strange, exotic, and distant is a characteristic romantic attitude. The poem shows, besides romantic tendencies, influences from Freneau's acquaintance with Milton and Ossian; there are parallels with Joseph Warton's "Ode to Fancy" (1746); and lines 11-20 are obviously inspired by the current deistic view that divine revelation is to be sought in nature rather than in the Bible. One of the most striking features of the poem is its form. In rhymed tetrameters—alert, elastic, and full of music and motion—the poem discards the sing-song, artificial phraseology, and stilted movement common to American and English poetry at the time.

<sup>2</sup> Lines 11-20, and especially 19-20, are indicative of Freneau's deistic ideas.

<sup>3</sup> Lines 30-31 allude to the Ptolemaic system of the universe as a succession of concentric spheres.

<sup>4</sup> See Milton's *Paradise Lost*, II, 1052.

Where the bride of Jesus dwells,  
And the deep ton'd organ swells  
In notes with lofty anthems join'd,  
Notes that half distract the mind.

Now like lightning she descends  
To the prison of the fiends,  
Hears the rattling of their chains,  
Feels their never ceasing pains—  
But, O never may she tell  
Half the frightfulness of hell.

Now she views Arcadian <sup>5</sup> rocks,  
Where the shepherds guard their flocks,  
And, while yet her wings she spreads,  
Sees chrystal streams and coral beds,  
Wanders to some desert deep,  
Or some dark, enchanted steep.  
By the full moonlight doth shew  
Forests of a dusky blue,  
Where, upon some mossy bed,  
Innocence reclines her head.

Swift, she stretches o'er the seas  
To the far off Hebrides,<sup>6</sup>  
Canvas on the lofty mast  
Could not travel half so fast—  
Swifter than the eagle's flight  
Or instantaneous rays of light!  
Lo! contemplative she stands  
On Norwegia's rocky lands—  
Fickle Goddess, set me down  
Where the rugged winters frown  
Upon Orca's <sup>7</sup> howling steep,  
Nodding o'er the northern deep,  
Where the winds tumultuous roar,  
Vext that Ossian <sup>8</sup> sings no more.  
Fancy, to that land repair,  
Sweetest Ossian slumbers there;  
Waft me far to southern isles  
Where the soften'd winter smiles,  
To Bermuda's orange shades,  
Or Demarara's <sup>9</sup> lovely glades;  
Bear me o'er the sounding cape,  
Painting death in every shape,

<sup>5</sup> That is, pastoral. Arcadia was a mountainous area in ancient Greece.

<sup>6</sup> Islands off the coast of Scotland.

<sup>7</sup> Probably a reference to the Orchades or Orkney Islands to the north of Scotland.

<sup>8</sup> A legendary Gaelic poet, revived by James MacPherson (1736–1796).

<sup>9</sup> A country and a river in British Guiana.

Where daring Anson <sup>10</sup> spread the sail  
Shatter'd by the stormy gale—

80

Lo! she leads me wide and far,  
Sense can never follow her—  
40 Shape thy course o'er land and sea,  
Help me to keep pace with thee,  
Lead me to yon' chalky cliff,  
Over rock and over reef,  
Into Britain's fertile land,  
Stretching far her proud command.  
Look back and view, thro' many a year,  
Cæsar, Julius Cæsar, there.<sup>11</sup>

90

Now to Tempe's <sup>12</sup> verdant wood,  
50 Over the mid-ocean flood  
Lo! the islands of the sea—  
Sappho,<sup>13</sup> Lesbos mourns for thee:  
Greece, arouse thy humbled head,<sup>14</sup>  
Where are all thy mighty dead,  
Who states to endless ruin hurl'd  
And carried vengeance through the world?  
Troy, thy vanish'd pomp resume,  
Or, weeping at thy Hector's tomb,

100

Yet those faded scenes renew,  
60 Whose memory is to Homer due.  
Fancy, lead me wandering still  
Up to Ida's <sup>15</sup> cloud-topt hill;  
Not a laurel there doth grow  
But in vision thou shalt show,—  
Every sprig on Virgil's tomb  
Shall in livelier colours bloom,  
And every triumph Rome has seen  
Flourish on the years between.

110

Now she bears me far away  
70 In the east to meet the day,  
Leads me over Ganges' streams,  
Mother of the morning beams—  
O'er the ocean hath she ran,  
Places me on Tinian:<sup>16</sup>  
Farther, farther in the east,  
Till it almost meets the west,  
Let us wandering both be lost

<sup>10</sup> George Anson (1697–1762) led a British naval expedition to the South Pacific.

<sup>11</sup> That is, Britain, where Cæsar landed in 55 B.C.

<sup>12</sup> The valley of Thessaly.

<sup>13</sup> Sappho (fl. 630–570 B.C.), born in Lesbos, was the most famous of the women poets of the ancient world.

<sup>14</sup> Humbled because Greece was occupied by the Turks from 1715 to 1821.

<sup>15</sup> The gods watched battles around Troy from Mount Ida.

<sup>16</sup> Tinian, an island in the Mariana Islands.

On Taitis<sup>17</sup> sca-beat coast,  
 Bear me from that distant strand,  
 Over ocean, over land,  
 To California's golden shore—  
 Fancy, stop, and rove no more.

Now, tho' late, returning home,  
 Lead me to Belinda's<sup>18</sup> tomb;  
 Let me glide as well as you  
 Through the shroud and coffin too  
 And behold, a moment, there,  
 All that once was good and fair—  
 Who doth here so soundly sleep?  
 Shall we break this prison deep?—  
 Thunders cannot wake the maid,  
 Lightnings cannot pierce the shade,  
 And tho' wintry tempests roar,  
 Tempests shall disturb no more.

Yet must those eyes in darkness stay,  
 That once were rivals to the day?—

120 Like heaven's bright lamp beneath the main  
 They are but set to rise again. 140  
 Fancy, thou the muses' pride,  
 In thy painted realms reside  
 Endless images of things,  
 Fluttering each on golden wings,  
 Ideal objects, such a store,  
 The universe could hold no more:  
 Fancy, to thy power I owe  
 Half my happiness below;  
 130 By thee Elysian groves<sup>19</sup> were made,  
 Thine were the notes that Orpheus<sup>20</sup> play'd; 150  
 By thee was Pluto<sup>21</sup> charm'd so well  
 While rapture seiz'd the sons of hell—  
 Come, O come—perceiv'd by none,  
 You and I will walk alone.  
 1770 1786

### *The Prayer of Orpheus*<sup>22</sup>

Sad monarch of the world below,  
 Stern guardian of this drowsy shade,  
 Through these unlovely realms I go  
 To seek a captive thou hast made.  
 O'er Stygian waters have I pass'd,  
 Contemning Jove's unjust decree,  
 And reached thy sable court at last  
 To find my lost Eurydicè.

Of all the nymphs, so deckt and drest  
 Like Venus of the starry train.  
 She was the loveliest and the best,  
 The pride and glory of the plain.  
 O free from thy despotic sway  
 This nymph of heaven-descended charms,  
 Too soon she came this dusky way—  
 Restore thy captive to my arms.

<sup>17</sup> Tahiti.

<sup>18</sup> A conventional name in neoclassical verse.

<sup>19</sup> The blessed lived in Elysium, a land of eternal spring and happiness.

<sup>20</sup> Orpheus, celebrated mythical Greek poet.

<sup>21</sup> God of the underworld.

<sup>22</sup> Although Freneau's poems on fanciful and natural themes establish him as the first significant American romantic poet, a poem like "The Prayer of Orpheus" is evidence of the fact that

As by a stream's fair verdant side  
 In myrtle shades she rovd along.  
 A serpent stung my blooming bride,  
 This brightest of the female throng— 20  
 The venom hastening thro' her veins  
 Forbade the freezing blood to flow,  
 And thus she left the Thracian plains  
 For these dejected groves below.

Even thou may'st pity my sad pain,  
 Since Love, as ancient storics say,  
 Forced thee to leave thy native reign,  
 10 And in Sicilian meadows stray:  
 Bright Proserpine thy bosom fired,  
 For her you sought unwelcome light, 30  
 Madness and love in you conspired  
 To seize her to the shades of night.

But if, averse to my request,  
 The banished nymph, for whom I mourn,  
 Must in Plutonian chambers rest,  
 And never to my arms return—  
 Take Orpheus too—his warm desire

Freneau was not entirely emancipated from the poetic diction and the other conventionalities of the pseudo-classical poets.

Can ne'er be quench'd by your decree:  
In life or death he must admire,  
He must adore Eurydice.  
c. 1771

FROM

*The American Village*<sup>23</sup>

Where yonder stream divides the fertile plain,  
Made fertile by the labours of the swain;  
And hills and woods high tow'ring o'er the rest,  
Behold a village with fair plenty blest:  
Each year tall harvests crown the happy field;  
Each year the meads their stores of fragrance yield,  
And ev'ry joy and ev'ry bliss is there,  
And healthful labour crowns the flowing year.

Though *Goldsmith* weeps in melancholy strains,  
Deserted Auburn and forsaken plains,  
And mourns his village with a patriot sigh,  
And in that village sees Britannia die:  
Yet shall this land with rising pomp divine,  
In it's own splendour and Britannia's shine.  
O muse, forget to paint her ancient woes,  
Her Indian battles, or her Gallic foes;  
Resume the pleasures of the rural scene.  
Describe the village rising on the green,  
It's harmless people, born to small command,  
Lost in the bosom of this western land:  
So shall my verse run gentle as the floods,  
So answer all ye hills, and echo all ye woods;  
So glide ye streams in hollow channels pent,  
Forever wasting, yet not ever spent.  
Ye clust'ring boughs by hoary thickets borne!  
Ye fields high waving with eternal corn!

<sup>23</sup> Only the opening passages of this 450-line poem are here printed, but they are enough to illustrate the peculiar mixture of eighteenth-century convention and half-successful attempts to write simply, naturally, and realistically—at once reminiscent of the sentimentality of Goldsmith in *The Deserted Village* (1770) and of the realism of Crabbe in *The Village* (1783). The contrast between the decadence of English, and the promise of American, village life is an indication of Freneau's addiction to the program of literary nationalism, fostered by the poetic exercises in which he had indulged during his years at Princeton with his classmates Brackenridge, Madison, and Burr. Considering the relative excellence of Freneau's "Power of Fancy" written two years earlier, one is at a loss to explain the clichés, crudities of form, and uncertain grammatical constructions of "The American Village" (1772) except in terms of the "giddy wandering brain" mentioned in the letter which follows this selection. Reading between the lines of this letter to his former roommate, James Madison, one discovers enough indications of affectation and immaturity to account for the infelicities of "The American Village."

Ye woodland nymphs the tender tale rehearse,  
The fabled authors of immortal verse:  
Ye Dryads fair, attend the scene I love,  
And Heav'n shall centre in yon' blooming grove. 30  
What tho' thy woods, America, contain  
The howling forest, and the tiger's den,  
The dang'rous serpent, and the beast of prey,  
Men are more fierce, more terrible than they.  
No monster with it's vile contagious breath,  
No flying scorpion darting instant death;  
No pois'nous adder, burning to engage,  
Has half the venom or has half the rage.  
What tho' the Turk protests to heav'n his ire,  
With lift up hand amidst his realms of fire; 40  
And Russia's Empress her fleets afar,  
To aid the havoc of the burning war:  
Their rage dismays not, and their arms in vain,  
In dreadful fury bathe with blood the plain;  
Their terrors harmless, tho' their story heard,  
How this one conquer'd, or was nobly spar'd:  
Vain is their rage, to us their anger vain,  
The deep Atlantic raves and roars between.

To yonder village then will I descend,  
There spend my days, and there my ev'nings spend;  
Sweet haunts of peace whose mud' wall'd sides  
delight 51  
The rural mind beyond the city bright:  
Their tops with hazles or with alders wove,  
Remurmur magic to the neighb'ring grove;  
And each one lab'ring in his own employ,  
Comes weary home at night, but comes with joy:  
The soil which lay for many thousand years  
O'er run by woods, by thickets and by bears;  
Now reft of trees, admits the chearful light,  
And leaves long prospects to the piercing sight; 60  
Where once the lynx nocturnal sallies made,  
And the tall chestnut cast a dreadful shade:  
No more the panther stalks his bloody rounds,  
Nor bird of night her hateful note resounds;  
Nor howling wolves roar to the rising moon,  
As pale arose she o'er yon eastern down.  
Some prune their trees, a larger load to bear  
Of fruits nectarine blooming once a year:  
See groaning waggons to the village come  
Fill'd with the apple, apricot or plumb; 70  
And heavy beams suspended from a tree,  
'To press their juice against the winter's day:  
Or see the plough torn through the new made field

Ordain'd a harvest, yet unknown to yield.  
 The rising barn whose spacious floor receives  
 The welcome thousands of the wheaten sheaves,  
 And spreads it's arms to take the plenteous store,  
 Sufficient for its master and the poor:  
 For as Eumocus us'd his beggar guest  
 The great Ulysses in his tatters drest:  
 So here fair Charity puts forth her hand,  
 And pours her blessing o'er the grateful land:  
 No needy wretch the rags of winter fears,  
 Secure he sits and spends his aged years,  
 With thankful heart to gen'rous souls and kind,  
 That save him from the winter and the wind.

1772

### *Letter to James Madison*

Somerset County, in Maryland,  
 November 22, 1772.

If I am not wrongly informed by my memory, I have not seen you since last April, you may recollect I was then undertaking a School at Flatbush on Long Island. I did not [*sic*] enter upon the business it is certain and continued in it thirteen days—but—

"Long Island I have bid adieu,  
 With all its bruitish crew.  
 The youth of that detested place,  
 Are void of reason and of grace.  
 From Flushing hills to Flatbush plains,  
 Deep ignorance unrivalled reigns."

I am very poetical, but excuse it. "Si fama non venit ad aures,"<sup>24</sup>—if you have not heard the rumour of this story (which, by the by is told in various taverns and eating houses) you must allow me to be a little prolix with it. Those who employed me were some gentlemen of New York, some of them are bullies, some merchants, and others Scoundrels: They sent me eight children, the oldest of whom was 10 years. 40 Some could read, others spell and a few stammer over a chapter of the Bible—these were my pupils and over these was I to preside. My salary moreover was £40,—there is something else relating to that I shall not at present mention—after I forsook them they proscribed me for four days and swore that if I was caught in New York they would either Trounce or Maim me: but I luckily escaped with my goods

<sup>24</sup> "If the report has not come to your ears." Virgil.

to Princetown—where I remained till commencement—so much for this affair.

I have printed a poem in New York called the American Village, containing about 450 Lines, also a few short pieces added; I would send you one if I had a proper opportunity—the additional poems are —"A Poem to the Nymph I never saw—The miserable Life of a Pedagogue—and Stanzas on an ancient Dutch house on Long Island—As to the main poem 10 it is damned by all good and judicious judges—my name is in the title page, this is called vanity by some—but "who so fond as youthful bards of fame?"

I arrived at this Somerset Academy the 18th of October, and intend to remain here till next October. I am assistant to Mr. Bra[c]kenridge.<sup>25</sup> This is the last time I shall enter into such business; it worries me to death and by no means suits my "giddy wandering brain." I would go over for the gown this 20 time two years, but the old hag Necessity has got such a prodigious grip of me that I fear I shall never be able to accomplish it. I believe if I cannot make this out I must turn quack, and indeed I am now reading Physic at my leisure hours, that is, when I am neither sleeping, hearing classes, or writing Poetry—for these three take up all my time.<sup>26</sup>

It is now late at night, not an hour ago I finished a little poem of about 400 lines, entitled a Journey to Maryland—being the Sum of my adventures—it begins 30 "From that fam'd town where Hudson's flood— unites with Stream perhaps as good; Muse has your bard begun to roam—& I intend to write a terrible Satire upon certain vicious persons of quality in New York—who have also used me ill—and print it next fall it shall contain 5 or 600 lines. Sometimes I write pastorals to shew my Wit.

"Deep to the woods I sing a Shepherd's care,  
 Deep to the woods, Cylenus calls me there,  
 The last retreat of Love and Verse I go,  
 Verse made me mad at first and—will keep me so."

I should have been glad to have heard from you before now; while I was in college I had but a short

<sup>25</sup> Henry Hugh Brackenridge, with whom he had collaborated at Princeton in the writing of their Commencement poem on "The Rising Glory of America."

<sup>26</sup> This passage indicates that young Freneau was pretty much at loose ends, so to speak; that he had ambitions, without quite knowing to what ends or how best to achieve them; and that he probably suffered also from *Wanderlust*—soon to be gratified by his several trips to the West Indies.

participation of your agreeable friendship, and the few persons I converse with and yet fewer, whose conversation I delight in, make me regret the Loss of it. I have met with a variety of rebuffs this year, which I forbear to mention, I look like an unmeaning Teague<sup>27</sup> just turn'd out of the hold of an Irish Ship coming down hither I met with a rare adventure at Annapolis. I was destitute even of a brass farthing. I got clear very handsomely.

Could one expect ever to see you again, if I travel 10 through Virginia I shall stop and talk with you a day or two. I shall be very glad to receive a letter from you if it can be conveniently forwarded—in short “Non sum qualis eram”<sup>28</sup> as Partridge says in Tom Jones<sup>29</sup>—My hair is grown like a mop, and I have a huge tuft of beard directly upon my chin—I want but five weeks of twenty-one years of age and already feel stiff with age—We have about 30 Students in this academy, who prey upon me like Leaches—“When shall I quit this whimpering pack, 20 and hide my head in acomack?”—Shall I leave them and go “Where Pokomokes long stream meandering flows —

Excuse this prodigious scrawl without stile or sense—I send this by Mr. Luther Martin who will forward it to Col. Lee—and he to you I hope. Mr. Martin lives in Acomack in Virginia this side the bay. Farewell and be persuaded I remain your

truly humble Serv't and friend

### *The Pictures of Columbus, the Genoese*<sup>30</sup>

PICTURE XVII

#### Columbus in Chains

Are these the honours they reserve for me,  
Chains for the man that gave new worlds to Spain!

<sup>27</sup> A very early and therefore interesting reference to Teague O'Regan, the jog-trotting, prosaic country yokel who attends Captain Farrago in those adventures that Brackenridge related in *Modern Chivalry*, an American *Don Quixote*, the first installment of which appeared in 1793.

<sup>28</sup> “I am not what I was.” Horace.

<sup>29</sup> Henry Fielding's novel, *The History of Tom Jones, a Foundling* (1749).

<sup>30</sup> These last two Idyls or Pictures from the dramatic life of Columbus (written 1774) illustrate Freneau at his best and worst. The restraint and inevitability of expression in some of his conceptions are counterbalanced by the trite grandiloquence of others. The text follows the edition of 1788.

Rest here, my swelling heart!—O kings, O queens,  
Patrons of monsters,<sup>31</sup> and their progeny,  
Authors of wrong, and slaves of fortune merely!  
Why was I seated by my prince's side,  
Honour'd, caress'd like some first peer of Spain?  
Was it that I might fall most suddenly  
From honour's summit to the sink of scandal!  
'Tis done, 'tis done!—what madness is ambition! 10  
What is there in that little breath of men,  
Which they call *fame*, that should induce the brave  
To forfeit ease and that domestic bliss  
Which is the lot of happy ignorance,  
Less glorious aims, and dull humility.—  
Whoc'er thou art that shalt aspire to honour,  
And on the strength and vigour of the mind  
Vainly depending, court a monarch's favour,  
Pointing the way to vast extended empire;  
First count your pay to be ingratitude, 20  
Then chains and prisons, and disgrace like mine!  
Each wretched pilot now shall spread his sails,  
And treading in my footsteps, hail new worlds,  
Which, but for me, had still been empty visions.

PICTURE XVIII

#### Columbus at Valladolid<sup>32</sup>

1

How sweet is sleep, when gain'd by length of toil!  
No dreams disturb the slumbers of the dead—  
To snatch existence from this scanty soil,  
Were these the hopes deceitful fancy bred;  
And were her painted pageants nothing more  
Than this life's phantoms by delusion led?

2

'The winds blow high: one other world remains;  
Once more without a guide I find the way;  
In the dark tomb to slumber with my chains—  
Prais'd by no poet on my funeral day, 10  
Nor even allow'd one dearly purchas'd claim—  
My new found world not honour'd with my name.

<sup>31</sup> During his third voyage, while in San Domingo, such unjust representations were made of his conduct to the Court of Spain, that a new admiral, Bovadilla, was appointed to supersede him, who sent Columbus home in chains. [Freneau's note.]

<sup>32</sup> After he found himself in disgrace with the Court of Spain, he retired to Valladolid, a town in Old Castile, where he died, it is said, more of a broken heart than of any other disease, on the 20th of May, 1506. [Freneau's note.]

3

Yet, in this joyless gloom while I repose,  
Some comfort will attend my pensive shade,  
When memory paints, and golden fancy shows  
My toils rewarded, and my woes repaid;  
When empires rise where lonely forests grew,  
Where Freedom shall her generous plans pursue.

4

To shadowy forms, and ghosts and sleepy things,  
Columbus, now with dauntless heart repair; 20  
You liv'd to find new worlds for thankless kings,  
Write this upon my tomb—yes—tell it there—  
Tell of those chains that sullied all my glory—  
Not mine, but their's—ah, tell the shameful story.  
1774 1788

### *A Political Litany*<sup>33</sup>

*Libera Nos, Domine.*—DELIVER US O LORD, not only  
from British Dependence, but also,

From a junto that labour with absolute power,  
Whose schemes disappointed have made them look  
sour,  
From the lords of the council, who fight against freedom,  
Who still follow on where delusion shall lead them.

From the group at St. James's, who slight our  
petitions,  
And fools that are waiting for further submissions—  
From a nation whose manners are rough and severe,  
From scoundrels and rascals,—do keep us all clear.

From pirates sent out by command of the king  
To murder and plunder, but never to swing; 10  
From *Wallace* and *Greaves*, and *Vipers* and *Roses*,\*  
Who, if heaven pleases, we'll give bloody noses.

From the valiant *Dunmore*, with his crew of banditti,  
Who plunder Virginians at Williamsburg city,  
From hot-headed *Montague*, mighty to swear,  
The little fat man, with his pretty white hair.

\* Captains and ships in the British navy, then employed on the American coast.

<sup>33</sup> This concluding prayer to the five verse satires against the British, all written in New York during the summer of 1775, is characteristic of Freneau's sharpening of his satiric pen, and signalizes the beginning of his life-long hatred of the British.

From bishops in Britain, who butchers are grown,  
From slaves, that would die for a smile from the  
throne,  
From assemblies that vote against *Congress proceedings*,  
(Who now see the fruit of their stupid mislead-  
ings.) 20

From *Tryon* the mighty, who flies from our city,  
And swelled with importance disdains the committee:  
(But since he is pleased to proclaim us his foes,  
What the devil care we where the devil he goes.)

From the caitiff, lord *North*, who would bind us in  
chains,  
From a royal king *Log*, with his tooth-full of brains,  
Who dreams, and is certain (when taking a nap)  
He has conquered our lands, as they lay on his map.

From a kingdom that bullics, and hectors, and swears,  
We send up to heaven our wishes and prayers, 30  
That we, disunited, may freemen be still,  
And Britain go on—to be damned if she will.

*New York, June 1775*

### *The Northern Soldier*

Ours not to sleep in shady bowers,  
When frosts are chilling all the plain,  
And nights are cold and long the hours  
To check the ardor of the swain,  
Who parting from his cheerful fire  
All comforts doth forego,  
And here and there  
And everywhere  
Pursues the prowling foe.

But we must sleep in frost and snows, 10  
No season shuts up our campaign;  
Hard as the oaks, we dare oppose  
The autumn's or the winter's reign.  
Alike to us the winds that blow  
In summer's season gay,  
Or those that rave  
On Hudson's wave  
And drift his ice away.

For Liberty, celestial maid,  
With joy all hardships we endure. 20  
In her blest smiles we are repaid,  
In her protection are secure.

Then rise superior to the foe,  
 Ye freeborn souls of fire;  
 Respect these arms,  
 'Tis freedom warms,  
 To noble deeds aspire.

Winter and death may change the scene,  
 The cold may freeze, the ball may kill,  
 And dire misfortunes intervene;  
 But freedom shall be potent still  
 To drive these Britons from our shore.  
 Who, cruel and unkind,  
 With slavish chain  
 Attempt in vain  
 Our freeborn limbs to bind.

1775

1775

FROM

*The Beauties of Santa Cruz* \*

Sick of thy northern glooms, come, shepherd, seek  
 More equal climes, and a serener sky:  
 Why shouldst thou toil amid thy frozen ground,  
 Where half year's snows, a barren prospect lie,

When thou mayst go where never frost was seen,  
 Or north-west winds with cutting fury blow,  
 Where never ice congealed the limpid stream,  
 Where never mountain tipt its head with snow?

Twice ten days prosperous gales thy barque shall bear  
 To isles that flourish in perpetual green,  
 Where richest herbage glads each fertile vale,  
 And ever verdant plants on every hill are seen.

Nor dread the dangers of the billowy deep,  
 Autumnal winds shall safely waft thee o'er;  
 Put off the timid heart, or, men unblest,  
 Ne'er shalt thou reach this gay enchanting shore.

\* Or St. Croix, a Danish island (in the American Archipelago), commonly, tho' erroneously, included in the cluster of the Virgin Islands; belonging to the crown of Denmark.

[Although a staunch patriot, Freneau was instinctively a man of peace, glad to spend the first years of the American Revolution in the West Indies. The poem is an expression of the romantic delight in exotic, semitropical luxuriance. Equally prominent in the poem is Freneau's humanitarian attitude toward slavery and the slave trade. His castigation of gold is analogous to the common eighteenth-century indictments of luxury and pride as the roots of all human evil.]

Cool, woodland streams from shaded cliffs descend,  
 The dripping rock no want of moisture knows,  
 Supplied by springs that on the skies depend,  
 That fountain feeding as the current flows. 20

Such were the isles which happy *Flaccus*<sup>34</sup> sung,  
 Where one tree blossoms while another bears,  
 Where spring forever gay, and every young,  
 Walks her gay round through her unceasing years.

Such were the climes which youthful Eden saw  
 Ere crossing fates destroyed her golden reign—  
 Reflect upon thy loss, unhappy man,  
 And seek the vales of *Paradise* again.

No lowering skies are here—the neighbouring sun  
 Clear and unveiled, his brilliant journey goes,  
 Each morn emerging from the ambient main,  
 And sinking there, each evening, to repose. 30

The native here, in golden plenty blest,  
 Bids from the soil the verdant harvests spring;  
 Feasts in the abundant dome, the joyous guest;  
 Time short,—life easy,—pleasure on the wing.

The smooth white cedar, here, delights the eye,  
 The bay-tree, with its aromatic green,  
 The sea-side grapes, sweet natives of the sand,  
 And pulse, of various kinds, on trees are seen. 40

Here mingled vines, their downward shadows cast,  
 Here, clustered grapes from loaded boughs depend,  
 Their leaves no frosts, their fruit no cold winds blast,  
 But, reared by suns, to time alone they bend.

The plantane and banana flourish here,  
 Of hasty growth, and love to fix their root  
 Where some soft stream of ambling water flows,  
 To yield full moisture to their clustered fruit.

On younger blue-browed hill, fresh harvests rise,  
 Where the dark tribe from Afric's sun burnt plain,  
 Oft o'er the ocean turn their wishful eyes  
 To isles remote high looming o'er the main. 50

And view soft seats of ease and fancied rest,  
 Their native groves new painted on the eye,  
 Where no proud misers thine gay hours molest,  
 No lordly despots pass, unsocial, by.

<sup>34</sup> Horace (Quintus Horatius Flaccus, 65 B.C.—8 B.C.), a Roman poet popular in the neoclassical age.

See, younder slave that slowly bends this way,  
 With years, and pain, and ceaseless toil oppress,  
 Though no complaining words his woes betray,  
 The eye dejected proves the heart distrest. 60

Perhaps in chains he left his native shore,  
 Perhaps he left a helpless offspring there,  
 Perhaps a wife, that he must see no more,  
 Perhaps a father, who his love did share.

Cursed be the ship that brought him o'er the main,  
 And cursed the men who from his country tore;  
 May she be stranded, ne'er to float again,  
 May they be shipwrecked on some hostile shore—

O gold accurst, of every ill the spring,  
 For thee compassion flies the darkened mind, 70  
 Reason's plain dictates no conviction bring,  
 And madness only sways all human kind.

O gold accurst! for thee we madly run,  
 With murderous hearts across the briny flood,  
 See foreign climes beneath a foreign sun,  
 And, there, exult to shed a brother's blood.

But thou, who ownest this sugar-bearing soil,  
 To whom no good the great FIRST CAUSE denies,  
 Let free-born hands attend thy sultry toil,  
 And fairer harvests to thy view shall rise, 80

The teeming earth will mightier stores disclose  
 Than ever struck thy longing eyes before,  
 And late content shall shed a soft repose,  
 Repose, so long a stranger at thy door.

To milder stars, and skies of clearer blue,  
 Sworn foe to tyrants, for a time repair:  
 And, till to mightier force proud Britain bends—  
 Despise her triumphs, and forget your care.

Soon shall the genius of the fertile soil  
 A new creation to thy view unfold— 90  
 Admire the works of Nature's magic hand,  
 But scorn that vulgar bait—the thirst for gold.—

Yet, if persuaded by no verse of mine,  
 You still admire your climes of frost and snow,  
 And pleased, prefer above these southern groves,  
 The darksome forests, that around you grow:

Still there remain—your native air enjoy,  
 Repel the TYRANT who thy peace invades:  
 While charmed, we trace the vales of SANTA CRUZ,  
 And paint with rapture, her inspiring shades. 100  
 1776 1779

### *The House of Night*<sup>35</sup>

#### A VISION

*Advertisement*—This Poem is founded upon the authority of Scripture, inasmuch as these sacred books assert, that *the last enemy that shall be conquered is Death*.<sup>36</sup> For the purposes of poetry he is here personified, and represented as on his dying bed. The scene is laid at a solitary palace, (the time midnight) which, tho' before beautiful and joyous, is now become sad and gloomy, as being the abode and receptacle of Death. Its owner, an amiable, majestic youth, who had lately lost a beloved consort, nevertheless with a noble philosophical fortitude and humanity, entertains him in a friendly manner, and by employing Physi-

cians, endeavours to restore him to health, altho' an enemy; convinced of the excellence and propriety of that divine precept, *If thine enemy hunger, feed him; if he thirst, give him drink*.<sup>37</sup> He nevertheless, as if by a spirit of prophecy, informs this (fictitiously) wicked being of the certainty of his doom, and represents to him in a pathetic manner the vanity of his expectations, either of a reception into the abodes of the just, or continuing longer to make havock of mankind upon earth. The patient finding his end approaching, composes his epitaph, and orders it to be engraved on his tombstone, hinting to us thereby, that even Death and Distress have vanity; and would be remembered with honour after he is no more, altho' his whole life has been spent in deeds of devastation and murder. He dies at last in the utmost agonies of despair, after agreeing with an avaricious Undertaker to intomb his bones. This reflects upon the inhumanity of those men, who, not to mention an enemy, would scarcely cover a departed friend with a little dust, without certainty of reward for so doing. The

<sup>35</sup> This first important American poem on death and the grave had its predecessors in England in the poems of the "Graveyard School," and was followed, in turn, by the mortuary verse of Bryant, Poe, Whitman, and others.

Composed in the West Indies, this poem was first published in the *United States Magazine* for August, 1779, where it bore the sub-title, "Six Hours Lodging with Death, A Vision." This earliest edition of seventy-three stanzas was enlarged to one hundred thirty-six stanzas in the 1786 edition. The selections printed are from the text of 1786.

<sup>36</sup> See I Corinthians 15:26.

<sup>37</sup> See Romans 12:20.

circumstances of his funeral are then recited, and the visionary and fabulous part of the poem disappears. It concludes with a few reflexions on the impropriety of a too great attachment to the present life, and incentives to such moral virtue as may assist in conducting us to a better.

## 1

Trembling I write my dream, and recollect  
A fearful vision at the midnight hour;  
So late, Death o'er me spread his sable wings,  
Painted with fancies of malignant power!

## 2

Such was the dream the sage Chaldean<sup>38</sup> saw  
Disclos'd to him that felt heav'n's vengeful rod,  
Such was the ghost, who through deep silence cry'd,  
*Shall mortal man—be juster than his God?*

## 3

Let others draw from smiling skies their theme,  
And tell of climes that boast unfading light, 10  
I draw a darker scene, replete with gloom,  
I sing the horrors of the *House of Night*.

## 4

Stranger, believe the truth experience tells,  
Poetic dreams are of a finer cast  
Than those which o'er the sober brain diffus'd,  
Are but a repetition of some action past.

## 5

Fancy, I own thy power—when sunk in sleep,  
Thou play'st thy wild delusive part so well  
You lift me into immortality,  
Depict new heavens, or draw scenes of hell. 20

## 6

By some sad means, when Reason holds no sway,  
Lonely I rov'd at midnight o'er a plain  
Where murmuring streams and mingling rivers flow  
Far to their springs, or seek the sea again.

## 7

Sweet vernal May! tho' then thy woods in bloom  
Flourish'd, yet nought of this could Fancy see,  
No wild pinks bless'd the meads, no green the fields,  
And naked seem'd to stand each lifeless tree:

<sup>38</sup> See Job 4:17, where Eliphaz the Temanite tells Job of a vision in which the spirit asks, "Shall mortal man be more just than God?"

## 8

Dark was the sky, and not one friendly star  
Shone from the zenith or horizon, clear, 30  
Mist sate upon the woods, and darkness rode  
In her black chariot, with a wild career.

## 9

And from the woods the late resounding note  
Issued of the loquacious Whip-poor-will,\*  
Hoarse, howling dogs, and nightly roving wolves  
Clamour'd from far off cliffs invisible.

## 10

Rude, from the wide extended Chesapeake  
I heard the winds the dashing waves assail,  
And saw from far, by picturing fancy form'd,  
The black ship travelling through the noisy gale. 40

## 11

At last, by chance and guardian fancy led,  
I reach'd a noble dome, rais'd fair and high,  
And saw the light from upper windows flame,  
Presage of mirth and hospitality.

## 12

And by that light around the dome appear'd  
A mournful garden of autumnal hue,  
Its lately pleasing flowers all drooping stood  
Amidst high weeds that in rank plenty grew.

## 13

The Primrose there, the violet darkly blue,  
Daisies and fair Narcissus ceas'd to rise, 50  
Gay spotted pinks their charming bloom withdrew  
And Polyanthus<sup>39</sup> quench'd its thousand dyes.

## 14

No pleasant fruit or blossom gaily smil'd,  
Nought but unhappy plants or trees were seen,  
The yew,<sup>40</sup> the myrtle, and the church-yard elm,  
The cypress, with its melancholy green.

## 15

There cedars dark, the osier, and the pine,  
Shorn tamarisks, and weeping willows grew,

\* A bird peculiar to America, of a solitary nature, who never sings but in the night. Her note resembles the name given to her by the country people.

<sup>39</sup> A fragrant narcissus.

<sup>40</sup> The yew and the trees and plants that follow are traditional ones found in funereal or graveyard poetry.

The poplar tall, the lotos, and the lime,  
And pyracantha did her leaves renew.

16

The poppy there, companion to repose,  
Display'd her blossoms that began to fall,  
And here the purple amaranthus rose  
With mint strong-scented, for the funeral.

17

And here and there with laurel shrubs between  
A tombstone lay, inscrib'd with strains of woe,  
And stanzas sad, throughout the dismal green,  
Lamented for the dead that slept below.

18

Peace to this awful dome!—when strait I heard  
The voice of men in a secluded room,  
Much did they talk of death, and much of life,  
Of coffins, shrouds, and horrors of a tomb.

19

Pathetic were their words, and well they aim'd  
To explain the mystic paths of providence,  
Learn'd were they all, but there remain'd not I  
To hear the upshot of their conference.

20

Meantime from an adjoining chamber came  
Confused murrings, half distinguish'd sounds,  
And as I nearer drew, disputes arose  
Of surgery, and remedies for wounds.

21

Dull were their feuds, for they went on to talk  
Of *Anchylosis*, and the shoulder blade,  
Os *Femoris*, *Trochanters* \*—and whate'er  
Has been discuss'd by Cheselden or Meade: <sup>41</sup>

22

And often each, to prove his notion true  
Brought proofs from Galen or Hippocrates <sup>42</sup>—  
But fancy led me hence—and left them so,  
Firm at their points of hardy No and Yes.

\* *Anchylosis*—a morbid contraction of the joints. Os *Femoris*—the thigh bone. *Trochanters*—two processes in the upper part of the thigh bone, otherwise called *rotator major et minor*, in which the tendons of many muscles terminate.

<sup>41</sup> Two noted English physicians and authorities on anatomy.

23

Then up three winding stairs my feet were brought  
To a high chamber, hung with mourning sad, <sup>90</sup>  
The unsuff'd candles glar'd with visage dim,  
'Midst grief, in ecstacy of woe run mad.

24

A wide leaf'd table stood on either side,  
Well fraught with phials, half their liquids spent,  
And from a couch, behind the curtain's veil,  
I heard a hollow voice of loud lament.

25

Turning to view the object whence it came,  
My frighted eyes a horrid form survey'd;  
Fancy, I own thy power—Death on the couch,  
With fleshless limbs, at rueful length, was laid. <sup>100</sup>

26

And o'er his head flew jealousies and cares,  
Ghosts, imps, and half the black Tartarian crew, <sup>43</sup>  
Arch-angels damn'd, nor was their Prince remote,  
Borne on the vaporous wings of Stygian <sup>44</sup> dew.

27

Around his bed, by the dull flambeaux' glare,  
I saw pale phantoms—Rage to madness vent,  
Wan, wasting grief, and ever musing care,  
Distressful pain, and poverty perplex.

28

Sad was his countenance, if we can call  
That countenance, where only bones were seen <sup>110</sup>  
And eyes sunk in their sockets, dark and low,  
And teeth, that only show'd themselves to grin.

29

Reft was his scull of hair, and no fresh bloom  
Of chearful mirth sate on his visage hoar:  
Sometimes he rais'd his head, while deep-drawn  
groans  
Were mixt with words that did his fate deplore.

30

Oft did he wish to see the daylight spring,  
And often toward the window lean'd to hear,

<sup>42</sup> Greek physicians, long considered authorities.

<sup>43</sup> Occupants of Hades.

<sup>44</sup> From the River Styx, principal river of the underworld.

Fore-runner of the scarlet-mantled morn,  
The early note of wakeful Chanticleer.<sup>45</sup>

120

31

Thus he—But at my hand a portly youth  
Of comely countenance, began to tell,  
“That this was Death upon his dying bed,  
Sullen, morose, and peevish to be well;

32

“Fixt is his doom—the miscreant reigns no more  
The tyrant of the dying or the dead;  
This night concludes his all-consuming reign,  
Pour out, ye heav’ns, your vengeance on his head.

33

“But since my friend (said he), chance leads you  
here,  
With me this night upon the sick attend. 130  
You on this bed of death must watch, and I  
Will not be distant from the fretful fiend.”

34

“Before he made this lofty pile his home,  
In undisturb’d repose I sweetly slept,  
But when he came to this sequester’d dome  
’Twas then my troubles came, and then I wept:

35

“Twice three long nights, in this sad chamber, I,  
As though a brother languish’d in despair,  
Have tended faithful round his gloomy bed,  
Have been content to breathe this loathsome air. 140

36

“A while relieve the languors that I feel,  
Sleep’s magic forces close my weary eyes;  
Soft o’er my soul unwonted slumbers steal,  
Aid the weak patient till you see me rise.

37

“But let no slumbers on your eye-lids fall,  
That if he ask for powder or for pill  
You may be ready at the word to start,  
And still seem anxious to perform his will.

38

“The bleeding Saviour of a world undone  
Bade thy compassion rise toward thy foe; 150

<sup>45</sup> The name of the cock in the epic of *Reynard the Fox*; also in Chaucer’s *Nun’s Priest’s Tale*.

Then, stranger, for the sake of Mary’s son,  
Thy tears of pity on this wretch bestow.

39

“’Twas he that stole from our adoring arms  
*Aspasia*, she the loveliest of her kind,  
Lucretia’s virtue, with a Helen’s charms,  
Charms of the face, and beauties of the mind.

40

“The blushy cheek, the lively, beaming eye,  
The ruby lip, the flowing jetty hair,  
The stature tall, the aspect so divine,  
All beauty, you would think, had center’d there. 160

41

“Each future age her virtues shall extol,  
Nor the just tribute to her worth refuse;  
Fam’d, to the stars *URANIA* <sup>46</sup> bids her rise,  
Theme of the moral, and the tragic Muse.

42

“Sweet as the fragrance of the vernal morn,  
Nipt in its bloom this faded flower I see;  
The inspiring angel from that breast is gone,  
And life’s warm tide forever chill’d in thee!

43

“Such charms shall greet my longing soul no more,  
Her lively eyes are clos’d in endless shade, 170  
Torpid, she rests on yonder marble floor;  
Approach, and see what havoc DEATH has made.

44

“Yet, stranger, hold—her charms are so divine,  
Such tints of life still on her visage glow,  
That even in death this slumbering bride of mine  
May seize thy heart, and make thee wretched too.

45

“O shun the sight—forbid thy trembling hand  
From her pale face to raise the enshrouding lawn,—  
Death claims thy care, obey his stern command,  
Trim the dull tapers, for I see no dawn!” 180

46

So said, at Death’s left side I sat me down,  
The mourning youth toward his right reclin’d;  
Death in the middle lay, with all his groans,  
And much he toss’d and tumbled, sigh’d and pin’d.

<sup>46</sup> The muse of astronomy.

47

But now this man of hell toward me turn'd,  
And straight, in hideous tone, began to speak,  
Long held he sage discourse, but I forbore  
To answer him, much less his news to seek.

48

He talk'd of tomb-stones and of monuments,  
Of equinoxial climes and India shores, 190  
He talk'd of stars that shed their influence,  
Fevvers and plagues, and all their noxious stores.

49

He mention'd, too, the guileful *calenture*,\*  
Tempting the sailor on the deep sea main,  
That paints gay groves upon the ocean floor,  
Beckoning her victim to the faithless scene.

50

Much spoke he of the myrtle and the yew,  
Of ghosts that nightly walk the church-yard o'er,  
Of storms that through the wint'ry ocean blow  
And dash the well-mann'd galley on the shore, 200

51

Of broad-mouth'd cannon, and the thunderbolt,  
Of sieges and convulsions, dearth and fire,  
Of poisonous weeds—but seem'd to sneer at these  
Who by the laurel o'er him did aspire.

[The deleted stanzas, 52-102, continue the conversation between Death and the Youth, terminating (as the Advertisement indicates) in Death's composing his own epitaph.]

103

Scarce had he spoke, when on the lofty dome  
Rush'd from the clouds a hoarse resounding blast—  
Round the four caves so loud and sad it play'd  
As though all music were to breathe its last.

104

Warm was the gale, and such as travelers say  
Sport with the winds on Zaara's <sup>47</sup> barren waste; 210  
Black was the sky, a mourning carpet spread,  
Its azure blotted, and its stars o'ercast!

\* *Calenture*—an inflammatory fever, attended with a delirium, common in long voyages at sea, in which the diseased persons fancy the sea to be green fields and meadows, and, if they are not hindered, will leap overboard.

<sup>47</sup> Sahara's.

105

Lights in the air like burning stars were hurl'd,  
Dogs howl'd, heaven mutter'd, and the tempest blew,  
The red half-moon peeped from behind a cloud  
As if in dread the amazing scene to view.

106

The mournful trees that in the garden stood  
Bent to the tempest as it rush'd along,  
The elm, the myrtle, and the cypress sad  
More melancholy tun'd its bellowing song. 220

107

No more that elm its noble branches spread,  
The yew, the cypress, or the myrtle tree,  
Rent from the roots the tempest tore them down,  
And all the grove in wild confusion lay.

108

Yet, mindful of his dread command, I part  
Glad from the magic dome—nor found relief;  
Damps from the dead hung heavier round my heart,  
While sad remembrance rous'd her stores of grief.

109

O'er a dark field I held my dubious way  
Where Jack-a-lantern <sup>48</sup> walk'd his lonely round, 230  
Beneath my feet substantial darkness lay,  
And screams were heard from the distemper'd ground.

110

Not look'd I back, till to a far off wood,  
Trembling with fear, my weary feet had sped—  
Dark was the night, but at the enchanted dome  
I saw the infernal windows flaming red.

111

And from within the howls of Death I heard,  
Cursing the dismal night that gave him birth,  
Damning his ancient sire, and mother sin,  
Who at the gates of hell, accursed, brought him  
forth. <sup>49</sup> 240

112

(For fancy gave to my enraptur'd soul  
An eagle's eye, with keenest glance to see,  
And bade those distant sounds distinctly roll,  
Which, waking, never had affected me.)

<sup>48</sup> Jack-o'-lantern, a night watchman.

<sup>49</sup> See *Paradise Lost*, bk. II, 746 ff.

113

Oft his pale breast with cruel hand he smote,  
And tearing from his limbs a winding sheet,  
Roar'd to the black skies, while the woods around,  
As wicked as himself, his words repeat.

114

Thrice tow'rd the skies his meager arms he rear'd,  
Invok'd all hell, and thunders on his head, 250  
Bid light'nings fly, earth yawn, and tempests roar,  
And the sea wrap him in its oozy bed.

115

"My life for one cool draught!—O, fetch your  
springs,  
Can one unfeeling to my woes be found!  
No friendly visage comes to my relief,  
But ghosts impend, and spectres hover round.

116

"Though humbled now, dishearten'd and distrest,  
Yet, when admitted to the peaceful ground,  
With heroes, kings, and conquerors I shall rest,  
Shall sleep as safely, and perhaps as sound." 260

117

Dim burnt the lamp, and now the phantom Death  
Gave his last groans in horror and despair—  
"All hell demands me hence,"—he said, and threw  
The red lamp hissing through the midnight air.

118

Trembling, across the plain my course I held,  
And found the grave-yard, loitering through the  
gloom,  
And, in the midst, a hell-red, wandering light,  
Walking in fiery circles round the tomb.

119

Among the graves a spiry building stood,  
Whose tolling bell, resounding through the  
shade, 270  
Sung doleful ditties to the adjacent wood,  
And many a dismal drowsy thing it said.

120

This fabrick tall, with towers and chanceels grac'd,  
Was rais'd by sinners' hands, in ages fled;  
The roof they painted, and the beams they brac'd,  
And texts from scripture o'er the walls they spread:

121

But wicked were their hearts, for they refus'd  
To aid the helpless orphan, when distrest,  
The shivering, naked stranger they misus'd,  
And banish'd from their doors the starving guest. 280

122

By laws protected, cruel and profane,  
The poor man's ox <sup>50</sup> these monsters drove away;—  
And left Distress to attend her infant train,  
No friend to comfort, and no bread to stay.

123

But heaven look'd on with keen, resentful eye,  
And doom'd them to perdition and the grave,  
'That as they felt not for the wretch distrest,  
So heaven no pity on their souls would have.

124

In pride they rais'd this building tall and fair,  
Their hearts were on perpetual mischief bent, 290  
With pride they preach'd, and pride was in their  
prayer,  
With pride they were deceiv'd, and so to hell they  
went.

125

At distance far approaching to the tomb,  
By lamps and lanthorns guided through the shade,  
A coal-black chariot hurried through the gloom,  
Spectres attending, in black weeds array'd.

126

Whose woeful forms yet chill my soul with dread,  
Each wore a vest in Stygian chambers wove,  
Death's kindred all—Death's horses they bestrode,  
And gallop'd fiercely, as the chariot drove. 300

127

Each horrid face a grisly mask conceal'd,  
Their busy eyes shot terror to my soul  
As now and then, by the pale lanthorn's glare,  
I saw them for their parted friend condole.

128

Before the hearse Death's chaplain seem'd to go,  
Who strove to comfort, what he could, the dead;  
Talk'd much of Satan, and the land of woe,  
And many a chapter from the scriptures read.

<sup>50</sup> See Job 24:3.

129

At last he rais'd the swelling anthem high,  
In dismal numbers seem'd he to complain;  
The captive tribes that by Euphrates wept,<sup>51</sup> 310  
Their song was jovial to this dreary strain.

130

That done, they plac'd the carcase in the tomb,  
To dust and dull oblivion now resign'd,  
Then turn'd the chariot tow'rd the House of Night,  
Which soon flew off, and left no trace behind.

131

But as I stoop'd to write the appointed verse,  
Swifter than thought the airy scene decay'd;  
Blushing the morn arose, and from the east  
With her gay streams of light dispell'd the shade. 320

132

What is this Death, ye deep read sophists, say?—  
Death is no more than one unceasing change;  
New forms arise, while other forms decay,  
Yet all is Life throughout creation's range.

133

The towering Alps, the haughty Apennine,  
The Andes, wrapt in everlasting snow,  
The Apalachian and the Ararat  
Sooner or later must to ruin go.

134

Hills sink to plains, and man returns to dust,  
That dust supports a reptile or a flower; 330  
Each changeful atom by some other nurs'd  
Takes some new form, to perish in an hour.

135

Too nearly join'd to sickness, toils, and pains,  
(Perhaps for former crimes imprison'd here)  
True to itself the immortal soul remains,  
And seeks new mansions in the starry sphere.

136

When Nature bids thee from the world retire,  
With joy thy lodging leave, a fated guest;  
In Paradise, the land of thy desire,  
Existing always, always to be blest. 340

1779, 1786

### *On the Memorable Victory of Paul Jones*<sup>52</sup>

1

O'er the rough main with flowing sheet  
The guardian of a numerous fleet,  
    *Seraphis* from the Baltic came;  
A ship of less tremendous force  
Sail'd by her side the self-same course,  
    *Countess of Scarb'ro'* was her name.

2

And now their native coasts appear,  
Britannia's hills their summits rear  
    Above the German main;<sup>53</sup>  
Fond to suppose their dangers o'er, 10  
They southward coast along the shore,  
    Thy waters, gentle Thames, to gain.

<sup>51</sup> See Psalm 137.

<sup>52</sup> The full title, when the poem was first published in the *Freeman's Journal*, August 8, 1781, read "On the Memorable Victory, Obtained by the Gallant Captain Paul Jones, of *Le Bon Homme Richard*, (or Father Richard) over the *Seraphis*, of 44 Guns, under the Command of Captain Pearson."

Fought off Hull, England, September 23, 1779, this battle was the first important American naval victory. The text here printed follows that of the 1786 edition.

3

Full forty guns *Seraphis* bore,  
And *Scarb'ro's Countess* twenty-four,  
    Mann'd with Old England's boldest tars—  
What flag that rides the Gallic seas<sup>54</sup>  
Shall dare attack such piles as these,  
    Design'd for tumults and for wars!

4

Now from the top-mast's giddy height  
A seaman cry'd—"Four sail in sight  
    Approach with favouring gales;"  
Pearson, resolv'd to save the fleet, 10  
Stood off to sea these ships to meet,  
    And closely brac'd his shivering sails.

5

With him advanc'd the *Countess* bold,  
Like a black tar in wars grown old:

<sup>53</sup> The North Sea.

<sup>54</sup> The seas around France.

And now these floating piles drew nigh;  
But, muse, unfold what chief of fame  
In th' other warlike squadron came,  
Whose standards at his mast head fly.

6

Tw'as JONES, brave JONES, to battle led  
As bold a crew as ever bled  
Upon the sky-surrounded main;  
The standards of the Western World  
Were to the willing winds unfurl'd,  
Denying Britain's tyrant reign.

7

The *Good Man Richard* led the line;  
The *Alliance* next: with these combine  
The Gallic ship they *Pallas* call:  
The *Vengeance*, arm'd with sword and flame,  
These to attack the Britons came—  
But two<sup>55</sup> accomplish'd all.

8

Now Phœbus sought his pearly bed:  
But who can tell the scenes of dread,  
The horrors of that fatal night!  
Close up these floating castles came;  
The *Good Man Richard* bursts in flame;  
*Seraphis* trembled at the sight.

9

She felt the fury of her ball,  
Down, prostrate down, the Britons fall;  
The decks were strew'd with slain:  
JONES to the foe his vessel lash'd;  
And, while the black artillery flash'd,  
Loud thunders shook the main.

10

Alas! that mortals should employ  
Such murdering engines, to destroy  
That frame by heav'n so nicely join'd;  
Alas! that e'er the god decreed  
That brother should by brother bleed,  
And pour'd such madness in the mind.

11

But thou, brave JONES, no blame shalt bear,  
The rights of men demand thy care:  
For these you dare the greedy waves—  
<sup>55</sup> The *Bon-Homme Richard* and the *Pallas*.

No tyrant on destruction bent  
Has planned thy conquests—thou art sent  
To humble tyrants and their slaves.

30

12

See!—dread *Seraphis* flames again—  
And art thou, JONES, among the slain,  
And sunk to Neptune's caves below—  
He lives—though crowds around him fall,  
Still he, unhurt, survives them all;  
Almost alone he fights the foe.

70

13

And can thy ship these strokes sustain?  
Behold thy brave companions slain,  
All clasp'd in ocean's dark embrace.  
STRIKE, OR BE SUNK!—the Briton cries—  
SINK, IF YOU CAN!—the chief replies,  
Fierce lightnings blazing in his face.

40

14

Then to the side three guns he drew,  
(Almost deserted by his crew)  
And charg'd them deep with woe:  
By Pearson's flash he aim'd the balls;  
His main-mast totters, down it falls—  
Tremendous was the blow.

80

15

Pearson as yet disdain'd to yield,  
But scarce his secret fears conceal'd,  
And thus was heard to cry—  
"With hell, not mortals, I contend;  
What art thou—human, or a fiend,  
That dost my force defy?"

50

90

16

"Return, my lads, the fight renew!"  
So call'd bold Pearson to his crew;  
But call'd, alas! in vain;  
Some on the decks lay maim'd and dead;  
Some to their deep recesses fled,  
And more were bury'd in the main.

60

17

Distress'd, forsaken, and alone,  
He haul'd his tatter'd standard down,  
And yielded to his gallant foe;  
Bold *Pallas* soon the *Countess* took,

100

Thus both their haughty colours struck,  
Confessing what the brave can do.

18

But JONES, too dearly didst thou buy  
These ships possest so gloriously,  
Too many deaths disgrac'd the fray:  
Thy barque that bore the conquering flame,  
That the proud Briton overcame,  
Even she forsook thee on thy way.

19

For when the morn began to shine,  
Fatal to her, the ocean brine  
Pour'd through each spacious wound;  
Quick in the deep she disappear'd,  
But JONES to friendly Belgia steer'd,  
With conquest and with glory crown'd.

20

Go on, great man, to daunt the foe,  
And bid the haughty Britons know  
They to our *Thirteen Stars* shall bend;  
The *Stars* that veil'd in dark attire,  
Long glimmer'd with a feeble fire,  
But radiant now ascend;

120

21

Bend to the Stars that flaming rise  
In western, not in eastern, skies,  
Fair Freedom's reign restor'd.  
So when the magi,<sup>56</sup> come from far,  
Beheld the God-attending Star,  
They trembled and ador'd.

1786

FROM

### *The British Prison Ship*

## CANTO II

The Prison Ship<sup>57</sup>

THE various horrors of these hulks to tell,  
These Prison Ships where pain and horror dwell,<sup>58</sup>  
Where death in tenfold vengeance holds his reign,  
And injur'd ghosts, yet unaveng'd, complain;  
This be my talk—ungenerous Britons, you  
Conspire to murder those you can't subduc.—

WEAK as I am, I'll try my strength to-day  
And my best arrows at these hell-hounds play,  
To future years one scene of death prolong,  
And hang them up to infamy, in song.

10

THAT Britain's rage should dye our plains with gore,  
And desolation spread through every shore,  
None e'er could doubt, that her ambition knew,  
This was to rage and disappointment due;  
But that those monsters whom our soil maintain'd,  
Who first drew breath in this devoted land,  
Like famish'd wolves, should on their country prey,  
Assist its foes, and wrest our lives away,

<sup>56</sup> See Matthew 1-2, 8-11.

<sup>57</sup> Written in 1780 and published in 1781, "The British Prison Ship" is in three cantos: (1) The Capture, (2) The Prison Ship, and (3) The Hospital Prison Ship. Canto II is given entire, after the edition of 1786.

<sup>58</sup> Based on personal experience, this poem presents evidence that Washington's repeated protests at such conditions were not unwarranted.

This shocks belief—and bids our soil disown  
Such friends, subservient to a bankrupt crown,  
By them the widow mourns her partner dead,  
Her mangled sons to darksome prisons led,  
By them—and hence my keenest sorrows rise,  
My friend, my guardian, my *Orestes*<sup>59</sup> dies;  
Still for that loss must wretched I complain,  
And sad *Ophelia* mourn her favourite swain.

20

AN! come the day when from this bloody shore  
Fate shall remove them to return no more—  
To scorch'd Bahama shall the traitors go  
With grief and rage, and unremitting woe,  
On burning sands to walk their painful round,  
And sigh through all the solitary ground,  
Where no gay flower their haggard eyes shall see,  
And find no shade but from the cypress tree.

30

So much we suffer'd from the tribe I hate,  
So near they shov'd me to the brink of fate,  
When two long months in these dark Hulks we lay  
Barr'd down by night, and fainting all the day  
In the fierce fervours of the solar beam,  
Cool'd by no breeze on Hudson's mountain-stream; 40  
That not unsung these threescore days shall fall  
To black oblivion that would cover all!—

<sup>59</sup> A legendary Greek character, son of Agamemnon and Clytemnestra, who was pursued by the Furies.

No masts or sails these crowded ships adorn,  
 Dismal to view, neglected and forlorn!  
 Here mighty ills oppress the imprison'd throng,  
 Dull were our slumbers, and our nights too long—  
 From morn to eve along the decks we lay  
 Scorch'd into fevers by the solar ray;  
 No friendly *awning* cast a welcome shade;  
 Once was it promis'd, and was never made;  
 No favours could these sons of death bestow;  
 'Twas endless cursing, and continual woe.  
 Immortal hatred doth their breasts engage,  
 And this lost empire swells their souls with rage.

two hulks on Hudson's stormy bosom lie,  
 Two, farther south, affront the pitying eye—  
 There the black *Scorpion* at her mooring rides,  
 There, *Strombolo* swings, yielding to the tides;  
 Here bulky *Jersey* fills a larger space,  
 And *Hunter*, to all hospitals disgrace—  
 Thou, *Scorpion*, fatal to the crowded throng,  
 Dire theme of horror and Plutonian song,  
 Requir'st my lay—thy sultry decks I know,  
 And all the torments that exist below!  
 The briny wave that Hudson's bosom fills  
 Drain'd through her bottom in a thousand rills.  
 Rotten and old, replete with sighs and groans,  
 Scarce on the waters she sustain'd her bones;  
 Here, doom'd to toil, or foundered in the tide,  
 At the moist pumps incessantly we ply'd,  
 Here, doom'd to starve, like famish'd dogs we tore  
 The scant allowance, that our tyrants bore.

REMEMBRANCE shudders at this scene of fears—  
 Still in my view some English brute appears,  
 Some base-born Hessian slave walks threat'ning by,  
 Some servile Scot, with murder in his eye  
 Still haunts my sight, as vainly they bemoan  
*Rebellions* manag'd so unlike their own!  
 O may I never feel the poignant pain  
 To live subjected to such fiends again,  
*Stewards* and *mates* that hostile Britain bore,  
 Cut from the gallows on their native shore,  
 Their ghastly looks and vengeance-beaming eyes  
 Still to my view in dismal colours rise—  
 O may I ne'er review these dire abodes,  
 These piles for slaughter, floating on the floods,—  
 And you that o'er the troubled ocean go,  
 Strike not your standards to this miscreant foe,  
 Better the greedy wave should swallow all,  
 Better to meet the death-conducted ball,  
 Better to sleep on ocean's deepest bed

At once destroy'd and number'd with the dead,  
 Than thus to perish in the face of day,  
 Where twice ten thousand deaths one death delay.

WHEN to the ocean dives the western sun,  
 And the scorch'd Tories fire their evening gun,  
 "Down, rebels, down!" the angry Scotchmen cry,  
 "Damn'd dogs, descend, or by our broadswords die!"

HAIL, dark abode! what can with thee compare—  
 Heat, sickness, famine, death, and stagnant air—  
 Pandora's box, from whence all mischief flew,  
 Here real found, torments mankind anew!—  
 Swift from the guarded decks we rush'd along,  
 And vainly sought repose, so vast our throng:  
 Three hundred wretches here, denied all light,  
 In crowded mansions pass the infernal night,  
 Some for a bed their tatter'd vestments join,  
 And some on chests, and some on floors recline;  
 Shut from the blessings of the evening air,  
 Pensive we lay with mingled corpses there,  
 Meagre and wan, and scorch'd with heat, below,  
 We loom'd like ghosts, ere death had made us so—  
 How could we else, where heat and hunger join'd  
 Thus to debase the body and the mind,  
 Where cruel thirst the parching throat invades,  
 Dries up the man, and fits him for the shades.

No waters laded from the bubbling spring  
 To these dire ships the British monsters bring—  
 By planks and ponderous beams completely wall'd  
 In vain for water, and in vain, I call'd—  
 No drop was granted to the midnight prayer,  
 To *Dives* in these regions of despair!—  
 The loathsome cask a deadly dose contains,  
 Its poison circling through the languid veins;  
 "Here, *generous* Britons, generous, as you say,  
 To my parch'd tongue one cooling drop convey,  
 Hell has no mischief like a thirsty throat,  
 Nor one tormentor like your David Sproat." \*

DULL flew the hours, till, from the East display'd,  
 Sweet morn dispells the horrors of the shade;  
 On every side dire objects meet the sight,  
 And pallid forms, and murders of the night,  
 The dead were past their pain, the living groan,  
 Nor dare to hope another morn their own;  
 But what to them is morn's delightful ray,  
 Sad and distressful as the close of day,  
 O'er distant streams appears the dewy green,  
 And leafy trees on mountain tops are seen,  
 But they no groves nor grassy mountains tread,

\* Commissary of Prisoners at New-York.

Mark'd for a longer journey to the dead. 140

BLACK as the clouds that shade St. Kilda's <sup>60</sup> shore,  
Wild as the winds that round her mountains roar,  
At every post some surly vagrant stands,  
Pick'd from the British or the Irish bands,  
Some slave from Hesse, some hangman's son at least  
Sold and transported, like his brother beast—  
Some miscreant Tory, puff'd with upstart pride,  
Led on by hell to take the royal side;  
Dispensing death triumphantly they stand,  
Their musquets ready to obey command; 150  
Wounds are their sport, as ruin is their aim:  
On their dark souls compassion had no claim,  
And discord only can their spirits please:  
Such were our tyrants, and such were these.

INGRATITUDE! no curse like thee is found  
Throughout this jarring world's extended round,  
Their hearts with malice to our country swell  
Because in former days we us'd them well—!  
This pierces deep, too deeply wounds the breast;  
We help'd them naked, friendless, and distressed, 160  
Receiv'd their vagrants with an open hand,  
Bestow'd them buildings, privilege, and land—  
Behold the change!—when angry Britain rose,  
These thankless tribes became our fiercest foes,  
By them devoted, plunder'd, and accurst  
Stung by the serpents whom ourselves had nurs'd.

BUT such a train of endless woes abound,  
So many mischiefs in these hulks are found,  
That on them all a poem to prolong  
Would swell too high the horrors of my song— 170  
Hunger and thirst to work our woe combine,

And mouldy bread, and flesh of rotten swine,  
The mangled carcase, and the batter'd brain,  
The doctor's poison, and the captain's cane,  
The soldier's musquet, and the steward's debt,  
The evening shackle, and the noon-day threat.

THAT juice destructive <sup>61</sup> to the pangs of care  
Which Rome of old, nor Athens could prepare,  
Which gains the day for many a modern chief  
When cool reflection yields a faint relief, 180  
That *charm*, whose virtue warms the world beside,  
Was by these tyrants to our use denied.

While yet they deign'd that healthy juice to lade,  
The putrid water felt its powerful aid;  
But when refus'd—to aggravate our pains—  
Then fevers rag'd and revel'd through our veins;  
Throughout my frame I felt its deadly heat,  
I felt my pulse with quicker motions beat;  
A pallid hue o'er every face was spread,  
Unusual pains attack'd the fainting head, 190  
No physic here, no doctor to assist;

My *name* was enter'd on the sick man's list;  
Twelve wretches more the same dark symptoms took,  
And these were enter'd on the doctor's book;  
The loathsome *Hunter* was our destin'd place,  
The *Hunter*, to all hospitals disgrace;  
With soldiers sent to guard us on our road,  
Joyful we left the *Scorpion's* dire abode;  
Some tears we shed for the remaining crew,  
Then curs'd the hulk, and from her sides with-  
drew. 200

1780 1781, 1786

### *To the Memory of the Brave Americans*

UNDER GENERAL GREENE, IN SOUTH CAROLINA,  
WHO FELL IN THE ACTION OF SEPTEMBER 8, 1781.

At Eutaw Springs the valiant died;  
Their limbs with dust are covered o'er—  
Weep on, ye springs, your tearful tide;  
How many heroes are no more!

If in this wreck of ruin, they  
Can yet be thought to claim a tear,

<sup>60</sup> An island of the outer Hebrides group, off the northwestern coast of Scotland.

O smite your gentle breast, and say  
The friends of freedom slumber here!

Thou, who shalt trace this bloody plain,  
If goodness rules thy generous breast, 10  
Sigh for the wasted rural reign;  
Sigh for the shepherds, sunk to rest!

Stranger, their humble graves adorn;  
You too may fall, and ask a tear;  
'Tis not the beauty of the morn  
That proves the evening shall be clear.—

<sup>61</sup> Rum.

They saw their injured country's woe;  
 The flaming town, the wasted field;  
 Then rushed to meet the insulting foe;  
 They took the spear—but left the shield.

Led by thy conquering genius, Greene,  
 The Britons they compelled to fly;  
 None distant viewed the fatal plain,  
 None grieved, in such a cause to die—

But, like the Parthian,<sup>62</sup> famed of old,  
 Who, flying, still their arrows threw,  
 These routed Britons, full as bold,  
 Retreated, and retreating slew.

Now rest in peace, our patriot band;  
 Though far from nature's limits thrown,  
 We trust they find a happier land,  
 A brighter sunshine of their own.

1781

1781

### To Lord Cornwallis<sup>63</sup>

AT YORK-VIRGINIA, OCTOBER 8. 1781.

HAIL, great destroyer (equall'd yet by none)  
 Of countries not thy master's, nor thine own;  
 Hatch'd by some demon on a stormy day,  
 Satan's best substitute to burn and slay;  
 Confin'd at last, hemm'd in by land and sea  
 Burgoyne himself was but a type of thee!

LIKE his, to freedom was thy deadly hate,  
 Like his thy baseness, and be his thy fate:  
 To you, like him, no prospect Nature yields  
 But ruin'd wastes and desolated fields—  
 In vain you raise the interposing wall,  
 And hoist those standards that, like you, must fall,  
 In you conclude the glories of your race,  
 Complete your monarch's, and your own disgrace.

10

WHAT has your lordship's pilfering arms attain'd?—  
 Vast stores of *plunder*, but no STATE regain'd—  
 That may return, though you perhaps may groan,  
 Restore it, ruffian, for 'tis not your own—  
 Then, lord and soldier, headlong to the brine  
 Rush down at once—the devil and the swine.

20

<sup>62</sup> The inhabitants of Parthia were a very warlike people, famed for their use of arrows in cavalry attacks.

<sup>63</sup> Poems like this and the longer diatribe "On the Fall of General Earl Cornwallis," celebrating his surrender to Washington on October 19, 1781, like Freneau's prose pamphlets, kept the patriot hatred and resentment of the British glowing. Text from the edition of 1786.

WOULDS'T thou at last with *Washington* engage,  
 Sad object of his pity, not his rage?

See, round thy posts now terribly advance  
 The chiefs, the armies, and the fleets of France,  
 Fight while you can, for warlike *Rochambeau*<sup>64</sup>  
 Aims at your head his last decisive blow,  
 Unnumber'd ghosts, from earth untimely sped,  
 Can take no rest till you, like them, are dead—  
 Then die, my Lord; that only chance remains  
 To wash away dishonourable stains,  
 For small advantage would your capture bring,  
 The *plundering servant of a bankrupt king*.

1781

1781, 1786

### The Vanity of Existence<sup>65</sup>

TO THYRSIS<sup>66</sup>

In youth, gay scenes attract our eyes,  
 And not suspecting their decay  
 Life's flowery fields before us rise,  
 Regardless of its winter day.

But vain pursuits, and joys as vain,  
 Convince us life is but a dream.  
 Death is to wake, to rise again  
 To that true life you best esteem.

So nightly on some shallow tide,  
 Oft have I seen a splendid show;  
 Reflected stars on either side,  
 And glittering moons were seen below.

10

But when the tide had ebb'd away,  
 The scene fantastic with it fled,  
 A bank of mud around me lay,  
 The sea-weed on the river's bed.

1781

### The Dying Indian: Tomo-Chequi

"On yonder lake I spread the sail no more!  
 Vigour, and youth, and active days are past—  
 Relentless demons urge me to that shore  
 On whose black forests all the dead are cast:—

<sup>64</sup> Jean Baptiste Donatien de Vimeur, Count Rochambeau (1725–1807), a French general in America in 1780.

<sup>65</sup> While Freneau frequently returned to the pastoral vein, his later examples in that genre often forsake, as in the concluding stanza of this poem, the fastidious elegance of the conventional pastoral for a harsh realism betokening disillusionment.

<sup>66</sup> Conventional name taken over from classical pastoral poetry.

Ye solemn train, prepare the funeral song,  
For I must go to shades below,  
Where all is strange and all is new;  
Companion to the airy throng!—

What solitary streams  
In dull and dreary dreams,  
All melancholy, must I rove along!

To what strange lands must *Chequi* take his way!  
Groves of the dead departed mortals trace:  
No deer along these gloomy forests stray,  
No huntsmen there take pleasure in the chase,  
But all are empty unsubstantial shades,  
That ramble through those visionary glades;  
No spongy fruits from verdant trees depend,  
But sickly orchards there  
Do fruits as sickly bear,  
And apples a consumptive visage shew,  
And withered hangs the hurtle-berry blue.

Ah me! what mischiefs on the dead attend!  
Wandering a stranger to the shores below,  
Where shall I brook or real fountain find?  
Lazy and sad deluding waters flow—  
Such is the picture in my boding mind!  
Fine tales, indeed, they tell  
Of shades and purling rills,  
Where our dead fathers dwell  
Beyond the western hills,  
But when did ghost return his state to shew;  
Or who can promise half the tale is true?

I too must be a fleeting ghost!—no more—  
None, none but shadows to those mansions go;  
I leave my woods, I leave the Huron shore,  
For emptier groves below!

Ye charming solitudes,  
Ye tall ascending woods,  
Ye glassy lakes and prattling streams,  
Whose aspect still was sweet,  
Whether the sun did greet.  
Or the pale moon embraced you with her beams—  
Adieu to all!

To all, that charmed me where I strayed,  
The winding stream, the dark sequestered shade;  
Adieu all triumphs here!  
Adieu the mountain's lofty swell,  
Adieu, thou verdant hill,  
And seas, and stars, and skies—farewell,  
For some remoter sphere!

Perplexed with doubts, and tortured with despair,  
Why so dejected at this hopeless sleep?  
Nature at last these ruins may repair,  
When fate's long dream is o'er, and she forgets to  
weep;  
10 Some real world once more may be assigned,  
Some new born mansion for the immortal mind!  
Farewell, sweet lake; farewell surrounding woods.  
To other groves, through midnight glooms, I stray,  
Beyond the mountains, and beyond the floods, 60  
Beyond the Huron bay!  
Prepare the hollow tomb, and place me low,  
My trusty bow and arrows by my side,  
The cheerful bottle and the venison store;  
For long the journey is that I must go,  
Without a partner, and without a guide."  
20 He spoke, and bid the attending mourners weep,  
Then closed his eyes, and sunk in endless sleep!  
1784 1784

### *The Hurricane* \*

Happy the man who, safe on shore,  
Now trims, at home, his evening fire;  
Unmoved, he hears the tempests roar,  
That on the tufted groves expire:  
30 Alas! on us they doubly fall,  
Our feeble barque must bear them all.  
Now to their haunts the birds retreat,  
The squirrel seeks his hollow tree,  
Wolves in their shaded caverns meet,  
All, all are blest but wretched we— 10  
Foredoomed a stranger to repose,  
No rest the unsettled ocean knows.  
While o'er the dark abyss we roam,  
Perhaps, with last departing gleam,  
40 We saw the sun descend in gloom,  
No more to see his morning beam;  
But buried low, by far too deep,  
On coral beds, unpitied, sleep!  
But what strange uncoasted strand  
Is that, where fate permits no day— 20  
No charts have we to mark that land,  
No compass to direct that way—  
What *PILOT* shall explore that realm,  
What new *COLUMBUS* take the helm!

\* Near the east end of Jamaica, July 30, 1784.

While death and darkness both surround,  
And tempests rage with lawless power,  
Of friendship's voice I hear no sound,  
No comfort in this dreadful hour—  
What friendship can in tempests be,  
What comforts on this raging sea?

The barque, accustomed to obey,  
No more the trembling pilots guide:  
Alone she gropes her trackless way,  
While mountains burst on either side—  
Thus, skill and science both must fail;  
And ruin is the lot of all.

1784

1785

### *The Wild Honey Suckle*

Fair flower, that dost so comely grow,  
Hid in this silent, dull retreat,  
Untouched thy honied blossoms blow,  
Unseen thy little branches greet;  
No roving foot shall crush thee here,  
No busy hand provoke a tear.

By Nature's self in white arrayed,  
She bade thee shun the vulgar eye,  
And planted here the guardian shade,  
And sent soft waters murmuring by;  
Thus quietly thy summer goes,  
Thy days declining to repose.

Smit with those charms, that must decay,  
I grieve to see your future doom;  
They died—nor were those flowers more gay,  
The flowers that did in Eden bloom;  
Unpitying frosts, and Autumn's power  
Shall leave no vestige of this flower.

From morning suns and evening dews  
At first thy little being came:  
If nothing once, you nothing lose,  
For when you die you are the same;  
The space between, is but an hour,  
The frail duration of a flower.

1786

### *The Indian Burying Ground*

In spite of all the learned have said,  
I still my old opinion keep:

The posture, that we give the dead,  
Points out the soul's eternal sleep.

Not so the ancients of these lands—  
The Indian, when from life released,  
Again is seated with his friends,\*  
And shares again the joyous feast.

30

His imaged birds, and painted bowl,  
And venison, for a journey dressed,  
Bespeak the nature of the soul,  
Activity, that knows no rest.

10

His bow, for action ready bent,  
And arrows, with a head of stone,  
Can only mean that life is spent,  
And not the old ideas gone.

Thou, stranger, that shalt come this way,  
No fraud upon the dead commit—  
Observe the swelling turf, and say  
They do not lie, but here they sit.

20

Here still a lofty rock remains,  
On which the curious eye may trace  
(Now wasted, half, by wearing rains)  
The fancies of a ruder race.

10

Here still an aged elm aspires,  
Beneath whose far-projecting shade  
(And which the shepherd still admires)  
The children of the forest played!

There oft a restless Indian queen  
(Pale Shebah,<sup>67</sup> with her braided hair)  
And many a barbarous form is seen  
To chide the man that lingers there.

30

By midnight moons, o'er moistening dews;  
In habit for the chase arrayed,  
The hunter still the deer pursues,  
The hunter and the deer, a shade!

20

And long shall timorous fancy see  
The painted chief, and pointed spear.  
And Reason's self shall bow the knee  
To shadows and delusions here.

40

1788

\* The North Americans bury their dead in a sitting posture; decorating the corpse with wampum, the images of birds, quadrupeds, &c: And (if that of a warrior) with bows, arrows, tomahawks and other military weapons.

<sup>67</sup> For the Queen of Sheba see I Kings and II Chronicles.

*To an Author*

Your leaves bound up compact and fair  
 In neat array at length prepare  
 To pass their hour on learning's stage,  
 To meet the surly critic's rage;  
 The statesman's slight, the smatterer's sneer—  
 Were these, indeed, your only fear,  
 You might be tranquil and resigned:  
 What most should touch your fluttering mind  
 Is that few critics will be found  
 To sift your works, and deal the wound.

Thus, when one fleeting year is past  
 On some byc-shelf *your* book is cast—  
*Another* comes, with *something new*,  
 And drives you fairly out of view:  
 With some to praise, *but more to blame*,  
 The mind returns to—whence it came;  
 And some alive, who *scarce could read*  
 Will publish satires on the dead.

Thrice happy Dryden, who could meet  
 Some rival bard in every street!  
 When all were bent on writing well  
 It was some credit to excel!

Thrice happy Dryden, who could find  
 A *Milbourne* for his sport designed—  
 And *Pope*, who saw the harmless rage  
 Of *Dennis* bursting o'er his page,  
 Might justly spurn the *critic's aim*,  
 Who only helped to swell his fame.

On these bleak climes by Fortune thrown,  
 Where rigid *Reason* reigns alone,  
 Where lovely *Fancy* has no sway,  
 Nor magic forms about us play,  
 Nor nature takes her summer hue,  
 Tell me, what has the muse to do?

An age employed in edging steel  
 Can no poetic raptures feel;  
 No solitude's attracting power,  
 No leisure of the noonday hour,  
 No shaded stream, no quiet grove  
 Can this fantastic century move.

The muse of love in no request—  
 Go—try your fortune with the rest,  
*One* of the nine you should engage,  
 To meet the follies of the age.

On *one*, we fear, your choice must fall,  
 The least engaging of them all;  
 Her visage stern—an angry style—  
 A clouded brow—malicious smile—  
 A mind on *murdered victims* placed—  
 She, only she, can please the taste!

1788

*On Mr. Paine's Rights of Man*

10 Thus briefly sketched the sacred RIGHTS OF MAN,  
 How inconsistent with the ROYAL PLAN!  
 Which for itself exclusive honour craves,  
 Where some are masters born, and millions slaves.  
 With what contempt must every eye look down  
 On that base, childish bauble called a *crown*,  
 The gilded bait, that lures the crowd, to come,  
 Bow down their necks, and meet a slavish doom;  
 The source of half the miseries men endure,  
 The quack that kills them, while it seems to cure. 10

Roused by the REASON of his manly page,  
 20 Once more shall PAINE a listening world engage:  
 From Reason's source, a bold reform he brings,  
 In raising *mankind*, he pulls down *kings*,  
 Who, source of discord, patrons of all wrong,  
 On blood and murder have been fed too long:  
 Hid from the world, and tutored to be base,  
 The curse, the scourge, the ruin of our race,  
 Their's was the task, a dull designing few,  
 To shackle beings that they scarcely knew, 20  
 Who made this globe the residence of slaves,  
 And built their thrones on systems formed by knaves  
 30 —Advance, bright years, to work their final fall,  
 And haste the period that shall crush them all.

Who, that has read and scann'd the historic page  
 But glows, at every line, with kindling rage,  
 To see by them the rights of men aspersed  
 Freedom restrain'd, and Nature's law reversed,  
 Men, ranked with beasts, by monarchs will'd away,  
 And bound young fools, or madmen to obey: 30  
 Now driven to wars, and now oppressed at home,  
 Compelled in crowds o'er distant seas to roam,  
 From India's climes the plundered prize to bring  
 40 To glad the strumpet, or to glut the king.

COLUMBIA, hail! immortal be thy reign:  
 Without a king, we till the smiling plain;  
 Without a king, we trace the unbounded sea,  
 And traffic round the globe, through each degree;

Each foreign clime our honour'd flag reveres,  
 Which asks no monarch, to support the STARS: 40  
 Without a king, the laws maintain their sway,  
 While honour bids each generous heart obey.  
 Be ours the task the ambitious to restrain,  
 And this great lesson teach—that kings are vain;  
 That warring realms to certain ruin haste,  
 That kings subsist by war, and wars are waste:  
 So shall our nation, form'd on Virtue's plan,  
 Remain the guardian of the Rights of Man,  
 A vast Republic, famed through every clime,  
 Without a king, to see the end of time. 50  
 1792 1795

### To My Book <sup>68</sup>

Seven years are now elaps'd, dear rambling volume,  
 Since, to all knavish wights a foe,  
 I sent you forth to vex and gall 'em,  
 Or drive them to the shades below;  
 With spirit, still, of DEMOCRATIC proof,  
 And still despising Shylock's canker'd hoof:  
 What doom the fates intend, is hard to say,  
 Whether to live to some far-distant day,  
 Or sickening in your prime,  
 In this hard-hitting clime, 10  
 Take pet, make wings, say prayers, and flit away.  
 "Virtue, order and religion,  
 Haste, and seek some other region;  
 Your plan is laid, to hunt them down,  
 Destroy the mitre, rend the gown,  
 And that vile hag, Philosophy, restore"—  
 Did ever volume plan so much before?  
 For seven years past, a host of busy foes  
 Have buzz'd about your nose,  
 White, black, and grey, by night and day; 20  
 Garbling, lying, singing, sighing:  
 These eastern gales a cloud of insects bring  
 That fluttering, sniveling, whimpering—on the  
 wing—  
 And, wafted still as discord's demon guides,  
 Flock round the flame, that yet shall singe their hides.

<sup>68</sup> Text from the edition of 1795. When this poem was first printed in Freneau's *National Gazette*, on August 4, 1792, a note called attention to the following attack:

"The National Gazette is—the vehicle of party spleen and opposition to the great principles of order, virtue, and religion."—*Gaz. U. States*."

It is to be observed that in the second stanza, beginning "Virtue, order and religion," Freneau is paraphrasing Fenno's attack while ridiculing it.

Well!—let the fates decree whate'er they please:  
 Whether you're doomed to drink oblivion's cup,  
 Or Praise-God Barebones eats you up,  
 This I can say, you've spread your wings afar,  
 Hostile to garter, ribbon, crown, and star; 30  
 Still on the people's, still on Freedom's side,  
 With full-determin'd aim, to baffle every claim  
 Of well-born wights, that aim to mount and ride.  
 1792 1795

### To Shylock Ap-Shenkin <sup>69</sup>

Since the day I attempted to print a gazette,  
 This Shylock Ap-Shenkin does nothing but fret.  
 Now preaching and screeching, then nibbling and  
 scribbling,  
 Remarking and barking, and whining and pining,  
 And still in a pet,  
 From morning 'till night, with my humble gazette.  
 Instead of whole columns our page to abuse,  
 Your readers would rather be treated with News:  
 While wars are a-brewing, and kingdoms undoing,  
 While monarchs are falling, and princesses squalling,  
 While France is reforming,<sup>70</sup> and Irishmen  
 storming <sup>71</sup>— 10  
 In a glare of such splendour, what folly to fret  
 At so humble a thing as a poet's GAZETTE!  
 No favours I ask'd from your friend in the EAST:  
 On your wretched soup-meagre I left them to feast;  
 So many base lies you have sent them in print,  
 That scarcely a man at our paper will squint:—  
 And now you begin (with a grunt and a grin,  
 With the bray of an ass, and a visage of brass,  
 With a quill in your hand and a LIE in your mouth)  
 To play the same trick on the men of the SOUTH! 20  
 One printer for CONGRESS (some think) is enough,  
 To flatter, and lie, to palaver, and puff,  
 To preach up in favour of monarchs and titles,  
 And garters, and ribbands, to prey on our vitals:  
 Who knows but Pomposo <sup>72</sup> will give it in fee,  
 Or make mister Shenkin the Grand Patentee!!!

<sup>69</sup> The text printed follows that of 1795. The poem is a document in the war between Hamilton and Jefferson. This satirical poem is a reply to John Fenno's charge that Freneau was a hireling of Jefferson.

<sup>70</sup> A reference to the French Revolution.

<sup>71</sup> The Irish uprising from 1793–1798, spurred by French sympathy, was terminated by the Act of Union (with England) in 1800.

<sup>72</sup> Pomposo, a personification of "pompous," probably a reference to Hamilton.

Then take to your scrapers, ye Republican Papers,  
 No rogue shall go snacks—and the News-Paper Tax  
 Shall be puff'd to the skies, as a measure most wise—  
 So, a spaniel, when master is angry, and kicks it, 30  
 Sneaks up to his shoe, and submissively licks it.  
 1792 1795

*On the Anniversary of the Storming  
 of the Bastille, at Paris,  
 July 14, 1789*

The chiefs that bow to Capet's reign,  
 In mourning, now, their weeds display;  
 But we, that scorn a monarch's chain,  
 Combine to celebrate the day  
 To Freedom's birth that put the scal,  
 And laid in dust the proud Bastille.

To Gallia's rich and splendid crown,  
 This mighty Day gave such a blow  
 As Time's recording hand shall own  
 No former age had power to do: 10  
 No single gem some Brutus stole,  
 But instant ruin seiz'd the whole.

Now Tyrant's rise, once more to bind  
 In royal chains a nation freed—  
 Vain hope! for they, to death consign'd,  
 Shall soon, like perjur'd Louis bleed:  
 O'er every king, o'er every queen  
 Fate hangs the sword, and guillotine.

"Plung'd in a gulf of deep distress  
 France turns her back—(so traitors say) 20  
 Kings, priests, and nobles, round her press,  
 Resolv'd to seize their destin'd prey:  
 Thus Europe swears (in arms combin'd)  
 To Poland's doom is France consign'd."

Yet those, who now are thought so low  
 From conquests that were basely gain'd,  
 Shall rise tremendous from the blow  
 And free Two Worlds, that still are chain'd,  
 Restrict the Briton to his isle,  
 And Freedom plant in every soil. 30

Ye sons of this degenerate clime,  
 Haste, arm the barque, expand the sail;  
 Assist to speed that golden time  
 When Freedom rules, and monarchs fail;  
 All left to France—new powers may join,  
 And help to crush the cause divine.

Ah! while I write, dear France Allied,  
 My ardent wish I scarce restrain,  
 To throw these Sybil leaves aside,  
 And fly to join you on the main: 40  
 Unfurl the topsail for the chace  
 And help to crush the tyrant race!

1793

1795

*Ode*<sup>73</sup>

God save the Rights of Man!  
 Give us a heart to scan  
 Blessings so dear;  
 Let them be spread around  
 Wherever man is found,  
 And with the welcome sound  
 Ravish his ear.

Let us with France agree,  
 And bid the world be free,  
 While tyrants fall! 10  
 Let the rude savage host  
 Of their vast numbers boast—  
 Freedom's almighty trust  
 Laughs at them all!

Though hosts of slaves conspire  
 To quench fair Gallia's fire,  
 Still shall they fail:  
 Though traitors round her rise,  
 Leagu'd with her enemies,  
 To war each patriot flies, 20  
 And will prevail.

No more is valour's flame  
 Devoted to a name,  
 Taught to adore—  
 Soldiers of Liberty  
 Disdain to bow the knee,  
 But teach Equality  
 To every shore.

The world at last will join  
 To aid thy grand design, 30  
 Dear Liberty!  
 To Russia's frozen lands  
 The generous flame expands:  
 On Afric's burning sands  
 Shall man be free!

<sup>73</sup> This poem was sung at the Civic Feast in honor of Citizen Genêt in Philadelphia, June 1, 1793.

In this our western world  
 Be Freedom's flag unfurl'd  
 Through all its shores!  
 May no destructive blast  
 Our heaven of joy o'ercast,  
 May Freedom's fabric last  
 While time endures.

If e'er her cause require!—  
 Should tyrants e'er aspire  
 To aim their stroke,  
 May no proud despot daunt—  
 Should he his standard plant,  
 Freedom will never want  
 Her heart of oak!

1793

1795

### *The Creek Indian in Philadelphia*<sup>74</sup>

[TOMO CHEQUI'S SOLILOQUY]

As I travel through the streets and by-ways of this village, I never fail hearing the condition of my brethren and myself commiserated by the men and women of the place, on account of what they call our savage way of life, when at home.

We, in our turn, no less pity them for living cooped up in dark cages and narrow boxes, where they have scarcely room to turn or breathe, where the cheerful rays of the sun never yet penetrated but are concealed from the wretched inhabitant by walls of stupendous height and thickness.

The most unrelenting storm, the darkest mourning cloth of clouds that ever overshadowed the face of the heavens, is sooner or later scattered and dissipated before the light of the great luminary: but in these deep alleys and narrow pathways reigns a perpetual gloom, the source of pining discontent and peevish melancholy.

There sits the artist on his bench, pale as the grass beneath the thick spreading oak; actuated, like a machine, by the will of another, he moves not from place to place, but is restrained by an artificial necessity to his gloomy habitation.

But in our country, and with us, a tree, on occa-

<sup>74</sup> Printed in the *Jersey Chronicle*, July 18, 1795, as "The Creek Indian in Philadelphia, No. VII. Written about Midnight."

This letter, supposedly by a Creek Indian chief who had been sent by his tribe to bargain with the American government for terms of a treaty is interesting as illustrating Freneau's views of primitivism, as well as his deistic conception of nature and religion.

sion, will serve us for a house. Our largest wigwams are erected and finished in a day, and admit the light and air in abundance. In summer, we allow the winds to blow freely through the sides, made of cane and wattles; in the winter, the fire is placed in the middle, and all enjoy an equal share. Our woods supply us with plenty of fuel, and for nothing; while *here* it is brought to the inhabitant in little niggardly parcels, and at the cost of much money. In many of their habitations *here* we are not allowed to see the cheerful blaze—it is confined in a thick dark case of iron, and throws out a deadly smothering heat that never fails to deject and afflict my spirit. In others, the fireplace is in the side of the wall—the master of the wigwam only enjoyeth the heat, and looketh with a stern eye on those who approach to partake of his little sneaking fire of two sticks.

But before the night is advanced too far, and the taper that yet burns brightly before me shall grow dim in the socket, I will put down some few particulars of the manner of what is called the savage life, by the white men.

I feel a glow of reanimation at the recollection of the charming vision and would instantly return to enjoy it, were I not restrained by the frowns of the big men of the council, who have strictly enjoined my brethren and myself not to return without at least the looking-glasses, blankets, and brandy.

In the morning early, we rise from the bed of skins to hail the first dawn of the sun. We seize our bows and arrows—we fly hastily through the dews of the forests—we attack the deer, the stag, or the buffalo, and return with abundance of food for the whole family. Wherever we run it is amidst the luxuriant vegetation of Nature, the delectable regale of flowers and blossoms, and beneath trees bending with plump and joyous fruits.

By this time the stomach receives its food with a pleasure unknown to the puny sons of this huge village. Our drink is the milk of the goat, mingled with the clear water of the stream flowing over the white sand or yellow pebbles. It is that which every wise Indian prefers, because it is the drink prepared by the hand of *nature*.

Every desire of the heart is considered as a blessing of this our common mother. These desires are few and simple, and are almost always within our power to gratify. We can vary them at pleasure, and thus they are always new.

We are strangers to the cruel passion of jealousy, and consider that man as under the dominion of the foolish spirit who is distrustful of his wife. Our young women live constantly under the golden star of love; nor do we think the less of them if, before they are married, they indulge in that amiable passion.

In the forests, we acknowledge no distinction of property. The woods are as free as the waters; and the odious landmark was never seen to arrest the foot 10 of the hunter.

We are carried along upon the great wheel of things. We trouble ourselves not about the uncertainties, or the seeming irregularities of its motions. When the comet extends its long glittering tail over our thick forests, or when the moon puts on her black mantle of mourning, we apprehend no cause of alarm. It is the work of the great spirit of the universe, who sleepeth not, but day and night guides his wonderful machine in the way that is best.

However numerous may be our wives, or our children around us, we afflict not our souls with trouble to know what will become of them when we are no more. Whether they shall be doomed to carry wood, as slaves, on the borders of the white men; or to bring the heavy load of waters from the springs of *Owya menah*, it is the same thing. We leave them to the care of that good Being who is the protector of the destitute.

We hear not the voice of the taxgatherer at our 30 doors, to take away our bed of skins to support the luxuries of the proud and governments that riot on the spoils of the poor. We despise all tributes, and abhor those burdens which are imposed on the white men to tame and degrade the spirit.

Surrounded by forests that have no lines of boundary, we fear no storms—they blow far above us and are spent in the regions over the tops of the trees. We are in dread of no droughts, for nature has so overshadowed the soil that the sunbeams cannot scorch it. It is therefore always moist, and favorable to the little gardens that give us the vegetables we want. The most impetuous torrents are arrested by the woods and thickets, and cannot sweep away our harvests before them.

Our manner of life renders us alert, cheerful, and courageous. We live in the midst of content; and when the time comes that we must depart to the silent mansions of our fathers, we depart without re-

gret, because we are sure that our sleep, though in reality it may be long, can be to us but a moment. When that interrupting pause of life is once made, a total oblivion of the past ensues; but we suppose we shall soon revive, young, vigorous, and beautiful, to enjoy once more the chase of the forest and the pleasures of the wigwam. This seems to be the economy of Nature, at least with regard to the men of the woods.

1795

### Stanzas

*Occasioned by certain absurd, extravagant, and even blasphemous panegyrics and encomiums on the character of the late gen. Washington, that appeared in several pamphlets, journals, and other periodical publications, in January, 1800.*

No tongue can tell, no pen describe  
The frenzy of a numerous tribe,  
Who, by distemper'd fancy led,  
Insult the memory of the dead.  
Of old, there were in every age  
Who stuff'd with gods the historian's page,  
And raised beyond the human sphere  
Some who, we know, were mortal here.

Such was the case, we know full well  
When darkness spread her pagan spell;  
Mere insects, born for tombs and graves,  
They changed into celestial knaves;  
Made some, condemn'd to tombs and shrouds,  
Lieutenant generals in the clouds.

In journals meant to spread the news  
From state to state—and we know whose—  
We read a thousand idle things  
That madness pens, or folly sings.

Was, Washington, your conquering sword  
Condemn'd to such a base reward?  
Was trash, like that we now review,  
The tribute to your valor due?

One holds you *more than mortal kind*,  
One holds you *all ethereal mind*,  
This puts you in your Saviour's seat,  
'That makes you *dreadful in retreat*.

One says you *are become a star*,  
One makes you *more resplendent, far*;  
One sings, that, when to death you bow'd,  
Old mother nature *shriek'd aloud*.

30

We grieve to see such pens profane  
The first of chiefs, the first of men.—  
To Washington—a man, who died—  
Is *abba*,<sup>75</sup> *father* well applied?

Absurdly, in a frantic strain,  
Why ask him not for *sun* and *rain*?—  
We sicken at the vile applause  
That bids him *give the ocean laws*.

Ye patrons of the ranting strain,  
What *temples have been rent in twain*?  
What fiery chariots have been sent  
To dignify the sad event?—

O ye profane, irreverent few,  
Who reason's medium never knew,  
On you she never glanced her beams;  
You carry all things to extremes.

Shall they who spring from parent earth  
Pretend to more than mortal birth?  
Or, to the omnipotent allied,  
Control his heaven, or join his side?

Or is there not some chosen curse,  
Some vengeance due, with lightning's force,  
That far and wide destruction spreads,  
To burst on such irreverent heads!

Had they, in life, be-praised him so,  
What would have been the event I know:  
He would have spurn'd them, with disdain,  
Or rush'd upon them with his cane.

He was no god, ye flattering knaves,  
He *own'd no world, he ruled no waves*;  
But—and exalt it, if you can,  
He was the upright, *honest man*.

This was his glory; this outshone  
Those attributes you dote upon:  
On this strong ground he took his stand;  
Such virtue saved a sinking land.

1800

1825

<sup>75</sup> A title of honor, generally signifying "Father," used by Jews in the Talmudic period; also used as a title for the deity by Jesus and his contemporaries, and later by Greek-speaking Christians.

## On a Honey Bee

DRINKING FROM A GLASS OF WINE  
AND DROWNED THEREIN

THOU, born to sip the lake or spring,  
Or quaff the waters of the stream,  
Why hither come, on vagrant wing?  
Does Bacchus tempting seem,  
Did he for you this glass prepare?  
Will I admit you to a share?

40 Did storms harass or foes perplex,  
Did wasps or king-birds bring dismay,  
Did wars distress, or labors vex,  
Or did you miss your way?  
A better seat you could not take  
Than on the margin of this lake.

10

Welcome!—I hail you to my glass:  
All welcome here you find;  
Here let the cloud of trouble pass,  
Here be all care resigned.  
50 This fluid never fails to please,  
And drown the griefs of men or bees.

What forced you here we cannot know,  
And you will scarcely tell,—  
But cheery we would have you go  
And bid a glad farewell:  
On lighter wings we bid you fly,—  
Your dart will now all foes defy.

20

Yet take not, oh! too deep a drink,  
And in this ocean die;  
Here bigger bees than you might sink,  
Even bees full six feet high.  
Like Pharaoh, then, you would be said  
To perish in a sea of red.

30

Do as you please, your will is mine;  
Enjoy it without fear,  
And your grave will be this glass of wine,  
Your epitaph—a tear;  
Go, take your seat in Charon's <sup>76</sup> boat;  
We'll tell the hive, you died afloat.

1809

<sup>76</sup> The ferryman on the River Styx.

*To a Caty-Did*

In a branch of willow hid  
Sings the evening Caty-did:  
From the lofty locust bough  
Feeding on a drop of dew,  
In her suit of green arrayed  
Hear her singing in the shade  
Caty-did, Caty-did, Caty-did!

While upon a leaf you tread,  
Or repose your little head,  
On your sheet of shadows laid,  
All the day you nothing said:  
Half the night your cheery tongue  
Reveled out its little song,  
Nothing else but Caty-did.

From your lodgings on the leaf  
Did you utter joy or grief?—  
Did you only mean to say,  
I have had my summer's day,  
And am passing, soon, away  
To the grave of Caty-did:—  
Poor, unhappy Caty-did!

But you would have uttered more  
Had you known of nature's power—  
From the world when you retreat,  
And a leaf's your winding sheet,  
Long before your spirit fled,  
Who can tell but nature said,  
Live again, my Caty-did!  
Live and chatter, Caty-did.

Tell me, what did Caty do?  
Did she mean to trouble you?  
Why was Caty not forbid  
To trouble little Caty-did?  
Wrong indeed at you to fling,  
Hurting no one while you sing  
Caty-did! Caty-did! Caty-did!

Why continue to complain?  
Caty tells me, she again  
Will not give you plague or pain:—  
Caty says you may be hid  
Caty will not go to bed  
While you sing us Caty-did.  
Caty-did! Caty-did! Caty-did!

But while singing, you forgot  
To tell us what did Caty not:  
Caty did not think of cold,  
Flocks retiring to the fold,  
Winter, with his wrinkles old,  
Winter, that yourself foretold  
When you gave us Caty-did.

50

Stay securely in your nest;  
Caty now will do her best,  
All she can to make you blest;  
But, you want no human aid—  
10 Nature, when she formed you, said,  
"Independent you are made,  
My dear little Caty-did:  
Soon yourself must disappear  
With the verdure of the year,—"  
And to go, we know not where,  
With your song of Caty-did.

20 *On the Universality and Other Attributes  
of the God of Nature*<sup>77</sup>

All that we see, about, abroad,  
What is it all, but nature's God?  
In meaner works discover'd here  
No less than in the starry sphere.

In seas, on earth, this God is seen;  
All that exist, upon him lean;  
He lives in all, and never stray'd  
A moment from the works he made:

30 His system fix'd on general laws  
Bespeaks a wise creating cause;  
Impartially he rules mankind  
And all that on this globe we find.

10

Unchanged in all that seems to change,  
Unbounded space is his great range;  
To one vast purpose always true,  
No time, with him, is old or new.

In all the attributes divine  
Unlimited perfectings shine;  
40 In these enwrapt, in these complete,  
All virtues in that centre meet.

20

<sup>77</sup> This and the next two poems illustrate Freneau's deistic religion.

This power who doth all powers transcend,  
To all intelligence a friend,  
Exists, the *greatest and the best* \*  
Throughout all worlds, to make them blest.

All that he did he first approved,  
He all things into *being* loved;  
O'er all he made he still presides,  
For them in life, or death provides.

1815

### *On the Uniformity and Perfection of Nature*

On one fix'd point all nature moves,  
Nor deviates from the track she loves;  
Her system, drawn from reason's source,  
She scorns to change her wonted course.

Could she descend from that great plan  
To work unusual things for man,  
To suit the insect of an hour—  
This would betray a want of power,

Unsettled in its first design  
And erring, when it did combine  
The parts that form the vast machine,  
The figures sketch'd on nature's scene.

Perfections of the great first cause  
Submit to no contracted laws,  
But all-sufficient, all-supreme,  
Include no trivial views in them.

Who looks through nature with an eye  
That would the scheme of heaven descry,  
Observes her constant, still the same,  
In all her laws, through all her frame.

10

No imperfection can be found  
In all that is, above, around,—  
All, nature made, in reason's sight  
Is order all and all is right.<sup>78</sup>

20

1815

\* Jupiter, optimus, maximus. Cicero.

### *On the Religion of Nature*

The power that gives with liberal hand  
'The blessings man enjoys, while here,  
And scatters through a smiling land  
The abundant products of the year;  
That power of nature, ever bless'd,  
Bestow'd religion with the rest.

Born with ourselves, her early sway  
Inclines the tender mind to take  
The path of right, fair virtue's way  
Its own felicity to make.  
This universally extends  
And leads to no mysterious ends.

10

Religion, such as nature taught,  
With all divine perfection suits;  
Had all mankind this system sought  
Sophists would cease their vain disputes,  
And from this source would nations know  
All that can make their heaven below.

This deals not curses on mankind,  
Or dooms them to perpetual grief,  
If from its aid no joys they find,  
It damns them not for unbelief;  
Upon a more exalted plan  
Creatress nature dealt with man—

20

Joy to the day, when all agree  
On such grand systems to proceed,  
From fraud, design, and error free,  
And which to truth and goodness lead:  
Then persecution will retreat  
And man's religion be complete.

30

1815

<sup>78</sup> Compare the concluding lines of the second epistle of Pope's *Essay on Man* (1732):

All Nature is but Art, unknown to thee;  
All Chance, Direction, which thou canst not see;  
All Discord, Harmony not understood;  
All partial Evil, universal Good:  
And, spite of Pride, in erring Reason's spite,  
One truth is clear, Whatever is, is right.

## JAMES FENIMORE COOPER (1789-1851)

Cooper has been interpreted variously by different generations. By the time he went abroad in 1826, his first half dozen novels had made him an international figure. His stories were republished in England and translated in France, Germany, Italy, Sweden, and Denmark almost immediately. He was widely applauded as the American Scott. During the years that he spent in Europe (1826-1833), he became a critic of European civilization, and immediately upon his return home, he became thoroughly disliked by large segments of American society for his frank criticism of life as he found it in the United States. Following his death in 1851, his position became secure as the great prose poet of the frontier and as the annalist of American naval history. The twentieth century is inclined to find his social criticism most significant. He was at various times novelist, romancer of the frontier and of the sea, chronicler and historian, commentator on civilizations and governments, and critic of society.

Motivated as he was throughout his life by what he called his "American principles," and living in a time when the United States was struggling through schisms and conflicts to attain national harmony and cultural homogeneity, it was inevitable that he should have been more than a mere practitioner of *belles-lettres* or a spinner of pleasant yarns. During the years when Cooper grew to manhood, America was divided politically between Federalists and Republicans, socially between aristocrats and democrats, religiously between Congregationalists and Unitarians, philosophically between idealists and materialists, and economically between agrarians and industrialists. The party spirit of Hamilton and Jefferson's day developed into the factionalism of Jackson's time. Men like Cooper felt that these divergencies and conflicts must be synthesized by a unifying body of principles before national and cultural unity could be achieved. All of his writings are therefore in greater or lesser degree activated by his so-called "American principles," which have been analyzed by Professor Robert E. Spiller as (1) a belief in liberty as a moral force, (2) a social structure with private property ownership as its base, (3) an aristocracy of worth, instead of

blood or wealth, and (4) a strong sense of nationality and cultural solidarity. These principles and their implications animate much of Cooper's works. Their injection into his writings removes his books from the narrow realm of polite literature into that broader concept by which American literature is conceived as an expression of the whole of American experience. Literature, he held, should not exist as an end in itself, and the social novel as he wrote it he considered to be a consciously purposive but nevertheless legitimate form of art. Aside from his great saga of *Leatherstocking* on the frontier and of his notable sea stories, Cooper's greatest service as a literary man is his enlargement of the scope of American letters.

Born at Burlington, New Jersey, in 1789, Cooper spent his boyhood at Otsego Hall, Cooperstown, New York, where his father, a judge and owner of a large estate in what was still essentially a frontier country, lived in gentlemanly and patriarchal state. It has been suggested that here already were brought to bear upon the boy the two dominant, often rival, forces of his character: (1) the inherited gentility of family, aristocratic bearing, and patrician way of life and (2) the republican sympathies inherent in the frontier conditions of central New York. Following his preparation for college by an Anglican clergyman of Albany, he entered Yale in 1802, but failed to distinguish himself as a student, meanwhile acquiring a settled distaste for New England and a decided prejudice against all Yankees. Cashiered for a student prank during his junior year, he was articled by his father to the captain of a merchant vessel sailing for England, and during 1808-1811 he served as a midshipman in the United States Navy and saw duty chiefly on the Great Lakes. Following his marriage in 1811 to Susan Augusta De Lancey of an old Tory family, he resigned from the Navy and settled down to the pleasant life of a country gentleman in Westchester County, where he was near enough to New York City to attend the theatre and to enjoy social and literary contacts.

Up to this time he had given no indication of being interested in writing; but one day, while read-

ing aloud to his wife an English novel, and growing impatient with its insipid nature, he remarked that he could write a better book himself. Challenged by his wife to try, he wrote *Precaution*, published in 1820. It is a conventional novel of English society, about which Cooper knew nothing at first hand; but its poor success aroused Cooper's fighting instincts to write a book that would command the attention of readers. Ashamed of having "fallen into the track of imitation" in his first work, Cooper later explained, "I endeavoured to repay the wrong done to my own views [his American principles], by producing a work that should be purely American, and of which love of country should be the theme." The result was *The Spy* (1821), which established his reputation as a novelist, and which marks, according to Carl Van Doren, the coming of age of American fiction. A cursory comparison between this novel and the best of Charles Brockden Brown's hot-house products should serve to illustrate the truth of Mr. Van Doren's observation.

The action of the story is localized in Westchester County, the Neutral Ground between the two armies of the Revolutionary War, which his long residence had made thoroughly familiar to him. For his hero he chose Harvey Birch, a spy, who had served General Washington with extraordinary fidelity, and an account of whose exploits he had heard years before from John Jay.

Although the language is somewhat stilted and affected, the story itself is vigorously narrated. It introduces us to Cooper's device of flight and pursuit, which he was to repeat many times in his later novels. It contains, besides, a surprising variety of characters drawn from all stations of life, and it develops and maintains suspense admirably through rapid action, sharp contrast, and mental tension. Three editions of *The Spy* were called for during the first year of its appearance, and Cooper was gratified to find popular support for his idea of employing familiar American scenes, interests, and characters for literary treatment. The success of the book had the added effect of heightening or confirming the ideas slowly forming in his mind of his so-called American "opinions" or "principles."

His next novel, *The Pioneers* (1823), was an extension of these same principles with the difference that for its material he turned to another great source-area of American fiction—the settlement of the frontier. The novel introduces us not only to Natty Bumppo, the Leatherstocking, who was to become his greatest fictional creation, but also to his successful portraiture of that vast movement by which the

wilderness was conquered by the American people. Here he was in his native element, having to draw only upon his own knowledge of the frontier society in which he had grown up. This familiarity with the variety of scene and character and his matchless skill of infusing vitality into it account for the remarkable success which the book enjoyed. Thirty-four hundred copies were sold on the first day of its publication.

Before he went on with this theme, he wrote *The Pilot* (1824, but dated 1823), a patriotic romance of the sea during Revolutionary days. The book was prompted by his dissatisfaction with Scott's *Pirate*. Believing that Scott as a landsman had failed to make the best of his opportunities, Cooper aimed to show in *The Pilot* what a man who had sailed the high seas might do with a sea tale. The story is notable as a thrilling account of sea battles, of flights and pursuits, in which John Paul Jones as the pilot figures prominently. But his best creation is the salty old sailor, Long Tom Coffin, who is on the sea what Leatherstocking is in the forest. The book is the first of a notable group of American sea stories, to which Cooper himself later added, among others, *The Red Rover* in 1828, *The Wing-and-Wing* in 1842, and *Afloat and Ashore* in 1844, and to which belong such classics as Dana's *Two Years before the Mast* (1840) and Melville's *Moby Dick* (1851).

Following these three successes, Cooper became the leading literary personality in New York City. He founded and dominated the famous literary society, the Bread and Cheese Club, took an active part in such public affairs as the welcoming of Lafayette on his return to America, and received an honorary degree from Columbia. About this time he planned a series of thirteen historical and patriotic novels, one for each of the original states, but only one was written—*Lionel Lincoln* (1825), an accurate but rather dull account of Bunker's Hill. The next year he returned to Leatherstocking in *The Last of the Mohicans*, to write what is generally considered his best novel. In it Natty Bumppo reappears as Hawkeye, now in the prime of manhood, as a scout in the frontier warfare between the English and the French and Indians. The book introduces also the Indian chiefs, Chingachgook and Uncas, distinguished for their noble, cunning, and romantic characters, as Magua, the Iroquois chieftain, is notable for the opposite qualities. The book is devoted to an epic-like portrayal of the vanishing Indian race, in a setting of the changeless majesty of the forest that sharpens, by contrast, the restless sense of danger and death.

In 1827 Cooper published *The Prairie*, portraying Leatherstocking in his extreme old age, compelled to retreat before the encroaching westward movement of the settlements. It completes the saga of the pioneer. Years later, after much had intervened to take his mind away from Chingachgook and Uncas, Magua and Hawkeye, he wrote two more novels, *The Pathfinder* in 1840 and *The Deerslayer* in 1841. These supply, as it were, the third and first acts, respectively, to make the five novels an epic of the frontier in a kind of dramatic progression of five acts. The order in which they should be read to illustrate what Cooper himself referred to as "a drama in five acts" is as follows: *The Deerslayer* (1841), *The Last of the Mohicans* (1826), *The Pathfinder* (1840), *The Pioneers* (1823), and *The Prairie* (1827). Leatherstocking is the unifying character, shown in five successive stages of his long and hazardous life. In *The Deerslayer*, laid in the time between 1740 and 1745, he is a young woodsman, on his first warpath. *The Last of the Mohicans* and *The Pathfinder* both belong to the period of the French and Indian wars—1756–1757, to be precise—when Leatherstocking, now aged about forty, is at the height of his strength and prowess. In *The Pioneers*, we are carried forward to 1793. The old scout is already past his prime. The country is being rapidly settled; and the old hunter and pathfinder, as he is compelled to retreat before the successive waves of settlers, grumbles that he loses himself in the clearings which the settlers' axes have made. In *The Prairie*, which represents the dénouement, we have arrived at the year 1804, just after the Louisiana Purchase. The frontiersman, fleeing before the encroachments and restraints of the settlements, finds himself an old man—no longer the deerslayer and pathfinder, but a trapper. His former friends are all dead; and his famous rifle Killdeer is now out-of-date and ready, like its owner, to be laid aside. Such are his thoughts as he watches the emigrant trains typifying the westward surge of civilization in which there is no place for his free life.

Like Daniel Boone, Leatherstocking is a heroic figure symbolizing a momentous epoch in American history. He is a highly romanticized figure, too much the poet of fine moral sentiment and the philosopher of deistic altruism to be quite convincing as a man drawn entirely from frontier life. Similarly Cooper's "noble red men" are idealizations of dignity, self-control, tribal loyalty, and reverence, which identify them more with Christian than pagan ethics, and suggest that, like Leatherstocking, they derive as much from French theories of the noble savage as from Cooper's own observations among the characters of

the frontier. The polished British and French officers and gentlemen who move across the scenes are too much the "fine flowers of civilization" to be quite alive. Finally, his "females" (for that was the term used in Cooper's day, when "lady" was still reserved for women of social or class distinction) are conventional figures possessing tender hearts, graceful forms, and a superabundance of "sensibility," so that Lowell had some justice on his side when he wrote in *A Fable for Critics*:

And the women he draws from one model don't vary,  
All sappy as maples and flat as a prairie.

There are other flaws. The language is often stilted and verbose. Evidences of hurried and careless writing are everywhere. Words are often ill-chosen, attempts at dialogue are sometimes amateurish, and pseudo-archaisms detract from the total effect of naturalness and simplicity that he aimed at. He shows little skill in anything more than the simplest plot; his handling of a complex situation is always confusing or cumbersome. Some of his stories open languidly, and others spin themselves out needlessly after the main business of the story has been transacted. Instead of carefully working out proper motivations, he resorts too frequently to stock devices; and some of his most thrilling narratives and his most exciting episodes—a battle, a pursuit, a capture, an escape, or a hand-to-hand conflict—are all too often prepared by some trifling accident or coincidence of the sort that led Mark Twain to rename the Leatherstocking tales the "Broken-Twig Series."

Nevertheless, as Percy H. Boynton has observed, few who came to scoff could have remained to rival or surpass Cooper as a story-teller. His accounts of deadly struggles and hairbreadth escapes have thrilled millions of readers at home and abroad, and his novels were long the most potent inducements to lure weary Europeans to the new land. In Europe, as in America, he remains perennially popular, and few ask or care how accurate his details of frontier existence or how authentic his characterization of woodsmen and Indians are. His saga-like portrayal of the frontiersman received eloquent expression in the remark of a French statesman in the spring of 1917, when the American national spirit was at length roused to enter the world conflict, "Thank God, the spirit of Leatherstocking is awake." Meanwhile, a hundred years after their appearance, Cooper's novels continue to sell in a way to gladden the heart of many a contemporary novelist and to prove the justice of Cooper's remark late in his life, "If anything from the

pen of the writer of these romances is to outlive himself, it is unquestionably the series of 'The Leatherstocking Tales.'"

Long before the epic of the frontier was told, Cooper turned to new scenes and other books. In 1826 he received a nominal appointment as consul in Lyons, France, and for seven years (1826-1833) he lived in Europe, traveling a good deal in England, Holland, Germany, France, Switzerland, and Italy, and meeting many European notables. This experience vastly widened his outlook and turned his mind in new directions. His travels made him see his own country in a different light and to appreciate anew her virtues; and while he was made aware of the graces and dignities of aristocratic countries, he also appraised the social oppressions on which they so often depended. His nationalism thus intensified, he resented the ignorance everywhere shown by Europeans regarding America, and set himself to educating them in sounder views and attitudes toward his native land. It was a hopeless and thankless task, as Franklin or Irving could have told him—especially for one as unabashedly outspoken as Cooper was. His *Notions of the Americans* (1828), too frankly partisan to convince Europeans, served only to annoy them; and his three novels—*The Bravo* (1831), *The Heidenmauer* (1832), and *The Headsman* (1833), designed to "debunk" the glamour of aristocratic and feudal traditions in Italy, Germany, and Switzerland, respectively—further antagonized his European readers. An unprofitable controversy in Paris over the relative costs of the French and American governments into which he allowed himself to be drawn pleased neither nation. His residence in Europe served only to precipitate the conflicts long brewing within him between his innately aristocratic social sensibilities and his republican convictions and to engender the critical temperament that embittered the rest of his life.

But before his comparative studies of European and American society completely absorbed him, he wrote three more novels that are innocent of social and political criticism. *The Red Rover* of 1827 is a notable sea tale in which the ocean plays the same role in disciplining man that the frontier and later the prairie play in the life of Natty Bumppo. In *Wept of Wish-ton-Wish* (1829) he wrote a historical romance of New England around an episode of King Philip's War that was more successful than *Lionel Lincoln* had been, despite his apparent dislike of the Puritan characters whom he portrayed. *The Water Witch*, which followed the next year, and which

Cooper regarded as the most imaginative of his books, is another story of the sea, including an account of a spirited naval battle; but his attempt to localize a supernatural legend in New York harbor, he admitted a few years later, proved "a comparative failure."

When he returned to New York in 1834, he was met by an attack upon his conduct as a critic of Europe. A *Letter to His Countrymen* (1834) was his prompt reply, explaining that his books on Europe were motivated solely by his desire to set aristocracy in its proper relation to democracy and to bring "American opinion . . . to bear on European facts." But he went further to explain that while he espoused republican as against aristocratic principles, he was not prepared to join wholeheartedly in the American chorus of self-approval just then sounding on every hand. He discovered that during the seven years of his absence the American temper had undergone a sweeping change, and he did not like what he saw of the political demagoguery, the social leveling rampant under the new Jacksonian spirit of frontier democracy, and the rising power of the masses unless they were prepared to wield that power wisely.

A careful reading of the passages in *The American Democrat* (1838) in which he distinguished between "the aristocrat" and "the democrat" will indicate why, though he considered some of the popular fruits of Jacksonian democracy to be vicious, breeding a greedy, ignorant, and contentious spirit, he could admire the sterling qualities of Old Hickory himself, and vote for him. It was not democracy that he attacked, but what he considered the abuse of it. Accordingly he lashed out at every group or agency which he sensed to be dangerous to true democracy—whether these represented entrenched conservatism or unbridled innovation. He particularly deplored the factionalism which party spirit seemed to him to breed. Himself nominally a member of the Democratic party (although he did not subscribe to all its tenets), he repeatedly declared that he "belonged" to neither of the two great American parties, and that if he had his way, he would do away with parties altogether. While his European novels attacked political corruption and feudalistic survivals in old-world governments and society, pointed to the dangers inherent in the assumption by government of infallibility or arbitrary power, and illustrated the baneful effects of special privilege, they were intended also to warn Americans that watchful vigilance was necessary to prevent the perversion of republicanism into tyrannical absolutism. And he made it clear that the

honorable guild of the sued," he himself became one of "the most vilified men in America."

Personalities loomed large in these legal battles; but Cooper was really interested in larger issues and broader principles. These have been conveniently summarized by Professor Robert E. Spiller as a set of ideals: (1) "a class consciousness in America founded on a flexible principle of moral worth and individual ability, but controlling social life, as in Europe, through education, wealth, and property," (2) "an American press, freed from imitative servility to foreign presses and foreign political interests, and guided by high moral and patriotic ideals," and (3) "an American literary criticism, freed from personal abuse, and consciously fostering a national literature." Naturally his adversaries lost sight of these more general objects, and, while attributing his quarrelsomeness to personal vindictiveness, put him down as a common scold. These embroilments continued to embitter his later years, during which he found himself distracted and confused by issues that carried him further and further from his more rewarding career as a novelist.

Indeed, in 1834 he swore that he would write no more novels for an ungrateful world unprepared to profit by good advice; but once fairly launched on his controversial career, there was no withdrawing from social criticism, and after six years he returned to the novel as such, finishing out in 1840 and 1841 the Leatherstocking series. He began in 1836 a series of five volumes of *Gleanings in Europe*—critical travel sketches of France, England, Switzerland, Italy, and Germany, that irritated the people of two continents; in 1839 he published an admirable *History of the Navy of the United States of America*, the real value of which long remained obscured by a controversy that had no direct bearing on the merit of the book; and he wrote also various stories and books of a miscellaneous character. So he proceeded, in the midst of vilification and controversy, to produce a shelf of fiction, history, and social criticism.

One important group of these later works is a series of sea stories. *Mercedes of Castile* (1840) deals with the first voyage of Columbus. *The Two Admirals* (1842) contains one of his best accounts of a naval battle, and *Wing-and-Wing* (1842), a romantic story of the Mediterranean, ranks high among his sea tales. *Afloat and Ashore* (1844), dealing with the evils of impressment, is no less powerful in its description of naval engagements than were his earlier sea stories, and *Jack Tier* (1846-48) is a lurid tale of piracy during the period of the Mexican War.

During 1844-46 he published also a series of novels

dealing with the theory of property rights as the basis of American civilization. *Afloat and Ashore* (1844) is properly a kind of introduction to the so-called Little-page trilogy: *Satanstoe* (1845), *The Chainbearer* (1845), and *The Redskins* (1846). In these novels he treated three generations of a New York family with some of his old skill, but more immediately they were Cooper's contribution to the Anti-Rent War of 1839-46, affording him an opportunity to promulgate his ideas of the inviolability of property rights as affecting his "American principles" of democracy, and providing future generations with a fine piece of social documentation for up-state New York for the period covered.

In 1846 he brought out the *Lives of Distinguished American Naval Officers*, to clinch his position as historian of the United States Navy. Thereafter came various novels and even a comedy called *Upside Down, or Philosophy in Petticoats*, which was produced in New York in 1850, but never published. Among his more notable later books were *The Crater* (1848), a social allegory relating the fate of a colony founded on a volcanic reef, and *The Ways of the Hour* (1850), a satire on trial by jury designed "to draw the attention of the reader to some of the social evils that beset us, more particularly in connection with the administration of criminal justice." The conclusion is the melancholy reflection of Cooper, within a year of his death, that after his long struggle for his "American opinions," the vulgar were still occupying the seats of the mighty, the press still used its power indiscriminately, and the demagogue still went unchecked, while the law and the courts were in the employ of those who planned the destruction of stability and the rights of property. Chaos—domestic, economic, national—threatened. His conclusion is that of an irreconcilable Tory commenting on past times when "in the days of the monarchy, in truth, greater republican simplicity really reigned among us, in a thousand ways" than reigns in the degenerate, decadent days of 1850. In the last days of his life he reaffirmed his distaste for the America of his later days and of the future toward which he saw America rushing, by forbidding any biography of his to be authorized.

While to most readers Cooper is the creator of the nearest approach Americans have to a national epic, and his Leatherstocking series undoubtedly remains his greatest contribution to American literature, he is coming to be viewed as essentially greater than a mere *belles-lettres* writer. For over and above the narrator of thrilling stories of the frontier and of the sea, he was a conservative patriot—none more sincere and

none more indefatigable in urging his countrymen to adopt noble principles while sloughing off shabby ones. If his patriotism led him into endless controversy with his countrymen, it was this same love of country that made him the creator of Harvey Birch,

Long Tom Coffin, Chingachgook, and Leatherstocking. His native qualities of character and the native quality of his books are what give him enduring worth.

*Preface to The Spy*<sup>1</sup>

The author has often been asked if there were any foundation in real life, for the delineation of the principal character in this book. He can give no clearer answer to the question, than by laying before his readers a simple statement of the facts connected with its original publication.

Many years since, the writer of this volume was at the residence of an illustrious man, who had been employed in various situations of high trust during the darkest days of the American revolution. The dis-

course turned upon the effects which great political excitement produce on character, and the purifying consequences of a love of country, when that sentiment is powerfully and generally awakened in a people. He who, from his years, his services, and his knowledge of men, was best qualified to take the lead in such a conversation, was the principal speaker. After dwelling on the marked manner in which the great struggle of the nation, during the war of 1775, had given a new and honorable direction to the thoughts and practices of multitudes whose time had formerly been engrossed by the most vulgar concerns of life, he illustrated his opinions by relating an anecdote, the truth of which he could attest as a personal witness.

<sup>1</sup> *The Spy* (1821), the second of Cooper's novels, was his first popular success and his first book on an American theme. Cooper often rewrote his prefaces or introductions for new editions of his works. The preface here reprinted was written for the 1849 New York edition, printed by Putnam. It is of especial interest because it relates in detail the anecdote on which *The Spy* is based, as Cooper heard it from Judge John Jay, and because it reveals something of Cooper's method of writing his earlier romances.

The dispute between England and the United States of America, though not strictly a family quarrel, had many of the features of a civil war. The people of the latter were never properly and constitutionally subject to the people of the former, but the inhabitants of both countries owed allegiance to a common king. The Americans, as a nation, disavowed this allegiance, and the English choosing to support their sovereign in the attempt to regain his power, most of the feelings of an internal struggle were involved in the conflict. A large proportion of the emigrants from Europe, then established in the colonies, took part

with the crown; and there were many districts in which their influence, united to that of the Americans who refused to lay aside their allegiance, gave a decided preponderance to the royal cause. America was then too young, and too much in need of every heart and hand, to regard these partial divisions, small as they were in actual amount, with indifference. The evil was greatly increased by the activity of the English in profiting by these internal dissensions; and it became doubly serious when it was found that attempts were made to raise various corps of provincial troops, who were to be banded with those from Europe, to reduce the young republic to subjection. Congress named an especial and a secret committee, therefore, for the express purpose of defeating this object. Of this committee Mr. —, the narrator of the anecdote, was chairman.

In the discharge of the novel duties which now devolved on him, Mr. — had occasion to employ an agent whose services differed but little from those of a common spy. This man, as will easily be understood, belonged to a condition in life which rendered him the least reluctant to appear in so equivocal a character. He was poor, ignorant, so far as the usual instruction was concerned; but cool, shrewd, and fearless by nature. It was his office to learn in what part of the country the agents of the crown were making their efforts to embody men, to repair to the place, enlist, appear zealous in the cause he affected to serve, and otherwise to get possession of as many of the secrets of the enemy as possible. The last he of course communicated to his employers, who took all the means in their power to counteract the plans of the English, and frequently with success.

It will readily be conceived that a service like this was attended with great personal hazard. In addition to the danger of discovery, there was the daily risk of falling into the hands of the Americans themselves, who invariably visited sins of this nature more severely on the natives of the country than on the Europeans who fell into their hands. In fact, the agent of Mr. — was several times arrested by the local authorities; and, in one instance, he was actually condemned by his exasperated countrymen to the gallows. Speedy and private orders to his gaoler alone saved him from an ignominious death. He was permitted to escape; and this seeming, and indeed actual, peril was of great aid in supporting his assumed character among the English. By the Americans, in his

little sphere, he was denounced as a bold and inveterate Tory. In this manner he continued to serve his country in secret during the early years of the struggle, hourly environed by danger, and the constant subject of unmerited opprobrium.

In the year — Mr. — was named to a high and honorable employment at a European court. Before vacating his seat in Congress, he reported to that body an outline of the circumstances related, necessarily suppressing the name of his agent, and demanding an appropriation in behalf of a man who had been of so much use, at so great risk. A suitable sum was voted, and its delivery was confided to the chairman of the secret committee.

Mr. — took the necessary means to summon his agent to a personal interview. They met in a wood, at midnight. Here Mr. — complimented his companion on his fidelity and adroitness; explained the necessity of their communications being closed; and finally tendered the money. The other drew back, and declined receiving it. "The country has need of all its means," he said; "as for myself, I can work, or gain a livelihood in various ways." Persuasion was useless, for patriotism was uppermost in the heart of this remarkable individual; and Mr. — departed, bearing with him the gold he had brought, and a deep respect for the man who had so long hazarded his life, unrequited, for the cause they served in common.

The writer is under an impression that, at a later day, the agent of Mr. — consented to receive a remuneration for what he had done; but it was not until his country was entirely in a condition to bestow it.

It is scarcely necessary to add, that an anecdote like this, simply but forcibly told by one of its principal actors, made a deep impression on all who heard it. Many years later, circumstances, which it is unnecessary to relate, and of an entirely adventitious nature, induced the writer to publish a novel, which proved to be, what he little foresaw at the time, the first of a tolerably long series. The same adventitious causes which gave birth to the book, determined its scene and its general character. The former was laid in a foreign country; and the latter embraced a crude effort to describe foreign manners. When this tale was published, it became matter of reproach among the author's friends, that he, an American in heart as in birth, should give to the world a work which aided perhaps, in some slight degree, to feed the imagina-

tions of the young and unpractised among his own countrymen by pictures drawn from a state of society so different from that to which he belonged. The writer, while he knew how much of what he had done was purely accidental, felt the reproach to be one that, in a measure, was just. As the only atonement in his power, he determined to inflict a second book, whose subject should admit of no cavil, not only on the world, but on himself. He chose patriotism for his theme; and to those who read this introduction and the book itself, it is scarcely necessary to add, that he took the hero of the anecdote just related as the best illustration of his subject.

Since the original publication of "The Spy," there have appeared several accounts of different persons who are supposed to have been in the author's mind while writing the book. As Mr. — did not mention the name of his agent, the writer never knew any more of his identity with this or that individual, than has been here explained. Both Washington and Sir Henry Clinton had an unusual number of secret emissaries; in a war that partook so much of a domestic character, and in which the contending parties were people of the same blood and language, it could scarcely be otherwise.

The style of the book has been revised by the author in this edition. In this respect, he has endeavored to make it more worthy of the favor with which it has been received; though he is compelled to admit there are faults so interwoven with the structure of the tale that, as in the case of a decayed edifice, it would cost perhaps less to reconstruct than to repair. Five-and-twenty years have been as ages with most things connected with America. Among other advances, that of her literature has not been the least. So little was expected from the publication of an original work of this description, at the time it was written, that the first volume of "The Spy" was actually printed several months, before the author felt a sufficient inducement to write a line of the second.

The efforts expended on a hopeless task are rarely worthy of him who makes them, however low it may be necessary to rate the standard of his general merit.

One other anecdote connected with the history of this book, may give the reader some idea of the hopes of an American author, in the first quarter of the present century. As the second volume was slowly printing, from manuscript that was barely dry when it went into the compositor's hands, the publisher intimated that the work might grow to a length that would consume the profits. To set his mind at rest, the last chapter was actually written, printed and paged, several weeks before the chapters which precede it were even thought of. This circumstance, while it cannot excuse, may serve to explain the manner in which the actors are hurried off the scene.

A great change has come over the country since this book was originally written. The nation is passing from the gristle into the bone, and the common mind is beginning to keep even pace with the growth of the body politic. The march from Vera Cruz to Mexico was made under the orders of that gallant soldier who, a quarter of a century before, was mentioned with honor, in the last chapter of this very book. Glorious as was that march, and brilliant as were its results in a military point of view, a stride was then made by the nation, in a moral sense, that has hastened it by an age, in its progress toward real independence and high political influence. The guns that filled the valley of the Aztecs with their thunder, have been heard in echoes on the other side of the Atlantic, producing equally hope or apprehension.

There is now no enemy to fear, but the one that resides within. By accustoming ourselves to regard even the people as erring beings, and by using the restraints that wisdom has adduced from experience, there is much reason to hope that the same Providence which has so well aided us in our infancy, may continue to smile on our manhood.

Cooperstown, March 29, 1849.

1821, 1849

*Preface to The Pioneers*<sup>2</sup>

As this work professes, in its titlepage, to be a descriptive tale, they who will take the trouble to read it may be glad to know how much of its contents is literal fact, and how much is intended to represent a general picture. The Author is very sensible that, had he confined himself to the latter, always the most effective, as it is the most valuable, mode of conveying knowledge of this nature, he would have made a far better book. But in commencing to describe scenes, and perhaps he may add 10 characters, that were so familiar to his own youth, there was a constant temptation to delineate that which he had known, rather than that which he might have imagined. This rigid adhesion to truth, an indispensable requisite in history and travels, destroys the charm of fiction; for all that is necessary to be conveyed to the mind by the latter had better be done by delineations of principles, and of characters in their classes, than by a too fastidious attention to originals.

New York having but one county of Otsego, and the Susquchanna but one proper source, there can be no mistake as to the site of the tale. The history of this district of country, so far as it is connected with civilized men, is soon told.

Otsego, in common with most of the interior of the province of New York, was included in the county of Albany, previously to the war of the separation. It then became in a subsequent division of territory, a part of Montgomery; and, finally, having 30 obtained a sufficient population of its own, it was set apart as a county by itself, shortly after the peace of 1783. It lies among those low spurs of the Alleghanies which cover the midland counties of New York; and it is little east of a meridional line drawn through the center of the state. As the waters of New York either flow southerly into the Atlantic or northerly into Ontario, and its outlet, Otsego Lake, being the source of the Susquchanna, is, of necessity, among its highest lands. The face of the country, the climate as it 30 was found by the whites, and the manners of the

settlers, are described with a minuteness for which the Author has no other apology than the force of his own recollections.

Otsego is said to be a word compounded of Ot, a place of meeting, and Sego, or Sago, the ordinary term of salutation used by the Indians of this region. There is a tradition which says, that the neighboring tribes were accustomed to meet on the banks of the lake to make their treaties, and otherwise to strengthen their alliances, and which refers the name to this practice. As the Indian agent of New York had a log dwelling at the foot of the lake, however, it is not impossible that the appellation grew out of the meetings that were held at his council fires; the war drove off the agent, in common with the other officers of the crown; and his rude dwelling was soon abandoned. The Author remembers it a few years later, reduced to the humble office of a smoke-house.

20 In 1779, an expedition was sent against the hostile Indians, who dwelt about a hundred miles west of Otsego, on the banks of the Cayuga. The whole country was then a wilderness, and it was necessary to transport the baggage of the troops by means of the rivers—a devious but practicable route. One brigade ascended the Mohawk, until it reached the point nearest to the sources of the Susquchanna; whence it cut a lane through the forest to the head of the Otsego. The boats and baggage were carried over this “portage,” and the troops proceeded to the other extremity of the lake, where they disembarked, and encamped. The Susquchanna, a narrow though rapid stream at its source, was much filled with “flood wood,” or fallen trees; and the troops adopted a novel expedient to facilitate their passage. The Otsego is about nine miles in length, varying in breadth from half a mile to a mile and a half. The water is of great depth, limpid, and supplied from a thousand springs. At its foot, the banks are rather less than thirty feet 30 high; the remainder of its margin being in mountains, intervals, and points. The outlet, or the Susquchanna, flows through a gorge in the low banks just mentioned which may have a width of two hundred feet. This gorge was dammed, and the waters of the lake collected; the Susquchanna was converted into a rill. When all was ready, the troops embarked, the dam

<sup>2</sup> *The Pioneers* (1823) was Cooper's third novel, and the first of the Leatherstocking series to be written, although it depicts the third of the five phases of Leatherstocking's career. When Cooper wrote *The Pioneers* he had not yet formed the plan of a series. This preface, written for the edition of 1850, is of particular interest because of its autobiographical details.

was knocked away, the Otsego poured out its current, and the boats went merrily down with the current.

General James Clinton, the brother of George Clinton, then governor of New York, and the father of De Witt Clinton, who died governor of the same state in 1827, commanded the brigade employed on this duty. During the stay of the troops at the foot of the Otsego a soldier was shot for desertion. The grave of this unfortunate man was the first place of human interment that the Author ever beheld, as the smoke-<sup>10</sup> house was the first ruin! The swivel alluded to in this work was buried and abandoned by the troops on this occasion; and it was subsequently found in digging the cellars of the Author's paternal residence.

Soon after the close of the war, Washington, accompanied by many distinguished men, visited the scene of this tale, it is said, with a view to examine the facilities for opening a communication by water with other points of the country. He stayed but a few hours.

In 1785, the Author's father, who had an interest in extensive tracts of land in this wilderness, arrived with a party of surveyors. The manner in which the scene met his eye is described by Judge Temple. At the commencement of the following year the settlement began; and from that time to this the country has continued to flourish. It is a singular feature in American life, that, at the beginning of this century, when the proprietor of the estate had occasion for settlers on a new settlement, and in a remote county,<sup>30</sup> he was enabled to draw them from among the increase of the former colony.

Although the settlement of this part of Otsego a little preceded the birth of the Author, it was not sufficiently advanced to render it desirable that an event, so important to himself, should take place in the wilderness. Perhaps his mother had a reasonable distrust of the practice of Dr. Todd, who must then have been in the novitiate of his experimental acquirements. Be that as it may, the Author was brought an<sup>40</sup> infant into this valley, and all his first impressions were here obtained. He has inhabited it ever since, at intervals; and he thinks he can answer for the faithfulness of the picture he has drawn.

Otsego has now become one of the most populous districts of New York. It sends forth its emigrants like any other old region; and it is pregnant with industry and enterprise. Its manufactures are prosperous; and it is worthy of remark, that one of the most ingen-

ious machines known in European art is derived from the keen ingenuity which is exercised in this remote region.

In order to prevent mistake, it may be well to say that the incidents of this tale are purely a fiction. The literal facts are chiefly connected with the natural and artificial objects, and the customs of the inhabitants. Thus the academy, and court-house, and jail, and inn, and most similar things, are tolerably exact. They have all, long since, given place to other build-<sup>10</sup> ings of a more pretending character. There is also some liberty taken with the truth in the description of the principal dwelling: the real building had no "firstly" and "lastly." It was of bricks, and not of stone; and its roof exhibited none of the peculiar beauties of the "composite order." It was erected in an age too primitive for that ambitious school of architecture. But the Author indulged his recollections freely when he had fairly entered the door. Here<sup>20</sup> all is literal, even to the severed arm of Wolfe, and the urn which held the ashes of Queen Dido.\*

The Author has elsewhere said that the character of Leather-Stocking is a creation, rendered probable by such auxiliaries as were necessary to produce that effect. Had he drawn still more upon fancy, the lovers of fiction would not have so much cause for their objections to his work. Still the picture would not have been in the least true, without some substitutes for most of the other personages. The great proprietor resident on his lands, and giving his name to, instead of receiving it from his estates, as in Europe, is common over the whole of New York. The physician, with his theory, rather obtained than corrected by experiments on the human constitution; the pious, self-denying, laborious, and ill-paid missionary; the half-educated, litigious, envious, and disreputable lawyer, with his counterpoise, a brother of the profession, of better origin and of better character; the shiftless, bargaining, discontented seller of his "bet-<sup>30</sup> terments;" the plausible carpenter, and most of the others, are more familiar to all who have ever dwelt in a new country.

\* Though forests still crown the mountains of Otsego, the bear, the wolf, and the panther are nearly strangers to them. Even the innocent deer is rarely seen bounding beneath their arches; for the rifle, and the activity of the settlers, have driven them to other haunts. To this change (which, in some particulars, is melancholy to one who knew the country in its infancy) it may be added, that the Otsego is beginning to be a niggard in its treasures.

It may be well to say here, a little more explicitly, that there was no intention to describe with particular accuracy any real characters in this book. It has been often said, and in published statements, that the heroine of this book was drawn after a sister of the writer, who was killed by a fall from a horse now near half a century since. So ingenious is conjecture, that a personal resemblance has been discovered between the fictitious character and the deceased relative! It is scarcely possible to describe two females of the same class in life, who would be less alike, personally, than Elizabeth Temple and the sister of the Author who met with the deplorable fate mentioned. In a word, they were as unlike in this respect, as in history, character, and fortunes.

Circumstances rendered this sister singularly dear

to the Author. After a lapse of half a century, he is writing this paragraph with a pain that would induce him to cancel it, were it not still more painful to have it believed that one whom he regarded with a reverence that surpassed the love of a brother, was converted by him into the heroine of a work of fiction.

From circumstances which, after this introduction, will be obvious to all, the Author has had more pleasure in writing "The Pioneers" than the book will, probably, ever give any of its readers. He is quite aware of its numerous faults, some of which he had endeavored to repair in this edition; but as he has—in intention, at least—done his full share in amusing the world, he trusts to its good nature for overlooking this attempt to please himself.

1823, 1850

FROM

### *Notions of the Americans*<sup>3</sup>

FROM LETTER XXIII

[On Learning and Literature]

The literature of the United States, has indeed, too [two] powerful obstacles to conquer before (to use a mercantile expression) it can ever enter the markets of its own country on terms of perfect equality with that of England. Solitary and individual works of genius may, indeed, be occasionally brought to light, under the impulses of the high feeling which has conceived them; but, I fear, a good, wholesome, profitable and continued pecuniary support, is the applause that talent most craves.<sup>4</sup> The fact, that an American publisher can get an English work without money, must, for a few years longer, (unless legislative protection shall be extended to their own authors,) have a tendency to repress a national literature. No man will pay a writer for an epic, a tragedy, a sonnet, a

history, or a romance, when he can get a work of equal merit for nothing. I have conversed with those who are conversant on the subject, and, I confess, I have been astonished at the information they imparted.

A capital American publisher<sup>5</sup> has assured me that there are not a dozen writers in this country, whose works he should feel confidence in publishing at all, while he reprints hundreds of English books without the least hesitation. This preference is by no means so much owing to any difference in merit, as to the fact that, when the price of the original author is to be added to the uniform hazard which accompanies all literary speculations, the risk becomes too great. The general taste of the reading world in this country is better than that of England.\* The fact is both proved and explained by the circumstance that thousands of works that are printed and read in the mother country, are not printed and read here. The publisher on this side of the Atlantic has the advantage of seeing the reviews of every book he wishes to print, and, what is of far more importance, he knows, with the

<sup>3</sup> *Notions of the Americans* bore the subtitle, *Picked up by a Travelling Bachelor*. It was published in two volumes in London and Philadelphia in 1828.

<sup>4</sup> It is to be observed that Cooper, more than any other writer, helped American authors overcome this obstacle. Charles Brockden Brown had had to finance his own novels in a market flooded with cheap reprints of English works of fiction, for which, in the absence of international copyright laws, the publishers paid nothing to the authors. Irving had succeeded in making his writings pay, but he had turned largely to the European scene. Cooper, writing on native subjects, invaded the English market itself and made a profitable career of writing.

\* The writer does not mean that the best taste of America is better than that of England; perhaps it is not quite so good; but, as a whole, the American reading world requires better books than the whole of the English reading world.

<sup>5</sup> Probably Matthew Carey.

exception of books that he is sure of selling, by means of a name, the decision of the English critics before he makes his choice. Nine times in ten, popularity, which is all he looks for, is a sufficient test of general merit. Thus, while you find every English work of character, or notoriety, on the shelves of an American book-store, you may ask in vain for most of the trash that is so greedily devoured in the circulating libraries of the mother country, and which would be just as eagerly devoured here, had not a better taste been created by a compelled abstinence. That taste must now be overcome before such works could be sold at all.

When I say that books are not rejected here, from any want of talent in the writers, perhaps I ought to explain. I wish to express something a little different. Talent is sure of too many avenues to wealth and honours, in America, to seek, unnecessarily, an unknown and hazardous path. It is better paid in the ordinary pursuits of life, than it would be likely to be paid by an adventure in which an extraordinary and skilful, because practised, foreign competition is certain. Perhaps high talent does not often make the trial with the American bookseller; but it is precisely for the reason I have named.

The second obstacle against which American literature has to contend, is in the poverty of materials.<sup>6</sup> There is scarcely an ore which contributes to the wealth of the author, that is found, here, in veins as rich as in Europe. There are no annals for the historian; no follies (beyond the most vulgar and commonplace) for the satirist; no manners for the dramatist; no obscure fictions for the writer of romance; no gross and hardy offences against decorum for the moralist; nor any of the rich artificial auxiliaries of poetry. The weakest hand can extract a spark from the flint, but it would baffle the strength of a giant to attempt kindling a flame with a pudding-stone. I very well know there are theorists who assume that the society and institutions of this country are, or ought to be, particularly favourable to novelties and variety. But the experience of one month, in these States, is

<sup>6</sup> The dearth of American materials for the American romancer, which Cooper here complains of, he made his particular problem; and during the course of his long and productive career, he did much to enlarge the scope of subjects considered acceptable for literary treatment. After the false start in *Precaution* (1820), for which he turned to English scenes, he wrote primarily of America for Americans. Even *The Bravo*, *The Heidenmauer*, and *The Headsman*, though they have European settings, were designed for American as much as for European consumption.

sufficient to show any observant man the falsity of their position. The effect of a promiscuous assemblage any where, is to create a standard of deportment; and great liberty permits every one to aim at its attainment. I have never seen a nation so much alike in my life, as the people of the United States, and what is more, they are not only like each other, but they are remarkably like that which common sense tells them they ought to resemble. No doubt, traits of character that are a little peculiar, without, however, being either very poetical, or very rich, are to be found in remote districts; but they are rare, and not always happy exceptions. In short, it is not possible to conceive a state of society in which more of the attributes of plain good sense, or fewer of the artificial absurdities of life, are to be found, than here. There is no costume for the peasant, (there is scarcely a peasant at all,) no wig for the judge, no baton for the general, no diadem for the chief magistrate. The darkest ages of their history are illuminated by the light of truth; the utmost efforts of their chivalry are limited by the laws of God; and even the deeds of their sages and heroes are to be sung in a language that would differ but little from a version of the ten commandments. However useful and respectable all this may be in actual life, it indicates but one direction to the man of genius.

It is very true there are a few young poets now living in this country, who have known how to extract sweets from even these wholesome, but scentless native plants. They have, however, been compelled to seek their inspiration in the universal laws of nature, and they have succeeded, precisely in proportion as they have been most general in their application. Among these gifted young men, there is one (Halleck)<sup>7</sup> who is remarkable for an exquisite vein of ironical wit, mingled with a fine, poetical, and, frequently, a lofty expression. This gentleman commenced his career as a satirist in one of the journals of New-York. Heaven knows, his materials were none of the richest; and yet the melody of his verse, the quaintness and force of his comparisons, and the exceeding humour of his strong points, brought him instantly into notice. He then attempted a general satire, by giving the history of the early days of a *belle*. He was again successful, though every body, at

<sup>7</sup> Fitz-Greene Halleck (1790-1867), the close associate of Joseph Rodman Drake (1795-1820), wrote a long social satire called *Fanny* (1819). He is best known today for his "Marco Bozzaris" (1825).

least every body of any talent, felt that he wrote in leading-strings. But he happened, shortly after the appearance of the little volume just named, (Fanny,) to visit England. Here his spirit was properly excited, and, probably on a rainy day, he was induced to try his hand at a *jeu d'esprit*, in the mother country. The result was one of the finest semi-heroic ironical descriptions to be found in the English language.\* This simple fact, in itself, proves the truth of a great deal of what I have just been writing, since it shows the effect a superiority of material can produce on the efforts of a man of true genius.

Notwithstanding the difficulties of the subject, talent has even done more than in the instance of Mr. Halleck. I could mention several other young poets of this country of rare merit. By mentioning Bryant,<sup>8</sup> Percival,<sup>9</sup> and Sprague,<sup>10</sup> I shall direct your attention to the names of those whose works would be most likely to give you pleasure. Unfortunately they are not yet known in Italian, but I think even you would not turn in distaste from the task of translation which the best of their effusions will invite.

The next, though certainly an inferior branch of imaginative writing, is fictitious composition. From the facts just named, you cannot expect that the novelists, or romance writers of the United States, should be very successful. The same reason will be likely, for a long time to come, to repress the ardour of dramatic genius. Still, tales and plays are no novelties in the literature of this country. Of the former, there are many as old as soon after the revolution; and a vast number have been published within the last five years. One of their authors of romance, who curbed his talents by as few allusions as possible to actual society, is distinguished for power and comprehensiveness of thought. I remember to have read one of his books (Wicland) when a boy, and I take it to be a never-failing evidence of genius, that, amid a thousand similar pictures which have succeeded, the

\* This little *morceau* of pleasant irony is called *Alnwick Castle*. [Cooper's note.]

<sup>8</sup> William Cullen Bryant (1794-1878) had by 1828 become popularly known as the author of "Thanatopsis," "To a Water-fowl," and the other poems collected in his volume of *Poems* (1821).

<sup>9</sup> James Gates Percival (1795-1856) was then considered one of America's most notable poets, until overshadowed by the ascendancy of Bryant. He was active in many pursuits; besides journalist and poet, he was an able linguist, philologist, and geologist.

<sup>10</sup> Charles Sprague (1791-1875), a Boston poet, much under the influence of Collins and Gray and others of the graveyard school of English poets.

images it has left, still stand distinct and prominent in my recollection. This author (Mr. Brockden Brown) enjoys a high reputation among his countrymen, whose opinions are sufficiently impartial, since he flattered no particular prejudice of the nation in any of his works.

The reputation of Irving is well known to you. He is an author distinguished for a quality (humour) that has been denied his countrymen; and his merit is the more rare, that it has been shown in a state of society so cold and so restrained. Besides these writers, there are many others of a similar character, who enjoy a greater or less degree of favour in their own country. The works of two or three have even been translated (into French) in Europe, and a great many are reprinted in England.<sup>11</sup> Though every writer of fiction in America has to contend against the difficulties I have named, there is a certain interest in the novelty of the subject, which is not without its charm. I think, however, it will be found that they have all been successful, or the reverse, just as they have drawn warily, or freely, on the distinctive habits of their own country. I now speak of their success purely as writers of romance. It certainly would be possible for an American to give a description of the manners of his own country, in a book that he might choose to call a romance, which should be read, because the world is curious on the subject, but which would certainly never be read for that nearly indefinable poetical interest which attaches itself to a description of manners less bald and uniform. All the attempts to blend history with romance in America, have been comparatively failures, (and perhaps fortunately,) since the subjects are too familiar to be treated with the freedom that the imagination absolutely requires. Some of the descriptions of the progress of society on the borders, have had a rather better success, since there is a positive, though no very poetical, novelty in the subject; but, on the whole, the books which have been best received, are those in which the authors have trusted most to their own conceptions of character, and to qualities that are common to the rest of the world and to human nature. This fact, if its truth be admitted, will serve to prove that the American writer must seek his renown in the exhibition of qualities that are general, while he is confessedly compelled to limit his observations to a state of society that has a wonderful

<sup>11</sup> Principally Cooper's own romances.

tendency not only to repress passion, but to equalize humours.

The Americans have always been prolific writers on polemics and politics. Their sermons and fourth of July orations are numberless. Their historians, without being very classical or very profound, are remarkable for truth and good sense. There is not, perhaps, in the language a closer reasoner in metaphysics than Edwards;<sup>12</sup> and their theological writers find great favour among the sectarians of their respective schools.

The stage of the United States is decidedly English.<sup>13</sup> Both plays and players, with few exceptions, are imported. Theatres are numerous, and they are to be found in places where a traveller would little expect to meet them. Of course they are of all sizes, and of every degree of decoration and architectural beauty known in Europe, below the very highest. The façade of the principal theatre in Philadelphia, is a chaste specimen in marble, of the Ionic,<sup>14</sup> if my<sup>20</sup> memory is correct. In New-York, there are two theatres about as large as the Théâtre Français<sup>15</sup> (in the interior), and not much inferior in embellishments. Besides these, there is a very pretty little theatre, where lighter pieces are performed, and another with a vast stage for melodramas. There are also one or two other places of dramatic representation in this city, in which horses and men contend for the bays.

The Americans pay well for dramatic talent.<sup>30</sup> Cooke,<sup>16</sup> the greatest English tragedian of our age, died on this side of the Atlantic; and there are few players of eminence in the mother country who are not tempted, at some time or other, to cross the ocean. Shakspeare is, of course, the great author of America, as he is of England, and I think he is quite as well relished here as there. In point of taste, if all the rest of the world be any thing against England, that of America is the best, since it unquestionably approaches nearest to that of the continent of Europe.<sup>40</sup> Nearly one-half of the theatrical taste of the English is condemned by their own judgments, since the

stage is not much supported by those who have had an opportunity of seeing any other. You will be apt to ask me how it happens, then, that the American taste is better? Because the people, being less exaggerated in their habits, are less disposed to tolerate caricatures, and because the theatres are not yet sufficiently numerous (though that hour is near) to admit of a representation that shall not be subject to the control of a certain degree of intelligence. I have heard an English player complain that he never saw such a dull audience as the one before which he had just been exhibiting; and I heard the same audience complain that they never listened to such dull jokes. Now, there was talent enough in both parties; but the one had formed his taste in a coarse school, and the others had formed theirs under the dominion of common sense. Independently of this peculiarity, there is a vast deal of acquired, travelled taste in this country. English tragedy, and high English comedy, both of which, you know, are excellent, never fail here, if well played; that is, they never fail under the usual limits of all amusement. One will cloy of sweets. But the fact of the taste and judgment of these people, in theatrical exhibitions, is proved by the number of their good theatres, compared to their population.

Of dramatic writers there are none, or next to none. The remarks I have made in respect to novels apply with double force to this species of composition. A witty and successful American comedy could only proceed from extraordinary talent. There would be less difficulty, certainly, with a tragedy; but still, there is rather too much foreign competition, and too much domestic employment in other pursuits, to invite genius to so doubtful an enterprise. The very baldness of ordinary American life is in deadly hostility to scenic representation. The character must be supported solely by its intrinsic power. The judge, the footman, the clown, the lawyer, the belle, or the beau, can receive no great assistance from dress. Melo-dramas, except the scene should be laid in the woods, are out of the question. It would be necessary to seek the great clock, which is to strike the portentous twelve blows, in the nearest church; a vaulted passage would degenerate into a cellar; and, as for ghosts, the country was discovered, since their visitations have ceased. The smallest departure from the incidents of ordinary life would do violence to every man's experience; and, as already mentioned, the

<sup>12</sup> Jonathan Edwards.

<sup>13</sup> Although by this time Godfrey, Tyler, Dunlap, Payne, Barker, and Bird had written original plays that were performed, Cooper is right in saying that acting companies still depended chiefly upon English plays for their repertory.

passions which belong to human nature must be delineated, in America, subject to the influence of that despot—common sense.

Notwithstanding the overwhelming influence of British publications, and all the difficulties I have named, original books are getting to be numerous in

the United States. The impulses of talent and intelligence are bearing down a thousand obstacles. I think the new works will increase rapidly, and that they are destined to produce a powerful influence on the world. We will pursue this subject another time.—Adieu.

1828

FROM

*A Letter to His Countrymen* <sup>17</sup>

The private citizen who comes before the world with matter relating to himself, is bound to show a better reason for the measure than the voluntary impulses of self-love. In my own case, it might, perhaps, appear a sufficient excuse for the step now taken, that I am acting chiefly on the defensive; that the editors of several of the public journals have greatly exceeded their legitimate functions, by animadverting on my motives and private affairs; and that assertions, opinions, and acts, have been openly attributed to me, that I have never uttered, entertained, or done. When an individual is thus dragged into notice, the right of self-vindication would seem to depend on a principle of natural justice; and yet, if I know the springs of my own conduct, I am less influenced by any personal considerations in what I am now doing, than by a wish to check a practice that has already existed too long among us; which appears to me to be on the increase; and which, while it is degrading to the character, if persisted in, may become dangerous to the institutions of this country.

The practice of quoting the opinions of foreign nations, by way of helping to make up its own estimate of the degree of merit that belongs to its public men, is, I believe, a custom peculiar to America. That our colonial origin, and provincial habits, should have given rise to such a usage, is sufficiently natural; that journals which have a poverty of original matter, should have recourse to that which can be obtained not only gratuitously, but by an extraordinary convention, without loss of reputation, and without even

the necessity of a translation, need be no mystery; but the readiness with which the practice can be accounted for, will not, I think, prove its justification, if it can be shown that it is destructive of those sentiments of self-respect, and of that manliness and independence of thought, that are necessary to render a people great, or a nation respectable. Questions have now arisen between a portion of the press and myself, which give me more authority to speak in the matter than might belong to one whose name had not been so freely used, and it is my intention, while I endeavor to do myself justice, to make an effort to arrest the custom to which there is allusion; and which, should it continue to prevail, must render every American more or less subject to the views of those who are hostile to the prosperity, the character, and the power of his native land.

The habit of fostering this deference to foreign opinion is dangerous to the very institutions under which we live. This is the point at which I have aimed from the commencement; for, while I feel that every defender of the action of our own system is entitled to fair-play, I have never had the weakness to believe that any personal interests of my own are a matter of sufficient importance to others, to require a publication like the present.

The practice of deferring to foreign opinion is dangerous to the institutions of the country.

In order to render the case that I wish to present clear, it will be necessary to take a short review of the institutions themselves.

The government of the United States is a peculiar confederation of many different bodies politic, for specified objects embracing certain of the higher

<sup>17</sup> Originally published in New York and London in 1834.

These selections contain Cooper's contrast of American with European institutions and customs and are designed to offer his thoughts on what in America is needful for the promotion of literary independence and the achievement of a "distinctive American thought."

functions of sovereignty, and to which we have given the appropriate name of a Union. The action of this government is obtained by a system of representation which, while it is compound and complicated in its elements, possesses, in fact, the redeeming and essential quality of simplicity, by providing that none but common interests shall be subject to its control. And, yet, while we actually possess, under the provisions of the Constitution, the essential requisite of an *ensemble* in the legal operation and spirit of the institutions, nothing is easier than to create an antagonist action, by overstepping the limits of the compact. A single glance at the instrument itself will explain my meaning.

A Union, from its very nature, must be a representative form of government; but the mere circumstance that a government is representative by no means establishes its character, which depends on the fact of whom the parties are that are represented. Under our system, each State is the arbiter of its own constituency, subject to the single condition that its form of polity shall be that of a Republic. A republic is a government in which the executive power is not hereditary, or in which the laws are administered in the name of a Commonwealth instead of that of a Prince. Venice, Poland, Frankfort, Unterwalden, Berne and Connecticut, are or were all republics. New-York, in virtue of its reserved rights, has decided that its constituency shall be represented on the principle of universal suffrage. Virginia has a freehold qualification. Either of these States has a right to modify its representation as it shall think best for its own interests. In point of fact, it is true the states of this Union are nearly all democracies, but they have attained this near approach to harmony by their own acts; for, under the limitations of the Federal Constitution, it is quite within the legal competency of the several bodies corporate which compose the Union, to make that Union a representation of democracies, or of aristocracies, or of a mixture of both, by altering the characters of the respective constituencies. Did the government of the United States possess more minute powers, therefore, and were the States to exercise the privilege just mentioned, making their representations a mixture of aristocracies and democracies, disunion or revolution would inevitably follow. Although there are instances in which monarchies and aristocracies coalesce

in confederations for defined objects, as in Germany,<sup>18</sup> and in which aristocracies and democracies unite for the same purposes, there is no instance in history in which these antagonist principles have long existed, in the full exercise of equal powers, in the form of a consolidated community. The struggle between them has always produced revolution in fact, whatever may have been done in form. By studying, then, the danger of a union of great antagonist principles in a consolidated form of government, we are admonished to respect the conditions on which the possibility of their co-existence is admitted into our own system. Although Virginia, and certain other States, may possibly be termed representative democracies, when considered solely in reference to their white population, they are in truth, even now, mild aristocracies, when considered in reference to their whole population. Immaterial as the difference is in most cases between the polity of Virginia and that of New-York, there are some points of disagreement that sufficiently show how easy it is, by transcending the conditions of the Union, to awaken a spirit of hostility, and to endanger the existence of the compact that now binds them together. To these points of difference in principle may be added, as temporary causes of disunion, those interests which arise from difference of climate and productions.

Every government has two great classes of obstacles to contend with:—the propensities of human nature, and the difficulties that arise from its particular manner of controlling its own affairs. As the first is an evil that we share in common with all men, it may be dismissed without comment; but in the case of the second, it will be useful to allude here to one or two of these particular causes of embarrassment as they exist under our own system.

The first great difficulty with which this government has to contend, is, for reasons that are obvious, the accurate discrimination between the powers that are granted to the Union and those that are reserved by the states. The contests which may arise on these vital questions can give birth to the only true whigs and tories of America. The object of this Union was not simply government—this was possessed in the several states—but it was to extend a uniform sys-

<sup>18</sup> Germany was a loose confederation of states from 1815 to 1848.

tem over so large a space, as to reap the greatest benefit from its action.

It has been said by others that the advantages of the Union, while they are admitted to be of the last importance, are of a purely negative character. This, I apprehend, is little more than clothing a truism in pretending language. The object of society in general is to enjoy the advantages of association and protection; to say, therefore, that we should be worse off without the Union, is but another method of saying 10 that we are better off with it. In Europe, when the enemies of this system (and they are the friends of all others) are driven from position to position in the arguments that frequently occur between them and Americans, concerning the merits and probable duration of our polity, they uniformly raise the objection, "that your government is only a compromise." Every government is a compromise, or something worse. Every community that is not founded on such a principle must sacrifice some of its interests to others; 20 and, in our case, so far from believing that the mutual concessions that have been made in the compact of the Union are opposed to the true spirit of government, I shall contend that they are proofs that its real objects and just limitations were properly understood. Disputes have certainly occurred, originating in a diversity of employments; but we have not yet reached the period when all the ordinary interests of civilized society are properly balanced. When that period shall arrive, and it cannot be distant, I 30 think it will be found that this diversity of employments is an additional ligament to the Union. But, while no great weight is to be given to a mere diversity of employments, every attention is due to those feelings that enter into the daily habits and prejudices of men. In this country, facts greatly outrun opinion. This is one of the reasons that we see men looking behind them to Europe for precedents, instead of being willing to conduct their own affairs on their own principles. Had congress the right 40 to control those minute interests of society that touch the rooted practices of different sections of the Union, as they are now controlled by the state legislatures, the revenue of the Union would not be worth a year's purchase; for nothing but force would compel the Virginian and the Vermontese to submit to the same detail of social organization. In such a case we should quickly see the vicious influence of the adverse principles of democracy and aristocracy. Still,

the constitution of the United States contemplates the coexistence of these antagonist forces in our system, through the several states, and it fully admits of their representation, for it leaves to each community the power to decide on the character of its constituency. It follows as a corollary from the proposition, that either the framers of the constitution were guilty of the gross neglect of admitting into the government of the Union the seeds of its own destruction, or that they devised means to obviate the natural conflict between principles so irreconcilably hostile. They did the latter, by limiting the powers of the new government to the control of those interests that take the same general aspects under every form of civilized society, let the authority emanate from what sources it may. This provision, then, is our only safeguard, and while it is respected there is little serious ground to apprehend the downfall of the system; but as soon as innovation shall make any serious inroads on these sacred limits, the bond which unites us will be severed. From all this is to be inferred the immense importance of keeping the action of the general government most rigidly within its defined sphere, to the utter exclusion of all construction but that which is clearly and distinctly to be inferred by honest deductions of powers that are conceded in terms.

To the danger which awaits any departure from a severe interpretation of the constitution, as it is to be apprehended from the possibility, and indeed it might be added the actual existence of different elements in the federal constituency, may be added that which arises from the facility of action through the organized forms of the state governments. The latter, however, when considered as distinct from the difference in these elements themselves, is a danger that arises solely from the inherent vices and weaknesses of man. They may or they may not lead to evil, as circumstances shall direct; but the existence of antagonist principles, or of conflicting elements, in the construction of any government, *must lead to dissension*, unless some unusual preventive is devised. As has been seen, in our own case, the expedient is a limitation of powers.

The second embarrassment dependent on its own details, with which the federal government has to contend, is the possibility of an occasional want of concurrence in views and action between the different branches of the constituted authorities. This evil is

peculiar to our own form of polity. It does not exist in England, and is almost the only solid advantage which that country, in a political point of view, possesses over our own.

As I am aware there will be a disposition to cavil at many of these positions, I may be permitted a word in the way of explanation. It has been said that in no other form of government is there the same danger from temporary collisions between the different branches of power, as in our own. To this would probably be objected the examples of England, at certain periods of her history, of France, since the restoration, and of divers of what are called the constitutional states of Germany; such as Bavaria, Saxony, Wurtemberg, the Hessen and Nassau. As respects the latter, while they are included in the reasons about to be given in relation to the two others, the instances they afford are entitled to no respect, for they are all under the control of an external and a superior force. Austria, Prussia and Russia would interfere to coerce the people,\* and the knowledge of this fact only has probably prevented revolution in them all.

England, so far from being an exception to the ground just taken, affords the strongest proof of its justice. The revolution of 1668 [1688?] was owing to a struggle between the powers of the state. Previously to that period the prerogative was in the ascendant, and since that period it has been constantly on the wane, until it is completely annihilated as to all practical political authority. The laws are still administered in the name of the king it is true, his signature is necessary to certain acts, and he is yet called the head of the church and state; but aristocracy has cast its web about him with so much ingenuity, that the premier conducts his hand, the chancellor wields his conscience, and parliament feeds him, until he is reduced to the condition of a well dressed lay-figure. There undeniably was a contest between parliament and the prerogative during the four reigns that preceded the last, and the result goes to prove the very position I have taken. This contest has wrought the effects of revolution, perverting the government from a monarchy to an oligarchy. The entire authority of the state, even to that of dictating his ministers to the king, is virtually in the hands of

parliament. Open, palpable revolution has been carefully avoided, simply because the tendency of such convulsions is to elevate the low and to depress the great, and it was the wish of the aristocracy to effect its purpose by indirect means, and by the fictions of legality. The ascendancy of the thousand families who control the British empire has been obtained under the cry of liberty.

As the situation of France has not admitted of as much legal fraud as that of England, her example, since the restoration, is still more plainly in favor of the truth of our position. The contest between the crown and the chambers led Louis XVIII. to alter the charter; and a few years later, when opinion had gathered force, and legislation began to assume most of its ordinary attributes, his successor lost his crown, in making a similar attempt.

Thus far, in quoting the examples of the European states, it has been the intention to show merely the inevitable tendency of struggles between the executive and the legislature, considered in connexion with leading principles, and under the supposition that the constituency and the representation are of the same mind. In the cases of what are called in Europe representative governments, the eventual \* danger has been somewhat lessened, and the temporary inconvenience removed, by a very simple expedient. The crown has power to prorogue or dissolve the legislature. The reasons, therefore, why the embarrassment that arises from temporary collisions between the executive and the legislature is greater in America than in England or France, are to be found in the fact that the chambers can be dissolved, and the fact that should the new elections be adverse to those who wield the power of the crown, the chambers, in their turn, compel a change of ministers. The alternative, as was the case in France in 1830, is revolution. It is unnecessary to say that the executive of this country has no power to dissolve congress, or congress any power to dissolve a ministry. The inevitable consequences of the continuance of such collisions, viz. revolution, or changes equal in effect to revolution, is obviated only by the frequency of the elections.

\* France also might now be added to the list of those states that would directly, or indirectly, lend its influence to effect the same object.

\* In England the danger has been averted by virtually reducing all the powers of the government to one body. The constituency of England is, as to political effect, the property of the representation. In cases where the landlord does not control, the open vote gives the richest man nearly the certainty of being elected. The exceptions do not affect the rule.

We will return to our own polity.

It will be admitted that the government of the United States is one of the powers delegated for limited and defined purposes. Its authority is to be found only in the constitution. Precedent, as it is derived from our own practice, is valuable merely as it has been established on sound principles, and as it is derived from the practices of others, is to be received with a cautious examination into its fitness for our peculiar condition.

The highest authority known to the constitution, in its spirit, is the constituency. It sits in judgment over all, and approves or condemns at pleasure. All the branches of the deputed government, executive, legislative and judicial, are equally amenable to its decisions. It has retained the power of even changing the characters of its several servants; of placing the authority of the president in the hands of a committee of congress, or in any other depository it shall select; of dispensing with the judiciary altogether, or of modifying its duties at pleasure; of re-modelling the legislature and of issuing to it new commissions, as it shall see fit. The only restraint it has laid on its own acts, is a provision pointing out the form in which its will is to be expressed, and a solitary condition touching that delicate point of the rights of the several states, which secures to each an equal representation in the senate. When the constituency and the people are identical, this becomes political liberty.

The highest attributes of the constituency are delegated to the legislature, whose powers are as carefully and as distinctly defined, as the nature of things would well permit. The judiciary and the executive are, in a great degree, subordinate to the will of the latter, on which there is no restraint but the provisions of the compact, and from which, when legitimately exercised, there is no appeal but to the constituency. Its members act with no other responsibility than that which they owe to their own body, and to the judgments that may be passed upon their measures by those who issued their commissions. Unlike the executive and the judiciary, they are liable to no impeachment.\* When the irresponsible nature of such a power, divided as it is among many, is taken

in connexion with its extent, it is very obvious that far more danger is to be apprehended from the legislature, through innovations on the principles of the constitution under the forms of law, than from either of the two other branches of the government. They all exercise delegated powers, it is true, and powers that can be perverted from their legitimate uses; but congress is the least restrained, while it possesses the highest authority. It follows of necessity that it is the  
10 branch of this government most likely to abuse its trust.

Obvious as are these facts, what has just been said is not the popular manner of viewing the subject. The English aristocracy has so long been innovating on the prerogative of the crown, under the cry of liberty, and the *theory* of the English constitution has so artfully favored such a mystification, that we have caught the feeling of another country, and are apt to consider those to whom we have confided the  
20 greatest authority under the least responsibility, the exclusive guardians of our liberties! Such an opinion can only be entertained by a sacrifice of both fact and reason. The constituency is its own protector, or our pretension to real liberty would be idle. The executive is a creature of our own forming, and for our own good, and it is manifestly a weakness to confound him or his authority, with a prince and his prerogative, the latter being based on the divine right.

In a monarchy power is supposed to be the pre-  
30 rogative of the crown, and what is called liberty is no more than concessions obtained from the sovereign in behalf of the subject. Under really free institutions, government itself is no more than a concession of powers for the benefit of protection and association. It is very possible that these mutual concessions should produce an exactly similar set of subordinate ordinances or laws, and yet one government shall enjoy real freedom, and the other possess no more than its shadow. The essence of liberty is in the ultimate power to control, as residing in the body of the nation. Its form is exhibited through the responsibility of the public agents.

The inference that I could wish to draw from this brief statement is the absolute necessity of construing the Constitution of the United States on its own

judge, or the president? In countries in which the representative is either an advocate or a master, there is good cause for his impunity, but in ours, where he is only a servant, there is none.

\* This is an instance in which imitation has led us astray from the commencement. What sufficient reason can be given why the representative, in a system like ours, should not be tried and punished for an abuse of trust, as well as a

principles; of rigidly respecting the spirit as well as the letter of its provisions; and of never attempting to avert any evil which may arise under the practice of the government, in any other manner than that which is pointed out by the instrument itself. On no other terms can this Union be perpetuated, and on these terms, there is reason to believe that our prospect of national happiness and power exceeds that of any other people on the globe.

I came before you, as a writer, when the habit of looking to others for mental aliment most disqualified the public to receive a native author with favor. It has been said lately that I owe the little success I met with at home, to foreign approbation. This assertion is unjust to you. Accident first made me a writer, and the same accident gave a direction to the subject of my pen. Ashamed to have fallen into the track of imitation, I endeavored to repair the wrong done to my own views, by producing a work that should be purely American, and of which love of country should be the theme. This work most of you received with a generous welcome that might have satisfied any one that the heart of this great community is sound. It was only at a later day, when I was willing more obviously to substitute American *principles* for American *things*, that I was first made to feel how far opinion, according to my poor judgment, still lags in the rear of facts. The American who wishes to illustrate and enforce the peculiar principles of his own country, by the agency of polite literature, will, for a long time to come, I fear, find that *his* constituency, as to all purposes of distinctive thought, is still too much under the influence of foreign theories, to receive him with favor. It is under this conviction that I lay aside the pen.<sup>19</sup> I am

told that this step will be attributed to the language of the journals, and some of my friends are disposed to flatter me with the belief that the journals misrepresent the public sentiment. On this head, I can only say that, like others similarly situated, I must submit to any false inferences of this nature to which accident shall give birth. I am quite unconscious of giving any undue weight to the crudities of the daily press, and as to the press of this country in particular, a good portion of the hostility it has manifested to myself, is so plainly stamped with its origin, that it never gave me any other uneasiness, than that which belongs to the certainty that it must be backed by a strong public opinion, or men of this description would never have presumed to utter what they have. The information on which I act is derived from sources entitled to more respect than the declamations of the press.

I confess I have come to this decision with reluctance, for I had hoped to be useful in my generation, and to have yet done something which might have identified my name with those who are to come after me. But it has been ordered differently. I have never been very sanguine as to the immortality of what I have written, a very short period having always sufficed for my ambition; but I am not ashamed to avow, that I have felt a severe mortification that I am to break down on the question of distinctive American thought. Were it a matter of more than feeling, I trust I should be among the last to desert my post. But the democracy of this country is in every sense strong enough to protect itself. Here, the democrat is the conservative, and, thank God, he has something worth preserving. I believe he knows it, and that he will prove true to himself. I confess I have no great fears of our modern aristocracy, which is wanting in more of chivalry than the *accolade*.

<sup>19</sup> As eventualities proved, of course, Cooper was to write and publish voluminously for many years to come.

FROM

*The American Democrat*<sup>20</sup>An Aristocrat and a Democrat<sup>21</sup>

We live in an age, when the words aristocrat and democrat are much used, without regard to the real significations. An aristocrat is one of a few, who possess the political power of a country; a democrat, one of the many. The words are also properly applied to those who entertain notions favorable to aristocratical or democratical forms of government. Such persons are not, necessarily, either aristocrats, or 10 democrats in fact, but merely so in opinion. Thus a member of a democratical government may have an aristocratical bias, and *vice versa*.

To call a man who has the habits and opinions of a gentleman, an aristocrat, from that fact alone, is an abuse of terms, and betrays ignorance of the true principles of government, as well as of the world. It must be an equivocal freedom, under which every one is not the master of his own innocent acts and associations, and he is a sneaking democrat, indeed, 20 who will submit to be dictated to, in those habits over which neither law nor morality assumes a right of control.

Some men fancy that a democrat can only be one who seeks the level, social, mental and moral, of the majority, a rule that would at once exclude all men of refinement, education and taste from the class. These persons are enemies of democracy, as they at once render it impracticable. They are usually great sticklers for their own associations and habits, too, 30 though unable to comprehend any of a nature that are superior. They are, in truth, aristocrats in principle, though assuming a contrary pretension; the ground work of all their feelings and arguments being self. Such is not the intention of liberty, whose aim is to leave every man to be the master of his own acts; denying hereditary honors, it is true, as unjust and unnecessary, but not denying the inevitable consequences of civilization.

<sup>20</sup> The full title of this work as first published in Cooperstown in 1838 read *The American Democrat, or Hints on the Social and Civil Relations of the United States of America*.

<sup>21</sup> This selection is interesting as presenting Cooper's argument that the development of a gentlemanly class in America is not inconsistent with a democratic society or a republican form of government.

The law of God is the only rule of conduct, in this, as in other matters. Each man should do as he would be done by. Were the question put to the greatest advocate of indiscriminate association, whether he would submit to have his company and habits dictated to him, he would be one of the first to resist the tyranny; for they, who are the most rigid in maintaining their own claims, in such matters, are usually the loudest in decrying those whom they fancy to be better off than themselves. Indeed, it may be taken as a rule in social intercourse, that he who is the most apt to question the pretensions of others, is the most conscious of the doubtful position he himself occupies; thus establishing the very claims he affects to deny, by letting his jealousy of it be seen. Manners, education and refinement, are positive things, and they bring with them innocent tastes which are productive of high enjoyments; and it is as unjust to deny their possessors their indulgence, as it would be to insist on the less fortunate's passing the time they would rather devote to athletic amusements, in listening to operas for which they have no relish, sung in a language they do not understand.

All that democracy means, is as equal a participation in rights as is practicable; and to pretend that social equality is a condition of popular institutions, is to assume that the latter are destructive of civilization, for, as nothing is more self-evident than the impossibility of raising all men to the highest standard of tastes and refinement, the alternative would be to reduce the entire community to the lowest. The whole embarrassment on this point exists in the difficulty of making men comprehend qualities they do not themselves possess. We can all perceive the difference between ourselves and our inferiors, but when it comes to a question of the difference between us and our superiors, we fail to appreciate merits of which we have no proper conceptions. In face of this obvious difficulty, there is the safe and 40 just governing rule, already mentioned, or that of permitting every one to be the undisturbed judge of his own habits and associations, so long as they are innocent, and do not impair the rights of others to be equally judges for themselves. It follows, that

social intercourse must regulate itself, independently of institutions, with the exception that the latter, while they withhold no natural, bestow no factitious advantages beyond those which are inseparable from the rights of property, and general civilization.

In a democracy, men are just as free to aim at the highest attainable places in society, as to obtain the largest fortunes; and it would be clearly unworthy of all noble sentiment to say, that the grovelling competition for money shall alone be free, while that which enlists all the liberal acquirements and elevated sentiments of the race, is denied the democrat. Such an avowal would be at once, a declaration of the inferiority of the system, since nothing but ignorance and vulgarity could be its fruits.

The democratic gentleman must differ in many essential particulars, from the aristocratic gentleman, though in their ordinary habits and tastes they are virtually identical. Their principles vary; and, to a slight degree, their deportment accordingly. The democrat, recognizing the right of all to participate in power, will be more liberal in his general sentiments, a quality of superiority in itself; but, in conceding this much to his fellow man, he will proudly maintain his own independence of vulgar domination, as indispensable to his personal habits. The same principles and manliness that would induce him to depose a royal despot, would induce him to resist a vulgar tyrant.

There is no more capital, though more common error, than to suppose him an aristocrat who maintains his independence of habits; for democracy asserts the control of the majority, only, in matters of law, and not in matters of custom. The very object of the institution is the utmost practicable personal liberty, and to affirm the contrary, would be sacrificing the end to the means.

An aristocrat, therefore, is merely one who fortifies his exclusive privileges by positive institutions, and a democrat, one who is willing to admit of a free competition, in all things. To say, however, that the last supposes this competition will lead to nothing, is an assumption that means are employed without any reference to an end. He is the purest democrat who best maintains his rights, and no rights can be dearer to a man of cultivation, than exemptions from unseasonable invasions on his time, by the coarse-minded and ignorant.

### On the American Press<sup>22</sup>

The newspaper press of this country is distinguished from that of Europe in several essential particulars. While there are more prints, they are generally of a lower character. It follows that in all in which they are useful, their utility is more diffused through society, and in all in which they are hurtful, the injury they inflict is more wide-spread and corrupting.

The great number of newspapers in America, is a cause of there being so little capital, and consequently so little intelligence, employed in their management. It is also a reason of the inexactitude of much of the news they circulate. It requires a larger investment of capital than is usual in this country, to obtain correct information; while, on the other hand, the great competition renders editors reckless and impatient to fill their columns. To these circumstances may be added the greater influence of vague and unfounded rumours in a vast and thinly settled country, than on a compact population, covering a small surface.

Discreet and observing men have questioned, whether, after excluding the notices of deaths and marriages, one half of the circumstances that are related in the newspapers of America, as facts, are true in their essential features; and, in cases connected with party politics, it may be questioned if 30 even so large a proportion can be set down as accurate.

This is a terrible picture to contemplate, for when the number of prints is remembered, and the avidity with which they are read is brought into the account, we are made to perceive that the entire nation, in a moral sense, breathes an atmosphere of falsehoods. There is little use, however, in concealing the truth; on the contrary, the dread in which public men and writers commonly stand of the power of the press to injure them, has permitted the evil to extend so far, that it is scarcely exceeding the bounds of a just alarm, to say that the country cannot much longer exist in safety, under the malign influence that now overshadows it. Any one, who has lived long enough to note changes of the sort, must have perceived how

<sup>22</sup> Illuminating by way of indicating Cooper's opinion of the American press immediately after he launched his first lawsuit against the local Cooperstown editors, but before he initiated the long series of libel suits against the New York editors, which ran from 1839 to 1845.

fast men of probity and virtue are loosing [*sic*] their influence in the country, to be superseded by those who scarcely deem an affectation of the higher qualities necessary to their success. This fearful change must, in a great measure, be ascribed to the corruption of the publick press, which, as a whole, owes its existence to the schemes of interested political adventurers.

Those who are little acquainted with the world are apt to imagine that a fact, or an argument, that is stated publicly in print, is entitled to more credit and respect than the same fact or argument presented orally, or in conversation. So far from this being true, however, in regard to the press of this country, it would be safer to infer the very reverse. Men who are accustomed daily to throw off their misstatements, become reckless of the consequences, and he who would hesitate about committing himself by an allegation made face to face, and as it were on his personal responsibility, would indite a paragraph, behind the impersonality of his editorial character, to be uttered to the world in the irresponsible columns of a journal. It is seldom, in cases which admit of doubt, that men are required to speak on the moment; but, with the compositor in waiting, the time pressing, and the moral certainty that a rival establishment will circulate the questionable statement if he decline, the editor too often throws himself into the breach. The contradiction of today, will make a paragraph, as well as the lie of yesterday, though he who sees the last and not the first, unless able to appreciate the character of his authority, carries away an untruth.

Instead of considering the editor of a newspaper, as an abstraction, with no motive in view but that of maintaining principles and disseminating facts, it is necessary to remember that he is a man, with all the interests and passions of one who has chosen this means to advance his fortunes, and of course, with all the accompanying temptations to abuse his opportunities, and this too, usually, with the additional draw-back of being a partisan in politics, religion, or literature. If the possession of power, in ordinary cases, is a constant inducement to turn it to an unjust profit, it is peculiarly so in the extraordinary case of the control of a public press.

Editors praise their personal friends, and abuse their enemies in print, as private individuals praise their friends, and abuse their enemies with their

tongues. Their position increases the number of each, and the consequence is, that the readers obtain inflated views of the first, and unjust notions of the last.

If newspapers are useful in overthrowing tyrants, it is only to establish a tyranny of their own. The press tyrannizes over publick men, letters, the arts, the stage, and even over private life. Under the pretence of protecting publick morals, it is corrupting them to the core, and under the semblance of maintaining liberty, it is gradually establishing a despotism as ruthless, as grasping, and one that is quite as vulgar as that of any christian state known. With loud professions of freedom of opinion, there is no tolerance; with a parade of patriotism, no sacrifice of interests; and with fulsome panegyrics on propriety, too frequently, no decency.

There is but one way of extricating the mind from the baneful influence of the press of this country, and that is by making a rigid analysis of its nature and motives. By remembering that all statements that involve disputed points are *ex parte*; that there is no impersonality, except in professions; that all the ordinary passions and interests act upon its statements with less than the ordinary responsibilities; and that there is the constant temptation to abuse, which ever accompanies power, one may come, at last, to a just appreciation of its merits, and in a degree, learn to neutralize its malignant influence. But this is a freedom of mind that few attain, for few have the means of arriving at these truths!

The admixture of truth and falsehood in the intelligence circulated by the press, is one of the chief causes of its evils. A journal that gave utterance to nothing but untruths, would loose [*sic*] its influence with its character, but there are none so ignorant as not to see the necessity of occasionally issuing truths. It is only in cases in which the editor has a direct interest to the contrary, in which he has not the leisure or the means of ascertaining facts, or in which he is himself misled by the passions, cupidity and interests of others, that untruths find a place in his columns. Still these instances may, perhaps, include a majority of the cases.

In a country like this, it is indispensable to mental independence, that every man should have a clear perception of the quality of the political news, and of the political opinions circulated by the press, for, he who confides implicitly to its statements is yield-

ing himself blindly to either the designed and exaggerated praises of friends, or to the calculated abuse of opponents. As no man is either as good, or as bad, as vulgar report makes him, we can, at once, see the value that ought to be given to such statements.

All representations that dwell wholly on merits, or on faults, are to be distrusted, since none are perfect, and it may, perhaps, be added, none utterly without some redeeming qualities.

Whenever the papers unite to commend, without qualification, it is safe to believe in either venality, or a disposition to defer to a preconceived notion of excellence, most men choosing to float with the current, rather than to resist it, when no active motive urges a contrary course, feeding falsehood, because it flatters a predilection; and whenever censure is general and sweeping, one may be almost certain it is exaggerated and false.

Puffs, political, literary, personal and national, can commonly be detected by their *ex parte* statements, as may be their counterpart, detraction. Dishonesty of intention is easily discovered by the man of the world, in both, by the tone; and he who blindly receives either eulogium or censure, because they stand audaciously in print, demonstrates that his judgment is still in its infancy.

Authors review themselves, or friends are employed to do it for them; political adventurers have their dependents, who build their fortunes on those of their patrons; artists, players, and even religionists, are not above having recourse to such expedients to advance their interests and reputation. The world would be surprised to learn the tyranny that the press has exercised, in our own times, over some of the greatest modern names, few men possessing the manliness and moral courage that are necessary to resist its oppression.

The people that has overturned the throne of a monarch, and set up a government of opinion in its stead, and which blindly yields its interests to the designs of those who would rule through the instrumentality of newspapers, has only exchanged one form of despotism for another.

It is often made a matter of boasting, that the United States contain so many public journals. It were wiser to make it a cause of mourning, since the quality, in this instance, diminishes in an inverse ratio to the quantity.

Another reason may be found for the deleterious influence of the American press, in the peculiar physical condition of the country. In all communities, the better opinion, whether as relates to moral or scientific truths, tastes, manners and facts, is necessarily in the keeping of a few; the great majority of mankind being precluded by their opportunities from reaching so high in the mental scale. The proportion between the intelligent and whole numbers, after making a proper allowance on account of the differences in civilization, is probably as great in this country, as in any other; possibly it is greater among the males; but the great extent of the territory prevents its concentration, and consequently, weakens its influence. Under such circumstances, the press has less to contend with than in other countries, where designing and ignorant men would stand rebuked before the collected opinion of those who, by their characters and information, are usually too powerful to be misled by vulgarity, sophistry and falsehood. Another reason is to be found in the popular character of the government, bodies of men requiring to be addressed in modes suited to the average qualities of masses.

In America, while the contest was for great principles, the press aided in elevating the common character, in improving the common mind, and in maintaining the common interests; but, since the contest has ceased, and the struggle has become one purely of selfishness and personal interests, it is employed, as a whole, in fast undermining its own work, and in preparing the nation for some terrible reverses, if not in calling down upon it, a just judgment of God.

As the press of this country now exists, it would seem to be expressly devised by the great agent of mischief, to depress and destroy all that is good, and to elevate and advance all that is evil in the nation. The little truth that is urged, is usually urged coarsely, weakened and rendered vicious, by personalities; while those who live by falsehoods, fallacies, enmities, partialities and the schemes of the designing, find the press the very instrument that the devils would invent to effect their designs.

A witty but unprincipled statesman of our own times, has said that "speech was bestowed on man to conceal his thoughts;" judging from its present condition, he might have added, "and the press to pervert truth."

## Conclusion

The inferences to be drawn from the foregoing<sup>23</sup> reasons and facts, admitting both to be just, may be briefly summed up as follows.

No expedients can equalize the temporal lots of men; for without civilization and government, the strong would oppress the weak, and, with them, an inducement to exertion must be left, by bestowing rewards on talents, industry and success. All that the best institutions, then, can achieve, is to remove useless obstacles, and to permit merit to be the artisan of its own fortune, without always degrading demerit to the place it ought naturally to fill.

Every human excellence is merely comparative, there being no good without alloy. It is idle therefore to expect a system that shall exhibit faultlessness, or perfection.

The terms liberty, equality, right and justice, used in a political sense, are merely terms of convention, and of comparative excellence, there being no such thing, in practice, as either of these qualities being carried out purely, according to the abstract notions of theories.

The affairs of life embrace a multitude of interests, and he who reasons on any one of them, without consulting the rest, is a visionary unsuited to control the business of the world.

There is a prevalent disposition in the designing to forget the means in the end, and on the part of the mass to overlook the result in the more immediate agencies. The first is the consequence of cupidity; the last of short-sightedness, and frequently of the passions. Both these faults need be vigilantly watched in a democracy, as the first unsettles principles while it favors artifice, and the last is substituting the transient motives of a day, for the deliberate policy and collected wisdom of ages.

Men are the constant dupes of names, while their happiness and well-being mainly depend on things. The highest proof a community can give of its fitness for self government, is its readiness in distinguishing between the two; for frauds, oppression, flattery and vice, are the offspring of the mistakes.

It is a governing principle of nature, that the agency which can produce most good, when perverted from its proper aim, is most productive of evil.

<sup>23</sup> Preceding sections dealt with Cooper's thoughts "On Property," "On Universal Suffrage," and "On Slavery."

It behooves the well-intentioned, therefore, vigilantly to watch the tendency of even their most highly prized institutions, since that which was established in the interests of the right, may so easily become the agent of the wrong.

The disposition of all power is to abuses, nor does it at all mend the matter that its possessors are a majority. Unrestrained political authority, though it be confided to masses, cannot be trusted without positive limitations, men in bodies being but an aggregation of the passions, weaknesses and interests of men as individuals.

It is as idle to expect what is termed gratitude, in a democracy, as from any other repository of power. Bodies of men, though submitting to human impulses generally, and often sympathetic as well as violent, are seldom generous. In matters that touch the common feeling, they are avaricious of praise, and they usually visit any want of success in a publick man, as a personal wrong. Thus it is that we see a dozen victories forgotten in a single defeat, an irritable vanity in the place of a masculine pride, and a sensitiveness to opinion, instead of a just appreciation of acts.

Under every system it is more especially the office of the prudent and candid to guard against the evils peculiar to that particular system, than to declaim against the abuses of others. Thus, in a democracy, instead of decrying monarchs and aristocrats, who are impotent, it is wiser to look into the sore spots of the only form of government that can do any practical injury, and to apply the necessary remedies, than to be glorifying ourselves at the expense of charity, common sense, and not unfrequently of truth.

Life is made up of positive things, the existence of which it is not only folly, but which it is often unsafe to deny. Nothing is gained by setting up impracticable theories, but alienating opinion from the facts under which we live, all the actual distinctions that are inseparable from the possession of property, learning, breeding, refinement, tastes and principles, existing as well in one form of government, as in another; the only difference between ourselves and other nations, in this particular, lying in the fact that there are no other artificial distinctions than those that are inseparable from the recognized principles and indispensable laws of civilization.

There is less real inequality in the condition of

men than outward circumstances would give reason to believe. If refinement brings additional happiness, it also adds point to misery. Fortunately, the high consolations of religion, in which lies the only lasting and true relief from the cares and seeming injustice

of the world, are equally attainable, or, if there be a disadvantage connected with this engrossing interest, it is against those whose lots are vulgarly supposed to be the most desirable.

1838

### *Preface to The Leatherstocking Tales* <sup>24</sup>

This series of Stories, which has obtained the name of "The Leather-Stocking Tales," has been written in a very desultory and inartificial manner. The order in which the several books appeared was essentially different from that in which they would have been presented to the world, had the regular course of their incidents been consulted. In the *Pioneers*, the first of the series written, the Leather-Stocking is represented as already old, and driven from his early haunts in the forest, by the sound of the axe, and the smoke of the settler. "The Last of the Mohicans," the next book in the order of publication, carried the readers back to a much earlier period in the history of our hero, representing him as middle-aged, and in the fullest vigor of manhood. In the *Prairie*, his career terminates, and he is laid in his grave. There, it was originally the intention to leave him, in the expectation that, as in the case of the human mass, he would soon be forgotten. But a latent regard for this character induced the author to resuscitate him in "The Pathfinder," a book that was not long after succeeded by "The Deerslayer," thus completing the series as it now exists.

While the five books that have been written were originally published in the order just mentioned, that of the incidents, inasmuch as they are connected with the career of their principal character, is, as has been stated, very different. Taking the life of the Leather-Stocking as a guide, "The Deerslayer" should have been the opening book, for in that work he is seen just emerging into manhood; to be succeeded by "The Last of the Mohicans," "The Pathfinder," "The Pioneers," and "The Prairie." This arrangement embraces the order of events, though far from being that in which the books at first appeared. "The *Pioneers*" was published in 1822; "The Deerslayer" in 1841; making the interval between them nineteen

years. Whether these progressive years have had a tendency to lessen the value of the last-named book by lessening the native fire of its author, or of adding somewhat in the way of improved taste and a more matured judgment, is for others to decide.

If anything from the pen of the writer of these romances is at all to outlive himself, it is, unquestionably, the series of "The Leather-Stocking Tales." To say this, is not to predict a very lasting reputation for the series itself, but simply to express the belief it will outlast any, or all, of the works from the same hand.

It is undeniable that the desultory manner in which "The Leather-Stocking Tales" were written, has, in a measure, impaired their harmony, and otherwise lessened their interest. This is proved by the fate of the two books last published, though probably the two most worthy an enlightened and cultivated reader's notice. If the facts could be ascertained, it is probable the result would show that of all those (in America, in particular) who have read the three first books of the series, not one in ten has a knowledge of the existence even of the two last. Several causes have tended to produce this result. The long interval of time between the appearance of "The *Prairie*" and that of "The *Pathfinder*," was itself a reason why the later books of the series should be overlooked. There was no longer novelty to attract attention, and the interest was materially impaired by the manner in which events were necessarily anticipated, in laying the last of the series first before the world. With the generation that is now coming on the stage this fault will be partially removed by the edition contained in the present work, in which the several tales will be arranged solely in reference to their connexion with each other.

The author has often been asked if he had any original in his mind, for the character of Leather-Stocking. In a physical sense, different individuals known to the writer in early life, certainly presented

<sup>24</sup> This preface was written especially for the new edition of Cooper's novels brought out by Putnam's in New York during 1849-1850.

themselves as models, through his recollections; but in a moral sense this man of the forest is purely a creation. The idea of delineating a character that possessed little of civilization but its highest principles as they are exhibited in the uneducated, and all of savage life that is not incompatible with these great rules of conduct, is perhaps natural to the situation in which Natty was placed. He is too proud of his origin to sink into the condition of the wild Indian, and too much a man of the woods not to imbibe as much as was at all desirable, from his friends and companions. In a moral point of view it was the intention to illustrate the effect of seed scattered by the way side. To use his own language, his "gifts" were "white gifts," and he was not disposed to bring on them discredit. On the other hand, removed from nearly all the temptations of civilized life, placed in the best associations of that which is deemed savage, and favorably disposed by nature to improve such advantages, it appeared to the writer that his hero was a fit subject to represent the better qualities of both conditions, without pushing either to extremes.

There was no violent stretch of the imagination, perhaps, in supposing one of civilized associations in childhood, retaining many of his earliest lessons amid the scenes of the forest. Had these early impressions, however, not been sustained by continued, though casual connexion with men of his own color, if not of his own caste, all our information goes to show he would soon have lost every trace of his origin. It is believed that sufficient attention was paid to the particular circumstances in which this individual was placed to justify the picture of his qualities that has been drawn. The Delawares early attracted the attention of missionaries, and were a tribe unusually influenced by their precepts and example. In many instances they became Christians, and cases occurred in which their subsequent lives gave proof of the efficacy of the great moral changes that had taken place within them.

A leading character in a work of fiction has a fair right to the aid which can be obtained from a poetical view of the subject. It is in this view, rather than in one more strictly circumstantial, that Leather-Stocking has been drawn. The imagination has no great task in portraying to itself a being removed from the every-day inducements to err, which abound in civilized life, while he retains the best and simplest of his

early impressions; who sees God in the forest; hears him in the winds; bows to him in the firmament that o'ercanopies all; submits to his sway in a humble belief of his justice and mercy; in a word, a being who finds the impress of the Deity in all the works of nature, without any of the blots produced by the expedients, and passion, and mistakes of man. This is the most that has been attempted in the character of Leather-Stocking. Had this been done without any of the drawbacks of humanity, the picture would have been, in all probability, more pleasing than just. In order to preserve the *vrai-semblable*, therefore, traits derived from the prejudices, tastes, and even the weaknesses of his youth, have been mixed up with these higher qualities and longings, in a way, it is hoped, to represent a reasonable picture of human nature, without offering to the spectator a "monster of goodness."

It has been objected to these books that they give a more favorable picture of the red man than he deserves. The writer apprehends that much of this objection arises from the habits of those who have made it. One of his critics, on the appearance of the first work in which Indian character was portrayed, objected that its "characters were Indians of the school of Heckewelder,"<sup>25</sup> rather than of the school of nature." These words quite probably contain the substance of the true answer to the objection. Heckewelder was an ardent, benevolent missionary, bent on the good of the red man, and seeing in him one who had the soul, reason, and characteristics of a fellow-being. The critic is understood to have been a very distinguished agent of the government, one very familiar with Indians, as they are seen at the councils to treat for the sale of their lands, where little or none of their domestic qualities come in play, and where, indeed, their evil passions are known to have the fullest scope. As just would it be to draw conclusions of the general state of American society from the scenes of the capital, as to suppose that the negotiating of one of these treaties is a fair picture of Indian life.

It is the privilege of all writers of fiction, more particularly when their works aspire to the elevation of romances, to present the *beau-idéal* of their characters

<sup>25</sup> A reference to the Rev. John Heckewelder's *Account of the History, Manners, and Customs of the Indian Nations who once Inhabited Pennsylvania and the Neighboring States* (1819), Cooper's chief source of information concerning Indians, of whom he knew little or nothing at first hand.

to the reader. This it is which constitutes poetry, and to suppose that the red man is to be represented only in the squalid misery or in the degraded moral state that certainly more or less belongs to his condition,

is, we apprehend, taking a very narrow view of an author's privileges. Such criticism would have deprived the world of even Homer.

1850

FROM

*The Deerslayer* <sup>26</sup>

## [Deerslayer's Escape]

## CHAPTER XXVII

*Thou hast been busy, Death, this day, and yet  
But half thy work is done! The gates of hell  
Are thronged, yet twice ten thousand spirits more,  
Who, from their warm and healthful tenements,  
Fear no divorce, must, ere the sun go down,  
Enter the world of woe!*

SOUTHEY

One experienced in the signs of the heavens would have seen that the sun wanted but two or three minutes of the zenith, when Deerslayer landed on the point where the Hurons were now encamped, nearly abreast of the castle. This spot was similar to the one already described, with the exception that the surface of the land was less broken and less crowded with trees. Owing to these two circumstances, it was all the better suited to the purpose for which it had been selected, the space beneath the branches bearing some resemblance to a densely wooded lawn. Favored by its position and its spring, it had been much resorted to by savages and hunters, and the natural grasses had succeeded their fires, leaving an appearance of sward in places, a very unusual accompaniment of the virgin forest. Nor was the margin of water fringed with bushes, as on so much of its shore, but the eye <sup>20</sup> penetrated the woods immediately on reaching the strand, commanding nearly the whole area of the projection.

If it was a point of honor with the Indian warrior to redeem his word when pledged to return and meet his death at a given hour, so was it a point of char-

<sup>26</sup> The Leatherstocking tales are too long, their action is too involved or crowded, and the author's manner of telling his story is too prolix to permit extended reproduction in a book of this kind. Such summaries or synopses as can be made of a story like *The Deerslayer* are either too circumstantial or so abbreviated as to be of little use. However, the four chapters here reprinted not only relate typical adventures but form a connected story, complete enough within itself to afford interesting reading. New characters introduced and antecedent events are sufficiently explained as the story progresses to clarify themselves.

acteristic pride to show no womanish impatience, but to reappear as nearly as possible at the appointed moment. It was well not to exceed the grace accorded by the generosity of the enemy, but it was better to meet it to a minute. Something of this dramatic effect mingles with most of the graver usages of the American aborigines, and no doubt, like the prevalence of a similar feeling among people more sophisticated and refined, may be referred to a principle of nature. We all love the wonderful, and when it comes attended by chivalrous self-devotion and a rigid regard to honor, it presents itself to our admiration in a shape doubly attractive. As respects Deerslayer, though he took a pride in showing his white blood by often deviating from the usages of the red-men, he frequently dropped into their customs, and oftener into their feelings, unconsciously to himself, in consequence of having no other arbiters to appeal to than their judgments and tastes. On the present occasion, he would have abstained from betraying a feverish haste by a too speedy return, since it would have contained a tacit admission that the time asked for was more than had been wanted; but, on the other hand, had the idea occurred to him, he would have quickened his movements a little, in order to avoid the dramatic appearance of returning at the precise instant set as the utmost limit of his absence. Still, accident had interfered to defeat the last intention, for when the young man put his foot on the point, and advanced with a steady tread towards the group of chiefs that was seated in grave array on a fallen tree, the oldest of their number cast his eye upward at an opening in the trees, and pointed out to his companions the startling fact that the sun was just entering a space that was known to mark the zenith. A common but low exclamation of surprise and admiration escaped every mouth, and the grim warriors looked at each other; some with envy and disappointment, some with astonishment, at the pre-

cise accuracy of their victim, and others with a more generous and liberal feeling. The American Indian always deemed his moral victories the noblest, prizing the groans and yielding of his victim under torture more than the trophy of his scalp; and the trophy itself more than his life. To slay, and not to bring off the proof of victory, indeed, was scarcely deemed honorable; even these rude and fierce tenants of the forest, like their more nurtured brethren of the court, and the camp, having set up for themselves imaginary and arbitrary points of honor, to supplant the conclusions of the right and the decisions of reason.

The Hurons had been divided in their opinions concerning the probability of their captive's return. Most of them, indeed, had not expected it possible for a pale-face to come back voluntarily, and meet the known penalties of an Indian torture; but a few of the seniors expected better things from one who had already shown himself so singularly cool, brave, and upright. The party had come to its decision, however, less in the expectation of finding the pledge redeemed, than in the hope of disgracing the Delawares by casting into their teeth the delinquency of one bred in their villages. They would have greatly preferred that Chingachgook should be their prisoner, and prove the traitor; but the pale-face scion of the hated stock was no bad substitute for their purposes, failing in their designs against the ancient stem. With a view to render the triumph as signal as possible, in the event of the hour's passing without the reappearance of the hunter, all the warriors and scouts of the party had been called in; and the whole band, men, women, and children, was now assembled at this single point, to be a witness of the expected scene. As the castle was in plain view, and by no means distant, it was easily watched by daylight; and it being thought that its inmates were now limited to Hurry, the Delaware, and the two girls, no apprehensions were felt of their being able to escape unseen. A large raft, having a breastwork of logs, had been prepared, and was in actual readiness to be used against either ark or castle, as occasion might require, so soon as the fate of Deerslayer was determined; the seniors of the party having come to the opinion that it was getting to be hazardous to delay their departure for Canada beyond the coming night. In short, the band waited merely to dispose of this single affair, ere it brought matters to a crisis, and prepared to

commence its retreat towards the distant waters of Ontario.

It was an imposing scene into which Deerslayer now found himself advancing. All the older warriors were seated on the trunk of the fallen tree, waiting his approach with grave decorum. On the right stood the young men, armed, while the left was occupied by the women and children. In the center was an open space of considerable extent, always canopied by leaves, but from which the underbrush, dead wood, and other obstacles had been carefully removed. The more open area had probably been much used by former parties, for this was the place where the appearance of a sward was the most decided. The arches of the woods, even at high noon, cast their somber shadows on the spot, which the brilliant rays of the sun that struggled through the leaves contributed to mellow, and, if such an expression can be used, to illuminate. It was probably from a similar scene that the mind of man first got its idea of the effects of Gothic tracery and churchly hues; this temple of nature producing some such effect, so far as light and shadows were concerned, as the well-known offspring of human invention.

As was not unusual among the tribes and wandering bands of the aborigines, two chiefs shared, in nearly equal degrees, the principal and primitive authority that was wielded over these children of the forest. There were several who might claim the distinction of being chief men, but the two in question were so much superior to all the rest in influence, that, when they agreed, no one disputed their mandates; and when they were divided, the band hesitated, like men who had lost their governing principle of action. It was also in conformity with practice—perhaps we might add in conformity with nature—that one of the chiefs was indebted to his mind for his influence, whereas the other owed his distinction altogether to qualities that were physical. One was a senior, well known for eloquence in debate, wisdom in council, and prudence in measures; while his great competitor, if not his rival, was a brave, distinguished in war, notorious for ferocity, and remarkable, in the way of intellect, for nothing but the cunning and expedients of the warpath. The first was Rivenoak, who has already been introduced to the reader, while the last was called le Panthère, in the language of the Canadas; or the Panther, to resort to the vernacular of the English colonies. The ap-

pellation of the fighting chief was supposed to indicate the qualities of the warrior, agreeably to a practice of the red-man's nomenclature; ferocity, cunning, and treachery being, perhaps, the distinctive features of his character. The title had been received from the French, and was prized so much the more from that circumstance, the Indian submitting profoundly to the greater intelligence of his pale-face allies in most things of this nature. How well the *sobriquet* was merited, will be seen in the sequel.

Rivenoak and the Panther sat side by side, awaiting the approach of their prisoner, as Deerslayer put his moccasined foot on the strand; nor did either move, or utter a syllable, until the young man had advanced into the center of the area, and proclaimed his presence with his voice. This was done firmly, though in the simple manner that marked the character of the individual.

"Here I am, Mingos," he said, in the dialect of the Delawares, a language that most present understood; 20 "here I am, and there is the sun. One is not more true to the laws of natur', than the other has proved true to his word. I am your prisoner; do with me what you please. My business with man and 'arth is settled; nothing remains now but to meet the white man's God, accordin' to a white man's duties and gifts."

A murmur of approbation escaped even the women at this address, and, for an instant there was a strong and pretty general desire to adopt into the tribe one 30 who owned so brave a spirit. Still there were dissenters from this wish, among the principal of whom might be classed the Panther, and his sister, le Sumach, so called from the number of her children, who was the widow of le Loup Cervier, now known to have fallen by the hand of the captive. Native ferocity held one in subjection, while the corroding passion of revenge prevented the other from admitting any gentler feeling at the moment. Not so with Rivenoak. This chief arose, stretched his arm before 40 him in a gesture of courtesy, and paid his compliments with an ease and dignity that a prince might have envied. As, in that band, his wisdom and eloquence were confessedly without rivals, he knew that on himself would properly fall the duty of first replying to the speech of the pale-face.

"Pale-face, you are honest," said the Huron orator. "My people are happy in having captured a man, and not a skulking fox. We now know you; we shall

treat you like a brave. If you have slain one of our warriors, and helped to kill others, you have a life of your own ready to give away in return. Some of my young men thought that the blood of a pale-face was too thin; that it would refuse to run under the Huron knife. You will show them it is not so; your heart is stout as well as your body. It is a pleasure to make such a prisoner; should my warriors say that the death of le Loup Cervier ought not to be 10 forgotten, and that he cannot travel towards the land of spirits alone, that his enemy must be sent to overtake him, they will remember that he fell by the hand of a brave, and send you after him with such signs of our friendship as shall not make him ashamed to keep your company. I have spoken; you know what I have said."

"True enough, Mingo, all true as the gospel," returned the simple-minded hunter; "you *have* spoken, and I *do* know not only what you have *said*, but, what is still more important, what you *mean*. I dare to say your warrior the Lynx, was a stouthcarted brave, and worthy of your fri'ndship and respect, but I do not feel unworthy to keep his company without any passport from your hands. Nevertheless, here I am, ready to receive judgment from your council, if, indeed, the matter was not determined among you afore I got back."

"My old men would not sit in council over a pale-face until they saw him among them," answered Rivenoak, looking around him a little ironically; "they said it would be like sitting in council over the winds; they go where they will, and come back as they see fit, and not otherwise. There was one voice that spoke in your favor, Deerslayer, but it was alone, like the song of the wren whose mate has been struck by the hawk."

"I thank that voice, whos'ever it may have been, Mingo, and will say it was as true a voice as the rest were lying voices. A furlough is as binding on a pale-face, if he be honest, as it is on a red-skin; and was it not so, I would never bring disgrace on the Delawares, among whom I may be said to have received my education. But words are useless and lead to braggin' feclin's; here I am; act your will on me."

Rivenoak made a sign of acquiescence, and then a short conference was privately held among the chiefs. As soon as the latter ended, three or four young men fell back from among the armed group, and disappeared. Then it was signified to the pris-

oner that he was at liberty to go at large on the point, until a council was held concerning his fate. There was more of seeming than of real confidence, however, in this apparent liberality, inasmuch as the young men mentioned already formed a line of sentinels across the breadth of the point, inland, and escape from any other part was out of the question. Even the canoe was removed beyond this line of sentinels, to a spot where it was considered safe from any sudden attempt. These precautions did not proceed from a failure of confidence, but from the circumstance that the prisoner had now complied with all the required conditions of his parole, and it would have been considered a commendable and honorable exploit to escape from his foes. So nice, indeed, were the distinctions drawn by the savages, in cases of this nature, that they often gave their victims a chance to evade the torture, deeming it as creditable to the captors to overtake, or to outwit a fugitive, when his exertions were supposed to be quickened by the extreme jeopardy of his situation, as it was for him to get clear from so much extraordinary vigilance.

Nor was Deerslayer unconscious of, or forgetful of, his rights and of his opportunities. Could he now have seen any probable opening for an escape, the attempt would not have been delayed a minute. But the case seemed desperate. He was aware of the line of sentinels, and felt the difficulty of breaking through it unharmed. The lake offered no advantages, as the canoe would have given his foes the greatest facilities for overtaking him; else would he have found it no difficult task to swim as far as the castle. As he walked about the point, he even examined the spot to ascertain if it offered no place of concealment; but its openness, its size, and the hundred watchful glances that were turned towards him, even while those who made them affected not to see him, prevented any such expedient from succeeding. The dread and disgrace of failure had no influence on Deerslayer, who deemed it ever a point of honor to reason and feel like a white man rather than as an Indian, and who felt it a sort of duty to do all he could, that did not involve a dereliction from principle, in order to save his life. Still he hesitated about making the effort, for he also felt that he ought to see the chance of success before he committed himself.

In the meantime the business of the camp ap-

peared to proceed in its regular train. The chiefs consulted apart, admitting no one but the Sumach to their councils; for she, the widow of the fallen warrior, had an exclusive right to be heard on such an occasion. The young men strolled about in indolent listlessness, awaiting the result with Indian patience, while the females prepared the feast that was to celebrate the termination of the affair, whether it proved fortunate, or otherwise, for our hero. No one betrayed feeling; and an indifferent observer, beyond the extreme watchfulness of the sentinels, would have detected no extraordinary movement or sensation to denote the real state of things. Two or three old women put their heads together, and, it appeared, unfavorably to the prospect of Deerslayer, by their scowling looks and angry gestures; but a group of Indian girls were evidently animated by a different impulse, as was apparent by stolen glances that expressed pity and regret. In this condition of the camp, an hour soon glided away.

Suspense is, perhaps, the feeling, of all others, that is most difficult to be supported. When Deerslayer landed, he fully, in the course of a few minutes, expected to undergo the tortures of an Indian revenge, and he was prepared to meet his fate manfully; but the delay proved far more trying than the nearer approach of suffering, and the intended victim began seriously to meditate some desperate effort at escape, as it might be from sheer anxiety to terminate the scene, when he was suddenly summoned to appear, once more, in front of his judges, who had already arranged the band in its former order, in readiness to receive him.

"Killer of the Deer," commenced Rivenoak, as soon as his captive stood before him, "my aged men have listened to wise words; they are ready to speak. You are a man whose fathers came from beyond the rising sun; we are children of the setting sun; we turn our faces towards the Great Sweet Lakes, when we look towards our villages. It may be a wise country and full of riches, towards the morning; but it is very pleasant towards the evening. We love most to look in that direction. When we gaze at the east, we feel afraid, canoe after canoe bringing more and more of your people in the track of the sun, as if their land was so full as to run over. The red-men are few already; they have need of help. One of our best lodges has lately been emptied by the death of its master; it will be a long time before his son can grow

big enough to sit in his place. There is his widow; she will want venison to feed her and her children, for her sons are yet like the young of the robin before they quit the nest. By your hand has this great calamity befallen her. She has two duties; one to le Loup Cervier, and one to his children. Scalp for scalp, life for life, blood for blood, is one law; to feed her young, another. We know you, Killer of the Deer. You are honest; when you say a thing, it is so. You have but one tongue, and that is not forked, like a snake's. Your head is never hid in the grass; all can see it. What you say, that will you do. You are just. When you have done wrong, it is your wish to do right again, as soon as you can. Here is the Sumach; she is alone in her wigwam, with children crying around her for food; yonder is a rifle; it is loaded and ready to be fired. Take the gun; go forth and shoot a deer; bring the venison and lay it before the widow of le Loup Cervier; feed her children; call yourself her husband. After which, your heart will no longer be Delaware, but Huron; le Sumach's ears will not hear the cries of her children; my people will count the proper number of warriors."

"I feared this, Rivenoak," answered Deerslayer, when the other had ceased speaking; "yes, I did dread that it would come to this. Hows'ever, the truth is soon told, and that will put an end to all expectations on this head. Mingo, I'm white, and Christian-born; 'twould ill become me to take a wife, under red-skin forms, from among heathen. That 30 which I wouldn't do in peaceable times, and under a bright sun, still less would I do behind clouds, in order to save my life. I may never marry; most likely Providence, in putting me up here in the woods, has intended I should live single, and without a lodge of my own; but should such a thing come to pass, none but a woman of my own color and gifts shall darken the door of my wigwam. As for feeding the young of your dead warrior, I would do that cheerfully, could it be done without discredit; but it cannot, seeing that I can never live in a Huron village. Your own young men must find the Sumach in venison, and the next time she marries, let her take a husband whose legs are not long enough to overrun territory that don't belong to him. We fou't a fair battle, and he fell; in this there is nothin' but what a brave expects, and should be ready to meet. As for getting a Mingo heart, as well might you expect to see grey hairs on a boy, or the blackberry growing on

the pine. No, no, Huron; my gifts are white, so far as wives are concerned; it is Delaware in all things touchin' Indians."

These words were scarcely out of the mouth of Deerslayer, before a common murmur betrayed the dissatisfaction with which they had been heard. The aged women, in particular, were loud in their expressions of disgust; and the gentle Sumach herself, a woman quite old enough to be our hero's mother, was not the least pacific in her denunciations. But all the other manifestations of disappointment and discontent were thrown into the background by the fierce resentment of the Panther. This grim chief had thought it a degradation to permit his sister to become the wife of a pale-face of the Yengeese at all, and had only given a reluctant consent to the arrangement—one by no means unusual among the Indians, however—at the earnest solicitations of the bereaved widow; and it goaded him to the quick to find his condescension slighted, the honor he had with so much regret been persuaded to accord, contemned. The animal from which he got his name does not glare on his intended prey with more frightful ferocity than his eyes gleamed on the captive; nor was his arm backward in seconding the fierce resentment that almost consumed his breast.

"Dog of the pale-faces!" he exclaimed, in Iroquois, "go yell among the curs of your own evil hunting-grounds!"

The denunciation was accompanied by an appropriate action. Even while speaking, his arm was lifted, and the tomahawk hurled. Luckily the loud tones of the speaker had drawn the eye of Deerslayer towards him, else would that moment have probably closed his career. So great was the dexterity with which this dangerous weapon was thrown, and so deadly the intent, that it would have riven the skull of the prisoner, had he not stretched forth an arm, and caught the handle in one of its turns, with a readiness quite as remarkable as the skill with which the missile had been hurled. The projectile force was so great, notwithstanding, that when Deerslayer's arm was arrested, his hand was raised above and behind his own head, and in the very attitude necessary to return the attack. It is not certain whether the circumstance of finding himself unexpectedly in this menacing posture and armed, tempted the young man to retaliate, or whether sudden resentment overcame his forbearance and prudence. His eye kindled, however,

and a small red spot appeared on each cheek, while he cast all his energy in the effort of his arm, and threw back the weapon at his assailant. The unexpectedness of this blow contributed to its success, the Panther neither raising an arm nor bending his head to avoid it. The keen little axe struck the victim in a perpendicular line with the nose, directly between the eyes, literally braining him on the spot. Sallying forward, as the serpent darts at his enemy even while receiving its own death-wound, this man of powerful frame fell his length into the open area formed by the circle, quivering in death. A common rush to his relief left the captive, for a single instant, quite without the crowd; and, willing to make one desperate effort for life he bounded off with the activity of a deer. There was but a breathless instant, when the whole band, old and young, women and children, abandoning the lifeless body of the Panther where it lay, raised the yell of alarm, and followed in pursuit.

Sudden as had been the event which induced Deerslayer to make this desperate trial of speed, his mind was not wholly unprepared for the fearful emergency. In the course of the past hour, he had pondered well on the chances of such an experiment, and had shrewdly calculated all the details of success and failure. At the first leap, therefore, his body was completely under the direction of an intelligence that turned all its efforts to the best account, and prevented everything like hesitation or indecision, at the important instant of the start. To this alone was he indebted for the first great advantage, that of getting through the line of sentinels unharmed. The manner in which this was done, though sufficiently simple, merits a description.

Although the shores of the point were not fringed with bushes, as was the case with most of the others on the lake, it was owing altogether to the circumstance that the spot had been so much used by hunters and fishermen. This fringe commenced on what might be termed the main land, and was as dense as usual, extending in long lines both north and south. In the latter direction, then, Deerslayer held his way; and, as the sentinels were a little without the commencement of this thicket, before the alarm was clearly communicated to them the fugitive had gained its cover. To run among the bushes, however, was out of the question, and Deerslayer held his way for some forty or fifty yards in the water, which was barely knee deep, offering as great an obstacle to the

speed of his pursuers as it did to his own. As soon as a favorable spot presented, he darted through the line of bushes, and issued into the open woods.

Several rifles were discharged at Deerslayer while in the water, and more followed as he came out into the comparative exposure of the clear forest. But the direction of his line of flight, which partially crossed that of the fire, the haste with which the weapons had been aimed, and the general confusion that prevailed in the camp, prevented any harm from being done. Bullets whistled past him, and many cut twigs from the branches at his side, but not one touched even his dress. The delay caused by these fruitless attempts was of great service to the fugitive, who had gained more than a hundred yards on even the leading men of the Hurons, ere something like concert and order had entered into the chase. To think of following with rifle in hand was out of the question; and after emptying their pieces in vague hopes of wounding their captive, the best runners of the Indians threw them aside, calling out to the women and boys to recover and load them again as soon as possible.

Deerslayer knew too well the desperate nature of the struggle in which he was engaged, to lose one of the precious moments. He also knew that his only hope was to run in a straight line, for as soon as he began to turn, or double, the greater number of his pursuers would put escape out of the question. He held his way, therefore, in a diagonal direction up the acclivity, which was neither very high nor very steep in this part of the mountain, but which was sufficiently toilsome for one contending for life, to render it painfully oppressive. There, however, he slackened his speed to recover breath, proceeding even at a quick walk or a slow trot, along the more difficult parts of the way. The Hurons were whooping and leaping behind him; but this he disregarded, well knowing they must overcome the difficulties he had surmounted ere they could reach the elevation to which he had attained. The summit of the first hill was now quite near him, and he saw, by the formation of the land, that a deep glen intervened, before the base of a second hill could be reached. Walking deliberately to the summit, he glanced eagerly about him in every direction, in quest of a cover. None offered in the ground; but a fallen tree lay near him, and desperate circumstances require desperate remedies. This tree lay in a line parallel to the glen, at

the brow of the hill; to leap on it, and then to force his person as close as possible under its lower side, took but a moment. Previously to disappearing from his pursuers, however, Deerslayer stood on the height and gave a cry of triumph, as if exulting at the sight of the descent that lay before him.—In the next instant he was stretched beneath the tree.

No sooner was this expedient adopted, than the young man ascertained how desperate had been his own efforts, by the violence of the pulsations in his frame. He could hear his heart beat, and his breathing was like the action of a bellows in quick motion. Breath was gained, however, and the heart soon ceased to throb as if about to break through its confinement. The footsteps of those who toiled up the opposite side of the acclivity were now audible, and presently voices and treads announced the arrival of the pursuers. The foremost shouted as they reached the height; then, fearful that their enemy would escape under favor of the descent, each leaped upon the fallen tree, and plunged into the ravine, trusting to get a sight of the pursued ere he reached the bottom. In this manner, Huron followed Huron, until Natty began to hope the whole had passed. Others succeeded, however, until quite forty had leaped over the tree; and then he counted them, as the surest mode of ascertaining how many could be behind. Presently all were in the bottom of the glen, quite a hundred feet below him, and some had even ascended part of the opposite hill, when it became evident an inquiry was making as to the direction he had taken. This was the critical moment; and one of nerves less steady, or of a training that had been neglected, would have seized it to rise, and fly. Not so with Deerslayer. He still lay quiet, watching with jealous vigilance every movement below, and fast regaining his breath.

The Hurons now resembled a pack of hounds at fault. Little was said, but each man ran about, examining the dead leaves, as the hound hunts for the lost scent. The great number of moccasins that had passed made the examination difficult, though the in-toe of an Indian was easily to be distinguished from the freer and wider step of a white man. Believing that no more pursuers remained behind, and hoping to steal away unseen, Deerslayer suddenly threw himself over the tree, and fell on the upper side. This achievement appeared to be effected successfully, and hope beat high in the bosom of the

fugitive. Rising to his hands and feet, after a moment lost in listening to the sounds in the glen, in order to ascertain if he had been seen, the young man next scrambled to the top of the hill, a distance of only ten yards, in the expectation of getting its brow between him and his pursuers, and himself so far under cover. Even this was effected, and he rose to his feet, walking swiftly but steadily along the summit, in a direction opposite to that in which he had first fled. The nature of the calls in the glen, however, soon made him uneasy, and he sprang upon the summit again, in order to reconnoiter. No sooner did he reach the height than he was seen, and the chase renewed. As it was better footing on the level ground, Deerslayer now avoided the side-hill, holding his flight along the ridge; while the Hurons, judging from the general formation of the land, saw that the ridge would soon melt into the hollow, and kept to the latter, as the easiest mode of heading the fugitive. A few, at the same time, turned south, with a view to prevent his escaping in that direction; while some crossed his trail towards the water, in order to prevent his retreat by the lake, running southerly.

The situation of Deerslayer was now more critical than it ever had been. He was virtually surrounded on three sides, having the lake on the fourth. But he had pondered well on all the chances, and took his measures with coolness, even while at the top of his speed. As is generally the case with the vigorous border-men, he could outrun any single Indian among his pursuers, who were principally formidable to him on account of their numbers and the advantages they possessed in position; and he would not have hesitated to break off in a straight line, at any spot, could he have got the whole band again fairly behind him. But no such chance did, or indeed could now offer; and when he found that he was descending towards the glen, by the melting away of the ridge, he turned short, at right angles to his previous course, and went down the declivity with tremendous velocity, holding his way towards the shore. Some of his pursuers came panting up the hill, in direct chase, while most still kept on, in the ravine, intending to head him at its termination. Deerslayer had now a different, though a desperate project in view. Abandoning all thoughts of escape by the woods, he made the best of his way towards the canoe. He knew where it lay; could it be reached, he had only to run the gauntlet of a few rifles, and success would be certain. None of the war-

rriors had kept their weapons, which would have retarded their speed, and the risk would come either from the uncertain hands of the women, or from those of some well-grown boy; though, most of the latter were already out in hot pursuit. Everything seemed propitious to the execution of this plan, and the course being a continued descent, the young man went over the ground at a rate that promised a speedy termination to his toil.

As Deerslayer approached the point, several women and children were passed, but, though the former endeavored to cast dried branches between his legs, the terror inspired by his bold retaliation on the redoubted Panther, was so great, that none dared come near enough seriously to molest him. He went by all triumphantly, and reached the fringe of bushes. Plunging through these, our hero found himself once more in the lake, and within fifty feet of the canoe. Here he ceased to run, for he well understood that his breath was now all-important to him. He even stooped, as he advanced, and cooled his parched mouth, by scooping up water in his hand to drink. Still the moments pressed, and he soon stood at the side of the canoe. The first glance told him that the paddles had been removed! This was a sore disappointment after all his efforts, and, for a single moment, he thought of turning, and of facing his foes by walking with dignity into the center of the camp again. But an infernal yell, such as the American savage alone can raise, proclaimed the quick approach of the nearest of his pursuers, and the instinct of life triumphed. Preparing himself duly, and giving a right direction to its bows, he ran off into the water bearing the canoe before him, threw all his strength and skill into a last effort, and cast himself forward so as to fall into the bottom of the light craft, without materially impeding its way. Here he remained on his back, both to regain his breath and to cover his person from the deadly rifle. The lightness, which was such an advantage in paddling the canoes, now operated unfavorably. The material was so like a feather, that the boat had no momentum; else would the impulse in that smooth and placid sheet have impelled it to a distance from the shore that would have rendered paddling with the hands safe. Could such a point once be reached. Deerslayer thought he might get far enough out to attract the attention of Chingachgook and Judith, who would not fail to come to his relief with other canoes, a circumstance

that promised everything. As the young man lay in the bottom of the canoe, he watched its movements, by studying the tops of the trees on the mountain-side, and judged of his distance by the time and the motion. Voices on the shore were now numerous, and he heard something said about manning the raft, which, fortunately for the fugitive, lay at a considerable distance, on the other side of the point.

Perhaps the situation of Deerslayer had not been more critical that day, than it was at this moment. It certainly had not been one half as tantalizing. He lay perfectly quiet for two or three minutes, trusting to the single sense of hearing, confident that the noise in the lake would reach his ears, did any one venture to approach by swimming. Once or twice he fancied that the element was stirred by the cautious movement of an arm, and then he perceived it was the wash of the water on the pebbles of the strand; for, in mimicry of the ocean, it is seldom that those little lakes are so totally tranquil as not to possess a slight heaving and setting on their shores. Suddenly all the voices ceased, and a death-like stillness pervaded the spot; a quietness as profound as if all lay in the repose of inanimate life. By this time, the canoe had drifted so far as to render nothing visible to Deerslayer, as he lay on his back, except the blue void of space, and a few of those brighter rays that proceed from the effulgence of the sun, marking his proximity. It was not possible to endure this uncertainty long. The young man well knew that the profound stillness foreboded evil, the savages never being so silent as when about to strike a blow; resembling the stealthy foot of the panther ere he takes his leap. He took out a knife, and was about to cut a hole through the bark, in order to get a view of the shore, when he paused from a dread of being seen in the operation, which would direct the enemy where to aim their bullets. At this instant a rifle was fired, and the ball pierced both sides of the canoe, within eighteen inches of the spot where his head lay. This was close work, but our hero had too lately gone through that which was closer, to be appalled. He lay still half a minute longer, and then he saw the summit of an oak coming slowly within his narrow horizon.

Unable to account for this change, Deerslayer could restrain his impatience no longer. Hitching his body along with the utmost caution, he got his eye at the bullet hole, and fortunately commanded a very tolerable view of the point. The canoe, by one of

those imperceptible impulses that so often decide the fate of men as well as the course of things, had inclined southerly, and was slowly drifting down the lake. It was lucky that Deerslayer had given it a shove sufficiently vigorous to send it past the end of the point ere it took this inclination, or it must have gone ashore again. As it was, it drifted so near it as to bring the tops of two or three trees within the range of the young man's view, as has been mentioned, and, indeed, to come in quite as close proximity with the extremity of the point as was at all safe. The distance could not much have exceeded a hundred feet, though fortunately a light current of air from the southwest began to set it slowly off shore.

Deerslayer now felt the urgent necessity of resorting to some expedient to get farther from his foes, and, if possible, to apprise his friends of his situation. The distance rendered the last difficult, while the proximity to the point rendered the first indispensable. As was usual in such craft, a large, round, smooth stone was in each end of the canoe, for the double purposes of seats and ballast; one of these was within reach of his feet. This stone he contrived to get so far between his legs as to reach it with his hands, and then he managed to roll it to the side of its fellow in the bows, where the two served to keep the trim of the light boat, while he worked his own body as far aft as possible. Before quitting the shore, and as soon as he perceived that the paddles were gone, Deerslayer had thrown a bit of dead branch into the canoe, and this was within reach of his arm. Removing the cap he wore, he put it on the end of this stick, just let it appear over the edge of the canoe, as far as possible from his own person. This ruse was scarcely adopted before the young man had proof how much he had underrated the intelligence of his enemies. In contempt of an artifice so shallow and commonplace, a bullet was fired directly through another part of the canoe, which actually razed his skin. He dropped the cap, and instantly raised it immediately over his head as a safeguard. It would seem that this second artifice was unseen, or what was more probable, the Hurons, feeling certain of recovering their captive, wished to take him alive.

Deerslayer lay passive a few minutes longer, his eye at the bullet hole, however, and much did he rejoice at seeing that he was drifting, gradually, farther and farther from the shore. When he looked upwards, the treetops had disappeared, but he soon

found that the canoe was slowly turning, so as to prevent his getting a view of anything at his peep hole but of the two extremities of the lake. He now bethought him of the stick, which was crooked, and offered some facilities for rowing, without the necessity of rising. The experiment succeeded, on trial, better even than he had hoped, though his great embarrassment was to keep the canoe straight. That his present maneuver was seen soon became apparent by the clamor on the shore, and a bullet entering the stern of the canoe, traversed its length, whistling between the arms of our hero, and passed out at the head. This satisfied the fugitive that he was getting away with tolerable speed, and induced him to increase his efforts. He was making a stronger push than common, when another messenger from the point broke the stick outboard, and at once deprived him of his oar. As the sound of voices seemed to grow more and more distant, however, Deerslayer determined to leave all to the drift, until he believed himself beyond the reach of bullets. This was nervous work, but it was the wisest of all the expedients that offered; and the young man was encouraged to persevere in it, by the circumstance that he felt his face fanned by the air, a proof that there was a little more wind.

## CHAPTER XXVIII

*Nor widows' tears, nor tender orphans' cries  
Can stop th' invader's force;  
Nor swelling seas, nor threatening skies,  
Prevent the pirate's course:  
Their lives to selfish ends decreed,  
Through blood and rapine they proceed;  
No anxious thoughts of ill-repute,  
Suspend the impetuous and unjust pursuit;  
But power and wealth obtained, guilty and great,  
Their fellow-creatures' fears they raise, or urge  
their hate.*

CONGREVE

By this time, Deerslayer had been twenty minutes in the canoe, and he began to grow a little impatient for some signs of relief from his friends. The position of the boat still prevented his seeing in any direction, unless it were up or down the lake; and, though he knew that his line of sight must pass within a hundred yards of the castle, it, in fact, passed that distance to the westward of the buildings. The profound stillness troubled him also, for he knew not whether to ascribe it to the increasing space between him and

the Indians, or to some new artifice. At length, wearied with fruitless watchfulness, the young man turned himself on his back, closed his eyes, and awaited the result in determined acquiescence. If the savages could so completely control their thirst for revenge, he was resolved to be as calm as themselves and to trust his fate to the interposition of the currents and air.

Some additional ten minutes may have passed in this quiescent manner, on both sides, when Deerslayer thought he heard a slight noise, like a low rubbing against the bottom of his canoe. He opened his eyes of course, in expectation of seeing the face or arm of an Indian rising from the water, and found that a canopy of leaves was impending directly over his head. Starting to his feet, the first object that met his eyes was Rivenoak, who had so far aided the slow progress of the boat as to draw it on the point, the grating on the strand being the sound that had first given our hero the alarm. The change in the drift of the canoe had been altogether owing to the baffling nature of the light currents of air, aided by some eddies in the water.

"Come," said the Huron, with a quiet gesture of authority to order his prisoner to land; "my young friend has sailed about till he is tired; he will forget how to run again unless he uses his legs."

"You've the best of it, Huron," returned Deerslayer, stepping steadily from the canoe, and passively following his leader to the open area of the point; "Providence has helped you in an unexpected manner. I'm your prisoner ag'in, and I hope you'll allow that I'm as good at breaking gaol as I am at keeping furloughs."

"My young friend is a moose!" exclaimed the Huron. "His legs are very long; they have given my young men trouble. But he is not a fish; he cannot find his way in the lake. We did not shoot him; fish are taken in nets, and not killed by bullets. When he turns moose again, he will be treated like a moose."

"Ay, have your talk, Rivenoak; make the most of your advantage. 'Tis your right, I suppose, and I know it is your gift. On that point there'll be no words between us; for all men must and ought to follow their gifts. Hows'ever, when your women begin to taunt and abuse me, as I suppose will soon happen, let 'em remember that if a pale-face struggles for life so long as it's lawful and manful, he knows how to

loosen his hold on it, decently, when he feels that the time has come. I'm your captive; work your will on me."

"My brother has had a long run on the hills, and a pleasant sail on the water," returned Rivenoak more mildly, smiling at the same time, in a way that his listener knew denoted pacific intentions. "He has seen the woods, he has seen the water; which does he like best? Perhaps he has seen enough to change his mind, and make him hear reason."

"Speak out, Huron. Something is in your thoughts, and the sooner it is said, the sooner you'll get my answer."

"That is straight! There is no turning in the talk of my pale-face friend, though he is a fox in running. I will speak to him; his ears are now open wider than before, and his eyes are not shut. The Sumach is poorer than ever. Once she had a brother and a husband. She had children too. The time came, and the husband started for the happy hunting-grounds without saying farewell; he left her alone with his children. This he could not help, or he would not have done it; le Loup Cervier was a good husband. It was pleasant to see the venison, and wild ducks, and geese, and bear's meat, that hung in his lodge in winter. It is now gone; it will not keep in warm weather. Who shall bring it back again? Some thought the brother would not forget his sister, and that, next winter, he would see that the lodge should not be empty. We thought this; but the Panther yelled, and followed the husband on the path of death. They are now trying which shall first reach the happy hunting-grounds. Some think the Lynx can run fastest, and some think the Panther can jump the farthest. The Sumach thinks both will travel so fast and so far that neither will ever come back. Who shall feed her and her young? The man who told her husband and her brother to quit her lodge, that there might be room for him to come into it. He is a great hunter, and we know that the woman will never want."

"Ay, Huron, this is soon settled, according to your notions; but it goes sorely against the grain of a white man's feelings. I've heard of men's saving their lives this-away, and I've known'd them that would prefer death to such a sort of captivity. For my part, I do not seek my end; nor do I seek matrimony."

"The pale-face will think of this while my people get ready for the council. He will be told what will

happen. Let him remember how hard it is to lose a husband and a brother. Go; when we want him, the name of Deerslayer will be called."

This conversation had been held with no one near but the speakers. Of all the band that had so lately thronged the place, Rivenoak alone was visible. The rest seemed to have totally abandoned the spot. Even the furniture, clothes, arms, and other property of the camp had entirely disappeared, and the place bore no other proofs of the crowd that had so lately occupied it than the traces of their fires and resting-places, and the trodden earth that still showed the marks of their feet. So sudden and unexpected a change caused Deerslayer a good deal of surprise and some uneasiness, for he had never known it to occur in the course of his experience among the Delawares. He suspected, however, and rightly, that a change of encampment was intended, and that the mystery of the movement was resorted to in order to work on his apprehensions.

Rivenoak walked up the vista of trees, as soon as he ceased speaking, leaving Deerslayer by himself. The chief disappeared behind the covers of the forest, and one unpracticed in such scenes might have believed the prisoner left to the dictates of his own judgment. But the young man, while he felt a little amazement at the dramatic aspect of things, knew his enemies too well to fancy himself at liberty, or a free agent. Still he was ignorant how far the Hurons meant to carry their artifices, and he determined to bring the question, as soon as practicable, to the proof. Affecting an indifference he was far from feeling, he strolled about the area, gradually getting nearer and nearer to the spot where he had landed, when he suddenly quickened his pace, though carefully avoiding all appearance of flight, and, pushing aside the bushes, he stepped upon the beach. The canoe was gone, nor could he see any traces of it, after walking to the northern and southern verges of the point, and examining the shores in both directions. It was evidently removed beyond his reach and knowledge, and under circumstances to show that such had been the intention of the savages.

Deerslayer now better understood his actual situation. He was a prisoner on the narrow tongue of land, vigilantly watched beyond a question, and with no other means of escape than that of swimming. He again thought of this last expedient, but the certainty that the canoe would be sent in chase, and the des-

perate nature of the chances of success, deterred him from the undertaking. While on the strand, he came to a spot where the bushes had been cut and thrown into a small pile. Removing a few of the upper branches, he found beneath them the dead body of the Panther. He knew that it was kept until the savages might find a place to inter it, when it would be beyond the reach of the scalping-knife. He gazed wistfully towards the castle, but there all seemed to be silent and desolate; and a feeling of loneliness and desertion came over him to increase the gloom of the moment.

"God's will be done!" murmured the young man, as he walked sorrowfully away from the beach, entering again beneath the arches of the wood; "God's will be done, on 'arth as it is in heaven! I did hope that my days would not be numbered so soon! but it matters little, after all. A few more winters, and a few more summers, and 'twould have been over, 20 accordin' to natur'. Ah's me! the young and active seldom think death possible, till he grins in their faces and tells 'em the hour is come!"

While this soliloquy was being pronounced, the hunter advanced into the area, where to his surprise he saw Hetty alone, evidently awaiting his return. The girl carried the Bible under her arm and her face, over which a shadow of gentle melancholy was usually thrown, now seemed sad and downcast. Moving nearer, Deerslayer spoke.

"Poor Hetty," he said, "times have been so troublesome of late, that I'd altogether forgotten you; we meet, as it might be, to mourn over what is to happen. I wonder what has become of Chingachgook and Wah!"

"Why did you kill the Huron, Deerslayer," returned the girl reproachfully. "Don't you know your commandments, which say, 'Thou shalt not kill!' They tell me you have now slain the woman's husband and brother."

"It's true, my good Hetty,—'tis gospel truth, and I'll not deny what has come to pass. But you must remember, gal, that many things are lawful in war, which would be onlawful in peace. The husband was shot in open fight; or open so far as I was concerned, while he had a better cover than common; and the brother brought his end on himself, by casting his tomahawk at an unarmed prisoner. Did you witness that deed, gal?"

"I saw it, and was sorry it happened, Deerslayer;

for I hoped you wouldn't have returned blow for blow, but good for evil."

"Ah, Hetty, that may do among the missionaries, but 'twould make an onsartain life in the woods. The Panther craved my blood, and he was foolish enough to throw arms into my hands at the very moment he was striving after it. 'Twould have been ag'in natur' not to raise a hand in such a trial, and 'twould have done discredit to my training and gifts. No, no; I'm as willing to give every man his own, as another; and so I hope you testify to them that will be likely to question you as to what you've seen this day."

"Deerslayer, do you mean to marry Sumach, now she has neither husband nor brother to feed her?"

"Are such your idces of matrimony, Hetty? Ought the young to wive with the old—the pale-face with the red-skin—the Christian with the heathen? It's ag'in reason and natur', and so you'll see, if you'll think of it a moment."

"I've always heard mother say," returned Hetty, averting her face, more from a feminine instinct than from any consciousness of wrong, "that people should never marry until they loved each other better than brothers and sisters; and I suppose that is what you mean. Sumach is old, and you *are* young."

"Ay, and she's red, and I'm white. Besides, Hetty, suppose you was a wife, now, having married some young man of your own years, and state, and color—Hurry Harry, for instance,"—Deerslayer selected this example, simply from the circumstance that he was the only young man known to both,—“and that he had fallen on a warpath, would you wish to take to your bosom, for a husband, the man that slew him?"

"Oh! no, no, no," returned the girl, shuddering. "That would be wicked, as well as heartless! No Christian girl could, or would, do that. I never shall be the wife of Hurry, I know; but were he my husband, no man should ever be it again, after his death."

"I thought it would get to this, Hetty, when you come to understand sarcumstances. 'Tis a moral impossibility that I should ever marry Sumach; and, though Indian weddin's have no priests, and not much religion, a white man who knows his gifts and duties can't profit by that, and so make his escape at the fitting time. I do think death would be more nat'ral like, and welcome, than wedlock with this woman."

"Don't say it too loud," interrupted Hetty impa-

tiently; "I suppose she will not like to hear it. I'm surc Hurry would rather marry even me than suffer torments, though I *am* feeble-minded; and I am surc it would kill me to think he'd prefer death to being my husband."

"Ay, gal; you an't Sumach, but a comcly young Christian, with a good heart, pleasant smile, and kind eye. Hurry might be proud to get you, and that, too, not in misery and sorrow, but in his best and happiest days. Hows'ever, take my advice, and never talk to Hurry about these things; he's only a borderer, at the best."

"I wouldn't tell him, for the world!" exclaimed the girl, looking about her like one affrighted, and blushing, she knew not why. "Mother always said young women shouldn't be forward, and speak their minds before they're asked;—oh! I never forget what mother told me. 'Tis a pity Hurry is so handsome, Deerslayer; I do think fewer girls would like him then, and he would sooner know his own mind."

"Poor gal, poor gal, it's plain enough how it is; but the Lord will bear in mind one of your simple heart and kind feelin's! We'll talk no more of these things; if you had reason, you'd be sorrowful at having let others so much into your secret. Tell me, Hetty, what has become of all the Hurons, and why they let you roam about the p'int, as if you, too, was a prisoner?"

"I'm no prisoner, Deerslayer, but a free girl, and go when and where I please. Nobody dare hurt *me*! If they did, God would be angry—as I can show them in the Bible. No—no—Hetty Hutter is not afraid; *she's* in good hands. The Hurons are up yonder in the woods, and keep a good watch on us both. I'll answer for it, since all the women and children are on the lookout. Some are burying the body of the poor girl who was shot last night, so that the enemy and the wild beasts can't find it. I told 'em that father and mother lay in the lake, but I wouldn't let them know in what part of it, for Judith and I don't want any of their heathenish company in our burying-ground."

"Ah's me!—Well, it is an awful dispatch to be standing here, alive and angry, and with the feelin's up and furious one hour, and then to be carried away at the next, and put out of sight of mankind in a hole in the 'arth! No one knows what will happen to him on a warpath, that's sartain."

Here the stirring of leaves and the cracking of

dried twigs interrupted the discourse, and apprised Deerslayer of the approach of his enemies. The Hurons closed around the spot that had been prepared for the coming scene, and in the center of which the intended victim now stood, in a circle—the armed men being so distributed among the feeble members of the band, that there was no safe opening through which the prisoner could break. But the latter no longer contemplated flight; the recent trial having satisfied him of his inability to escape when 10 pursued so closely by numbers. On the contrary, all his energies were aroused, in order to meet his expected fate, with a calmness that should do credit to his color and his manhood; one equally removed from recreant alarm and savage boasting.

When Rivenoak reappeared in the circle, he occupied his old place at the head of the area. Several of the elder warriors stood near him; but, now that the brother of Sumach had fallen, there was no longer any recognized chief present, whose influence and 20 authority offered a dangerous rivalry to his own. Nevertheless, it is well known that little which could be called monarchical, or despotic, entered into the politics of the North American tribes, although the first colonists, bringing with them to this hemisphere the notions and opinions of their own countries, often dignified the chief men of those primitive nations with the titles of kings and princes. Hereditary influence did certainly exist; but there is much reason to believe it existed rather as a consequence of 30 hereditary merit and acquired qualifications, than as a birthright. Rivenoak, however, had not even this claim—having risen to consideration purely by the force of talents, sagacity, and, as Bacon expresses it, in relation to all distinguished statesmen, “by a union of great and mean qualities”; a truth of which the career of the profound Englishman himself furnishes so apt an illustration.

Next to arms, eloquence offers the great avenue to popular favor, whether it be in civilized or savage 40 life; and Rivenoak had succeeded, as so many have succeeded before him, quite as much by rendering fallacies acceptable to his listeners, as by any profound or learned expositions of truth, or the accuracy of his logic. Nevertheless, he had influence; and was far from being altogether without just claims to its possession. Like most men who reason more than they feel, the Huron was not addicted to the indulgence of the mere ferocious passions of his people: he had

been commonly found on the side of mercy in all the scenes of vindictive torture and revenge that had occurred in his tribe since his own attainment to power. On the present occasion, he was reluctant to proceed to extremities, although the provocation was so great; still it exceeded his ingenuity to see how that alternative could well be avoided. Sumach resented her rejection more than she did the deaths of her husband and brother, and there was little probability that the woman would pardon a man who had so unequivocally preferred death to her embraces. Without her forgiveness there was scarce a hope that the tribe could be induced to overlook its loss; and even to Rivenoak, himself, much as he was disposed to pardon, the fate of our hero now appeared to be almost hopelessly sealed.

When the whole band was arrayed around the captive, a grave silence, so much the more threatening from its profound quiet, pervaded the place. Deerslayer perceived that the women and boys had been preparing splinters of the fat pine roots, which he well knew were to be stuck into his flesh and set in flames, while two or three of the young men held the thongs of bark with which he was to be bound. The smoke of a distant fire announced that the burning brands were in preparation, and several of the elder warriors passed their fingers over the edges of their tomahawks, as if to prove their keenness and temper. Even the knives seemed loosened in their sheaths, impatient for the bloody and merciless work to begin.

“Killer of the Deer,” recommenced Rivenoak, certainly without any signs of sympathy or pity in his manner, though with calmness and dignity; “Killer of the Deer, it is time that my people knew their minds. The sun is no longer over our heads; tired of waiting on the Hurons, he has begun to fall near the pines on this side of the valley. He is travelling fast towards the country of our French fathers; it is to warn his children that their lodges are empty, and that they ought to be at home. The roaming wolf has his den, and he goes to it when he wishes to see his young. The Iroquois are not poorer than the wolves. They have villages, and wigwams, and fields of corn; the good spirits will be tired of watching them alone. My people must go back and see to their own business. There will be joy in the lodges when they hear our whoop from the forest! It will be a sorrowful whoop; when it is understood, grief will come after it. There will be one scalp-whoop, but there will be

only one. We have the fur of the Muskrat; his body is among the fishes. Deerslayer must say whether another scalp shall be on our pole. Two lodges are empty; a scalp, living or dead, is wanted at each door."

"Then take 'em dead, Huron," firmly, but altogether without dramatic boasting, returned the captive. "My hour is come, I do suppose; and what must be, must. If you are bent on the tortur', I'll do my indvors to bear up ag'in it, though no man can say 10 how far his natur' will stand pain, until he's been tried."

"The pale-face cur begins to put his tail between his legs!" cried a young and garrulous savage, who bore the appropriate title of the Corbeau Rouge; a *sobriquet* he had gained from the French, by his facility in making unseasonable noises, and an undue tendency to hear his own voice; "he is no warrior; he has killed the Loup Cervier when looking behind him not to see the flash of his own rifle. He grunts 20 like a hog already; when the Huron women begin to torment him, he will cry like the young of the catamount. He is a Delaware woman, dressed in the skin of a Yengeese!"

"Have your say, young man; have your say," returned Deerslayer, unmoved; "you know no better, and I can overlook it. Talking may aggravate women, but can hardly make knives sharper, fire hotter, or rifles more sartain."

Rivenoak now interfered, reproving the Red Crow 30 for his premature interference, and then directing the proper persons to bind the captive. This expedient was adopted, not from any apprehension that he would escape, or from any necessity, that was yet apparent, of his being unable to endure the torture with his limbs free, but from an ingenious design of making him feel his helplessness, and of gradually sapping his resolution, by undermining it, as it might be, little by little. Deerslayer offered no resistance. He submitted his arms and his legs, freely if not 40 cheerfully, to the ligaments of bark which were bound around them, by order of the chief, in a way to produce as little pain as possible. These directions were secret, and given in a hope that the captive would finally save himself from any serious bodily suffering, by consenting to take the Sumach for a wife. As soon as the body of Deerslayer was withed in bark sufficiently to create a lively sense of helplessness, he was literally carried to a young tree and bound against it,

in a way that effectually prevented him from moving, as well as from falling. The hands were laid flat against the legs, and thongs were passed over all, in a way nearly to incorporate the prisoner with the tree. His cap was then removed, and he was left half-standing, half-sustained by his bonds, to face the coming scene in the best manner he could.

Previously to proceeding to anything like extremities, it was the wish of Rivenoak to put his captive's resolution to the proof by renewing the attempt at a compromise. This could be effected only in one manner, the acquiescence of the Sumach being indispensably necessary to a compromise of her right to be revenged. With this view, then, the woman was next desired to advance, and to look to her own interest; no agent being considered as efficient as the principal herself in this negotiation. The Indian females, when girls, are usually mild and submissive, with musical tones, pleasant voices, and merry laughs; but toil and suffering generally deprive them of most of these advantages by the time they have reached an age which the Sumach had long before passed. To render their voices harsh, it would seem to require active, malignant passions, though, when excited, their screams can rise to a sufficiently conspicuous degree of discordancy to assert their claim to possess this distinctive peculiarity of the sex. The Sumach was not altogether without feminine attraction, however, and had so recently been deemed handsome in her tribe, as not to have yet learned the full influence that time and exposure produce on man as well as on woman. By an arrangement of Rivenoak's, some of the women around her had been employing the time in endeavoring to persuade the bereaved widow that there was still a hope Deerslayer might be prevailed on to enter her wigwam in preference to entering the world of spirits, and this, too, with a success that previous symptoms scarcely justified. All this was the result of a resolution on the part of the chief to leave no proper means unemployed, in order to get the greatest hunter that was then thought to exist in all that region transferred to his own nation, as well as a husband for a woman who he felt would be likely to be troublesome, were any of her claims to the attention and care of the tribe overlooked.

In conformity with this scheme, the Sumach had been secretly advised to advance into the circle, and to make her appeal to the prisoner's sense of justice before the band had recourse to the last experiment.

The woman, nothing loth, consented; for there was some such attraction, in becoming the wife of a noted hunter, among the females of the tribes, as is experienced by the sex in more refined life, when they bestow their hands on the affluent. As the duties of a mother were thought to be paramount to all other considerations, the widow felt none of that embarrassment in preferring her claims, to which even a female fortune-hunter among ourselves might be liable. When she stood forth before the whole party, therefore, the children that she led by the hand fully justified all she did.

"You see me before you, cruel pale-face," the woman commenced; "your spirit must tell you my errand. I have found *you*; I cannot find le Loup Cervier, nor the Panther; I have looked for them, in the lake, in the woods, in the clouds. I cannot say where they have gone."

"No man knows, good Sumach, no man knows," interposed the captive. "When the spirit leaves the body it passes into a world beyond our knowledge, and the wisest way, for them that are left behind, is to hope for the best. No doubt both your warriors have gone to the happy hunting-grounds, and at the proper time you will see 'em ag'in in their improved state. The wife and sister of braves must have looked forward to some such termination of their 'arthly careers."

"Cruel pale-face, what had my warriors done that you should slay them? They were the best hunters and the boldest young men of their tribe; the Great Spirit intended that they should live until they withered like the branches of the hemlock, and fell of their own weight."

"Nay, nay, good Sumach," interrupted the Deerslayer, whose love of truth was too indomitable to listen to such hyperbole with patience, even though it came from the torn breast of a widow,—“Nay, nay, good Sumach, this is a little out-doing red-skin privileges. Young man was neither, any more than you can be called a young woman; and as to the Great Spirit's intending that they should fall otherwise than they did, that's a grievous mistake, inasmuch as what the Great Spirit intends is sartain to come to pass. Then, ag'in, it's plain enough neither of your fri'nds did me any harm; I raised my hand ag'in 'em on account of what they were *striving* to do, rather than what they did. This is nat'ral law, 'to do, lest you should be done by.'"

"It is so. Sumach has but one tongue; she can tell but one story. The pale-face struck the Hurons, lest the Hurons should strike him. The Hurons are a just nation: they will forget it. The chiefs will shut their eyes, and pretend not to have seen it. The young men will believe the Panther and the Lynx have gone to far-off hunts; and the Sumach will take her children by the hand, and go into the lodge of the pale-face, and say, 'See; these are *your* children—they are also mine; feed us, and we will live with you.'"

"The tams are onadmissible, woman; and, though I feel for your losses, which must be hard to bear, the tams cannot be accepted. As to givin' you ven'son, in case we lived near enough together, that would be no great expl'ite; but as for becomin' your husband, and the father of your children, to be honest with you, I feel no callin' that-a-way."

"Look at this boy, cruel pale-face; he has no father to teach him to kill the deer, or to take scalps. See this girl; what young man will come to look for a wife in a lodge that has no head? There are more among my people in the Canadas, and the Killer of Deer will find as many mouths to feed as his heart can wish for."

"I tell you, woman," exclaimed Deerslayer, whose imagination was far from seconding the appeal of the widow, and who began to grow restive under the vivid pictures she was drawing, "all this is nothing to me. People and kindred must take care of their own fatherless, leaving them that have no children to their own loneliness. As for me, I have no offspring, and I want no wife. Now, go away, Sumach; leave me in the hands of your chiefs; for my color, and gifts, and natur' itself, cry out ag'in the idee of taking you for a wife."

It is unnecessary to expatiate on the effect of this downright refusal of the woman's proposals. If there was anything like tenderness in her bosom,—and no woman was, probably, ever entirely without that feminine quality,—it all disappeared at this plain announcement. Fury, rage, mortified pride, and a volcano of wrath, burst out at one explosion, converting her into a sort of maniac, as it might be at the touch of a magician's wand. Without deigning a reply in words, she made the arches of the forest ring with her screams, and then flew forward at her victim, seizing him by the hair, which she appeared resolute to draw out by the roots. It was some time before her grasp could be loosened. Fortunately for the prisoner,

her rage was blind, since his total helplessness left him entirely at her mercy; had it been better directed it might have proved fatal before any relief could have been offered. As it was, she did succeed in wrenching out two or three handfuls of hair, before the young men could tear her away from her victim.

The insult that had been offered to the Sumach was deemed an insult to the whole tribe; not so much, however, on account of any respect that was felt for the woman, as on account of the honor of 10 the Huron nation. Sumach, herself, was generally considered to be as acid as the berry from which she derived her name; and now that her great supporters, her husband and brother, were both gone, few cared about concealing their aversion. Nevertheless, it had become a point of honor to punish the pale-face who disdained a Huron woman, and more particularly, one who coolly preferred death to relieving the tribe from the support of a widow and her children. The young men showed an impatience to begin to torture, 20 that Rivenoak understood; and as his elder associates manifested no disposition to permit any longer delay, he was compelled to give the signal for the infernal work to proceed.

#### CHAPTER XXIX

*The ugly bear now minded not the stake,  
Nor how the cruel mastiffs do him tear;  
The stag lay still, unroused from the brake,  
The foamy boar feared not the hunter's spear:  
All thing was still in desert, bush, and briar.*

LORD DORSET

It was one of the common expedients of the savages, on such occasions, to put the nerves of their victims to the severest proofs. On the other hand, it was a matter of Indian pride, to betray no yielding to terror, or pain; but for the prisoner to provoke his enemies to such acts of violence as would soonest produce death. Many a warrior had been known to bring his own sufferings to a more speedy termina- 40 tion by taunting reproaches and reviling language, when he found that his physical system was giving way under the agony of sufferings, produced by a hellish ingenuity, that might well eclipse all that has been said of the infernal devices of religious persecution. This happy expedient of taking refuge from the ferocity of his foes, in their passions, was denied Deerslayer, however, by his peculiar notions of the duty of a white man; and he had stoutly made up his

mind to endure everything, in preference to disgracing his color.

No sooner did the young men understand that they were at liberty to commence, than some of the boldest and most forward among them sprang into the arena, tomahawk in hand. Here they prepared to throw that dangerous weapon, the object being to strike the tree as near as possible to the victim's head, without absolutely hitting him. This was so hazardous an experiment, that none but those who were known to be exceedingly expert with the weapon were allowed to enter the lists at all, lest an early death might interfere with the expected entertainment. In the truest hands, it was seldom that the captive escaped injury in these trials; and it often happened that death followed, even when the blow was not premeditated. In the particular case of our hero, Rivenoak and the older warriors were apprehensive that the example of the Panther's fate might prove a motive with some fiery spirit, suddenly to sacrifice his conqueror, when the temptation of effecting it in precisely the same manner, and possibly with the identical weapon with which the warrior had fallen, offered. This circumstance, of itself, rendered the ordeal of the tomahawk doubly critical for the Deerslayer.

It would seem, however, that all who now entered what we shall call the lists, were more disposed to exhibit their own dexterity than to resent the deaths 30 of their comrades. Each prepared himself for the trial, with the feelings of rivalry, rather than with the desire for vengeance; and for the first few minutes, the prisoner had little more connection with the result, than grew out of the interest that necessarily attached itself to a living target. The young men were eager, instead of being fierce, and Rivenoak thought he still saw signs of being able to save the life of the captive, when the vanity of the young men had been gratified: always admitting that it was not sacrificed to the delicate experiments that were about to be made.

The first youth who presented himself for the trial was called the Raven, having as yet had no opportunity of obtaining a more warlike *sobriquet*. He was remarkable for high pretension, rather than for skill, or exploits; and those who knew his character thought the captive in imminent danger when he took his stand, and poised the tomahawk. Nevertheless, the young man was good-natured, and no thought was

uppermost in his mind other than the desire to make a better cast than any of his fellows. Deerslayer got an inkling of this warrior's want of reputation, by the injunctions that he had received from the seniors; who, indeed, would have objected to his appearing in the arena at all, but for an influence derived from his father, an aged warrior of great merit, who was then in the lodges of the tribe. Still, our hero maintained an appearance of self-possession. He had made up his mind that his hour was come, and it would have been a mercy, instead of a calamity, to fall by the unsteadiness of the first hand that was raised against him. After a suitable number of flourishes and gesticulations, that promised much more than he could perform, the Raven let the tomahawk quit his hand. The weapon whirled through the air with the usual evolutions, cut a chip from the sapling to which the prisoner was bound, within a few inches of his cheek, and stuck in a large oak that grew several yards behind him. This was decidedly a bad effort, and a common sneer proclaimed as much, to the great mortification of the young man. On the other hand, there was a general, but suppressed murmur of admiration, at the steadiness with which the captive stood the trial. The head was the only part he could move, and this had been purposely left free, that the tormentors might have the amusement, and the tormented endure the shame of dodging, and otherwise attempting to avoid the blows. Deerslayer disappointed these hopes, by a command of nerve that rendered his whole body as immovable as the tree to which it was bound. Nor did he even adopt the natural and usual expedient of shutting his eyes: the firmest and oldest warrior of the red-men never having more disdainfully denied himself this advantage, under similar circumstances.

The Raven had no sooner made his unsuccessful and puerile effort, than he was succeeded by *le Daim-Mosc*, or the Moose; a middle-aged warrior, who was particularly skilful in the use of the tomahawk, and from whose attempt the spectators confidently looked for gratification. This man had none of the good-nature of the Raven, but he would gladly have sacrificed the captive to his hatred of the pale-faces generally, were it not for the greater interest he felt in his own success as one particularly skilful in the use of this weapon. He took his stand quietly, but with an air of confidence, poised his little axe but a single instant, advanced a foot with a quick motion, and

threw. Deerslayer saw the keen instrument whirling towards him, and believed all was over; still, he was not touched. The tomahawk had actually bound the head of the captive to the tree, by carrying before it some of his hair; having buried itself deep beneath the soft bark. A general yell expressed the delight of the spectators, and the Moose felt his heart soften a little towards the prisoner, whose steadiness of nerve alone enabled him to give this evidence of his consummate skill.

*Le Daim-Mosc* was succeeded by the Bounding Boy, or *le Garçon qui Bondi*, who came leaping into the circle like a hound, or a goat at play. This was one of those elastic youths, whose muscles seemed always in motion, and who either affected, or who from habit was actually unable to move in any other manner, than by showing the antics just mentioned. Nevertheless, he was both brave and skilful, and had gained the respect of his people by deeds in war as well as success in the hunts. A far nobler name would long since have fallen to his share, had not a Frenchman of rank inadvertently given him this *sobriquet*, which he religiously preserved as coming from his great father, who lived beyond the wide salt lake. The Bounding Boy skipped about in front of the captive, menacing him with his tomahawk, now on one side, and now on another, and then again in front, in the vain hope of being able to extort some sign of fear by this parade of danger. At length Deerslayer's patience became exhausted by all this mummery, and he spoke, for the first time since the trial had actually commenced.

"Throw away, Huron!" he cried, "or your tomahawk will forget its ar'n'd. Why do you keep loping about like a fa'a'n that's showing its dam how well it can skip, when you're a warrior grown, yourself, and a warrior grown defies you and all your silly antics? Throw, or the Huron gals will laugh in your face."

Although not intended to produce such an effect, the last words aroused the "Bounding" warrior to fury. The same nervous excitability which rendered him so active in his person, made it difficult to repress his feelings, and the words were scarcely past the lips of the speaker, than the tomahawk left the hand of the Indian. Nor was it cast without good-will, and a fierce determination to slay. Had the intention been less deadly, the danger might have been greater. The aim was uncertain, and the weapon glanced near the

check of the captive, slightly cutting the shoulder in its evolutions. This was the first instance in which any other object, than that of terrifying the prisoner, and of displaying skill, had been manifested; and the Bounding Boy was immediately led from the arena, and was warmly rebuked for his intemperate haste, which had come so near defeating all the hopes of the band.

To this irritable person succeeded several other young warriors, who not only hurled the tomahawk but who cast the knife, a far more dangerous experiment, with reckless indifference; yet they always manifested a skill that prevented any injury to the captive. Several times Deerslayer was grazed, but in no instance did he receive what might be termed a wound. The unflinching firmness with which he faced his assailants, more especially in the sort of rally with which this trial terminated, excited a profound respect in the spectators; and when the chiefs announced that the prisoner had well withstood the trials of the knife and the tomahawk, there was not a single individual in the band who really felt any hostility towards him, with the exception of Sumach and the Bounding Boy. These two discontented spirits got together, it is true, feeding each other's ire; but, as yet, their malignant feelings were confined very much to themselves, though there existed the danger that the others, ere long, could not fail to be excited by their own efforts into that demoniacal state which usually accompanied all similar scenes among the red-men.

Rivenoak now told his people that the pale-face had proved himself to be a man. He might live with the Delawares, but he had not been made woman with that tribe. He wished to know whether it was the desire of the Hurons to proceed any further. Even the gentlest of the females, however, had received too much satisfaction in the late trials to forego their expectations of a gratifying exhibition; and there was but one voice in the request to proceed. The politic chief, who had some such desire to receive so celebrated a hunter into his tribe as a European minister has to devise a new and available means of taxation, sought every plausible means of arresting the trial in season; for he well knew, if permitted to go far enough to arouse the more ferocious passions of the tormentors, it would be as easy to dam the waters of the great lakes of his own region as to attempt to arrest them in their bloody career. He therefore called four or five of the best marksmen to him, and

bid them put the captive to the proof of the rifle, while, at the same time, he cautioned them touching the necessity of their maintaining their own credit, by the closest attention to the manner of exhibiting their skill.

When Deerslayer saw the chosen warriors step into the circle with their arms prepared for service, he felt some such relief as the miserable sufferer, who has long endured the agonies of disease, feels at the certain approach of death. Any trifling variance in the aim of this formidable weapon would prove fatal; since, the head being the target, or rather the point it was desired to graze without injury, an inch or two of difference in the line of projection, must at once determine the question of life or death.

In the torture by the rifle there was none of the latitude permitted that appeared in the case of even Gesler's apple, a hair's-breadth being, in fact, the utmost limits that an expert marksman would allow himself on an occasion like this. Victims were frequently shot through the head by too eager or unskillful hands; and it often occurred that, exasperated by the fortitude and taunts of the prisoner, death was dealt intentionally in a moment of ungovernable irritation. All this Deerslayer well knew, for it was in relating the traditions of such scenes, as well as of the battles and victories of their people, that the old men beguiled the long winter evenings in their cabins. He now fully expected the end of his career, and experienced a sort of melancholy pleasure in the idea that he was to fall by a weapon as much beloved as the rifle. A slight interruption, however, took place before the business was allowed to proceed.

Hetty Hutter witnessed all that passed, and the scene at first had pressed upon her feeble mind in a way to paralyze it entirely; but, by this time, she had rallied, and was growing indignant at the unmerited suffering the Indians were inflicting on her friend. Though timid, and shy as the young of the deer, on so many occasions, this right-feeling girl was always intrepid in the cause of humanity; the lessons of her mother, and the impulses of her own heart,—perhaps we might say the promptings of that unseen and pure spirit that seemed ever to watch over and direct her actions—uniting to keep down the apprehensions of woman, and to impel her to be bold and resolute. She now appeared in the circle, gentle, feminine, even bashful in mien, as usual, but earnest

in her words and countenance, speaking like one who knew herself to be sustained by the high authority of God.

"Why do you torment Deerslayer, red-men?" she asked. "What has he done that you trifle with his life; who has given you the right to be his judges? Suppose one of your knives or tomahawks had hit him; what Indian among you all could cure the wound you would make? Besides, in harming Deerslayer, you injure your own friend; when father and Hurry Harry came after your scalps, he refused to be of the party, and stayed in the canoe by himself. You are tormenting your friend in tormenting this young man!"

The Hurons listened with grave attention, and one among them, who understood English, translated what had been said into their native tongue. As soon as Rivenoak was made acquainted with the purport of her address, he answered it in his own dialect; the interpreter conveying it to the girl in English.

"My daughter is very welcome to speak," said the stern old orator, using gentle intonations, and smiling as kindly as if addressing a child—"the Hurons are glad to hear her voice; they listen to what she says. The Great Spirit often speaks to men with such tongues. This time her eyes have not been open wide enough to see all that has happened. Deerslayer did not come for our scalps, that is true; why did he not come? Here they are, on our heads; the warlocks are ready to be taken hold of; a bold enemy ought to stretch out his hand to seize them. The Iroquois are too great a nation to punish men that take scalps. What they do themselves, they like to see others do. Let my daughter look around her, and count my warriors. Had I as many hands as four warriors, their fingers would be fewer than my people, when they came into your hunting-grounds. Now, a whole hand is missing. Where are the fingers? Two have been cut off by this pale-face; my Hurons wish to see if he did this by means of a stout heart, or by treachery; like a skulking fox, or like a leaping panther."

"You know yourself, Huron, how one of them fell. I saw it, and you all saw it, too. 'Twas too bloody to look at, but it was not Deerslayer's fault. Your warrior sought his life, and he defended himself. I don't know whether the good book says that it was right, but all men will do that. Come, if you want to know which of you can shoot best, give Deerslayer a rifle, and then you will find how much more ex-

pert he is than any of your warriors; yes, than *all* of them together!"

Could one have looked upon such a scene with indifference, he would have been amused at the gravity with which the savages listened to the translation of this unusual request. No taunt, no smile mingled with their surprise; for Hetty had a character and a manner too saintly to subject her infirmity to the mockings of the rude and ferocious. On the contrary, she was answered with a respectful attention.

"My daughter does not always talk like a chief at a council fire," returned Rivenoak, "or she would not have said this. Two of my warriors have fallen by the blows of our prisoner; their grave is too small to hold a third. The Hurons do not like to crowd their dead. If there is another spirit about to set out for the far-off world, it must not be the spirit of a Huron; it must be the spirit of a pale-face. Go, daughter, and sit by Sumach, who is in grief; let the Huron warriors show how well they can shoot; let the pale-face show how little he cares for their bullets."

Hetty's mind was unequal to a sustained discussion, and, accustomed to defer to the directions of her seniors, she did as told, seating herself passively on a log by the side of the Sumach, and averting her face from the painful scene that was occurring within the circle.

The warriors, as soon as this interruption had ceased, resumed their places, and again prepared to exhibit their skill, as there was a double object in view, that of putting the constancy of the captive to the proof, and that of showing how steady were the hands of the marksmen under circumstances of excitement. The distance was small, and, in one sense, safe. But in diminishing the distance taken by the tormentors, the trial to the nerves of the captive was essentially increased. The face of Deerslayer, indeed, was just removed sufficiently from the ends of the guns to escape the effects of the flash, and his steady eye was enabled to look directly into their muzzles, as it might be, in anticipation of the fatal messenger that was to issue from each. The cunning Hurons well knew this fact; and scarce one levelled his piece without first causing it to point as near as possible at the forehead of the prisoner, in the hope that his fortitude would fail him, and that the band would enjoy the triumph of seeing a victim quail under their ingenious cruelty. Nevertheless, each of the competi-

tors was still careful not to injure, the disgrace of striking prematurely being second only to that of failing altogether in attaining the object. Shot after shot was made; all the bullets coming in close proximity to the Deerslayer's head, without touching it. Still, no one could detect even the twitching of a muscle on the part of the captive, or the slightest winking of an eye. This indomitable resolution, which so much exceeded everything of its kind that any present had before witnessed, might be referred to three distinct causes. The first was resignation to his fate, blended with natural steadiness of deportment; for our hero had calmly made up his mind that he must die, and preferred this mode to any other; the second was his great familiarity with this particular weapon, which deprived it of all the terror that is usually connected with the mere form of the danger; and the third was this familiarity carried out in practice, to a degree so nice as to enable the intended victim to tell, within an inch, the precise spot where each bullet must strike, for he calculated its range by looking in at the bore of the piece. So exact was Deerslayer's estimation of the line of fire, that his pride of feeling finally got the better of his resignation, and, when five or six had discharged their bullets into the trees, he could not refrain from expressing his contempt at their want of hand and eye.

"You may call this shooting, Mingos," he exclaimed, "but we've squaws among the Delawares, and I have known Dutch gals on the Mohawk, that could outdo your greatest indivors. Ondo these arms of mine, put a rifle into my hands, and I'll pin the thinnest warlock in your party to any tree you can show me; and this at a hundred yards: ay, or at two hundred, if the object can be seen, nineteen shots in twenty: or, for that matter, twenty in twenty, if the piece is creditable and trusty!"

A low menacing murmur followed this cool taunt; the ire of the warriors kindled at listening to such a reproach from one who so far disdained their efforts as to refuse even to wink, when a rifle was discharged as near his face as could be done without burning it. Rivenoak perceived that the moment was critical, and, still retaining his hope of adopting so noted a hunter into his tribe, the politic old chief interposed in time, probably, to prevent an immediate resort to that portion of the torture which must necessarily have produced death, through extreme bodily suffering, if in no other manner. Moving into the center of the irri-

tated group, he addressed them with his usually wily logic and plausible manner, at once suppressing the fierce movement that had commenced.

"I see how it is," he said. "We have been like the pale-faces when they fasten their doors at night, out of fear of the red-man. They use so many bars that the fire comes and burns them before they can get out. We have bound the Deerslayer too tight; the thongs keep his limbs from shaking, and his eyes from shutting. Loosen him; let us see what his own body is really made of."

It is often the case, when we are thwarted in a cherished scheme, that any expedient, however unlikely to succeed, is gladly resorted to, in preference to a total abandonment of the project. So it was with the Hurons. The proposal of the chief found instant favor; and several hands were immediately at work, cutting and tearing the ropes of bark from the body of our hero. In half a minute, Deerslayer stood as free from bonds, as when, an hour before, he had commenced his flight on the side of the mountain. Some little time was necessary that he should recover the use of his limbs, the circulation of the blood having been checked by the tightness of the ligatures; and this was accorded to him by the politic Rivenoak, under the pretense that his body would be more likely to submit to apprehension, if its true tone were restored; though really with a view to give time to the fierce passions which had been awakened in the bosoms of his young men, to subside. This *ruse* succeeded; and Deerslayer, by rubbing his limbs, stamping his feet, and moving about, soon regained the circulation;—recovering all his physical powers, as effectually as if nothing had occurred to disturb them.

It is seldom men think of death in the pride of their health and strength. So it was with Deerslayer. Having been helplessly bound, and, as he had every reason to suppose, so lately on the very verge of the other world, to find himself so unexpectedly liberated, in possession of his strength, and with a full command of limb, acted on him like a sudden restoration to life, reanimating hopes that he had once absolutely abandoned. From that instant all his plans changed. In this, he simply obeyed a law of nature; for while we have wished to represent our hero as being resigned to his fate, it has been far from our intention to represent him as anxious to die. From the instant that his buoyancy of feeling revived, his thoughts were keenly bent on the various projects that pre-

sented themselves as modes of evading the designs of his enemies; and he again became the quick-witted, ingenious, and determined woodsman, alive to all his own powers and resources. The change was so great that his mind resumed its elasticity; and, no longer thinking of submission, it dwelt only on the devices of the sort of warfare in which he was engaged.

As soon as Deerslayer was released, the band divided itself in a circle around him, in order to hedge him in; and the desire to break down his spirit grew 10 in them, precisely as they saw proofs of the difficulty there would be in subduing it. The honor of the band was now involved in the issue; and even the sex lost all its sympathy with suffering, in the desire to save the reputation of the tribe. The voices of the girls, soft and melodious as nature had made them, were heard mingling with the menaces of the men; and the wrongs of Sumach suddenly assumed the character of injuries inflicted on every Huron female. Yielding to this rising tumult, the men drew back a little, signify- 20 ing to the females that they left the captive, for a time, in their hands; it being a common practice, on such occasions, for the women to endeavor to throw the victim into a rage by their taunts and revilings, and then to turn him suddenly over to the men in a state of mind that was little favorable to resisting the agony of bodily suffering. Nor was this party without the proper instruments for effecting such a purpose. Sumach had a notoriety as a scold; and one or two crones, like the She Bear, had come out with the 30 party, most probably as the conservators of its decency and moral discipline; such things occurring in savage as well as civilized life. It is unnecessary to repeat all that ferocity and ignorance could invent for such a purpose; the only difference between this outbursting of feminine anger, and a similar scene among ourselves, consisting in the figures of speech and the epithets; the Huron women calling their prisoner by the names of the lower and least respected animals that were known to themselves.

But Deerslayer's mind was too much occupied to permit him to be disturbed by the abuse of excited hags; and their rage necessarily increasing with his indifference, as his indifference increased with their rage, the furies soon rendered themselves impotent by their own excesses. Perceiving that the attempt was a complete failure, the warriors interfered to put a stop to this scene; and this so much the more, because preparations were now seriously making for the com-

mencement of the real tortures, or that which would put the fortitude of the sufferer to the test of severe bodily pain. A sudden and unlooked-for announcement, that proceeded from one of the lookouts, a boy ten or twelve years old, however, put a momentary check to the whole proceedings. As this interruption has a close connection with the *dénouement* of our story, it shall be given in a separate chapter.

## CHAPTER XXX

*So deem'st thou—so each mortal deems  
Of that which is from that which seems;  
But other harvest here  
Than that which peasant's scythe demands,  
Was gathered in by sterner hands,  
With bayonet, blade, and spear.*

SCOTT

It exceeded Deerslayer's power to ascertain what had produced the sudden pause in the movements of his enemies, until the fact was revealed in the due course of events. He perceived that much agitation prevailed among the women in particular, while the warriors rested on their arms, in a sort of dignified expectation. It was plain no alarm was excited, though it was not equally apparent that a friendly occurrence produced the delay. Rivenoak was evidently apprised of all, and by a gesture of his arm he appeared to direct the circle to remain unbroken, and for each person to await the issue in the situation he, or she, then occupied. It required but a minute or two to bring an explanation of this singular and mysterious pause, which was soon terminated by the appearance of Judith, on the exterior of the line of bodies, and her ready admission within its circle.

If Deerslayer was startled by this unexpected arrival, well knowing that the quick-witted girl could claim none of that exemption from the penalties of captivity that was so cheerfully accorded to her feeble-minded sister, he was equally astonished at the guise 40 in which she came. All her ordinary forest attire, neat and becoming as this usually was, had been laid aside for the brocade that has been already mentioned, and which had once before wrought so great and magical an effect in her appearance. Nor was this all. Accustomed to see the ladies of the garrison, in the formal, gala attire of the day, and familiar with the more critical niceties of these matters, the girl had managed to complete her dress, in a way to leave nothing strikingly defective in its details, or even to betray an

incongruity that would have been detected by one practiced in the mysteries of the toilet. Head, feet, arms, hands, bust, and drapery, were all in harmony, as female attire was then deemed attractive and harmonious; and the end she aimed at, that of imposing on the uninstructed senses of the savages, by causing them to believe their guest was a woman of rank and importance, might well have succeeded with those whose habits had taught them to discriminate between persons. Judith, in addition to her rare native beauty, had a singular grace of person, and her mother had imparted enough of her own deportment to prevent any striking or offensive vulgarity of manner; so that, sooth to say, the gorgeous dress might have been worse bestowed in nearly every particular. Had it been displayed in a capital, a thousand might have worn it, before one could have been found to do more credit to its gay colors, glossy satins, and rich laces, than the beautiful creature whose person it now aided to adorn.

The effect of such an apparition had not been miscalculated. The instant Judith found herself within the circle, she was, in a degree, compensated for the fearful personal risk she ran, by the unequivocal sensation of surprise and admiration produced by her appearance. The grim old warriors uttered their favorite exclamation, "Hugh!" The younger men were still more sensibly overcome, and even the women were not backward in letting open manifestations of pleasure escape them. It was seldom that these untutored children of the forest had ever seen any white female above the commonest sort, and, as to dress, never before had so much splendor shone before their eyes. The gayest uniforms of both French and English seemed dull compared with the luster of the brocade; and while the rare personal beauty of the wearer added to the effect produced by its hues, the attire did not fail to adorn that beauty in a way which surpassed even the hopes of its wearer. Decrslayer himself was astounded, and this quite as much by the brilliant picture the girl presented, as at the indifference to consequences with which she had braved the danger of the step she had taken. Under such circumstances, all waited for the visitor to explain her object, which to most of the spectators seemed as inexplicable as her appearance.

"Which of these warriors is the principal chief?" demanded Judith of Decrslayer, as soon as she found it was expected that she should open the com-

munications; "my errand is too important to be delivered to any of inferior rank. First explain to the Hurons what I say; then give an answer to the question I have put."

Decrslayer quietly complied, his auditors greedily listening to the interpretation of the first words that fell from so extraordinary a vision. The demand seemed perfectly in character for one who had every appearance of an exalted rank herself. Rivenoak gave an appropriate reply, by presenting himself before his fair visitor in a way to leave no doubt that he was entitled to all the consideration he claimed.

"I can believe this, Huron," resumed Judith, enacting her assumed part with a steadiness and dignity that did credit to her powers of imitation, for she strove to impart to her manner the condescending courtesy she had once observed in the wife of a general officer at a similar though a more amicable scene: "I can believe you to be the principal person of this party; I see in your countenance the marks of thought and reflection. To you, then, I must make my communication."

"Let the Flower of the Woods speak," returned the old chief courteously, as soon as her address had been translated so that all might understand it. "If her words are as pleasant as her looks, they will never quit my ears; I shall hear them long after the winter of Canada has killed the flowers, and frozen all the speeches of summer."

This admiration was grateful to one constituted like Judith, and contributed to aid her self-possession, quite as much as it fed her vanity. Smiling involuntarily, or in spite of her wish to seem reserved, she proceeded in her plot.

"Now, Hurons," she continued, "listen to my words. Your eyes tell you that I am no common woman. I will not say I am queen of this country; *she* is afar off, in a distant land; but under our gracious monarchs, there are many degrees of rank; one of these I fill. What that rank is precisely, it is unnecessary for me to say, since you would not understand it. For that information you must trust your eyes. You *see* what I am; you must *feel* that in listening to my words, you listen to one who can be your friend, or your enemy, as you treat her."

This was well uttered, with a due attention to manner, and a steadiness of tone that was really surprising, considering all the circumstances of the case. It was well, though simply rendered into the Indian

dialect, too, and it was received with a respect and gravity that augured favorably for the girl's success. But Indian thought is not easily traced to its sources. Judith waited with anxiety to hear the answer, filled with hope even while she doubted. Rivenoak was a ready speaker, and he answered as promptly as comported with the notions of Indian decorum; that peculiar people seeming to think a short delay respectful, inasmuch as it manifests that the words already heard have been duly weighed.

"My daughter is handsomer than the wild roses of Ontario; her voice is pleasant to the ear as the song of the wren," answered the cautious and wily chief, who of all the band stood alone in not being fully imposed on by the magnificent and unusual appearance of Judith; but who distrusted even while he wondered: "the humming-bird is not much larger than the bee; yet its feathers are as gay as the tail of the peacock. The Great Spirit sometimes puts very bright clothes on very little animals. Still, He covers the moose with coarse hair. These things are beyond the understanding of poor Indians, who can only comprehend what they see and hear. No doubt my daughter has a very large wigwam, somewhere about the lake; the Hurons have not found it, on account of their ignorance?"

"I have told you, chief, that it would be useless to state my rank and residence, inasmuch as you would not comprehend them. You must trust to your eyes for this knowledge; what red-man is there who cannot see? This blanket that I wear is not the blanket of a common squaw; these ornaments are such as the wives and daughters of chiefs only appear in. Now, listen and hear why I have come alone among your people, and hearken to the errand that has brought me here. The Yengeese have young men as well as the Hurons; and plenty of them, too; this you well know."

"The Yengeese are as plenty as the leaves on the trees! This every Huron knows and feels."

"I understand you, chief. Had I brought a party with me, it might have caused trouble. My young men and your young men would have looked angrily at each other; especially had my young men seen that pale-face bound for the tortures. He is a great hunter, and is much loved by all the garrisons, far and near. There would have been blows about him, and the trail of the Iroquois back to the Canadas would have been marked with blood."

"There is so much blood on it now," returned the

chief, gloomily. "that it blinds our eyes. My young men see that it is all Huron."

"No doubt; and more Huron blood would be spilt, had I come surrounded with pale-faces. I have heard of Rivenoak, and have thought it would be better to send him back in peace to his village, that he might leave his women and children behind him; if he then wished to come for our scalps, we would meet him. He loves animals made of ivory, and little rifles. See; I have brought some with me to show him. I am his friend. When he has packed up these things among his goods, he will start for his village, before any of my young men can overtake him; and then he will show his people in Canada what riches they can come to seek, now that our great fathers, across the Salt Lake, have sent each other the war-hatchet. I will lead back, with me, this great hunter, of whom I have need to keep my house in venison."

Judith, who was sufficiently familiar with Indian phraseology, endeavored to express her ideas in the sententious manner common to those people; and she succeeded even beyond her own expectations. Deerslayer did her full justice in the translation, and this so much the more readily, since the girl carefully abstained from uttering any direct untruth; a homage she paid to the young man's known aversion to falsehood, which he deemed a meanness altogether unworthy of a white man's gifts. The offering of the two remaining elephants, and of the pistols already mentioned, one of which was all the worse for the recent accident, produced a lively sensation among the Hurons generally, though Rivenoak received it coldly, notwithstanding the delight with which he had first discovered the probable existence of a creature with two tails. In a word, this cool and sagacious savage was not so easily imposed on as his followers; and with a sentiment of honor that half the civilized world would have deemed supererogatory, he declined the acceptance of a bribe that he felt no disposition to earn by a compliance with the donor's wishes.

"Let my daughter keep her two-tailed hog to eat when venison is scarce," he drily answered; "and the little gun, which has two muzzles. The Hurons will kill deer when they are hungry; and they have long rifles to fight with. This hunter cannot quit my young men now; they wish to know if he is as stout-hearted as he boasts himself to be."

"That I deny, Huron," interrupted Deerslayer with

warmth; "yes, that I downright deny, as ag'in truth and reason. No man has heard me *boast*, and no man shall, though ye flay me alive, and then roast the quivering flesh, with your own infarnal devices and cruelties! I may be humble, and misfortunate, and your prisoner; but I'm no boaster, by my very gifts."

"My young pale-face *boasts* he is *no* boaster," returned the crafty chief. "He *must* be right. I hear a strange bird singing. It has very rich feathers. No Huron ever before saw such feathers! They will be 10 ashamed to go back to their village and tell their people that they let their prisoner go on account of the song of this strange bird, and not be able to give the *name* of the bird. They do not know how to say whether it is a wren or a cat-bird. This would be a great disgrace; my young men would not be allowed to travel in the woods without taking their mothers with them to tell them the name of the birds!"

"You can ask my name of your prisoner," returned the girl. "It is Judith; and there is a great deal of the 20 history of Judith in the pale-faces' best book, the Bible. If I am a bird of fine feathers, I have also my name."

"No," answered the wily Huron, betraying the artifice he had so long practiced, by speaking in English, with tolerable accuracy, "I not ask prisoner. He tired; want rest. I ask my daughter, with feeble-mind. She speak truth. Come here, daughter; you answer. *Your* name, Hetty?"

"Ycs, that's what they call me," returned the girl, 30 "though it's written Esther, in the Bible."

"He write *him* in Bible, too! All write in Bible. No matter—what *her* name?"

"That's Judith, and it's so written in the Bible, though father sometimes called her Jude. That's my sister Judith, Thomas Hutter's daughter—Thomas Hutter, whom you called the Muskrat; though he was *no* muskrat, but a man, like yourselves—he lived in a house on the water, and that was enough for *you*!"

A smile of triumph gleamed on the hard-wrinkled 40 countenance of the chief, when he found how completely his appeal to the truth-loving Hetty had succeeded. As for Judith, herself, the moment her sister was questioned, she saw that all was lost; for no sign, or even entreaty, could have induced the right-feeling girl to utter a falsehood. To attempt to impose a daughter of the Muskrat on the savages as a princess, or a great lady, she knew would be idle; and she saw her bold and ingenious expedient for liberating the

captive fail, through one of the simplest and most natural causes that could be imagined. She turned her eye on Deerslayer, therefore, as if imploring him to interfere, to save them both.

"It will not do, Judith," said the young man, in answer to this appeal, which he understood, though he saw its uselessness. "It will not do. 'Twas a bold idee, and fit for a general's lady; but yonder Mingo—" Rivenoak had withdrawn to a little distance, and was out of earshot—"but yonder Mingo is an uncommon man, and not to be deceived by any onnat'ral sarcumventions. Things must come afore him in their right order, to draw a cloud afore *his* eyes! 'Twas too much to attempt making him fancy that a queen, or a great lady, lived in these mountains; and no doubt he thinks the fine clothes you wear are some of the plunder of your own father—or, at least, of him who once passed for your father; as quite likely it was, if all they say is true."

"At all events, Deerslayer, my presence here will save you for a time. They will hardly attempt torturing you before my face!"

"Why not, Judith? Do you think they will treat a woman of the pale-faces more tenderly than they treat their own? It's true that your sex will most likely save you from the torments, but it will not save your liberty, and may not save your scalp. I wish you hadn't come, my good Judith; it can do no good to me, while it may do great harm to yourself."

"I can share your fate," the girl answered, with generous enthusiasm. "They shall not injure you while I stand by, if in my power to prevent it—besides—"

"Besides what, Judith? What means have you to stop Indian cruelties, or to avert Injin deviltries?"

"None, perhaps, Deerslayer," answered the girl, with firmness; "but I can suffer with my friends—die with them if necessary."

"Ah! Judith—suffer you may; but die you will not until the Lord's time shall come. It's little likely that one of your sex and beauty will meet with a harder fate than to become the wife of a chief, if indeed your white inclinations can stoop to match with an Indian. 'Twould have been better had you stayed in the ark, or the castle—but what has been done, is done. You was about to say something, when you stopped at 'besides?' "

"It might not be safe to mention it here, Deerslayer," the girl hurriedly answered, moving past him

carelessly, that she might speak in a low tone; "half an hour is all in all to us. None of your friends are idle."

The hunter replied merely by a grateful look. Then he turned towards his enemies, as if ready again to face the torments. A short consultation had passed among the elders of the band, and by this time they also were prepared with their decision. The merciful purpose of Rivenoak had been much weakened by the artifice of Judith, which, failing of its real object, was likely to produce results the very opposite of those she had anticipated. This was natural; the feeling being aided by the resentment of an Indian, who found how near he had been to becoming the dupe of an inexperienced girl. By this time Judith's real character was fully understood—the widespread reputation of her beauty contributing to the exposure. As for the unusual attire, it was confounded with the profound mystery of the animals with two tails, and, for the moment, lost its influence.

When Rivenoak, therefore, faced the captive again, it was with an altered countenance. He had abandoned the wish of saving him, and was no longer disposed to retard the more serious part of the torture. This change of sentiment was, in effect, communicated to the young men, who were already eagerly engaged in making their preparations for the contemplated scene. Fragments of dried wood were rapidly collected near the sapling, the splinters which it was intended to thrust into the flesh of the victim, previously to lighting, were all collected, and the thongs were already produced, that were again to bind him to the tree. All this was done in profound silence, Judith watching every movement with breathless expectation, while Deerslayer himself stood seemingly as unmoved as one of the pines of the hills. When the warriors advanced to bind him, however, the young man glanced at Judith, as if to inquire whether resistance or submission were most advisable. By a significant gesture she counselled the last; and, in a minute, he was once more fastened to the tree, a helpless object of any insult or wrong that might be offered. So eagerly did everyone now act, that nothing was said. The fire was immediately lighted in the pile, and the end of all was anxiously expected.

It was not the intention of the Hurons absolutely to destroy the life of their victim by means of fire. They designed merely to put his physical fortitude to the severest proofs it could endure, short of that

extremity. In the end, they fully intended to carry his scalp with them into their village, but it was their wish first to break down his resolution, and to reduce him to the level of a complaining sufferer. With this view, the pile of brush and branches had been placed at a proper distance, or one at which it was thought the heat would soon become intolerable, though it might not be immediately dangerous. As often happened, however, on these occasions, this distance had been miscalculated, and the flames began to wave their forked tongues in a proximity to the face of the victim that would have proved fatal in another instant, had not Hetty rushed through the crowd, armed with a stick, and scattered the blazing pile in a dozen directions. More than one hand was raised to strike the presumptuous intruder to the earth; but the chiefs prevented the blows, by reminding their irritated followers of the state of her mind. Hetty, herself, was insensible to the risk she ran; but, as soon as she had performed this bold act, she stood looking about her, in frowning resentment, as if to rebuke the crowd of attentive savages for their cruelty.

"God bless you, dearest sister, for that brave and ready act!" murmured Judith, herself unnerved so much as to be incapable of exertion; "Heaven itself has sent you on its holy errand."

"'Twas well-meant, Judith," rejoined the victim; "'twas excellently meant, and 'twas timely, though it may prove untimely in the end! What is to come to pass must come to pass soon, or 'twill quickly be too late. Had I drawn in one mouthful of that flame in breathing, the power of man couldn't save my life; and you see that, this time, they've so bound my forehead as not to leave my head the smallest chance. 'Twas well meant; but it might have been more merciful to let the flames act their part."

"Cruel, heartless Hurons!" exclaimed the still indignant Hetty; "would you burn a man and a Christian as you would burn a log of wood? Do you never read your Bibles? or do you think God will forget such things?"

A gesture from Rivenoak caused the scattered brands to be collected; fresh wood was brought, even the women and children busying themselves eagerly in the gathering of dried sticks. The flame was just kindling a second time when an *Indian* female pushed through the circle, advanced to the heap, and with her foot dashed aside the lighted twigs in time to prevent the conflagration. A yell followed this

second disappointment; but when the offender turned towards the circle, and presented the countenance of Hist, it was succeeded by a common exclamation of pleasure and surprise. For a minute, all thought of pursuing the business in hand was forgotten, and young and old crowded around the girl, in haste to demand an explanation of her sudden and unlooked-for return. It was at this critical instant that Hist spoke to Judith in a low voice, placed some small object, unseen, in her hand, and then turned to meet the salutations of the Huron girls, with whom she was personally a great favorite. Judith recovered her self-possession, and acted promptly. The small, keen-edged knife, that Hist had given to the other, was passed by the latter into the hands of Hetty, as the safest and least-suspected medium of transferring it to Deerslayer. But the feeble intellect of the last defeated the well-grounded hopes of all three. Instead of first cutting loose the hands of the victim, and then concealing the knife in his clothes, in readiness for action at the most available instant, she went to work herself, with earnestness and simplicity, to cut the thongs that bound his head, that he might not again be in danger of inhaling flames. Of course this deliberate procedure was seen, and the hands of Hetty were arrested ere she had more than liberated the upper portion of the captive's body, not including his arms, below the elbows. This discovery at once pointed distrust towards Hist; and, to Judith's surprise, when questioned on the subject, that spirited girl was not disposed to deny her agency in what had passed.

"Why should I not help the Deerslayer?" the girl demanded, in the tones of a firm-minded woman. "He is the brother of a Delaware chief; my heart is all Delaware. Come forth, miserable Briarthorn, and wash the Iroquois paint from your face; stand before the Hurons, the crow that you are; you would eat the carrion of your own dead, rather than starve. Put him face to face with Deerslayer, chiefs and warriors; I will show you how great a knave you have been keeping in your tribe."

This bold language, uttered in their own dialect, and with a manner full of confidence, produced a deep sensation among the Hurons. Treachery is always liable to distrust; and, though the recreant Briarthorn had endeavored to serve the enemy well, his exertions and assiduities had gained for him little more than toleration. His wish to obtain Hist for a wife had first

induced him to betray her and his own people; but serious rivals to his first project had risen up among his new friends, weakening still more their sympathies with treason. In a word, Briarthorn had been barely permitted to remain in the Huron encampment, where he was as closely and as jealously watched as Hist herself; seldom appearing before the chiefs, and sedulously keeping out of view of Deerslayer, who, until this moment, was ignorant even of his presence. Thus summoned, however, it was impossible to remain in the background. "Wash the Iroquois paint from his face," he did not; for when he stood in the center of the circle, he was so disguised in these new colors, that, at first, the hunter did not recognize him. He assumed an air of defiance, notwithstanding, and haughtily demanded what any could say against "Briarthorn."

"Ask yourself that," continued Hist, with spirit, though her manner grew less concentrated; and there was a slight air of abstraction that became observable to Deerslayer and Judith, if to no others. "Ask that of your own heart, sneaking woodchuck of the Delawares; come not here with the face of an innocent man. Go look in the spring; see the colors of your enemies on your lying skin; and then come back and boast how you ran from your tribe, and took the blanket of the French for your covering! Paint yourself as bright as a humming-bird, you will still be black as the crow."

Hist had been so uniformly gentle while living with the Hurons, that they now listened to her language with surprise. As for the delinquent, his blood boiled in his veins; and it was well for the pretty speaker that it was not in his power to execute the revenge he burned to inflict on her, in spite of his pretended love.

"Who wishes Briarthorn?" he sternly asked. "If this pale-face is tired of life; if afraid of Indian torments, speak, Rivenoak; I will send him after the warriors we have lost."

"No, chief; no, Rivenoak," eagerly interrupted Hist. "The Deerslayer fears nothing; least of all, a crow! Unbind him—cut his withes—place him face to face with this cawing bird; then let us see which is tired of life."

Hist made a forward movement, as if to take a knife from a young man, and perform the office she had mentioned, in person; but an aged warrior interposed, at a sign from Rivenoak. This chief watched

all the girl did, with distrust; for, even while speaking in her most boastful language, and in the steadiest manner, there was an air of uncertainty and expectation about her, that could not escape so close an observer. She acted well; but two or three of the old men were equally satisfied that it was merely acting. Her proposal to release Deerslayer, therefore, was rejected; and the disappointed Hist found herself driven back from the sapling, at the very moment she fancied herself about to be successful. At the same time, the circle, which had got to be crowded and confused, was enlarged, and brought once more into order. Rivenoak now announced the intention of the old men again to proceed; the delay having been continued long enough, and leading to no result.

"Stop, Huron; stay, chiefs!" exclaimed Judith, scarce knowing what she said, or why she interposed, unless to obtain time; "for God's sake, a single minute longer—"

The words were cut short by another and still more extraordinary interruption. A young Indian came bounding through the Huron ranks, leaping into the very center of the circle, in a way to denote the utmost confidence, or temerity bordering on fool-hardiness. Five or six sentinels were still watching the lake at different and distant points; and it was the first impression of Rivenoak that one of these had come in with tidings of import. Still, the movements of the stranger were so rapid, and his war-dress, which scarcely left him more drapery than an antique statue, had so little distinguishing about it, that, at the first moment, it was impossible to ascertain whether he were friend or foe. Three leaps carried this warrior to the side of Deerslayer, whose withes were cut in the twinkling of an eye, with a quickness and precision that left the prisoner perfect master of his limbs. Not till this was effected, did the stranger bestow a glance on any other object; then he turned, and showed the astonished Hurons the noble brow, fine person, and eagle eye of a young warrior in the paint and panoply of a Delaware. He held a rifle in each hand, the butts of both resting on the earth, while from one dangled its proper pouch and horn. This was Killdeer, which, even as he looked boldly and in defiance on the crowd around him, he suffered to fall back into the hands of its proper owner. The presence of two armed men, though it was in their midst, startled the Hurons. Their rifles were scattered about against the different trees, and their only weapons were their knives and

tomahawks. Still, they had too much self-possession to betray fear. It was little likely that so small a force would assail so strong a band; and each man expected some extraordinary proposition to succeed so decisive a step. The stranger did not seem disposed to disappoint them; he prepared to speak.

"Hurons," he said, "this earth is very big. The great lakes are big, too; there is room beyond them for the Iroquois; there is room for the Delawares on this side. I am Chingachgook, the son of Uncas; the kinsman of Tamenund. This is my betrothed; that pale-face is my friend. My heart was heavy when I missed him; I followed him to your camp to see that no harm happened to him. All the Delaware girls are waiting for Wah; they wonder that she stays away so long. Come, let us say farewell, and go on our path."

"Hurons, this is your mortal enemy, the Great Serpent of them you hate!" cried Briarthorn. "If he escape, blood will be in your moccasin prints, from this spot to the Canadas. I am *all* Huron."

As the last words were uttered, the traitor cast his knife at the naked breast of the Delaware. A quick movement of the arm on the part of Hist, who stood near, turned aside the blow, the dangerous weapon burying its point in a pine. At the next instant, a similar weapon glanced from the hand of the Serpent, and quivered in the recreant's heart. A minute had scarcely elapsed from the moment in which Chingachgook bounded into the circle, and that in which Briarthorn fell, like a log, dead in his tracks. The rapidity of events had prevented the Hurons from acting; but this catastrophe permitted no farther delay. A common exclamation followed, and the whole party was in motion. At this instant, a sound unusual to the woods was heard, and every Huron, male and female, paused to listen, with ears erect and faces filled with expectation. The sound was regular and heavy, as if the earth were struck with beetles. Objects became visible among the trees of the background, and a body of troops was seen advancing with measured tread. They came upon the charge, the scarlet of the king's livery shining among the bright green foliage of the forest.

The scene that followed is not easily described. It was one in which wild confusion, despair, and frenzied efforts, were so blended, as to destroy the unity and distinctness of the action. A general yell burst from the enclosed Hurons; it was succeeded by

the hearty cheers of England. Still, not a musket or rifle was fired, though that steady, measured tramp continued, and the bayonet was seen gleaming in advance of a line that counted nearly sixty men. The Hurons were taken at a fearful disadvantage. On three sides was the water, while their formidable and trained foes cut them off from flight on the fourth. Each warrior rushed for his arms, and then all on the point, man, woman, and child, eagerly sought the covers. In this scene of confusion and dismay, however, nothing could surpass the discretion and coolness of Deerslayer. His first care was to place Judith and Hist behind trees, and he looked for Hetty; but she had been hurried away in the crowd of Huron women. This effected, he threw himself on a flank of the retiring Hurons, who were inclining off towards the southern margin of the point in the hope of escaping through the water. Deerslayer watched his

opportunity, and finding two of his recent tormentors in a range, his rifle first broke the silence of the terrific scene. The bullet brought both down at one discharge. This drew a general fire from the Hurons, and the rifle and war-cry of the Serpent were heard in the clamor. Still the trained men returned no answering volley, the whoop and pierce of Hurry alone being heard on their side, if we except the short, prompt word of authority, and that heavy, measured, and menacing tread. Presently, however, the shrieks, groans, and denunciations that usually accompany the use of the bayonet, followed. That terrible and deadly weapon was glutted in vengeance. The scene that succeeded was one of those, of which so many have occurred in our own times, in which neither age nor sex forms an exemption to the lot of a savage warfare.

## WILLIAM CULLEN BRYANT (1794-1878)

Identified for the sake of convenience with the Knickerbocker group of writers, who dominated the American literary scene from the War of 1812 to the rise of the Transcendentalists during the thirties, Bryant was a New Yorker by adoption only. Upon going to New York in 1825 (aged thirty-one), he shared with Cooper and Irving the literary leadership, and for the next fifty-three years he was a commanding figure as editor, publicist, essayist, critic, orator, and poet. But while he was identified, during most of his mature life with New York City, he belongs to New England by birth, by inheritance, by early associations, by almost every shaping influence on his literary personality. Maturing early and changing little afterwards, the Bryant who left his native regions to become one of the most influential editors of the century was already, in all essentials, the Bryant whom we know best today. His first volume of forty-four pages of 1821, contains most, and the second, of 1832, contains almost all, of what is essential in Bryant's poetry. In the half-century during which he added considerably to the bulk of these early volumes, he varied his emphasis, constructions, and forms, but added virtually nothing basically new to the content of his poetry. There was little change in what he valued in nature and in human nature, or how he envisaged it in his imagination; or how, after it had passed through the alembic of his mind and character, he gave it expression. Although he subsequently published several more volumes of verse (including many fine poems), they contain few revelations and no radically new forms. His life, however busy and fruitful, was relatively calm and uneventful. It included, neither during his middle nor later life, many soul-stirring or deeply humanizing experiences. As the editor of one of the most influential newspapers in America, he was stirred by portentous events and important social issues to write pungent editorials, but they seldom touched his poetic nature and evoked few poems in him. European travel, while producing several series of travel letters, came too late to effect such a marked intellectual change in him as it made in Emerson, or to give him a new poetic outlook, as it did for Longfellow. The death of his wife, in 1866, profoundly

stirred him, but at seventy-two he could turn his grief into the quiet channel of translating Homer. In short, what had been needful for the development of his poetic personality happened to him before he left the haunts of his boyhood, and accordingly his early life is of particular importance by way of explaining the content and form of his poetry.

Born November 3, 1794, at Cummington, in the Berkshire hills of western Massachusetts, Bryant was the son of genteel parents who traced their descent directly to the Mayflower pilgrims. The father was a kindly, cultivated physician, staunchly orthodox in his religion, and Federalist in his political views. When Dr. Peter Bryant, himself fond of poetry, heard his precocious son praying that he "might receive the gift of poetic genius and write verses that might endure," the father undertook to introduce the lad to "Johnson deep," "Addison refined," and especially "Pope's celestial fire." Under promptings such as these, the lad of nine began to versify after the manner of the pseudo-classical English poets, and in 1804 he had the satisfaction of seeing his "Description of a School" published in the *Hampshire Gazette* of Northampton. Four years later his proud father caused to be published in Boston young Bryant's satirical poem on Jefferson, *The Embargo, or a Sketch of the Times*. Besides illustrating his thorough schooling in the conventional couplets of Pope, *The Embargo* contains evidence of the lad's complete indoctrination in Federalist principles by his father. Occasioned by the unpopularity of Jefferson's Embargo of 1807, the poem voices all the negative aspects of the Federalist attack upon the stupidity of all Democrats, the vileness of the "French intrigue," and the alleged villainy of President Jefferson, to whom the young Federalist issued the following invitation:

Go, wretch, resign the presidential chair,  
Disclose thy secret features foul or fair,  
Go, search, with curious eyes, for horned frogs,  
'Mongst the wild wastes of Louisianian bogs;  
Or where Ohio rolls his turbid stream,  
Dig for huge bones, thy glory and thy theme; . . .  
But quit to abler hands, the helm of state,  
Nor image ruin on thy country's fate!

Just as he absorbed his political opinions from his father, so he took the impress of religious orthodoxy from his elders of the Cummington community, when he wrote in 1807:

Then let us tread, as lowly Jesus trod,  
The path that leads the sinner to his God;  
Keep Heaven's bright mansions ever in our eyes,  
Press tow'rd's the mark and seize the glorious prize.

All these juvenile poems illustrate the ready dependence of the young poet for his measures upon the eighteenth-century wits of Queen Anne's England. As yet utterly unmindful of the revolution that was going forward under the auspices of Wordsworth and Coleridge, Bryant set himself to write—

With classic purity, unstudied ease,  
To sense instructive, pleasing to the ear,  
Correct, yet flowing, elegant and clear.

That is, his early verse was all written from a Federalist, Calvinist, and classicist point of view. There was as yet nothing to suggest the turn he was to make within the next decade toward Democratic, Unitarian, and romantic principles.

Most prominent among the agencies influencing his conversion from conservatism to liberalism was his contact with rational currents of thought fashionable among the students of Williams College, whither he went in 1810 as a sophomore. The break with the religious orthodoxy of his youth is announced in "Thanatopsis," the first draft of which was written in 1811, shortly before he reached his seventeenth birthday. The subject itself, Death, or more particularly, How shall a man approach the grave? was not new. Bryant had himself encountered it in the poems of Henry Kirke White, Robert Blair, and others of the "graveyard" school of English poets. Their influence on the poem is marked. What is new is its unorthodox, that is, un-Christian, approach to death. Instead of any reference to the conventional doctrines of election or of rewards and punishments, of Calvin or of Christ, the young rebel offers the stoical view of death as a welcome release from the miseries of human existence. Instead of the usual consolatory assertion of the soul's immortality and the perpetuation of individual being or of death as a progression to the eternal bliss of Heaven, there is only the deistic doctrine that the grave ends all:

Earth that nourished thee, shall claim  
Thy growth, to be resolved to earth again,  
And, lost each human trace, surrendering up  
Thine individual being, shalt thou go  
To mix forever with the elements,  
To be a brother to the insensible rock  
And to the sluggish clod . . .

The only consolation offered is that this is the fate of all men. Since none can escape it, it behooves a man to make the most of it by meeting death heroically, that is, stoically.

By 1817, when he wrote "To a Waterfowl," he had moderated his views to an expression of faith in a supernatural power above, who could be relied on to lead man's steps aright just as God guides the waterfowl from "zone to zone" in its flight; and in "The Forest Hymn" of 1825 the groves are called "God's first temples." Although he often employed familiar religious imagery in his later poems, he never returned to the Calvinist faith of his youth, but adopted the naturalistic philosophy of the Unitarians. Unable to accept the Trinity, he identified God with the "Great First Cause" in "An Evening Reverie" (1841) and with the "Great Movement of the Universe" in "The Flood of Years" (1876). He worshipped a God who was spiritual rather than anthropomorphic—who typified universal love and benevolence among men, and who could be contemplated in the universality of the visible creation.

In his political views he experienced a similar conversion. Among the first causes leading to an examination of the Federalism inherited from his father was the hot sectionalism engendered by the War of 1812. He was himself ready at one time to enlist in the Massachusetts militia and to resist forcibly federal usurpation. But just about the time he attained his majority and set out to practice law, the once powerful Federal party went into a decided decline, and party alignments grew more indistinct. In the meantime, Bryant had been disappointed, after his year at Williams College, in not being able to continue his education at Yale. Instead he turned to studying law in several lawyers' offices at Worthington and Bridgewater. Admitted to the bar in 1815, he practiced first at Plainfield and from 1816 to 1825 at Great Barrington. During these years his reading in the law and in history, together with what he saw of the practice of political principles, made him dissatisfied with the parochialism of his inherited political views. Before he removed to New York City in 1825, he had become a liberal devoted to a broad program of reform, including world peace, emancipation from slavery, free trade, and democratic principles of government. In short, he was prepared, in all essentials, for the great role that he was to play for the next fifty years as a liberal and democratic editor of the influential *New York Evening Post*.

No less radical than the change in his religious and political thinking was his conversion from classicism to romanticism in his literary theory and practice. It went forward as an attendant development with his

political and religious liberalism. Although he vowed in 1815, when he was admitted to the practice of law, that he would devote himself entirely to the work of his profession, and that he would "tune the rural lay no more," he admitted also—

I cannot forget with what fervid devotion  
I worshipped the visions of verse and of fame.

However determined his resolution, poetry was an irresistible effervescence in his blood that would not be denied. Immediately upon writing the first draft of "Thanatopsis" in 1811, he made the discovery of Wordsworth and Coleridge's *Lyrical Ballads*. "A thousand springs," he said, "seemed to gush up at once into my heart and the face of Nature, of a sudden, to change into a strange freshness and life." "The Yellow Violet," written in 1814, and "Inscription for the Entrance to a Wood," of the next year, bear witness of how the earlier influences of White, Blair, Cowper, and Thomson (as these are manifest in "Thanatopsis," for example) were transmuted into the fullness of a romanticist's worship of nature under Wordsworthian influence. This new love of nature "in all her visible forms" led him often to forsake his Coke and Blackstone for ramblings among the hills and in the valleys—

Till I felt the dark power o'er my reveries stealing,  
From the gloom of the thickets that over me hung,  
And the thoughts that awoke, in that rapture of feeling,  
Were formed into verse as they rose to my tongue.

A few years later he recalled how he had sought to break the spell that held him long, "the dear, dear witchery of song," resolved that "the poet's idle lore" should waste his "prime of years no more," forgetful that wheresoever he looked he saw "Nature's everlasting smile" recalling him to "the love of song." Thus Wordsworth and nature reclaimed him to the sweet uses of poetry.

In the meantime his earliest compositions under the new impetus of nature had been acclaimed notable successes. The reception of "Thanatopsis" itself had been flattering. When the verses were first sent by Bryant's father to the editor of the *North American Review*, the latter, doubting their authenticity, read them to his associate, who told him, "You have been imposed upon; no one on this side the Atlantic is capable of writing such verses." Upon being assured that they were indeed Bryant's own, they were printed in the *North American Review* for September, 1817, together with the "Inscription for the Entrance to a Wood," with its new Wordsworthian notes. "To a Waterfowl" was no less popular on its first appear-

ance in 1818. Shortly thereafter Bryant fell in love with Fanny Fairchild, whom he apostrophized, after the manner of Wordsworth's Lucy poems, in "Oh Fairest of the Rural Maids" (written in 1820). From now on, nature worship, love, and poetic inspiration went forward hand in hand under romantic auspices. Like Wordsworth, he felt himself a "dedicated spirit," seeking emanations of the indwelling life of nature. Like Wordsworth, too, he found in nature forces to stimulate and delight as well as to soothe and heal the spirit of man. He began to show the typical romantic interest in simple types of humanity and to regard the Indian as an example of "the noble savage race." The prairie and the pioneer fascinated him, and he became an ardent literary nationalist. Like a romantic antiquary, he searched for traditions, superstitions, and legends of the past to romanticize, even to dabbling in the horrible, the terrible, and the grotesque. New themes needed new forms, and he early began his experimentations in metres and genres that made him eventually one of the most various and versatile of American versifiers. Most important of all, he insisted that while poetry at its best aims to promote "the virtue and welfare of society" by inspiring and perfecting moral character, it originates in the feelings and operates through the imagination. The true office of poetry, he said in an essay on "Early American Verse," published in the *North American Review* for July, 1818, is to "touch the heart"; and in a series of four "Lectures on Poetry," delivered in 1826 before the Athenæum Society of New York, he expounded this theory at greater length. While insisting that "to write fine poetry requires intellectual qualities of the highest order," its humanized moral teachings are not to be presented barefacedly but imaginatively and in terms of beauty: "The most beautiful poetry is that which takes the strongest hold on the feelings, and, if it is really the most beautiful, then it is poetry in the highest sense. . . . The great spring of poetry is emotion. . . . Strong feeling is always a sure guide. It rarely offends against good taste, because it instinctively chooses the most effectual means of communicating itself to others." Forty years later he repeated the same creed in "The Poet" (1864). "The framing of a deathless lay," he observed, is not "the pastime of a drowsy summer's day," but requires a gathering of all the poet's powers, intellectual and emotional:

The secret wouldst thou know  
To touch the heart or fire the blood at will?  
Let thine own eyes o'erflow;  
Let the lips quiver with the passionate thrill;  
Seize the great thought, ere yet its power is past,  
And bind, in words, the fleet emotion fast.

In 1821 Bryant published the first collection of his verses under the simple title of *Poems*. Despite its slender bulk of forty-four pages, it was the most important body of original verse published in America up to that time. During the same year he was invited to read "The Ages" as the annual poem of the Phi Beta Kappa Society at Harvard. The years 1824-25, while he was actively writing for the *United States Literary Gazette* of Boston, represent his most creative period as a poet. Long desirous of moving to Boston, he found no good opportunity there, but in 1825 he accepted the co-editorship of the *New York Review*, and immediately became a member of the literary group forming Cooper's Bread and Cheese Club. Before the year was out he went over as assistant editor of the *New York Evening Post*, whose full editorship he assumed in 1829.

His translation to New York marks the beginning of a new period in his life. Although he continued to write poetry, publishing important collections in 1832, 1844, and later, the poet in him was henceforth subordinate to that of the editor, critic, orator, and man of public affairs. Besides making the *Evening Post* the greatest newspaper of the time and acquiring a considerable private fortune, he spoke with conviction and authority to become one of the most influential voices in the land advocating freedom of speech, the principle of collective bargaining and the right of workmen to strike, free trade, reform legislation for crime and punishment, sound currency and banking methods, and the liberation of subject peoples abroad and of slaves at home. Fortright and vigorous in the statement of his views on such subjects as slavery and workingmen's rights, he was considered by his contemporaries as an aggressive, not to say violent, editor. Indeed, it is said that for many years the *Post* suffered financially because New York businessmen withheld their advertising from the paper on the ground that its editor, in supporting labor, was opposed to their interests. A supporter of Andrew Jackson because of Old Hickory's "simplicity and frankness . . . incorruptible honesty . . . and fearless directness," he was no uncritical follower of party. When Harrison's log-cabin, hard-cider campaign got under way, he was disgusted by what he considered its fraudulent character, and he mercilessly ridiculed coonskin democracy. As the struggle over slavery became acute, he denounced the Fugitive Slave Law as "the most ruffianly act ever authorized by a deliberative assembly." The cause of the Free-Soil men he called "great and righteous"; the Dred Scott decision, a "disgrace"; and John Brown a "martyr and hero." In 1855, having decided that the Democratic party was no longer true to its ideals, he

became active in the organization of the Republican party in the East. From the beginning he was vehement in his denunciation of the doctrine of nullification. When secession came, he said fearlessly and uncompromisingly, "If a state secedes, it is rebellion, and the seceders are traitors." Once war became inevitable, no one was more insistent than he on a vigorous prosecution of the bloody contest, or in the suppression of such disrupting forces as the draft riots in New York City during 1863, himself resolutely braving the unbridled mob violence that convulsed the city for three days. When the Republican party openly allied itself with post-war capitalism, his suspicion and opposition were aroused. Whatever his party allegiance, he was a democrat from principle, demanding tolerance and fairness, championing unpopular causes, and defending the rights of free men.

In the end he came to have less faith in outward than in inward reform. As a progressive utopian during his middle years, he often joined wholeheartedly in efforts to remake society through local and national reform; but fundamentally he was a humanist rather than a humanitarian, holding to the simple faith of his New England rearing that as the perfect state of society is reached only through the emancipation and perfecting of individuals, so the liberty of the individual is the only infallible cure for all ills. In his old age, too, he submitted to the Christian rite of baptism, by a Unitarian minister, and he became a member of the Unitarian church. It is sometimes said that his translation of Homer, after his wife's death in 1866, was a capitulation to classicism. But these modifications of the old Bryant in his political, religious, and literary views constitute not so much a reactionary reversion to conservatism as a moderation or mediation, occasioned by the wisdom of a long life of rich and varied experience.

Despite the wealth and fame that crowned his old age, he continued to live simply and to work earnestly for the cause of liberty. His last public performance, one that hastened his death, was to speak at the unveiling of Mazzini's statue in Central Park. His speech was a plea for human liberty and "the rights and duties of human brotherhood." Throughout his long career, as editor and critic, he was indefatigable in his desire to raise the level of American literature by urging American authors to adopt simplicity, integrity, and freedom as their guiding principles. No one worked more earnestly than he in discovering new talent and encouraging young writers.

His numerous volumes of later verse are all distinguished for evenness and dignity. Occasionally, as in "The Prairie" (1832), "The Battlefield" (1842),

and "The Death of Lincoln" (1865), he matched his earlier performance; but he had no markedly new themes to add to the few elemental ones of his youth: the beauty and beneficence of nature, the sacredness of human freedom, the ebb and flow of human existence, and the dignity and abiding influence of goodness. His last long poem, "The Flood of Years," in 1878, is in the same lofty mood of meditation as is "The Ages" of 1821. His range was narrow, but within its confines he was a master. There is in his poetry no pagan luxuriance and no riot of colorful sensuousness; instead, the ethical idealism of his New England conditioning gives stately, restrained form to his passionate righteousness and his high seriousness. The austerity and frigidity of his verse, popularized by Lowell's humorous lines in "A Fable for Critics," proceed not from a cold heart or an illiberal brain, but from a noble reserve and the fine poise of a mind that lives contentedly within its own resources.

The poet's was for Bryant the highest calling. It proceeded, he said in "The Poet," from

. . . feelings of calm power and mighty sweep,  
Like currents journeying through the windless deep.

He allowed "no empty gusts of passion," no merely "fluent strains" or "smooth array of phrase," no emotional crotchets or erratic sensibilities, to distract him from his high purpose of clothing—

. . . in words of flame  
Thoughts that shall live within the general mind.

Not one of the world's master poets, because he was not pre-eminently endowed with intellectual intensity and imaginative concentration, yet he remains unequalled among American poets as leaving a record markedly true to his poetic aims.

A Puritan-liberal, as Parrington has called him, Bryant, the journalist and critic who sat for fifty years in judgment on matters political and economic as well as cultural, and who reflected in the *Evening Post* a refinement of taste and dignity of character unequalled in earlier American journalism, performed an important service for America quite apart from his contribution to our incipient poetry. He was at once the father of nineteenth-century American journalism and the father of nineteenth-century American nature poetry.

FROM

*The Embargo,*OR SKETCHES OF THE TIMES; A SATIRE <sup>1</sup>

*When private faith and public trust are sold,  
And traitors barter liberty for gold,  
When fell corruption, dark, and deep, like fate,  
Saps the foundations of a sinking state;  
Then warmer numbers glow through Satire's page,  
And all her smiles are darken'd into rage;  
Then keener indignation fires her eye,  
Then flash her lightnings and her thunders fly.*

ESSAY ON SATIRE

Look where we will, and in whatever land,  
Europe's rich soil, or Afric's burning sand;  
Where the wild savage hunts his wilder prey,  
Or art and science pour their brightest day;  
The monster vice appears before our eyes,  
In naked impudence or gay disguise.

But quit the lesser game, indignant Muse,  
And to thy country turn thy nobler views.  
Ill-fated clime! condemn'd to feel th' extremes  
Of a weak ruler's philosophic dreams; 10  
Driv'n headlong on to ruin's fateful brink  
When will thy Country feel, when will she think!

Wake Muse of Satire, in the cause of trade,  
Thou scourge of miscreants who the laws evade!  
Dart thy keen glances, knit thy threat'ning brows,  
And hurl thine arrows at fair Commerce's foes!

Much injur'd Commerce! 'tis thy falling cause,  
Which, from obscurity, a stripling draws;  
And were his powers but equal to his zeal,  
Thy dastard foes his keen reproach should feel. 20  
Curse of our Nation, source of countless woes,  
From whose dark womb unreckon'd misery flows;  
Th' embargo rages like a sweeping wind,  
Fear low'rs before, and famine stalks behind.  
What words, oh, Muse! can paint the mournful scene,  
The saddening street, the desolated green;  
How hungry labourers leave their toil and sigh,  
And sorrow droops in each desponding eye!

<sup>1</sup> These first 140 lines of Bryant's 244-line satire indicate not only the youth's facility as a versifier in the tradition of the eighteenth-century satirists but also the intolerance of Federalist opposition to Jefferson and his measures.

Bryant never reprinted the poem in any of his collected editions and in later years was irritated whenever it was called to his attention.

See the bold sailor from the ocean torn,  
His element, sink friendless and forlorn! 30  
His suffering spouse the tear of anguish shed,  
His starving children cry in vain for bread!

The farmer, since supporting trade is fled,  
Leaves the rude yoke, and cheerless hangs his head;  
Misfortunes fall, an unremitting shower,  
Debts follow debts, on taxes, taxes pour.  
See in his stores his hoarded produce rot,  
Or sheriff sales his profits bring to naught;  
Disheartening cares in thronging myriads flow,  
Till down he sinks to poverty and woe! 40

Oh, ye bright pair, the blessing of mankind!  
Whom time has sanction'd, and whom fate has join'd,  
COMMERCE, that bears the trident of the main,  
And AGRICULTURE, empress of the plain;  
Who, hand in hand, and heav'n-directed, go  
Diffusing gladness through the world below;  
Whoe'er the wretch, would hurl the flaming brand,  
Of dire disunion, palsied be his hand!  
Like 'Cromwell damn'd to everlasting fame,'  
Let unborn ages execrate his name! 50  
Dark is the scene, yet darker prospects threat,  
And ills may follow unexperienc'd yet!

Oh Heaven! defend, as future seasons roll,  
This western world from Buonaparte's control,  
Preserve our *Freedom*, and our rights secure,  
While truth subsists, and virtue shall endure!

Lo, Austria crouches to the tyrant's stroke,  
And Rome's proud states receive his galling yoke;  
Kings fall before him, for his sway extends  
Where'er his all-subduing course he bends. 60  
See Lusitania's fate, and shall we, say,  
Turn not our feet, that tread the self-same way?

Must we with Belgia, and Helvetia mourn,  
In vile subjection, abject, and forlorn?  
Our laws laid prostrate, and our freedom fled,  
Our independence, boasted valour dead?

We, who seven years erst brav'd Britannia's power,  
By Heaven supported in the gloomiest hour;

For whom our Sages plann'd, our Heroes bled,  
Whom WASHINGTON, our pride and glory led;  
Till Heaven, propitious did our efforts crown,  
With freedom, commerce, plenty, and renown!

70

When shall this land, some courteous angel say,  
Throw off a weak, and erring ruler's sway?  
Rise, injur'd people, vindicate your cause!  
And prove your love of Liberty and laws;  
Oh wrest, sole refuge of a sinking land,  
The sceptre from the slave's imbecile hand!  
Oh ne'er consent, obsequious, to advance  
The *willing vassal* of imperious France!  
Correct that suffrage you misus'd before,  
And lift your voice above a Congress' roar!  
And thou, the scorn of every patriot name,  
Thy country's ruin, and her council's shame!  
Poor servile thing! derision of the brave!  
Who erst from Tarleton fled to Carter's cave;  
Thou, who, when menac'd by perfidious Gaul,  
Didst prostrate to her whisker'd minion fall;  
And when our cash her empty bags supplied,  
Didst meanly strive the foul disgrace to hide;  
Go, wretch, resign the presidential chair,  
Disclose thy secret features foul or fair,  
Go, search, with curious eyes, for horned frogs,  
'Mongst the wild wastes of Louisianian bogs;  
Or where Ohio rolls his turbid stream,  
Dig for huge bones, thy glory and thy theme;  
Go scan, Philosophist; thy \*\*\*\*\* charms,  
And sink supinely in her sable arms;  
But quit to abler hands, the helm of state,  
Nor image ruin on thy country's fate!

80

90

100

But vain are reason, eloquence and art,  
And vain the warm effusions of the heart.  
Ev'n while I sing, see, *faction* urge her claim,  
Mislead with falsehood, and with zeal inflame,  
Lift her broad banner, spread her empire wide,  
And stalk triumphant, with a fury's stride.

She blows her brazen trump, and at the sound,  
A motley throng obedient flock around;  
A mist of changing hue o'er all she flings,  
And darkness perches on her dragon wings!

110

As Johnson deep, as Addison refin'd,  
And skill'd to pour conviction o'er the mind,  
Oh might some Patriot rise! the gloom dispel,  
Chase error's mist, and break her magic spell!

But vain the wish, for hark! the murmuring meed  
Of hoarse applause, from yonder shed proceed;  
Enter, and view the thronging concourse there,  
Intent, with gaping mouth, and stupid stare,  
While in the midst their supple leader stands,  
Harangues aloud, and flourishes his hands;  
To adulation tunes his servile throat,  
And sues, successful, for each blockhead's vote.

120

"Oh, were I made a ruler in the land!  
Your rights, no man can better understand;  
For the dear people, how my bowels yearn!  
That *such* may govern, be your chief concern:  
Then federal tyranny shall flee away,  
And *mild democracy* confirm her sway."  
The powerful influence of the knave's address,  
In capers droll, the foolish dupes confess,  
With *horrid* shouts the affrighted sky is rent,  
And high in air their tatter'd hats are sent.

130

But should truth shine, distinguishingly bright,  
And lay his falsehoods naked to the sight;  
He tries new arts to blind their willing eyes,  
Feeds with new flatteries, hammers out new lies;  
Exerts his influence, urges all his weight,  
To blast the laurels of the good and great;  
Till reconfirm'd the fools uphold him still,  
Their creed, his *dictum*, and their laws, his  
will. . . .

1808

*Thanatopsis*<sup>2</sup>

Not that from life, and all its woes  
The hand of death shall set me free;  
Not that this head, shall then repose  
In the low vale most peacefully.

Ah, when I touch time's farthest brink,  
A kinder solace must attend;  
It chills my very soul, to think  
On that dread hour when life must end.

In vain the flatt'ring verse may breathe,  
Of ease from pain, and rest from strife,  
10 There is a sacred dread of death  
Inwoven with the strings of life.

This bitter cup at first was given  
When angry *justice* frown'd severe,  
And 'tis th' eternal doom of heaven  
That man must view the grave with fear.

———Yet a few days, and thee,  
The all-beholding sun, shall see no more,  
In all his course; nor yet in the cold ground,  
Where thy pale form was laid, with many tears, 20  
Nor in th' embrace of ocean shall exist  
Thy image. Earth, that nourished thee, shall claim  
Thy growth, to be resolv'd to earth again;  
And, lost each human trace, surrend'ring up  
Thine individual being, shalt thou go  
To mix forever with the elements,  
To be a brother to th' insensible rock  
And to the sluggish clod, which the rude swain  
Turns with his share, and treads upon. The oak  
Shall send his roots abroad, and pierce thy mould. 30

Yet not to thy eternal resting place  
Shalt thou retire alone—nor couldst thou wish  
Couch more magnificent. Thou shalt lie down  
With patriarchs of the infant world—with kings  
The powerful of the earth—the wise, the good,

<sup>2</sup> "Thanatopsis," literally "A View of Death," in its naturalistic stoicism and generally un-Christian character is indicative of the young poet's change of views from his inherited orthodox principles. The first draft of the poem was written about 1811. The version here printed in the left-hand column was first published in the *North American Review* for September, 1817. It is not certain that Bryant considered the four quatrains which precede the blank verse a part of "Thanatopsis," but the whole is here reproduced as the editors of the *North American Review* published it. In the right-hand column is printed the revised form of the poem as Bryant included it in his first collected edition of *Poems* in 1821.

Fair forms, and hoary seers of ages past,  
All in one mighty sepulchre.—The hills,  
Rock-ribb'd and ancient as the sun,—the vales  
Stretching in pensive quietness between;  
The venerable woods—the floods that move 40  
In majesty—and the complaining brooks,  
That wind among the meads, and make them green,  
Are but the solemn decorations all,  
Of the great tomb of man.—The golden sun,  
The planets, all the infinite host of heaven  
Are glowing on the sad abodes of death,  
10 Through the still lapse of ages. All that tread  
The globe are but a handful to the tribes  
That slumber in its bosom.—Take the wings  
Of morning—and the Borean desert<sup>3</sup> pierce— 50  
Or lose thyself in the continuous woods  
That veil Oregon,<sup>4</sup> where he hears no sound  
Save his own dashings—yet—the dead are there,  
And millions in those solitudes, since first  
The flight of years began, have laid them down  
In their last sleep—the dead reign there alone—  
So shalt thou rest—and what if thou shalt fall  
Unnoticed by the living—and no friend  
Take note of thy departure? Thousands more  
Will share thy destiny.—The tittering world 60  
Dance to the grave. The busy brood of care  
Plod on, and each one chases as before  
His favourite phantom.—Yet all these shall leave  
Their mirth and their employments, and shall come  
And make their bed with thee!———

1811

1817

To him who in the love of Nature holds  
Communion with her visible forms, she speaks  
A various language; for his gayer hours  
She has a voice of gladness, and a smile  
And eloquence of beauty, and she glides  
Into his darker musings, with a mild  
And healing sympathy, that steals away  
Their sharpness, ere he is aware. When thoughts  
Of the last bitter hour come like a blight 10  
Over thy spirit, and sad images  
Of the stern agony, and shroud, and pall,  
And breathless darkness, and the narrow house,

<sup>3</sup> The Arctic wastes.

<sup>4</sup> The Indian name for the Columbia River,

Make thee to shudder, and grow sick at heart,—  
Go forth, under the open sky, and list  
To Nature's teachings, while from all around—  
Earth and her waters, and the depths of air,—  
Comes a still voice—

Yet a few days, and thee  
The all-beholding sun shall see no more  
In all his course; nor yet in the cold ground,  
Where thy pale form was laid, with many tears, 20  
Nor in the embrace of ocean, shall exist  
Thy image. Earth, that nourished thee, shall claim  
Thy growth, to be resolved to earth again,  
And, lost each human trace, surrendering up  
Thine individual being, shalt thou go  
To mix forever with the elements,  
To be a brother to the insensible rock  
And to the sluggish clod, which the rude swain  
Turns with his share, and treads upon. The oak  
Shall send his roots abroad, and pierce thy mould. 30

Yet not to thine eternal resting-place  
Shalt thou retire alone, nor couldst thou wish  
Couch more magnificent. Thou shalt lie down  
With patriarchs of the infant world, with kings,  
The powerful of the earth, the wise, the good,  
Fair forms, and hoary seers of ages past,  
All in one mighty sepulchre. The hills  
Rock-ribbed and ancient as the sun, the vales  
Stretching in pensive quietness between;  
The venerable woods, rivers that move 40  
In majesty, and the complaining brooks  
That make the meadows green; and, poured round all,  
Old Ocean's gray and melancholy waste,—  
Are but the solemn decorations all  
Of the great tomb of man. The golden sun,  
The planets, all the infinite host of heaven,  
Are shining on the sad abodes of death,

Through the still lapse of ages. All that tread  
The globe are but a handful to the tribes  
That slumber in its bosom.—Take the wings 50  
Of morning, pierce the Barcan<sup>5</sup> wilderness,  
Or lose thyself in the continuous woods  
Where rolls the Oregon, and hears no sound,  
Save his own dashings—yet the dead are there:  
And millions in those solitudes, since first  
The flight of years began, have laid them down  
In their last sleep—the dead reign there alone.  
So shalt thou rest, and what if thou withdraw  
In silence from the living, and no friend  
Take note of thy departure? All that breathe 60  
Will share thy destiny. The gay will laugh  
When thou art gone, the solemn brood of care  
Plod on, and each one as before will chase  
His favorite phantom; yet all these shall leave  
Their mirth and their employments, and shall come  
And make their bed with thee. As the long train  
Of ages glide away, the sons of men,  
The youth in life's green spring, and he who goes  
In the full strength of years, matron and maid,  
The speechless babe, and the gray-headed man— 70  
Shall one by one be gathered to thy side,  
By those, who in their turn shall follow them.

So live, that when thy summons comes to join  
The innumerable caravan, which moves  
To that mysterious realm, where each shall take  
His chamber in the silent halls of death,  
Thou go not, like the quarry-slave at night,  
Scourged to his dungeon, but, sustained and soothed  
By an unfaltering trust, approach thy grave,  
Like one who wraps the drapery of his couch 80  
About him, and lies down to pleasant dreams.  
1811, 1821 1821

<sup>5</sup> Refers to the region of Barca, in northern Africa.

### *The Yellow Violet*

When beechen buds begin to swell,  
And woods the blue-bird's warble know,  
The yellow violet's modest bell  
Peeps from the last year's leaves below.

Ere russet fields their green resume,  
Sweet flower, I love, in forest bare,  
To meet thee, when thy faint perfume  
Alone is in the virgin air.  
Of all her train, the hands of Spring  
First plant thee in the watery mould, 10

And I have seen thee blossoming  
 Beside the snow-bank's edges cold.  
 Thy parent sun, who bade thee view  
 Pale skies, and chilling moisture sip,  
 Has bathed thee in his own bright hue,  
 And streaked with jet thy glowing lip.  
 Yet slight thy form, and low thy seat,  
 And earthward bent thy gentle eye,  
 Unapt the passing view to meet  
 When loftier flowers are flaunting nigh.  
 Oft, in the sunless April day,  
 Thy early smile has stayed my walk;  
 But midst the gorgeous blooms of May,  
 I passed thee on thy humble stalk.  
 So they, who climb to wealth, forget  
 The friends in darker fortunes tried.  
 I copied them—but I regret  
 That I should ape the ways of pride.

And when again the genial hour  
 Awakes the painted tribes of light,<sup>6</sup>  
 I'll not o'erlook the modest flower  
 That made the woods of April bright.

1814

### *Inscription for the Entrance to a Wood*<sup>7</sup>

Stranger, if thou hast learned a truth which needs  
 No school of long experience, that the world  
 Is full of guilt and misery, and hast seen  
 Enough of all its sorrows, crimes, and cares,  
 To tire thee of it, enter this wild wood  
 And view the haunts of Nature. The calm shade  
 Shall bring a kindred calm, and the sweet breeze  
 That makes the green leaves dance, shall waft a balm  
 To thy sick heart. Thou wilt find nothing here  
 Of all that pained thee in the haunts of men,  
 And made thee loathe thy life. The primal curse  
 Fell, it is true, upon the unsinning earth,  
 But not in vengeance. God hath yoked to guilt  
 Her pale tormentor, misery. Hence, these shades  
 Are still the abodes of gladness; the thick roof  
 Of green and stirring branches is alive  
 And musical with birds, that sing and sport

10

<sup>6</sup> One of the worst examples of Bryant's addiction in his earlier poems to the poetic diction of the eighteenth century.

<sup>7</sup> This poem, especially ll. 6-11, should be compared with Wordsworth's "Lines Composed a Few Miles Above Tintern Abbey," especially ll. 22-31.

In wantonness of spirit; while below  
 The squirrel, with raised paws and form erect,  
 Chirps merrily. Throngs of insects in the shade  
 Try their thin wings and dance in the warm beam  
 That waked them into life. Even the green trees  
 Partake the deep contentment; as they bend  
 To the soft winds, the sun from the blue sky  
 Looks in and sheds a blessing on the scene.  
 Scarce less the cleft-born wild-flower seems to enjoy  
 Existence, than the winged plunderer  
 That sucks its sweets. The mossy rocks themselves,  
 And the old and ponderous trunks of prostrate trees  
 That lead from knoll to knoll a causey<sup>8</sup> rude  
 Or bridge the sunken brook, and their dark roots,  
 With all their earth upon them, twisting high,  
 Breathe fixed tranquillity. The rivulet  
 Sends forth glad sounds, and tripping o'er its bed  
 Of pebbly sands, or leaping down the rocks,  
 Seems, with continuous laughter, to rejoice  
 In its own being. Softly tread the marge,  
 Lest from her midway perch thou scare the wren  
 That dips her bill in water. The cool wind,  
 That stirs the stream in play, shall come to thee,  
 Like one that loves thee nor will let thee pass  
 Ungreeted, and shall give its light embrace.

1817

### *"I Cannot Forget with What Fervid Devotion"*

I cannot forget with what fervid devotion  
 I worshipped the visions of verse and of fame;  
 Each gaze at the glories of earth, sky, and ocean,  
 To my kindled emotions, was wind over flame.  
 And deep were my musings in life's early blossom,  
 'Mid the twilight of mountain-groves wandering  
 long;  
 How thrilled my young veins, and how throbbed my  
 full bosom,  
 When o'er me descended the spirit of song!  
 'Mong the deep-cloven fells<sup>9</sup> that for ages had  
 listened  
 To the rush of the pebble-paved river between,  
 Where the kingfisher screamed and gray precipice  
 glistened,  
 All breathless with awe have I gazed on the scene;

<sup>8</sup> That is, causeway.

<sup>9</sup> Mountains with deep gorges.

Till I felt the dark power o'er my reveries stealing,  
 From the gloom of the thickets that over me hung,  
 And the thoughts that awoke, in that rapture of  
 feeling,  
 Were formed into verse as they rose to my tongue.  
 Bright visions! I mixed with the world, and ye faded,  
 No longer your pure rural worshipper now;  
 In the haunts your continual presence pervaded,  
 Ye shrink from the signet of care on my brow. 20  
 In the old mossy groves on the breast of the  
 mountain,  
 In deep lonely glens where the waters complain,  
 By the shade of the rock, by the gush of the fountain,  
 I seek your loved footsteps, but seek them in vain.  
 Oh, leave not forlorn and forever forsaken,  
 Your pupil and victim to life and its tears!  
 But sometimes return, and in mercy awaken  
 The glories ye showed to his earlier years.  
 1815 1826

### To a Waterfowl<sup>10</sup>

Whither, midst falling dew,  
 While glow the heavens with the last steps of day,  
 Far, through their rosy depths, dost thou pursue  
 Thy solitary way?  
 Vainly the fowler's<sup>11</sup> eyes  
 Might mark thy distant flight to do thee wrong,  
 As, darkly seen against the crimson sky,  
 Thy figure floats along.  
 Seek'st thou the plashy<sup>12</sup> brink  
 Of weedy lake, or marge of river wide, 10  
 Or where the rocking billows rise and sink  
 On the chafed ocean-side?  
 There is a Power whose care  
 Teaches thy way along that pathless coast—  
 The desert and illimitable air—  
 Lone wandering, but not lost.

<sup>10</sup> The idea for this poem came to Bryant on a December evening in 1815 as he walked, in a "forlorn and desolate" mood, toward Plainfield, Mass., to make inquiries about the opportunities offered there for a young lawyer. The sight of the waterfowl winging its way southward, as if under divine guidance, gave him reassurance, and that night he wrote the poem, which Matthew Arnold and Hartley Coleridge agreed in considering the finest short poem in the English language.

<sup>11</sup> That is, hunter's.

<sup>12</sup> Marshy.

All day thy wings have fanned,  
 At that far height, the cold, thin atmosphere,  
 Yet stoop not, weary, to the welcome land,  
 Though the dark night is near. 20  
 And soon that toil shall end;  
 Soon shalt thou find a summer home, and rest,  
 And scream among thy fellows; reeds shall bend,  
 Soon, o'er thy sheltered nest.  
 Thou'rt gone, the abyss of heaven  
 Hath swallowed up thy form; yet, on my heart  
 Deeply has sunk the lesson thou hast given,  
 And shall not soon depart.  
 He who, from zone to zone,  
 Guides through the boundless sky thy certain  
 flight, 30  
 In the long way that I must tread alone,  
 Will lead my steps aright.  
 1815 1818

### Green River<sup>13</sup>

When breezes are soft and skies are fair,  
 I steal an hour from study and care,  
 And hie me away to the woodland scene,  
 Where wanders the stream with waters of green,  
 As if the bright fringe of herbs on its brink  
 Had given their stain to the wave they drink;  
 And they, whose meadows it murmurs through,  
 Have named the stream from its own fair hue.  
 Yet pure its waters—its shallows are bright  
 With colored pebbles and sparkles of light, 10  
 And clear the depths where its eddies play,  
 And dimples deepen and whirl away,  
 And the plane-tree's speckled arms o'ershoot  
 The swifter current that mines its root,  
 Through whose shifting leaves, as you walk the hill,  
 The quivering glimmer of sun and rill  
 With a sudden flash on the eye is thrown,  
 Like the ray that streams from the diamond-stone.  
 Oh, loveliest there the spring days come,  
 With blossoms, and birds, and wild-bees' hum; 20  
 The flowers of summer are fairest there,

<sup>13</sup> During the years when Bryant gravitated between poetry and the law, he often repaired to the banks of Green River for relaxation, apparently in the mood described in "I Cannot Forget with what Fervid Devotion" and "I Broke the Spell that Held Me Long."

And freshest the breath of the summer air;  
And sweetest the golden autumn day  
In silence and sunshine glides away.

Yet, fair as thou art, thou shunnest to glide,  
Beautiful stream! by the village side;  
But windest away from haunts of men,  
To quiet valley and shaded glen;  
And forest, and meadow, and slope of hill,  
Around thee, are lonely, lovely, and still  
Lonely—save when, by thy rippling tides  
From thicket to thicket the angler glides:  
Or the simpler <sup>14</sup> comes, with basket and book  
For herbs of power on thy banks to look;  
Or haply, some idle dreamer, like me,  
To wander, and muse, and gaze on thee,  
Still—save the chirp of birds that feed  
On the river cherry and seedy reed,  
And thy own wild music gushing out  
With mellow murmur of fairy shout,  
From dawn to the blush of another day,  
Like traveller singing along his way.

That fairy music I never hear,  
Nor gaze on those waters so green and clear,  
And mark them winding away from sight,  
Darkened with shade or flashing with light,  
While o'er them the vine to its thicket clings,  
And the zephyr stoops to freshen his wings,  
But I wish that fate had left me free  
To wander these quiet haunts with thee,  
Till the eating cars of earth should depart,  
And the peace of the scene pass into my heart;  
And I envy thy stream, as it glides along  
Through its beautiful banks in a trance of song.

Though forced to drudge for the dregs of men,  
And scrawl strange words with the barbarous pen,  
And mingle among the jostling crowd,  
Where the sons of strife are subtle and loud—  
I often come to this quiet place,  
To breathe the airs that ruffle thy face,  
And gaze upon thee in silent dream,  
For in thy lonely and lovely stream  
An image of that calm life appears  
That won my heart in my greener years.

1818

1821

<sup>14</sup> Herb-gatherer.

### "Oh Fairest of the Rural Maids" <sup>15</sup>

Oh fairest of the rural maids!  
Thy birth was in the forest shades;  
Green boughs, and glimpses of the sky,  
Were all that met thine infant eye.

Thy sports, thy wanderings, when a child,  
Were ever in the sylvan wild;  
And all the beauty of the place  
Is in thy heart and on thy face.

The twilight of the trees and rocks  
Is in the light shade of thy locks;  
Thy step is as the wind, that weaves  
Its playful way among the leaves.

Thine eyes are springs, in whose serene  
And silent waters heaven is seen;  
Their lashes are the herbs that look  
On their young figures in the brook.

The forest depths, by foot unpressed,  
Are not more sinless than thy breast;  
The holy peace that fills the air  
Of those calm solitudes, is there.

1820

1832

### A Winter Piece <sup>16</sup>

The time has been that these wild solitudes,  
Yet beautiful as wild, were trod by me  
Often than now; and when the ills of life  
Had chafed my spirit—when the unsteady pulse  
Beat with strange flutterings—I would wander forth  
And seek the woods. The sunshine on my path  
Was to me as a friend. The swelling hills,  
The quiet dells retiring far between,  
With gentle invitation to explore  
Their windings, were a calm society  
That talked with me and soothed me. Then the chant  
Of birds, and chime of brooks, and soft caress  
Of the fresh sylvan air, made me forget  
The thoughts that broke my peace, and I began  
To gather simples by the fountain's brink,  
And lose myself in day-dreams. While I stood

<sup>15</sup> Addressed to Frances Fairchild a year before their marriage. The poem suggests Wordsworth's "Three Years She Grew in Sun and Shower."

<sup>16</sup> Although obviously Wordsworthian in tone, this poem, originally entitled "Winter Scenes," is a distinctively New England production, antedating Whittier's "Snow-Bound" by forty-five years.

In Nature's loneliness, I was with one  
 With whom I early grew familiar, one  
 Who never had a frown for me, whose voice  
 Never rebuked me for the hours I stole 20  
 From cares I loved not, but of which the world  
 Deems highest, to converse with her. When shrieked  
 The bleak November winds, and smote the woods,  
 And the brown fields were herbless, and the shades,  
 That met above the merry rivulet,  
 Were spoiled, I sought, I loved them still; they  
 seemed

Like old companions in adversity.  
 Still there was beauty in my walks; the brook,  
 Bordered with sparkling frost-work, was as gay  
 As with its fringe of summer flowers. Afar, 30  
 The village with its spires, the path of streams  
 And dim receding valleys, hid before  
 By interposing trees, lay visible  
 Through the bare grove, and my familiar haunts  
 Seemed new to me. Nor was I slow to come  
 Among them, when the clouds, from their still skirts,  
 Had shaken down on earth the feathery snow,  
 And all was white. The pure keen air abroad,  
 Albeit it breathed no scent of herb, nor heard  
 Love-call of bird nor merry hum of bee, 40  
 Was not the air of death. Bright mosses crept  
 Over the spotted trunks, and the close buds,  
 That lay along the boughs, instinct with life,  
 Patient, and waiting the soft breath of Spring,  
 Feared not the piercing spirit of the North.  
 The snow-bird twittered on the beechen bough,  
 And 'neath the hemlock, whose thick branches bent  
 Beneath its bright cold burden, and kept dry  
 A circle, on the earth, of withered leaves,  
 The partridge found a shelter. Through the snow 50  
 The rabbit sprang away. The lighter track  
 Of fox, and the raccoon's broad path, were there.  
 Crossing each other. From his hollow tree  
 The squirrel was abroad, gathering the nuts  
 Just fallen, that asked the winter cold and sway  
 Of winter blast, to shake them from their hold.

But Winter has yet brighter scenes—he boasts  
 Splendors beyond what gorgeous Summer knows;  
 Or Autumn with his many fruits, and woods  
 All flushed with many hues. Come when the rains 60  
 Have glazed the snow and clothed the trees with ice,  
 While the slant sun of February pours  
 Into the bowers a flood of light. Approach!

The incrusted surface shall upbear thy steps,  
 And the broad arching portals of the grove  
 Welcome thy entering. Look! the massy trunks  
 Are cased in the pure crystal; each light spray,  
 Nodding and tinkling in the breath of heaven,  
 Is studded with its trembling water-drops, 70  
 That glimmer with an amethystine light.  
 But round the parent-stem the long low boughs  
 Bend, in a glittering ring, and arbors hide  
 The glassy floor. Oh! you might deem the spot  
 The spacious cavern of some virgin mine,  
 Deep in the womb of earth—where the gems grow,  
 And diamonds put forth radiant rods and bud  
 With amethyst and topaz—and the place  
 Lit up, most royally, with the pure beam  
 That dwells in them. Or haply the vast hall 80  
 Of fairy palace, that outlasts the night,  
 And fades not in the glory of the sun;—  
 Where crystal columns send forth slender shafts  
 And crossing arches; and fantastic aisles  
 Wind from the sight in brightness, and are lost  
 Among the crowded pillars. Raise thine eye;  
 Thou seest no cavern roof, no palace vault:  
 There the blue sky and the white drifting cloud  
 Look in. Again the wildered fancy dreams  
 Of spouting fountains, frozen as they rose,  
 And fixed, with all their branching jets, in air, 90  
 And all their sluices sealed. All, all is light;  
 Light without shade. But all shall pass away  
 With the next sun. From numberless vast trunks  
 Loosened, the crashing ice shall make a sound  
 Like the far roar of rivers, and the eve  
 Shall close o'er the brown woods as it was wont.

And it is pleasant, when the noisy streams  
 Are just set free, and milder suns melt off  
 The plashy snow, save only the firm drift  
 In the deep glen or the close shade of pines— 100  
 'Tis pleasant to behold the wreaths of smoke  
 Roll up among the maples of the hill,  
 Where the shrill sound of youthful voices wakes  
 The shriller echo, as the clear pure lymph,  
 That from the wounded trees, in twinkling drops,  
 Falls, mid the golden brightness of the morn,  
 Is gathered in with brimming pails, and oft,  
 Wielded by sturdy hands, the stroke of axe  
 Makes the woods ring. Along the quiet air,  
 Come and float calmly off the soft light clouds, 110  
 Such as you see in summer, and the winds

Scarce stir the branches. Lodged in sunny cleft,  
 Where the cold breezes come not, blooms alone  
 The little wind-flower, whose just opened eye  
 Is blue as the spring heaven it gazes at—  
 Startling the loiterer in the naked groves  
 With unexpected beauty, for the time  
 Of blossoms and green leaves is yet afar.  
 And ere it comes, the encountering winds shall oft  
 Muster their wrath again, and rapid clouds 120  
 Shade heaven, and bounding on the frozen earth  
 Shall fall their volleyed stores, rounded like hail  
 And white like snow, and the loud North again  
 Shall buffet the vexed forest in his rage.  
 1820 1825

### *Hymn to Death*<sup>17</sup>

Oh! could I hope the wise and pure in heart  
 Might hear my song without a frown, nor deem  
 My voice unworthy of the theme it tries,—  
 I would take up the hymn to Death, and say  
 To the grim power, The world hath slandered thee  
 And mocked thee. On thy dim and shadowy brow  
 They place an iron crown, and call thee king  
 Of terrors, and the spoiler of the world,  
 Deadly assassin, that strik'st down the fair,  
 The loved, the good—that breathest on the lights 10  
 Of virtue set along the vale of life,  
 And they go out in darkness. I am come,  
 Not with reproaches, not with cries and prayers,  
 Such as have stormed thy stern, insensible ear  
 From the beginning; I am come to speak  
 Thy praises. True it is, that I have wept  
 Thy conquests, and may weep them yet again,  
 And thou from some I love will take a life  
 Dear to me as my own. Yet while the spell  
 Is on my spirit, and I talk with thee 20  
 In sight of all thy trophies, face to face,  
 Meet is it that my voice should utter forth  
 Thy nobler triumphs; I will teach the world  
 To thank thee. Who are thine accusers?—Who?  
 The living!—they who never felt thy power,

<sup>17</sup> Preoccupied as Bryant was during his earlier years with thoughts of death (in "Thanatopsis" and numerous other of his earlier poems), he appears to have shaken off his fears of death under the cheering influence of his happy life with Frances Fairchild in Great Barrington. The first 133 lines were written in this new mood of serenity. Lines 134-168 were added after he received the news of his father's death, the earlier portion being put down as "desultory numbers" written in a mood of "idle revery."

And know thee not. The curses of the wretch  
 Whose crimes are ripe, his sufferings when thy hand  
 Is on him, and the hour he dreads is come,  
 Are writ among thy praises. But the good—  
 Does he whom thy kind hand dismissed to peace, 30  
 Upbraid the gentle violence that took off  
 His fetters, and unbarred his prison-cell?

Raise then the hymn to Death. Deliverer!  
 God hath anointed thee to free the oppressed  
 And crush the oppressor. When the armed chief,  
 The conqueror of nations, walks the world,  
 And it is changed beneath his feet, and all  
 Its kingdoms melt into one mighty realm—  
 Thou, while his head is loftiest and his heart  
 Blasphemes, imagining his own right hand 40  
 Almighty, thou dost set thy sudden grasp  
 Upon him, and the links of that strong chain  
 Which bound mankind are crumbled; thou dost break  
 Sceptre and crown, and beat his throne to dust.  
 Then the earth shouts with gladness, and her tribes  
 Gather within their ancient bounds again.  
 Else had the mighty of the olden time,  
 Nimrod,<sup>18</sup> Sesotris,<sup>19</sup> or the youth who feigned  
 His birth from Libyan Ammon,<sup>20</sup> smitten yet  
 The nations with a rod of iron, and driven 50  
 Their chariot o'er our necks. Thou dost avengé,  
 In thy good time, the wrongs of those who know  
 No other friend. Nor dost thou interpose  
 Only to lay the sufferer asleep,  
 Where he who made him wretched troubles not  
 His rest—thou dost strike down his tyrant too.  
 Oh, there is joy when hands that held the scourge  
 Drop lifeless, and the pitiless heart is cold.  
 Thou too dost purge from earth its horrible  
 And old idolatries;—from the proud fane 60  
 Each to his grave their priests go out, till none  
 Is left to teach their worship; then the fires  
 Of sacrifice are chilled, and the green moss  
 O'ercreeps their altars; the fallen images  
 Cumber the weedy courts, and for loud hymns,  
 Chanted by kneeling multitudes, the wind  
 Shrieks in the solitary aisles. When he  
 Who gives his life to guilt, and laughs at all

<sup>18</sup> Nimrod, a son of Kush, described in Genesis 10:8-10, as a mighty hunter and ruler.

<sup>19</sup> Sesotris, the name given by the Greeks to the great Egyptian king and conqueror; often called Rameses-Sesotris.

<sup>20</sup> An epithet of Zeus as worshipped in Egypt and Libya, identifying him with the Egyptian Amen.

The laws that God or man has made, and round  
 Hedges his scat with power, and shines in  
 wealth,—  
 Lifts up his atheist front to scoff at Heaven,  
 And celebrates his shame in open day,  
 Thou, in the pride of all his crimes, cutt'st off  
 The horrible example. Touched by thine,  
 The extortioner's hard hand foregoes the gold  
 Wrung from the o'er-worn poor. The perjurer,  
 Whose tongue was lithe, e'en now, and voluble  
 Against his neighbor's life, and he who laughed  
 And leaped for joy to see a spotless fame  
 Blasted before his own foul calumnies,  
 Are smit with deadly silence. He, who sold  
 His conscience to preserve a worthless life,  
 Even while he hugs himself on his escape,  
 Trembles, as, doubly terrible, at length,  
 Thy steps o'ertake him, and there is no time  
 For parley, nor will bribes unclench thy grasp.  
 Oft, too, dost thou reform thy victim. long  
 Ere his last hour. And when the reveller,  
 Mad in the chase of pleasure, stretches on,  
 And strains each nerve, and clears the path of life 90  
 Like wind, thou point'st him to the dreadful goal,  
 And shak'st thy hour-glass in his reeling eye,  
 And check'st him in mid course. Thy skeleton hand  
 Shows to the faint of spirit the right path,  
 And he is warned, and fears to step aside.  
 Thou sett'st between the ruffian and his crime  
 Thy ghastly countenance, and his slack hand  
 Drops the drawn knife. But, oh, most fearfully  
 Dost thou show forth Heaven's justice, when thy  
 shafts  
 Drink up the ebbing spirit—then the hard 100  
 Of heart and violent of hand restores  
 The treasure to the friendless wretch he wronged.  
 Then from the writhing bosom thou dost pluck  
 The guilty secret; lips, for ages sealed,  
 Are faithless to their dreadful trust at length,  
 And give it up, the felon's latest breath  
 Absolves the innocent man who bears his crime;  
 The slanderer, horror-smitten, and in tears,  
 Recalls the deadly obloquy he forged  
 To work his brother's ruin. Thou dost make 110  
 Thy penitent victim utter to the air  
 The dark conspiracy that strikes at life,  
 And aims to whelm the laws; ere yet the hour  
 Is come, and the dread sign of murder given.

Thus, from the first of time, hast thou been found  
 On virtue's side; the wicked, but for thee,  
 Had been too strong for the good; the great of earth  
 Had crushed the weak for ever. Schooled in guile  
 For ages, while each passing year had brought  
 Its baneful lesson, they had filled the world 120  
 With their abominations; while its tribes,  
 Trodden to earth, imbruted, and despoiled,  
 Had knelt to them in worship; sacrifice  
 Had smoked on many an altar, temple-roofs  
 Had echoed with the blasphemous prayer and hymn:  
 But thou, the great reformer of the world,  
 80 Tak'st off the sons of violence and fraud  
 In their green pupilage, their lore half learned—  
 Ere guilt had quite o'errun the simple heart  
 God gave them at their birth, and blotted out 130  
 His image. Thou dost mark them flushed with hope,  
 As on the threshold of their vast designs  
 Doubtful and loose they stand, and strik'st them  
 down.

Alas! I little thought that the stern power,  
 Whose fearful praise I sang, would try me thus  
 Before the strain was ended. It must cease—  
 For he is in his grave who taught my youth  
 The art of verse, and in the bud of life  
 Offered me to the Muses. Oh, cut off  
 Untimely! when thy reason in its strength 140  
 Ripened by years of toil and studious search,  
 And watch of Nature's silent lessons, taught  
 Thy hand to practise best the lenient art  
 To which thou gavest thy laborious days,  
 And, last, thy life. And, therefore, when the earth  
 Received thee, tears were in unyielding eyes  
 And on hard cheeks, and they who deemed thy skill  
 Delayed their death-hour, shuddered and turned pale  
 When thou wert gone. This faltering verse, which  
 thou  
 Shalt not, as wont, o'erlook, is all I have 150  
 To offer at thy grave—this—and the hope  
 To copy thy example, and to leave  
 A name of which the wretched shall not think  
 As of an enemy's, whom they forgive  
 As all forgive the dead. Rest, therefore, thou  
 Whose early guidance trained my infant steps—  
 Rest, in the bosom of God, till the brief sleep  
 Of death is over, and a happier life  
 Shall dawn to waken thine insensible dust.

Now thou art not—and yet the men whose  
 guilt 160  
 Has wearied Heaven for vengeance—he who bears  
 False witness—he who takes the orphan's bread,  
 And robs the widow—he who spreads abroad  
 Polluted hands in mockery of prayer,  
 Arc left to cumber earth. Shuddering I look  
 On what is written, yet I blot not out  
 The desultory numbers; let them stand,  
 The record of an idle revery.  
 1820 1825

### *The West Wind*

Beneath the forest's skirt I rest,  
 Whose branching pines rise dark and high,  
 And hear the breezes of the West  
 Among the thread-like foliage sigh.  
 Sweet Zephyr! why that sound of woe?  
 Is not thy home among the flowers?  
 Do not the bright June roses blow,  
 To meet thy kiss at morning hours?  
 And lo! thy glorious realm outspread—  
 Yon stretching valleys, green and gay,  
 And yon free hill-tops, o'er whose head  
 The loose white clouds are borne away.  
 And there the full broad river runs,  
 And many a fount wells fresh and sweet,  
 To cool thee when the mid-day suns  
 Have made thee faint beneath their heat.  
 Thou wind of joy, and youth, and love;  
 Spirit of the new-wakened year!  
 The sun in his blue realm above  
 Smooths a bright path when thou art here. 20  
 In lawns the murmuring bee is heard,  
 The wooing ring-dove in the shade;  
 On thy soft breath, the new-fledged bird  
 Takes wing, half happy, half afraid.  
 Ah! thou art like our wayward race;—  
 When not a shade of pain or ill  
 Dims the bright smile of Nature's face,  
 Thou lov'st to sigh and murmur still.  
 1821 1822

### *The Indian Girl's Lament*

An Indian girl was sitting where  
 Her lover, slain in battle, slept;  
 Her maiden veil, her own black hair,  
 Came down o'er eyes that wept;  
 And wildly, in her woodland tongue,  
 This sad and simple lay she sung;  
 "I've pulled away the shrubs that grew  
 Too close above thy sleeping head,  
 And broke the forest-boughs that threw  
 Their shadows o'er thy bed, 10  
 That, shining from the sweet southwest,  
 The sunbeams might rejoice thy rest.  
 "It was a weary, weary road  
 That led thee to the pleasant coast,  
 Where thou, in his serene abode,  
 Hast met thy father's ghost;  
 Where everlasting autumn lies  
 On yellow woods and sunny skies.  
 "'Twas I the brodered mocsen made,  
 That shod thee for that distant land; 20  
 'Twas I thy bow and arrows laid  
 Beside thy still cold hand;  
 Thy bow in many a battle bent,  
 Thy arrows never vainly sent.  
 "With wampum-belts I crossed thy breast,  
 And wrapped thee in the bison's hide,  
 And laid the food that pleased thee best,  
 In plenty, by thy side,  
 And decked thee bravely, as became  
 A warrior of illustrious name. 30  
 "Thou'rt happy now, for thou hast passed  
 The long dark journey of the grave,  
 And in the land of light, at last,  
 Hast joined the good and brave;  
 Amid the flushed and balmy air,  
 The bravest and the loveliest there.  
 "Yet, oft to thine own Indian maid  
 Even there thy thoughts will earthward stray—  
 To her who sits where thou wert laid,  
 And weeps the hours away, 40  
 Yet almost can her grief forget,  
 To think that thou dost love her yet.  
 "And thou, by one of those still lakes  
 That in a shining cluster lie,

On which the south wind scarcely breaks  
 The image of the sky,  
 A bower for thee and me hast made  
 Beneath the many-colored shade.

"And thou dost wait and watch to meet  
 My spirit sent to join the blessed,  
 And, wondering what detains my feet  
 From that bright land of rest,  
 Dost seem, in every sound, to hear  
 The rustling of my footsteps near."

*"I Broke the Spell That Held Me Long"*

I broke the spell that held me long,  
 The dear, dear witchery of song.  
 I said, the poet's idle lore  
 Shall waste my prime of years no more,  
 For Poetry, though heavenly born,  
 Consorts with poverty and scorn.

I broke the spell—nor deemed its power  
 Could fetter me another hour.  
 Ah, thoughtless! how could I forget  
 Its causes were around me yet?  
 For wheresoe'er I looked, the while,  
 Was Nature's everlasting smile.

Still came and lingered on my sight  
 Of flowers and streams the bloom and light,  
 And glory of the stars and sun;  
 And these and poetry are one.  
 They, ere the world had held me long,  
 Recalled me to the love of song.

*An Indian at the Burial-Place of His Father*<sup>21</sup>

It is the spot I came to seek—  
 My father's ancient burial-place,  
 Ere from these vales, ashamed and weak,  
 Withdrew our wasted race.  
 It is the spot—I know it well—  
 Of which our old traditions tell.

For here the upland bank sends out  
 A ridge toward the riverside;

<sup>21</sup> Bryant shared with Freneau, Cooper, Irving, Longfellow, and others a romantic interest in the American Indian, his "Monument Mountain," "The Indian Girl's Lament," and "The Prairies" all being motivated by this same interest.

I know the shaggy hills about,  
 The meadows smooth and wide,  
 The plains, that, toward the southern sky,  
 Fenced east and west by mountains lie.

10

A white man, gazing on the scene,  
 Would say a lovely spot was here,  
 And praise the lawns, so fresh and green,  
 Between the hills so sheer.  
 I like it not—I would the plain  
 Lay in its tall old groves again.

The sheep are on the slopes around,  
 The cattle in the meadows feed,  
 And laborers turn the crumbling ground,  
 Or drop the yellow seed,  
 And prancing steeds, in trappings gay,  
 Whirl the bright chariot o'er the way.

20

Methinks it were a nobler sight  
 To see these vales in woods arrayed,  
 Their summits in the golden light,  
 Their trunks in grateful shade,  
 And herds of deer that bounding go  
 O'er hills and prostrate trees below.

30

And then to mark the lord of all,  
 The forest hero, trained to wars,  
 Quivered and plumed, and lithe and tall,  
 And seamed with glorious scars,  
 Walk forth, amid his reign, to dare  
 The wolf, and grapple with the bear.

This bank, in which the dead were laid,  
 Was sacred when its soil was ours;  
 Hither the silent Indian maid  
 Brought wreaths of beads and flowers,  
 And the gray chief and gifted seer  
 Worshipped the god of thunders here.

40

But now the wheat is green and high  
 On clods that hid the warrior's breast,  
 And scattered in the furrows lie  
 The weapons of his rest;  
 And there, in the loose sand, is thrown  
 Of his large arm the mouldering bone.

Ah, little thought the strong and brave  
 Who bore their lifeless chieftain forth—  
 Or the young wife that weeping gave  
 Her first-born to the earth,

50

That the pale race who waste us now  
Among their bones should guide the plough.

They waste us—ay—like April snow  
In the warm noon, we shrink away;

And fast they follow, as we go

Toward the setting day—

Till they shall fill the land, and we

Are driven into the Western sea.

But I behold a fearful sign,

To which the white men's eyes are blind;

Their race may vanish hence, like mine,

And leave no trace behind,

Save ruins o'er the region spread,

And the white stones above the dead.

Before these fields were shorn and tilled,

Full to the brim our rivers flowed;

The melody of waters filled

The fresh and boundless wood;

And torrents dashed and rivulets played,

And fountains spouted in the shade.

Those grateful sounds are heard no more,

The springs are silent in the sun;

The rivers, by the blackened shore,

With lessening current run;

The realm our tribes are crushed to get

May be a barren desert yet.

1824

### *Monument Mountain*<sup>22</sup>

Thou who wouldst see the lovely and the wild  
Mingled in harmony on Nature's face,  
Ascend our rocky mountains. Let thy foot  
Fail not with weariness, for on their tops  
The beauty and the majesty of earth,  
Spread wide beneath, shall make thee to forget  
The steep and toilsome way. There, as thou stand'st.  
The haunts of men below thee, and around  
The mountain-summits, thy expanding heart  
Shall feel a kindred with that loftier world  
To which thou art translated, and partake  
The enlargement of thy vision. Thou shalt look  
Upon the green and rolling forest-tops,  
And down into the secrets of the glens,  
And streams that with their bordering thickets strive

10

<sup>22</sup> Bryant based this poem on a legend current at Great Barrington.

To hide their windings. Thou shalt gaze, at once,  
Here on white villages, and tith, and herds,  
And swarming roads, and there on solitudes  
That only hear the torrent, and the wind,  
And eagle's shriek. There is a precipice  
That seems a fragment of some mighty wall,  
Built by the hand that fashioned the old world,  
To separate its nations, and thrown down  
When the flood drowned them. To the north, a path  
Conducts you up the narrow battlement.  
Steep is the western side, shaggy and wild  
With mossy trees, and pinnacles of flint,  
And many a hanging crag. But, to the east,  
Steeper to the vale go down the bare old cliffs—  
Huge pillars, that in middle heaven upbear  
Their weather-beaten capitals, here dark  
With moss, the growth of centuries, and there  
Of chalky whiteness where the thunderbolt  
Has splintered them. It is a fearful thing  
To stand upon the beetling verge,<sup>23</sup> and see  
Where storm and lightning, from that huge gray wall,  
Have tumbled down vast blocks, and at the base  
Dashed them in fragments, and to lay thine ear  
Over the dizzy depth, and hear the sound  
Of winds, that struggle with the woods below,  
Come up like ocean murmurs. But the scene  
Is lovely round; a beautiful river there  
Wanders amid the fresh and fertile meads,  
The paradise he made unto himself,  
Mining the soil for ages. On each side  
The fields swell upward to the hills; beyond,  
Above the hills, in the blue distance, rise  
The mountain-columns with which earth props  
heaven.

20

30

70

40

There is a tale about these reverend rocks,  
A sad tradition of unhappy love,  
And sorrows borne and ended, long ago,  
When over these fair vales the savage sought  
His game in the thick woods. There was a maid,  
The fairest of the Indian maids, bright-eyed,  
With wealth of raven tresses, a light form,  
And a gay heart. About her cabin-door  
The wide old woods resounded with her song  
And fairy laughter all the summer day.  
She loved her cousin; such a love was deemed,  
By the morality of those stern tribes,  
Incestuous, and she struggled hard and long

50

60

<sup>23</sup> That is, overhanging cliff.

Against her love, and reasoned with her heart,  
 As simple Indian maiden might. In vain.  
 Then her eye lost its lustre, and her step  
 Its lightness, and the gray-haired men that passed  
 Her dwelling, wondered that they heard no more  
 The accustomed song and laugh of her, whose looks  
 Were like the cheerful smile of Spring, they said,  
 Upon the Winter of their age. She went  
 To weep where no eye saw, and was not found 70  
 When all the merry girls were met to dance,  
 And all the hunters of the tribe were out;  
 Nor when they gathered from the rustling husk  
 The shining ear; nor when, by the river's side,  
 They pulled the grape and startled the wild shades  
 With sounds of mirth. The keen-eyed Indian dames  
 Would whisper to each other, as they saw  
 Her wasting form, and say, *The girl will die.*

One day into the bosom of a friend,  
 A playmate of her young and innocent years, 80  
 She poured her griefs. "Thou know'st, and thou  
 alone,"

She said, "for I have told thee, all my love,  
 And guilt, and sorrow. I am sick of life.  
 All night I weep in darkness, and the morn  
 Glares on me, as upon a thing accursed,  
 That has no business on the earth. I hate  
 The pastimes and the pleasant toils that once  
 I loved; the cheerful voices of my friends  
 Sound in my ear like mockings, and, at night,  
 In dreams, my mother, from the land of souls, 90  
 Calls me and chides me. All that look on me  
 Do seem to know my shame; I cannot bear  
 Their eyes; I cannot from my heart root out  
 The love that wrings it so, and I must die."

It was a summer morning, and they went  
 To this old precipice. About the cliffs  
 Lay garlands, ears of maize,<sup>24</sup> and shaggy skins  
 Of wolf and bear, the offerings of the tribe  
 Here made to the Great Spirit, for they deemed,  
 Like worshippers of the elder time, that God 100  
 Doth walk on the high places and affect  
 The earth-o'erlooking mountains. She had on  
 The ornaments with which her father loved  
 To deck the beauty of his bright-eyed girl.  
 And bade her wear when stranger warriors came  
 To be his guests. Here the friends sat them down.  
 And sang, all day, old songs of love and death,

<sup>24</sup> Ears of Indian corn.

And decked the poor wan victim's hair with flowers,  
 And prayed that safe and swift might be her way  
 To the calm world of sunshine, where no grief 110  
 Makes the heart heavy and the eyelids red.  
 Beautiful lay the region of her tribe  
 Below her—waters resting in the embrace  
 Of the wide forest, and maize-planted glades  
 Opening amid the leafy wilderness.  
 She gazed upon it long, and at the sight  
 Of her own village peeping through the trees,  
 And her own dwelling, and the cabin-roof  
 Of him she loved with an unlawful love,  
 And came to die for, a warm gush of tears 120  
 Ran from her eyes. But when the sun grew low  
 And the hill shadows long, she threw herself  
 From the steep rock and perished. There was scooped,  
 Upon the mountain's southern slope, a grave;  
 And there they laid her, in the very garb  
 With which the maiden decked herself for death,  
 With the same withering wild-flowers in her hair.  
 And o'er the mould that covered her, the tribe  
 Built up a simple monument, a cone  
 Of small loose stones. Thenceforward all who  
 passed, 130  
 Hunter, and dame, and virgin, laid a stone  
 In silence on the pile. It stands there yet.  
 And Indians from the distant West,<sup>25</sup> who come  
 To visit where their fathers' bones are laid,  
 Yet tell the sorrowful tale, and to this day  
 The mountain where the hapless maiden died  
 Is called the Mountain of the Monument.  
 1824 1824

### *The Murdered Traveller*

When Spring, to woods and wastes around,  
 Brought bloom and joy again,  
 The murdered traveller's bones were found,  
 Far down a narrow glen.

The fragrant birch, above him, hung  
 Her tassels in the sky;  
 And many a vernal blossom sprung,  
 And nodded careless by.

The redbird warbled, as he wrought  
 His hanging nest o'er head, 10  
 And fearless, near the fatal spot,  
 Her young the partridge led.

<sup>25</sup> The Indians of New York and New England retreated westward to Michigan and northward to Canada.

But there was weeping far away,  
And gentle eyes, for him,  
With watching many an anxious day,  
Were sorrowful and dim.

They little knew, who loved him so,  
The fearful death he met,  
When shouting o'er the desert snow,  
Unarmed, and hard beset;—

Nor how, when round the frosty pole  
The northern dawn was red,  
The mountain wolf and wildcat stole  
To banquet on the dead;—

Nor how, when strangers found his bones,  
They dressed the hasty bier,  
And marked his grave with nameless stones,  
Unmoistened by a tear.

But long they looked, and feared, and wept,  
Within his distant home;  
And dreamed, and started as they slept,  
For joy that he was come.

Long, long they looked—but never spied  
His welcome step again,  
Nor knew the fearful death he died  
Far down that narrow glen.

1824

1825

### *Mutation*

They talk of short-lived pleasure—be it so—  
Pain dies as quickly: stern, hard-featured Pain  
Expires, and lets her weary prisoner go.

The fiercest agonies have shortest reign;  
And after dreams of horror, comes again  
The welcome morning with its rays of peace.

Oblivion, softly wiping out the stain,  
Makes the strong secret pangs of shame to cease:  
Remorse is virtue's root; its fair increase

Are fruits of innocence and blessedness: 10  
Thus joy, o'erborne and bound, doth still release  
His young limbs from the chains that round him  
press.

Weep not that the world changes—did it keep  
A stable, changeless state, 'twere cause indeed to  
weep.

1824

1824

### *November*

Yet one smile more, departing, distant sun!

One mellow smile through the soft vapory air,  
Ere, o'er the frozen earth, the loud winds run,  
Or snows are sifted o'er the meadows bare.

One smile on the brown hills and naked trees,  
And the dark rocks whose summer wreaths are cast, 20  
And the blue gentian-flower, that, in the breeze,  
Nods lonely, of her beauteous race the last.

Yet a few sunny days, in which the bee  
Shall murmur by the hedge that skirts the way, 10  
The cricket chirp upon the russet lea,  
And man delight to linger in thy ray.

Yet one rich smile, and we will try to bear  
The piercing winter frost, and winds, and darkened  
air.

1824

1824

### *A Forest Hymn*<sup>26</sup>

30

The groves were God's first temples. Ere man  
learned

To hew the shaft,<sup>27</sup> and lay the architrave,<sup>28</sup>  
And spread the roof above them—ere he framed  
The lofty vault, to gather and roll back  
The sound of anthems; in the darkling wood,  
Amid the cool and silence, he knelt down,  
And offered to the Mightiest solemn thanks  
And supplication. For his simple heart  
Might not resist the sacred influences

Which, from the stilly twilight of the place, 10  
And from the gray old trunks that high in heaven  
Mingled their mossy boughs, and from the sound  
Of the invisible breath that swayed at once  
All their green tops, stole over him, and bowed  
His spirit with the thought of boundless power  
And inaccessible majesty. Ah, why  
Should we, in the world's riper years, neglect

<sup>26</sup> This is the last poem written by Bryant at Great Barrington before moving to New York City. It illustrates Bryant's relation to nature. For details, see Norman Foerster's *Nature in American Literature* (New York, 1923), chap. I.

When, some years later, Bryant tried to revise passages in the poem that had been criticized, he found that in the revision he had "marred the unity and effect of the poem as a whole," and therefore declared (in conformity with the ideas expressed in his poem on "The Poet"), "The truth is, that an alteration ought never to be made without the mind being filled with the subject. In mending a faulty passage in cold blood, we often do more mischief, by attending to particulars and neglecting the entire construction and sequence of ideas, than we do good."

<sup>27</sup> Column.

<sup>28</sup> The lintel lying between the capital and the frieze.

God's ancient sanctuaries, and adore  
 Only among the crowd, and under roofs  
 That our frail hands have raised? Let me, at least, 20  
 Here, in the shadow of this aged wood,  
 Offer one hymn—thrice happy, if it find  
 Acceptance in His ear.

Father, thy hand  
 Hath reared these venerable columns, thou  
 Didst weave this verdant roof. Thou didst look down  
 Upon the naked earth, and, forthwith, rose  
 All these fair ranks of trees. They, in thy sun,  
 Budded, and shook their green leaves in thy breeze,  
 And shot toward heaven. The century-living crow  
 Whose birth was in their tops, grew old and died 30  
 Among their branches, till, at last, they stood,  
 As now they stand, massy, and tall, and dark,  
 Fit shrine for humble worshipper to hold  
 Communion with his Maker. These dim vaults,  
 These winding aisles, of human pomp or pride  
 Report not. No fantastic carvings show  
 The boast of our vain race to change the form  
 Of thy fair works. But thou art here—thou fill'st  
 The solitude. Thou art in the soft winds  
 That run along the summit of these trees 40  
 In music; thou art in the cooler breath  
 That from the inmost darkness of the place  
 Comes, scarcely felt; the barky trunks, the ground,  
 The fresh moist ground, are all instinct with thee.  
 Here is continual worship;—Nature, here,  
 In the tranquillity that thou dost love,  
 Enjoys thy presence. Noiselessly, around,  
 From perch to perch, the solitary bird  
 Passes; and yon clear spring, that, midst its herbs,  
 Wells softly forth and wandering steeples the roots 50  
 Of half the mighty forest, tells no tale  
 Of all the good it does. Thou hast not left  
 Thyself without a witness, in these shades,  
 Of thy perfections. Grandeur, strength, and grace  
 Are here to speak of thee. This mighty oak—  
 By whose immovable stem I stand and seem  
 Almost annihilated—not a prince,  
 In all that proud old world beyond the deep,  
 E'er wore his crown as loftily as he  
 Wears the green coronal of leaves with which 60  
 Thy hand has graced him. Nestled at his root  
 Is beauty, such as blooms not in the glare  
 Of the broad sun. That delicate forest flower,  
 With scented breath and look so like a smile,

Seems, as it issues from the shapeless mould,  
 An emanation of the indwelling Life,  
 A visible token of the upholding Love,  
 That are the soul of this great universe.

My heart is awed within me when I think  
 Of the great miracle that still goes on, 70  
 In silence, round me—the perpetual work  
 Of thy creation, finished, yet renewed  
 Forever. Written on thy works I read  
 The lesson of thy own eternity.  
 Lo! all grow old and die—but see again,  
 How on the faltering footsteps of decay  
 Youth presses—ever-gave and beautiful youth  
 In all its beautiful forms. These lofty trees  
 Wave not less proudly that their ancestors 80  
 Moulder beneath them. Oh, there is not lost  
 One of earth's charms: upon her bosom yet,  
 After the flight of untold centuries,  
 The freshness of her far beginning lies  
 And yet shall lie. Life mocks the idle hate  
 Of his arch-enemy Death—yea, seats himself  
 Upon the tyrant's throne—the sepulchre,  
 And of the triumphs of his ghastly foe  
 Makes his own nourishment. For he came forth  
 From thine own bosom, and shall have no end.

There have been holy men who hid themselves 90  
 Deep in the woody wilderness, and gave  
 Their lives to thought and prayer, till they outlived  
 The generation born with them, nor seemed  
 Less aged than the hoary trees and rocks  
 Around them;—and there have been holy men  
 Who deemed it were not well to pass life thus.  
 But let me often to these solitudes  
 Retire, and in thy presence reassure  
 My feeble virtue. Here its enemies,  
 The passions, at thy plainer footsteps shrink 100  
 And tremble and are still. O God! when thou  
 Dost scare the world with tempests, set on fire  
 The heavens with falling thunderbolts, or fill,  
 With all the waters of the firmament,  
 The swift dark whirlwind that uproots the woods  
 And drowns the villages; when, at thy call,  
 Uprises the great deep and throws himself  
 Upon the continent, and overwhelms  
 Its cities—who forgets not, at the sight  
 Of these tremendous tokens of thy power, 110  
 His pride, and lays his strifes and follies by?  
 Oh, from these sterner aspects of thy face

Spare me and mine, nor let us need the wrath  
Of the mad, unchained elements to teach  
Who rules them. Be it ours to meditate,  
In these calm shades, thy milder majesty,  
And to the beautiful order of thy works  
Learn to conform the order of our lives.

1825

*Lines on Revisiting the Country*<sup>29</sup>

I stand upon my native hills again,  
Broad, round, and green, that in the summer sky  
With garniture of waving grass and grain,  
Orchards, and beechen forests, basking lie,  
While deep the sunless glens are scooped between,  
Where brawl o'er shallow beds the streams unseen.

A lisping voice and glancing eyes are near,  
And ever-restless feet of one, who, now,  
Gathers the blossoms of her fourth bright year;  
There plays a gladness o'er her fair young brow 10  
As breaks the varied scene upon her sight,  
Upheaved and spread in verdure and in light.

For I have taught her, with delighted eye,  
To gaze upon the mountains—to behold,  
With deep affection, the pure ample sky  
And clouds along its blue abysses rolled,  
To love the song of waters, and to hear  
The melody of winds with charmed ear.

Here have I 'scaped the city's stifling heat,  
Its horrid sounds, and its polluted air, 20  
And, where the season's milder fervors beat,  
And gales, that sweep the forest borders, bear  
The song of bird and sound of running stream,  
Am come awhile to wander and to dream.

Ay, flame thy fiercest, sun! thou canst not wake,  
In this pure air, the plague that walks unseen.  
The maize-leaf and the maple-bough but take,  
From thy strong heats, a deeper, glossier green.  
The mountain wind, that faints not in thy ray,  
Sweeps the blue steams of pestilence away. 30

The mountain wind! most spiritual thing of all  
The wide earth knows; when, in the sultry time,

<sup>29</sup> Written during a summer vacation spent at Great Barrington, after Bryant had gone to live in New York. Lines 7-18 refer to his daughter Frances, born in Great Barrington. Her introduction to external nature (as Professor Tremaine McDowell has observed), although recorded in Wordsworthian terms, was actuated by Bryant's devotion to the Berkshires.

He stoops him from his vast cerulean hall,  
He seems the breath of a celestial clime!  
As if from heaven's wide-open gates did flow  
Health and refreshment on the world below.

1825

*The African Chief*<sup>30</sup>

Chained in the market-place he stood,  
A man of giant frame,  
Amid the gathering multitude  
That shrunk to hear his name—  
All stern of look and strong of limb,  
His dark eye on the ground:—  
And silently they gazed on him  
As on a lion bound.

Vainly, but well, that chief had fought,  
He was a captive now, 10  
Yet pride, that fortune humbles not,  
Was written on his brow.  
The scars his dark broad bosom wore  
Showed warrior true and brave;  
A prince among his tribe before,  
He could not be a slave.

Then to his conqueror he spake:  
"My brother is a king;  
Undo this necklace from my neck,  
And take this bracelet ring, 20  
And send me where my brother reigns,  
And I will fill thy hands  
With store of ivory from the plains,  
And gold-dust from the sands."

"Not for thy ivory nor thy gold  
Will I unbind thy chain;  
That bloody hand shall never hold  
The battle-spear again.  
A price thy nation never gave  
Shall yet be paid for thee; 30  
For thou shalt be the Christian's slave,  
In lands beyond the sea."

<sup>30</sup> Concerning this poem, properly regarded as one of the numerous romantic productions glorifying the noble wild savage, Bryant left the following note: "The story of the African chief, related in this ballad, may be found in the 'African Repository' for April, 1825. The subject of it was a warrior of majestic stature, the brother of Yarradee, king of the Solima nation. He had been taken in battle, and was brought in chains for sale to the Rio Pongas, where he was exhibited in the market-place, his ankles still adorned with massy rings of gold which he wore when captured. The refusal of his captors to listen to his offers of ransom drove him mad, and he died a maniac."

Then wept the warrior chief, and bade  
 To shred his locks away;  
 And one by one, each heavy braid  
 Before the victor lay.

Thick were the platted locks, and long,  
 And closely hidden there  
 Shone many a wedge of gold among  
 The dark and crispèd hair.

“Look, feast thy greedy eye with gold  
 Long kept for sorest need:  
 Take it—thou askest sums untold—  
 And say that I am freed.  
 Take it—my wife, the long, long day,  
 Weeps by the cocoa-tree,  
 And my young children leave their play,  
 And ask in vain for me.”

“I take thy gold, but I have made  
 Thy fetters fast and strong,  
 And ween that by the cocoa-shade  
 Thy wife will wait thee long.”  
 Strong was the agony that shook  
 The captive’s frame to hear,  
 And the proud meaning of his look  
 Was changed to mortal fear.

His heart was broken—crazed his brain:  
 At once his eye grew wild;  
 He struggled fiercely with his chain.  
 Whispered, and wept, and smiled;  
 Yet wore not long those fatal bands,  
 And once, at shut of day,  
 They drew him forth upon the sands,  
 The foul hyena’s prey.

### *The Death of the Flowers*<sup>31</sup>

The melancholy days have come, the saddest of the  
 year,  
 Of wailing winds, and naked woods, and meadows  
 brown and sere;  
 Heaped in the hollows of the grove, the autumn  
 leaves lie dead;  
 They rustle to the eddying gust, and to the rabbit’s  
 tread;

The robin and the wren are flown, and from the  
 shrubs the jay,  
 And from the wood-top calls the crow through all the  
 gloomy day.

Where are the flowers, the fair young flowers, that  
 lately sprang and stood  
 In brighter light and softer airs, a beauteous sister-  
 hood?

40

Alas! they all are in their graves, the gentle race of  
 flowers

Are lying in their lowly beds, with the fair and  
 good of ours.

10

The rain is falling where they lie, but the cold  
 November rain

Calls not from out the gloomy earth the lovely ones  
 again.

The wind-flowers and the violet, they perished  
 long ago,

50

And the brier-rose and the orchis died amid the  
 summer glow;

But on the hill the golden-rod, and the aster in the  
 wood,

And the yellow sunflower by the brook in autumn  
 beauty stood,

Till fell the frost from the clear cold heaven, as  
 falls the plague on men,

And the brightness of their smile was gone, from  
 upland, glade, and glen.

60

And now, when comes the calm mild day, as still  
 such days will come,

To call the squirrel and the bee from out their  
 winter home;

20

When the sound of dropping nuts is heard,  
 though all the trees are still,

And twinkle in the smoky light the waters of the rill,  
 The south wind searches for the flowers whose  
 fragrance late he bore,

And sighs to find them in the wood and by the  
 stream no more.

And then I think of one who in her youthful beauty  
 died,

The fair meek blossom that grew up and faded by  
 my side.

In the cold moist earth we laid her, when the forests  
 cast the leaf,

And we wept that one so lovely should have a life  
 so brief:

<sup>31</sup> Written in memory of Bryant’s favorite sister, Mrs. Sarah Bryant Shaw, who died in 1824.

Yet not unmeet it was that one, like that young  
friend of ours,  
So gentle and so beautiful, should perish with  
the flowers.

1825

1825

*The Past*<sup>32</sup>

Thou unrelenting Past!  
Strong are the barriers round thy dark domain,  
And fetters, sure and fast,  
Hold all that enter thy unbreathing reign.

Far in thy realm withdrawn  
Old empires sit in sullenness and gloom,  
And glorious ages gone  
Lie deep within the shadow of thy womb.

Childhood, with all its mirth,  
Youth, Manhood, Age that draws us to the  
ground,  
And last, Man's Life on earth,  
Glide to thy dim dominions, and are bound.

Thou hast my better years;  
Thou hast my earlier friends, the good, the kind,  
Yielded to thee with tears—  
The venerable form,<sup>33</sup> the exalted mind.

My spirit yearns to bring  
The lost ones back—yearns with desire intense,  
And struggles hard to wring  
Thy bolts apart, and pluck thy captives thence. 20

In vain; thy gates deny  
All passage save to those who hence depart;  
Nor to the streaming eye  
Thou giv'st them back—nor to the broken heart.

In thy abysses hide  
Beauty and excellence unknown; to thee  
Earth's wonder and her pride  
Are gathered, as the waters to the sea;

Labors of good to man,  
Unpublished charity, unbroken faith, 30  
Love, that midst grief began,  
And grew with years, and faltered not in death.

<sup>32</sup> Bryant persisted in regarding this his best poem, preferring it even to "Thanatopsis."

<sup>33</sup> A reference to Bryant's father, Dr. Peter Bryant.

<sup>34</sup> A reference to Bryant's sister, Mrs. Sarah Bryant Shaw, who died in 1824.

<sup>35</sup> Although John Burroughs insisted that the fringed gentian

Full many a mighty name  
Lurks in thy depths, unuttered, unrevered;  
With thee are silent fame,  
Forgotten arts, and wisdom disappeared. 30

Thine for a space are they—  
Yet shalt thou yield thy treasures up at last:  
Thy gates shall yet give way,  
Thy bolts shall fall, inexorable Past! 40

All that of good and fair  
Has gone into thy womb from earliest time,  
Shall then come forth to wear  
The glory and the beauty of its prime.

They have not perished—no!  
Kind words, remembered voices once so sweet,  
Smiles, radiant long ago,  
And features, the great soul's apparent seat.

All shall come back; each tie  
Of pure affection shall be knit again; 50  
Alone shall Evil die,  
And Sorrow dwell a prisoner in thy reign.

And then shall I behold  
Him, by whose kind paternal side I sprung,  
And her, who, still and cold,  
Fills the next grave—the beautiful and young.<sup>34</sup>  
1828 1828

*To the Fringed Gentian*<sup>35</sup>

Thou blossom bright with autumn dew  
And colored with the heaven's own blue,  
That openest when the quiet light  
Succeeds the keen and frosty night—

Thou comest not when violents lean  
O'er wandering brooks and springs unseen,  
Or columbines, in purple dressed,  
Nod o'er the ground-bird's<sup>36</sup> hidden nest.

Thou waitest late and com'st alone,  
When woods are bare and birds are flown, 10  
And frosts and shortening days portend  
The aged year is near his end.

does not come late and alone "when woods are bare," but rather early in the autumn along with many other flowers, the fringed gentian appears in the hills of western Massachusetts precisely as Bryant says. A comparison of the language and construction of this poem with those of the earlier poem on "The Yellow Violet" is revelatory.

<sup>36</sup> A ground bird is any of several thrush-like birds.

Then doth thy sweet and quiet eye  
Look through its fringes to the sky,  
Blue—blue—as if that sky let fall  
A flower from its cerulean wall.

I would that thus, when I shall see  
The hour of death draw near to me,  
Hope, blossoming within my heart,  
May look to heaven as I depart.  
1829

1832

### *Song of Marion's Men \**

Our band is few but true and tried,  
Our leader frank and bold;  
The British soldier trembles<sup>37</sup>  
When Marion's name is told.  
Our fortress is the good greenwood,  
Our tent the cypress-tree;  
We know the forest round us,  
As seamen know the sea.  
We know its walls of thorny vines,  
Its glades of reedy grass,  
Its safe and silent islands  
Within the dark morass.

10

Woe to the English soldiery  
That little dread us near!  
On them shall light at midnight  
A strange and sudden fear:  
When, waking to their tents on fire,  
They grasp their arms in vain,  
And they who stand to face us  
Are beat to earth again;  
And they who fly in terror deem  
A mighty host behind,  
And hear the tramp of thousands  
Upon the hollow wind.

20

\* The exploits of General Francis Marion, the famous partisan warrior of South Carolina, form an interesting chapter in the annals of the American Revolution. The British troops were so harassed by the irregular and successful warfare which he kept up at the head of a few daring followers, that they sent an officer to remonstrate with him for not coming into the open field and fighting "like a gentleman and a Christian."

<sup>37</sup> When, in 1832, Irving undertook to sponsor an English edition of Bryant's poems, the publisher asked Irving to make the poem less offensive to English readers. Irving accordingly authorized the change from "The British soldier trembles" to "The foe man trembles in his camp." Both Irving, who believed that he was acting for the best interests of author and publisher,

Then sweet the hour that brings release  
From danger and from toil:  
We talk the battle over,  
And share the battle's spoil.  
The woodland rings with laugh and shout,  
As if a hunt were up,  
And woodland flowers are gathered  
To crown the soldier's cup.  
With merry songs we mock the wind  
That in the pine-top grieves,  
And slumber long and sweetly  
On beds of oaken leaves.

30

Well knows the fair and friendly moon  
The band that Marion leads—  
The glitter of their rifles,  
The scampering of their steeds.  
'Tis life to guide the fiery barb  
Across the moonlit plain:  
'Tis life to feel the night-wind  
That lifts his tossing mane.  
A moment in the British camp—  
A moment—and away  
Back to the pathless forest,  
Before the peep of day.

40

Grave men there are by broad Santee,  
Grave men with hoary hairs;  
Their hearts are all with Marion,  
For Marion are their prayers.  
And lovely ladies greet our band  
With kindest welcoming,  
With smiles like those of summer,  
And tears like those of spring.  
For them we wear these trusty arms,  
And lay them down no more  
Till we have driven the Briton,  
Forever, from our shore.

50

1831

1831

### *The Prairies*<sup>38</sup>

These are the gardens of the Desert, these  
The unshorn fields, boundless and beautiful,

and Bryant, who knew nothing of the change, were severely attacked for "cowardly subservience" to British opinion. As late as 1932 the incident was characterized as an "outrageous" case of "kow-towing to English influence."

<sup>38</sup> Inspired by Bryant's first view of the West, on a visit to his brothers in Illinois in 1832.

For which the speech of England has no name<sup>39</sup>—  
 The Prairies. I behold them for the first,  
 And my heart swells, while the dilated sight  
 Takes in the encircling vastness. Lo! they stretch  
 In airy undulations, far away,  
 As if the Ocean, in his gentlest swell,  
 Stood still, with all his rounded billows fixed,  
 And motionless forever. Motionless?—  
 No—they are all unchained again. The clouds  
 Sweep over with their shadows, and, beneath,  
 The surface rolls and fluctuates to the eye;  
 Dark hollows seem to glide along and chase  
 The sunny ridges. Breezes of the South!  
 Who toss the golden and the flame-like flowers,  
 And pass the prairie-hawk that, poised on high,  
 Flaps his broad wings, yet moves not—ye have  
 played

Among the palms of Mexico and vines  
 Of Texas, and have crisped the limpid brooks  
 That from the fountains of Sonora<sup>40</sup> glide  
 Into the calm Pacific—have ye fanned  
 A nobler or a lovelier scene than this?  
 Man hath no part in all this glorious work:  
 The hand that built the firmament hath heaved  
 And smoothed these verdant swells, and sown their  
 slopes

With herbage, planted them with island-groves,  
 And hedged them round with forests. Fitting  
 floor

For this magnificent temple of the sky—  
 With flowers whose glory and whose multitude  
 Rival the constellations! The great heavens  
 Seem to stoop down upon the scene in love,—  
 A nearer vault, and of a tenderer blue,  
 Than that which bends above our Eastern hills.

As o'er the verdant waste I guide my steed,  
 Among the high rank grass that sweeps his sides  
 The hollow beating of his footstep seems  
 A sacrilegious sound. I think of those  
 Upon whose rest he tramples. Are they here—  
 The dead of other days?—and did the dust  
 Of these fair solitudes once stir with life  
 And burn with passion? Let the mighty mounds  
 That overlook the rivers, or that rise  
 In the dim forest crowded with old oaks,

<sup>39</sup> The word *prairie* came into the English language from the French.

<sup>40</sup> A region or state in northwest Mexico.

Answer. A race, that long has passed away,  
 Built them; a disciplined and populous race  
 Heaped, with long toil, the earth, while yet the  
 Greek

Was hewing the Pentelicus<sup>41</sup> to forms  
 Of symmetry, and rearing on its rock  
 The glittering Parthenon.<sup>42</sup> These ample fields  
 Nourished their harvests, here their herds were  
 fed,

When haply by their stalls the bison lowed,  
 And bowed his manèd shoulder to the yoke.  
 All day this desert murmured with their toils,  
 Till twilight blushed, and lovers walked, and  
 wooed

In a forgotten language, and old tunes,  
 From instruments of unremembered form,  
 Gave the soft winds a voice. The red-man came—  
 The roaming hunter-tribes, warlike and fierce,  
 And the mound-builders vanished from the earth.  
 The solitude of centuries untold  
 Has settled where they dwelt. The prairie-wolf<sup>43</sup>  
 Hunts in their meadows, and his fresh-dug den  
 Yawns by my path. The gopher mines the ground  
 Where stood their swarming cities. All is gone;  
 All—save the piles of earth that hold their bones,  
 The platforms where they worshipped unknown  
 gods,

The barriers which they builded from the soil  
 To keep the foe at bay—till o'er the walls  
 The wild beleaguers broke, and, one by one,  
 The strongholds of the plain were forced, and  
 heaped

With corpses. The brown vultures of the wood  
 Flocked to those vast uncovered sepulchres,  
 And sat, unscared and silent, at their feast.  
 Haply some solitary fugitive,  
 Lurking in marsh and forest, till the sense  
 Of desolation and of fear became  
 Bitterer than death, yielded himself to die.  
 Man's better nature triumphed then. Kind words  
 Welcomed and soothed him; the rude conquerors  
 Seated the captive with their chiefs; he chose  
 A bride among their maidens, and at length  
 Seemed to forget—yet ne'er forgot—the wife  
 Of his first love, and her sweet little ones,  
 Butchered, amid their shrieks, with all his race.

<sup>41</sup> A mountain in Attica, Greece, noted for its marble.

<sup>42</sup> The temple of Pallas in Athens, built about 450 B.C.

<sup>43</sup> The coyote.

Thus change the forms of being. Thus arise  
 Races of living things, glorious in strength,  
 And perish, as the quickening breath of God  
 Fills them, or is withdrawn. The red-man, too,  
 Has left the blooming wilds he ranged so long, 90  
 And, nearer to the Rocky Mountains, sought  
 A wilder hunting-ground. The beaver builds  
 No longer by these streams, but far away,  
 On waters whose blue surface ne'er gave back  
 The white man's face—among Missouri's springs,<sup>44</sup>  
 And pools whose issues swell the Oregon<sup>45</sup>—  
 He rears his little Venice. In these plains  
 The bison<sup>46</sup> feeds no more. Twice twenty leagues  
 Beyond remotest smoke of hunter's camp,  
 Roams the majestic brute, in herds that shake 100  
 The earth with thundering steps—yet here I meet  
 His ancient footprints stamped beside the pool.

Still this great solitude is quick with life.  
 Myriads of insects, gaudy as the flowers  
 They flutter over, gentle quadrupeds,  
 And birds, that scarce have learned the fear of  
 man,  
 Are here, and sliding reptiles of the ground,  
 Startlingly beautiful. The graceful deer  
 Bounds to the wood at my approach. The bee,  
 A more adventurous colonist than man, 110  
 With whom he came across the eastern deep,  
 Fills the savannas<sup>47</sup> with his murmurings,  
 And hides his sweets, as in the golden age,  
 Within the hollow oak. I listen long  
 To his domestic hum, and think I hear  
 The sound of that advancing multitude  
 Which soon shall fill these deserts. From the  
 ground  
 Comes up the laugh of children, the soft voice  
 Of maidens, and the sweet and solemn hymn  
 Of Sabbath worshippers. The low of herds 120  
 Blends with the rustling of the heavy grain  
 Over the dark brown furrows. All at once  
 A fresher wind sweeps by, and breaks my dream,  
 And I am in the wilderness alone.  
 1832 1833

<sup>44</sup> The source of the Missouri River is in Montana.

<sup>45</sup> The Columbia River.

<sup>46</sup> The buffalo.

<sup>47</sup> Treeless plains.

<sup>48</sup> This poem reveals Bryant's ideals for himself and for the New York *Evening Post* when he bore the brunt of the attack of extreme Democrat and "Locofoco" newspapers.

The justly famous passage beginning "Truth crushed to earth

### *The Battle-Field* <sup>48</sup>

Once this soft turf, this rivulet's sands,  
 Were trampled by a hurrying crowd,  
 And fiery hearts and armed hands  
 Encountered in the battle-cloud.

Ah! never shall the land forget  
 How gushed the life-blood of her brave—  
 Gushed, warm with hope and courage yet,  
 Upon the soil they fought to save.

Now all is calm, and fresh, and still;  
 Alone the chirp of fitting bird, 10  
 And talk of children on the hill,  
 And bell of wandering kine, are heard.

No solemn host goes trailing by  
 The black-mouthed gun and staggering wain;  
 Men start not at the battle-cry.  
 Oh, be it never heard again!

Soon rested those who fought; but thou  
 Who minglest in the harder strife  
 For truths which men receive not now,  
 Thy warfare only ends with life. 20

A friendless warfare! lingering long  
 Through weary day and weary year;  
 A wild and many-weaponed throng  
 Hang on thy front, and flank, and rear.

Yet nerve thy spirit to the proof,  
 And blench not at thy chosen lot,  
 The timid good may stand aloof,  
 The sage may frown—yet faint thou not.

Nor heed the shaft too surely cast,  
 The foul and hissing bolt of scorn; 30  
 For with thy side shall dwell, at last,  
 The victory of endurance born.

Truth, crushed to earth, shall rise again;  
 Th' eternal years of God are hers;  
 But Error, wounded, writhes in pain,  
 And dies among his worshippers.

shall rise again" was first quoted by Benjamin F. Butler, Attorney-General under Jackson and Van Buren, in a speech made in Tammany Hall. As he closed, a voice of unmistakable brogue shouted, "Hurrah for Shakespeare!" "No," replied Mr. Butler, "not Shakespeare, but a pupil of his in the school of Nature and truth—our own Bryant," when (adds Bryant's biographer, Parke Godwin) the building rang with cheer on cheer.

Yea, though thou lie upon the dust,  
 When they who helped thee flee in fear,  
 Die full of hope and manly trust,  
 Like those who fell in battle here.

40

Another hand thy sword shall wield,  
 Another hand the standard wave,  
 Till from the trumpet's mouth is pealed  
 The blast of triumph o'er thy grave.

1837

1837

### *The Antiquity of Freedom*

Here are old trees, tall oaks, and gnarled pines,  
 That stream with gray-green mosses; here the  
 ground  
 Was never trenched by spade, and flowers spring up  
 Unsovn, and die ungathered. It is sweet  
 To linger here, among the fitting birds  
 And leaping squirrels, wandering brooks, and  
 winds  
 That shake the leaves, and scatter, as they pass,  
 A fragrance from the cedars, thickly set  
 With pale-blue berries. In these peaceful shades—  
 Peaceful, unpruned, immeasurably old—  
 My thoughts go up the long dim path of years,  
 Back to the earliest days of liberty.

10

O FREEDOM! thou art not, as poets dream,  
 A fair young girl, with light and delicate limbs,  
 And wavy tresses gushing from the cap<sup>49</sup>  
 With which the Roman master crowned his slave  
 When he took off the gyves. A bearded man,  
 Armed to the teeth, art thou; one mailed hand  
 Grasps the broad shield, and one the sword; thy  
 brow,

Glorious in beauty though it be, is scarred  
 With tokens of old wars; thy massive limbs  
 Are strong with struggling. Power at thee has  
 launched

20

His bolts, and with his lightnings smitten thee;  
 They could not quench the life thou hast from  
 heaven;

Merciless Power has dug thy dungeon deep,  
 And his swart armorers, by a thousand fires,  
 Have forged thy chain; yet, while he deems thee  
 bound,

<sup>49</sup> A reference to the "liberty cap" of the French revolutionists, adapted from the Roman *pilleus*, given to a slave when freed.

The links are shivered, and the prison-walls  
 Fall outward; terribly thou springest forth,  
 As springs the flame above a burning pile,  
 And shoutest to the nations, who return  
 Thy shoutings, while the pale oppressor flies.

30

Thy birthright was not given by human hands:  
 Thou wert twin-born with man. In pleasant fields,  
 While yet our race was few, thou sat'st with him,  
 To tend the quiet flock and watch the stars,  
 And teach the reed to utter simple airs.  
 Thou by his side, amid the tangled wood,  
 Didst war upon the panther and the wolf,  
 His only foes; and thou with him didst draw  
 The earliest furrow on the mountain-side,  
 Soft with the deluge. Tyranny himself,  
 Thy enemy, although of reverend<sup>50</sup> look,  
 Hoary with many years, and far obeyed,  
 Is later born than thou; and as he meets  
 The grave defiance of thine elder eye,  
 The usurper trembles in his fastnesses.

40

Thou shalt wax stronger with the lapse of years,  
 But he shall fade into a feeblere age—  
 Feebler, yet subtler. He shall weave his snares,  
 And spring them on thy careless steps, and clap  
 His withered hands, and from their ambush call  
 His hordes to fall upon thee. He shall send  
 Quaint maskers, wearing fair and gallant forms  
 To catch thy gaze, and uttering graceful words  
 To charm thy ear; while his sly imps, by stealth,  
 Twine round thee threads of steel, light thread  
 on thread,

50

That grow to fetters; or bind down thy arms  
 With chains concealed in chaplets. Oh! not yet  
 Mayst thou unbrace thy corslet, nor lay by  
 Thy sword; nor yet, O Freedom! close thy lids,  
 In slumber; for thine enemy never sleeps,  
 And thou must watch and combat till the day  
 Of the new earth and heaven.<sup>51</sup> But wouldst  
 thou rest

60

Awhile from tumult and the frauds of men,  
 These old and friendly solitudes invite  
 Thy visit. They, while yet the forest-trees  
 Were young upon the unviolated earth,  
 And yet the moss-stains on the rock were new,  
 Beheld thy glorious childhood, and rejoiced.

70

1842

1842

<sup>50</sup> Venerable.

<sup>51</sup> That is, the millennium.

*"Oh Mother of a Mighty Race"* <sup>52</sup>

Oh mother of a mighty race,  
 Yet lovely in thy youthful grace!  
 The elder dames, thy haughty peers,  
 Admire and hate thy blooming years.  
     With words of shame  
 And taunts of scorn they join thy name.  
 For on thy cheeks the glow is spread  
 That tints thy morning hills with red;  
 Thy step—the wild-deer's rustling feet  
 Within thy woods are not more fleet;  
     Thy hopeful eye  
 Is bright as thine own sunny sky.  
 Ay, let them rail—those haughty ones,  
 While safe thou dwellest with thy sons.  
 They do not know how loved thou art,  
 How many a fond and fearless heart  
     Would rise to throw  
 Its life between thee and the foe.  
 They know not, in their hate and pride,  
 What virtues with thy children bide;  
 How true, how good, thy graceful maids  
 Make bright, like flowers, the valley-shades;  
     What generous men  
 Spring, like thine oaks, by hill and glen.  
 What cordial welcomes greet the guest  
 By thy lone rivers of the West;  
 How faith is kept, and truth revered,  
 And man is loved, and God is feared,  
     In woodland homes,  
 And where the ocean-border foams.  
 There's freedom at thy gates and rest  
 For Earth's down-trodden and opprest,  
 A shelter for the hunted head,  
 For the starved laborer toil and bread.  
     Power, at thy bounds,  
 Stops and calls back his baffled hounds.  
 Oh, fair young mother! on thy brow  
 Shall sit a nobler grace than now.  
 Deep in the brightness of thy skies  
 The thronging years in glory rise,  
     And, as they fleet,  
 Drop strength and riches at thy feet.

<sup>52</sup> Written shortly after his second voyage to Europe and following a visit to his brothers in Illinois, this poem expresses a glorification at once of the New World (as contrasted with the Old) and of the American frontier.

Thine eye, with every coming hour,  
 Shall brighten, and thy form shall tower;  
 And when thy sisters, elder born,  
 Would brand thy name with words of scorn,  
     Before thine eye,  
 Upon their lips the taunt shall die.  
 1846

1847

*Robert of Lincoln* <sup>53</sup>

Merrily swinging on brier and weed,  
 Near to the nest of his little dame,  
 10 Over the mountain-side or mead,  
 Robert of Lincoln is telling his name:  
     Bob-o'-link, bob-o'-link,  
     Spink, spank, spink;  
 Snug and safe is that nest of ours,  
 Hidden among the summer flowers.  
     Chee, chee, chee.  
 Robert of Lincoln is gayly drest, 10  
     Wearing a bright black wedding-coat;  
 White are his shoulders and white his crest.  
 20 Hear him call in his merry note:  
     Bob-o'-link, bob-o'-link,  
     Spink, spank, spink;  
 Look, what a nice new coat is mine,  
 Sure there was never a bird so fine.  
     Chee, chee, chee.  
 Robert of Lincoln's Quaker wife,<sup>54</sup>  
     Pretty and quiet, with plain brown wings, 20  
 Passing at home a patient life,  
     Broods in the grass while her husband sings:  
 30 Bob-o'-link, bob-o'-link,  
     Spink, spank, spink;  
 Brood, kind creature; you need not fear  
 Thieves and robbers while I am here.  
     Chee, chee, chee.  
 Modest and shy as a nun is she;  
     One weak chirp is her only note.  
 Braggart and prince of braggarts is he, 30  
     Pouring boasts from his little throat:  
     Bob-o'-link, bob-o'-link,  
 40 Spink, spank, spink;  
 Never was I afraid of man;  
 Catch me, cowardly knaves, if you can!  
     Chee, chee, chee.

<sup>53</sup> A simple poem dedicated to his favorite bird, the bobolink.

<sup>54</sup> The female bobolink, so called because of her plain yellowish-brown plumage.

Six white eggs on a bed of hay,  
 Flecked with purple, a pretty sight!  
 There as the mother sits all day,  
 Robert is singing with all his might:  
     Bob-o'-link, bob-o'-link,  
     Spink, spank, spink;  
 Nice good wife, that never goes out,  
 Keeping house while I frolic about.  
     Chee, chee, chee.

Soon as the little ones chip the shell,  
 Six wide mouths are open for food;  
 Robert of Lincoln bestirs him well,  
 Gathering seeds for the hungry brood.  
     Bob-o'-link, bob-o'-link,  
     Spink, spank, spink;  
 This new life is likely to be  
 Hard for a gay young fellow like me.  
     Chee, chee, chee.

Robert of Lincoln at length is made  
 Sober with work, and silent with care;  
 Off is his holiday garment laid,  
 Half forgotten that merry air:  
     Bob-o'-link, bob-o'-link,  
     Spink, spank, spink;  
 Nobody knows but my mate and I  
 Where our nest and our nestlings lie.  
     Chee, chee, chee.

Summer wanes; the children are grown;  
 Fun and frolic no more he knows;  
 Robert of Lincoln's a humdrum crone;  
 Off he flies, and we sing as he goes:  
     Bob-o'-link, bob-o'-link,  
     Spink, spank, spink;  
 When you can pipe that merry old strain,  
 Robert of Lincoln, come back again.  
     Chee, chee, chee.

### *The Poet*<sup>55</sup>

Thou, who wouldst wear the name  
 Of poet mid thy brethren of mankind,  
 And clothe in words of flame

<sup>55</sup> This impassioned plea for emotional intensity in the poet is consonant with Bryant's own analysis of poetry in his "Lectures on Poetry," but hardly with Lowell's quip about Bryant's poetic practice (in *A Fable for Critics*),

There is Bryant, as quiet, as cool, and as dignified,  
 As a smooth, silent iceberg, that never is ignifed . . .

Thoughts that shall live within the general  
 mind!  
 Deem not the framing of a deathless lay  
 The pastime of a drowsy summer day.  
 But gather all thy powers,  
 And wreak them on the verse that thou dost  
 weave,  
 And in thy lonely hours  
 At silent morning or at wakeful eve,  
 While the warm current tingles through thy veins,  
 Set forth the burning words in fluent strains.  
 No smooth array of phrase,  
 Artfully sought and ordered though it be,  
 Which the cold rhymers lays  
 Upon his page with languid industry,  
 Can wake the listless pulse to livelier speed,  
 Or fill with sudden tears the eyes that read.  
 The secret wouldst thou know  
 To touch the heart or fire the blood at will?  
 Let thine own eyes o'erflow;  
 Let thy lips quiver with the passionate thrill;  
 Seize the great thought, ere yet its power be past,  
 And bind, in words, the fleet emotion fast.  
 Then, should thy verse appear  
 Halting and harsh, and all unaptly wrought,  
 Touch the crude line with fear,  
 Save in the moment of impassioned thought;  
 Then summon back the original glow, and mend  
 The strain with rapture that with fire was penned.  
 Yet let no empty gust  
 Of passion find an utterance in thy lay,  
 A blast that whirls the dust  
 Along the howling street and dies away;  
 But feelings of calm power and mighty sweep,  
 Like currents journeying through the windless deep.

30

40

Seek'st thou, in living lays,  
 To limn the beauty of the earth and sky?  
 Before thine inner gaze  
 Let all that beauty in clear vision lie;  
 Look on it with exceeding love, and write  
 The words inspired by wonder and delight.

Of tempests wouldst thou sing,  
 Or tell of battles—make thyself a part  
 Of the great tumult; cling  
 To the tossed wreck with terror in thy heart;

Scalc, with the assaulting host, the rampart's  
height,  
And strike and struggle in the thickest fight.

So shalt thou frame a lay

That haply may endure from age to age, 50  
And they who read shall say:

"What witchery hangs upon this poet's page!  
What art is his the written spells to find  
That sway from mood to mood the willing mind!"

### *The Death of Lincoln* <sup>56</sup>

Oh, slow to smite and swift to spare,  
Gentle and merciful and just!  
Who, in the fear of God, didst bear  
The sword of power, a nation's trust!

In sorrow by thy bier we stand,  
Amid the awe that hushes all,  
And speak the anguish of a land  
That shook with horror at thy fall.

Thy task is done; the bond are free:  
We bear thee to an honored grave, 10  
Whose proudest monument shall be  
The broken fetters of the slave.

Pure was thy life; its bloody close  
Hath placed thee with the sons of light,  
Among the noble host of those  
Who perished in the cause of Right.  
1865 1865

### *The Flood of Years* <sup>57</sup>

A mighty Hand, from an exhaustless Urn,  
Pours forth the never-ending Flood of Years,  
Among the nations. How the rushing waves  
Bear all before them! On their foremost edge,  
And there alone, is Life. The Present there  
Tosses and foams, and fills the air with roar

<sup>56</sup> Written, at the request of the Committee of Arrangements, when the body of Lincoln was carried in funeral procession through New York City, April, 1865.

<sup>57</sup> Uncertain as Bryant was in his younger years about the future life (see "Thanatopsis"), when asked in 1876 whether this poem expressed his own belief concerning immortality, he replied, "Certainly I believe all that is said in the lines. . . quoted; otherwise I could not have written them. I believe in the everlasting life of the soul; and it seems to me that immortality would be but an imperfect gift without the recognition in the life to come of those who are dear to us."

Of mingled noises. There are they who toil,  
And they who strive, and they who feast, and they  
Who hurry to and fro. The sturdy swain—  
Woodman and delver with the spade—is there, 10  
And busy artisan beside his bench,  
And pallid student with his written roll.  
A moment on the mounting billow seen,  
The flood sweeps over them and they are gone.  
There groups of revellers whose brows are twined  
With roses, ride the topmost swell awhile,  
And as they raise their flowing cups and touch  
The clinking brim to brim, are whirled beneath  
The waves and disappear. I hear the jar  
Of beaten drums, and thunders that break forth 20  
From cannon, where the advancing billow sends  
Up to the sight long files of armed men,  
That hurry to the charge through flame and smoke.  
The torrent bears them under, whelmed and hid  
Slayer and slain, in heaps of bloody foam.  
Down go the steed and rider, the plumed chief <sup>58</sup>  
Sinks with his followers; the head that wears  
The imperial diadem goes down beside  
The felon's with cropped ear and branded cheek.  
A funeral-train—the torrent sweeps away 30  
Bearers and bier and mourners. By the bed  
Of one who dies men gather sorrowing,  
And women weep aloud; the flood rolls on;  
The wail is stifled and the sobbing group  
Borne under. Hark to that shrill, sudden shout,  
The cry of an applauding multitude,  
Swayed by some loud-voiced orator who wields  
The living mass as if he were its soul!  
The waters choke the shout and all is still.  
Lo! next a kneeling crowd, and one who spreads 40  
The hands in prayer, the engulfing wave o'ertakes  
And swallows them and him. A sculptor wields  
The chisel, and the stricken marble grows  
To beauty; at his easel, cager-eyed,  
A painter stands, and sunshine at his touch  
Gathers upon his canvas, and life glows;  
A poet, as he paces to and fro,  
Murmurs his sounding lines. Awhile they ride  
The advancing billow, till its tossing crest  
Strikes them and flings them under, while their  
tasks 50

Are yet unfinished. See a mother smile

<sup>58</sup> The phrase, *plumed chief*, may have been suggested to Bryant by the fact that James G. Blaine, nominated for the presidency in 1876 by Col. Robert G. Ingersoll, was called the "Plumed Knight."

On her young babe that smiles to her again;  
 The torrent wrests it from her arms; she shrieks  
 And weeps, and midst her tears is carried down.  
 A beam like that of moonlight turns the spray  
 To glistening pearls; two lovers, hand in hand,  
 Rise on the billowy swell and fondly look  
 Into each other's eyes. The rushing flood  
 Flings them apart: the youth goes down; the maid  
 With hands outstretched in vain, and streaming  
 eyes,

60 Waits for the next high wave to follow him.  
 An aged man succeeds; his bending form  
 Sinks slowly. Mingling with the sullen stream  
 Gleam the white locks, and then are seen no more.

Lo! wider grows the stream—a sea-like flood  
 Saps earth's walled cities; massive palaces  
 Crumble before it; fortresses and towers  
 Dissolve in the swift waters; populous realms  
 Swept by the torrent see their ancient tribes  
 Engulfed and lost; their very languages  
 Stifled, and never to be uttered more.

I pause and turn my eyes, and looking back  
 Where that tumultuous flood has been, I see  
 The silent ocean of the Past, a waste  
 Of waters weltering over graves, its shores  
 Strewn with the wreck of fleets where mast and  
 hull

Drop away piecemeal; battlemented walls  
 Frown idly, green with moss, and temples stand  
 Unroofed, forsaken by the worshipper.

There lie memorial stones, whence time has  
 gnawed

80 The graven legends, thrones of kings o'erturned,  
 The broken altars of forgotten gods,  
 Foundations of old cities and long streets  
 Where never fall of human foot is heard,  
 On all the desolate pavement. I behold  
 Dim glimmerings of lost jewels, far within  
 The sleeping waters, diamond, sardonyx,  
 Ruby and topaz, pearl and chrysolite,  
 Once glittering at the banquet on fair brows  
 That long ago were dust, and all around  
 Strewn on the surface of that silent sea  
 Are withering bridal wreaths, and glossy locks  
 Shorn from dear brows, by loving hands, and scrolls  
 O'er written, haply with fond words of love  
 And vows of friendship, and fair pages flung  
 Fresh from the printer's engine. There they lie  
 A moment, and then sink away from sight.

I look, and the quick tears are in my eyes,  
 For I behold in every one of these  
 A blighted hope, a separate history  
 100 Of human sorrows, telling of dear ties  
 Suddenly broken, dreams of happiness  
 Dissolved in air, and happy days too brief  
 That sorrowfully ended, and I think  
 How painfully must the poor heart have beat  
 In bosoms without number, as the blow  
 Was struck that slew their hope and broke their  
 peace.

Sadly I turn and look before, where yet  
 The Flood must pass, and I behold a mist  
 Where swarm dissolving forms, the brood of  
 Hope,

110 Divinely fair, that rest on banks of flowers,  
 Or wander among rainbows, fading soon  
 And reappearing, haply giving place  
 To forms of grisly aspect such as Fear  
 Shapes from the idle air—where serpents lift  
 The head to strike, and skeletons stretch forth  
 The bony arm in menace. Further on

A belt of darkness seems to bar the way  
 Long, low, and distant, where the Life to come  
 Touches the Life that is. The Flood of Years  
 120 Rolls toward it near and nearer. It must pass  
 That dismal barrier. What is there beyond?  
 Hear what the wise and good have said. Beyond  
 That belt of darkness, still the Years roll on  
 More gently, but with not less mighty sweep.

They gather up again and softly bear  
 80 All the sweet lives that late were overwhelmed  
 And lost to sight, all that in them was good,  
 Noble, and truly great, and worthy of love—

The lives of infants and ingenuous youths,  
 130 Sages and saintly women who have made  
 Their households happy; all are raised and borne  
 By that great current in its onward sweep,  
 Wandering and rippling with caressing waves  
 Around green islands fragrant with the breath  
 Of flowers that never wither. So they pass  
 From stage to stage along the shining course  
 Of that bright river, broadening like a sea.

As its smooth eddies curl along their way  
 They bring old friends together; hands are  
 clasped

140 In joy unspeakable; the mother's arms  
 Again are folded round the child she loved  
 And lost. Old sorrows are forgotten now,

Or but remembered to make sweet the hour  
That overpays them; wounded hearts that bled  
Or broke are healed forever. In the room  
Of this grief-shadowed present, there shall be  
A Present in whose reign no grief shall gnaw

The heart, and never shall a tender tie  
Be broken; in whose reign the eternal Change 150  
That waits on growth and action shall proceed  
With everlasting Concord hand in hand.  
1876 1876

FROM

*Review of Solyman Brown, An Essay on American Poetry* <sup>59</sup>

[Early American Verse]

Of the poetry of the United States different opinions have been entertained, and prejudice on the one side, and partiality on the other, have equally prevented a just and rational estimate of its merits. Abroad, our literature has fallen under unmerited contumely,<sup>60</sup> from those who were but slenderly acquainted with the subject on which they professed to decide; and at home, it must be confessed, that the swaggering and pompous pretensions of many have done not a little to provoke and excite the ridicule of foreigners. Either of these extremes exerts an injurious influence on the cause of letters in our country. To encourage exertion and embolden merit to come forward, it is necessary that they should be acknowledged and rewarded—few will have the confidence to solicit what has been withheld from claims as strong as theirs, or the courage to tread a path which presents no prospect but the melancholy wrecks of those who have gone before them. National gratitude—national pride—every high and generous feeling that attaches us to the land of our birth, or that exalts our characters as individuals, ask of us that we should foster the infant literature of our country, and that genius and industry, employing their efforts to hasten its perfection, should receive, from our hands, that celebrity which reflects as much honour on the nation which confers it as on those

to whom it is extended. On the other hand, it is not necessary for these purposes—it is even detrimental to bestow on mediocrity the praise due to excellence, and still more so is the attempt to persuade ourselves and others into an admiration of the faults of favourite writers. We make but a contemptible figure in the eyes of the world, and set ourselves up as objects of pity to our posterity, when we affect to rank the poets of our own country with those mighty masters of song who have flourished in Greece, Italy and Britain. Such extravagant admiration may spring from a praise-worthy and patriotic motive, but it seems to us that it defeats its own object of encouraging our literature, by seducing those, who would aspire to the favour of the public, into an imitation of imperfect models, and leading them to rely too much on the partiality of their countrymen to overlook their deficiencies. Were our rewards to be bestowed only on what is intrinsically meritorious, merit alone would have any apology for appearing before the public. The poetical adventurer should be taught that it is only the production of genius, taste, and diligence that can find favour at the bar of criticism—that his writings are not to be applauded merely because they are written by an American, and are not decidedly bad; and that he must produce some more satisfactory evidence of his claim to celebrity than an extract from the parish register. To show him what we expect of him, it is as necessary to point out the faults of his predecessors, as to commend their excellences. He must be taught, as well what to avoid, as what to imitate. This is the only way of diffusing and preserving a pure taste, both among those who read and those who write, and, in our opinion, the only way of affording merit a proper and effectual encouragement.

It must, however, be allowed, that the poetry of the United States, though it has not reached that perfection to which some other countries have carried

<sup>59</sup> This selection is a portion of Bryant's review of Solyman Brown's versified survey of classical and modern poetry entitled *An Essay on American Poetry, with Several Miscellaneous Pieces* (New Haven, 1818), which he prepared at the request of Willard Phillips, editor of the *North American Review*, and which appeared in that periodical for July, 1818. After roundly condemning Brown for having "fallen into the great mistake in thinking himself qualified to write a book," Bryant proceeds to give his own estimate of American poetry—one of the earliest justly critical appraisals to be written.

<sup>60</sup> Bryant here refers to such views of American art as were expressed by Sydney Smith in the *Edinburgh Review* for December, 1818.

theirs, is yet even better than we could have been expected to produce, considering that our nation has scarcely seen two centuries since the first of its founders erected their cabins on its soil, that our literary institutions are yet in their infancy, and that our citizens are just beginning to find leisure to attend to intellectual refinements and indulge in intellectual luxury, and the means of rewarding intellectual excellence.

For the first century after the settlement of this country, the few quaint and unskilful specimens of poetry which yet remain to us, are looked upon merely as objects of curiosity, are preserved only in the cabinet of the antiquary, and give little pleasure, if read without reference to the age and people which produced them. A purer taste began after this period to prevail—the poems of the Rev. John Adams,<sup>61</sup> written in the early part of the eighteenth century, which have been considered as no bad specimen of the poetry of his time, are tolerably free from the faults of the generation that preceded him, and show the dawning of an ambition of correctness and elegance. The poetical writings of Joseph Green, Esq.,<sup>62</sup> who wrote about the middle of the same century, have been admired for their humour and the playful ease of their composition.

But, previous to the contest which terminated in the independence of the United States, we can hardly be said to have had any national poetry. Literary ambition was not then frequent amongst us—there was little motive for it, and few rewards. We were contented with considering ourselves as participating in the literary fame of that nation, of which we were a part, and of which many of us were natives, and aspired to no separate distinction. And indeed we might well lay an equal claim, with those who remained on the British soil, to whatever glory the genius and learning as well as the virtue and bravery of other times reflected on the British name. These were qualities which ennobled our common ancestors; and though their graves were not with us, and we were at a distance from the scenes and haunts which were hallowed by their deeds, their studies, and their contemplations, yet we brought with us, and preserved all the more valuable gifts which they left to their posterity and to mankind—their illumination—

their piety—their spirit of liberty—reverence for their memory and example and all the proud tokens of a generous descent.

Yet here was no theatre for the display of literary talent—the worshippers of fame could find no altars erected to that divinity in America, and he who would live by his pen must seek patronage in the parent country. Some men of taste and learning amongst us, might occasionally amuse their leisure with poetical trifles, but a country struggling with the difficulties of colonization, and possessing no superfluous wealth, wanted any other class of men rather than poets. Accordingly we find the specimens of American poetry, before this period, mostly desultory and occasional—rare and delicate exotics, cultivated only by the curious.

On our becoming an independent empire, a different spirit began to manifest itself, and the general ambition to distinguish ourselves as a nation was not without its effect on our literature. It seems to us, that it is from this time only that we can be said to have poets of our own, and from this period it is that we must date the origin of American poetry. About this time, flourished Francis Hopkinson,<sup>63</sup> whose humorous ballad, entitled *The Battle of the Kegs*, is in most of our memories, and some of whose attempts, though deficient in vigour, are not inelegant. The keen and forcible invectives of Dr. Church,<sup>64</sup> which are still recollected by his contemporaries, received an additional edge and sharpness from the exasperated feelings of the times. A writer in verse of inferior note was Philip Freneau, whose pen seems to have been chiefly employed on political subjects, and whose occasional productions, distinguished by a coarse strength of sarcasm, and abounding with allusions to passing events, which is perhaps their greatest merit, attracted in their time considerable notice, and in the year 1786 were collected into a volume. But the influence of that principle which awoke and animated the exertions of all who participated in the political enthusiasm of that time, was still more strongly exemplified in the Connecticut poets—Trumbull, Dwight, Barlow, Humphreys,<sup>65</sup> and Hopkins<sup>66</sup>—who began to write about this period. In all

<sup>63</sup> Francis Hopkinson (1739–91), poet, composer, statesman, lawyer.

<sup>64</sup> Benjamin Church (1734–76), physician, author, poet.

<sup>65</sup> David Humphreys (1752–1818), one of the Connecticut Wits.

<sup>66</sup> Lemuel Hopkins (1750–1801), another one of the Connecticut Wits.

<sup>61</sup> Rev. John Adams (1704–40), New England clergyman, poet, and master of nine languages.

<sup>62</sup> Joseph Green (1706–80), a Boston poet.

the productions of these authors, there is a pervading spirit of *nationality* and patriotism—a desire to reflect credit on the country to which they belonged, which seems, as much as individual ambition, to have prompted their efforts, and which at times gives a certain glow and interest to their manner.

McFingal, the most popular of the writings of the former of these poets, first appeared in the year 1782. This pleasant satire on the adherents of Britain in those times, may be pronounced a tolerably successful imitation of the great work of Butler<sup>67</sup>—though, like every other imitation of that author, it wants that varied and inexhaustible fertility of allusion, which made all subjects of thought—the lightest and most abstruse parts of learning—every thing in the physical and moral world—in art or nature, the playthings of his wit. The work of Trumbull cannot be much praised for the purity of its diction. Yet perhaps great scrupulousness in this particular was not consistent with the plan of the author, and, to give the scenes of his poem their full effect, it might have been thought necessary to adopt the familiar dialect of the country and the times. We think his *Progress of Dulness* a more pleasing poem, as more finished, and more perfect in its kind, and, though written in the same manner, more free from the constraint and servility of imitation. The graver poems of Trumbull contain some vigorous and animated declamation.

Of Dr. Dwight<sup>68</sup> we would speak with all the respect due to talents, to learning, to piety, and a long life of virtuous usefulness—but we must be excused from feeling any high admiration of his poetry. It seems to us modelled upon a manner altogether too artificial and mechanical. There is something strained, violent, and out of nature, in all his attempts. His *Conquest of Canaan* will not secure immortality to its author. In this work the author has been considered by some as by no means happy in the choice of his fable—however this may be, he has certainly failed to avail himself of the advantages it offered him—his epic wants the creations and colourings of an inventive and poetical fancy—the charm, which, in the hands of genius, communicates an interest to the simplest incidents, and something of the illusion of reality to the most improbable fictions. The versification is remarkable for its unbroken monotony. Yet it contains splendid passages, which,

separated from the body of the work, might be admired, but a few pages pall both on the ear and the imagination. It has been urged in its favor that the writer was young—the poetry of his maturer years does not however seem to possess greater beauties or fewer faults. The late Mr. Dennie<sup>69</sup> at one time exerted his ingenuity to render this poem popular with his countrymen; in the year 1800 he published, in the *Farmer's Museum*, a paper printed at Walpole, of which he was the editor, a series of observations and criticism on the *Conquest of Canaan*, after the manner of Addison in those numbers of the *Spectator* which made Milton a favourite with the English people. But this attempt did not meet with success—the work would not sell, and loads of copies yet cumber the shelves of our booksellers. In the other poems of Dr. Dwight, which are generally obnoxious [*sic*] to the same criticisms, he sometimes endeavours to descend to a more familiar style, and entertains his reader with laborious attempts at wit, and here he is still unsuccessful. Parts of his *Greenfield Hill*, and that most unfortunate of his productions, the *Triumph of Infidelity*, will confirm the truth of this remark.

Barlow, when he began to write, was a poet of no inconsiderable promise. His *Hasty Pudding*, one of his earliest productions, is a good specimen of mock-heroic poetry, and his *Vision of Columbus*, at the time of its first appearance, attracted much attention and was hailed as an earnest of better things. It is no small praise to say, that when appointed by the General Assembly of Churches in Connecticut to revise Watts' Version of the Psalms<sup>70</sup> and to versify such as were omitted in that work, he performed the task in a manner which made a near approach to the simplicity and ease of that poet who according to Dr. Johnson,<sup>71</sup> 'has done better than any body else what nobody has done well.' In his maturer years, Barlow became ambitious of distinguishing himself and doing honour to his country by some more splendid and important exertion of his talents, and, for this purpose, projected a national epic, in which was sung the Discovery of America, the successful struggle of the states in the defence of their liberties, and the exalted prospects which were opening before them. It

<sup>69</sup> Joseph Dennie (1736–63), the "Oliver Oldschool" of the *Port Folio*, which he edited.

<sup>70</sup> Sir Isaac Watts (1674–1748), author of the popular *Psalms of David* (1719).

<sup>71</sup> Dr. Samuel Johnson (1709–84).

<sup>67</sup> That is, Samuel Butler's *Hudibras* (1663–68).

<sup>68</sup> Timothy Dwight (1752–1817).

is to be regretted that a design, so honourable and so generously conceived, should have failed. In 1807 appeared the *Columbiad*, which was his poem of the Vision of Columbus, much enlarged, and with such variations as the feelings and reflections of his riper age and judgment led him to make. The *Columbiad* is not, in our opinion, so pleasing a poem, in its present form as in that in which it was originally written. The plan of the work is utterly destitute of interest, and that, which was at first sufficiently 10 wearisome, has become doubly so by being drawn out to its present length. Nor are the additions of much value, on account of the taste in which they are composed. Barlow, in his later poetry, attempted to invigorate his style, but instead of drawing strength and salubrity, from the pure wells of ancient English, he corrupted and debased it with foreign infusions. The imposing but unchaste glitter, which distinguished the manner of Darwin<sup>72</sup> and his imitators, appears likewise to have taken strong hold on his fancy, and he has not scrupled to bestow on his poem much of this meretricious decoration. But notwithstanding the bad taste in which his principal work is composed—20 notwithstanding he cannot be said to write with much pathos, or many of the native felicities of fancy, there is yet enough, in the poetry of Mr. Barlow to prove that, had he fixed his eye on purer models, he might have excelled, not indeed in epic or narrative poetry nor in the delineation of passion and feeling, but in that calm, lofty, sustained style, 30 which suits best with topics of morality and philosophy, and for which the vigour and spirit of his natural manner, whenever he permits it to appear, shew him to have been well qualified.

Humphreys was a poet of humbler pretension. His writings, which were first collected in 1790, are composed in a better taste than those of the two last, and, if he has less genius, he has likewise fewer faults. Some of his lighter pieces are sufficiently pretty. He is most happy when he aims at nothing beyond an 40 elegant mediocrity, and to do him justice this is generally the extent of his ambition. On the whole, he may be considered as sustaining a respectable rank among the poets of our country.

A writer of a different cast from those we have mentioned, and distinguished by a singular boldness of imagination, as well as great humour, was Dr.

<sup>72</sup> Erasmus Darwin (1731–1802), English naturalist and poet, and grandfather of Charles Darwin.

Lemuel Hopkins, who, in 1786, and the year following, in conjunction with Trumbull, Barlow, and Humphreys, and other wits of that time, wrote the *Anarchiad*, a satire, on a plan similar to that of the *Rolliad*, which appeared in the *New Haven Gazette* of those years, and of which the wildest parts are attributed to him. He was likewise author of the *Speech of Hesper*, and some smaller poems, which have been praised for their wit. There is a coarseness and want of polish in his style; and his imagination, daring and original, but unrestrained by a correct judgment, often wanders into absurdities and extravagances. Still, if he had all the madness, he must be allowed to have possessed some of the inspiration of poetry.

One material error of taste pervades the graver productions of these authors, into which it should seem they were led by copying certain of the poets of England, who flourished near the period in which they began to write. It was their highest ambition to attain a certain lofty, measured, declamatory manner—an artificial elevation of style, from which it is impossible to rise or descend without abruptness and violence, and which allows just as much play and freedom to the faculties of the writer as a pair of stilts allows the body. The imagination is confined to one trodden circle, doomed to the chains of a perpetual mannerism, and condemned to tinkle the same eternal tune with its fetters. Their versification, though not equally exceptionable in all, is formed upon the same stately model of balanced and wearisome regularity. Another fault, which arises naturally enough out of the peculiar style which we have imputed to these poets, is the want of pathos and feeling in their writings—the heart is rarely addressed, and never with much power or success. Amidst this coldness of manner, sameness of imagery and monotony of versification, the reader lays down his book, dazzled and fatigued.

In 1800 appeared the poems of William Clifton,<sup>73</sup> who fell, at the age of twenty-seven, a victim to that scourge of our climate which ceases not to waste when other diseases are sated—the pulmonary consumption. There is none of our American poetry, on which we dwell with more pleasure, mingled indeed with regret as the untimely fate of the writer, than these charming remains. Amidst many of the immature effusions of his greener years, and unfinished

<sup>73</sup> William Clifton (1772–99), a Pennsylvania poet.

productions which were never meant to meet the eye of the world, there are to be found specimens of poetry, not only more delicate, classical and polished, but more varied in imagery, and possessing more of that flexibility of style of the want of which in others we have complained, and more faithful to nature and the feelings, than it has often been our lot to meet with, in the works of our native poets. In his later and more finished productions, his diction is refined to an unusual degree of purity, and through this lucid medium the creations of his elegant fancy appear with nothing to obscure their loveliness.

Several respectable additions have been made to the mass of American poetry by Mr. Alsop.<sup>74</sup> His monody on the death of Washington was admired at the time of its appearance. The public is likewise indebted to him for a version of the poem of Silius Italicus on the Punic war, and another of the Second Canto of Berni's Orlando Inamorato. Often elegant, but occasionally relapsing into feebleness and languor,<sup>20</sup> his poetry is that of a man of correct and cultivated taste, but of no very fervid genius, nor bending the faculties of his mind with much intensity to the work in which he was engaged.

The posthumous works of St. John Honeywood, Esq.<sup>75</sup> were published in the year 1801. These modest remains, the imperfect but vigorous productions of no common mind, have not been noticed as they deserved. They contain many polished and nervous lines.

We should not expect to be easily pardoned, were we to pass by the writings of a poet who enjoyed, during his life time, so extensive a popularity as the late Mr. [Robert Treat] Paine.<sup>76</sup> The first glow of admiration, which the splendid errors of his manner excited in the public, is now over, and we can calmly estimate his merits and defects. He must be allowed to have possessed an active and fertile fancy. Even in the misty obscurity, which often shrouds his conceptions not only from the understanding of the reader, but, it should seem, from that of the writer himself, there sometimes break out glimpses of greatness and majesty. Yet with a force and exuberance of imagination which, if soberly directed, might have gained him the praise of magnificence, he is perpetually wandering in search of conceits and extrava-

gances. He is ambitious of the epigrammatic style, and often bewilders himself with attempts to express pointedly what he does not conceive clearly. More instances of the false sublime might perhaps be selected from the writings of this poet, than from those of any other of equal talents, who lived in the same period. The brilliancy of Paine's poetry is like the brilliancy of frost-work—cold and fantastic. Who can point out the passage in his works, in which he speaks to the heart in its own language? He was a fine, but misguided genius.

With respect to the prevailing style of poetry, at the present day, in our country, we apprehend that it will be found, in too many instances, tinged with a sickly and affected imitation of the peculiar manner of some of the late popular poets of England.<sup>77</sup> We speak not of a disposition to emulate whatever is beautiful and excellent in their writings—still less would we be understood as intending to censure that sort of imitation which, exploring all the treasures of English poetry, culls from all a diction, that shall form a natural and becoming dress for the conceptions of the writer—this is a course of preparation which every one ought to go through before he appears before the public—but we desire to set a mark on that servile habit of copying, which adopts the vocabulary of some favourite author, and apes the fashion of his sentences, and cramps and forces the ideas into a shape, which they would not naturally have taken, and of which the only recommendation is, not that it is most elegant or most striking, but that it bears some resemblance to the manner of him who is proposed as a model. This way of writing has an air of poverty and meanness—it seems to indicate a paucity of reading as well as perversion of taste—it might almost lead us to suspect that the writer had but one or two examples of poetical composition in his hands, and was afraid of expressing himself, except according to some formula which they might contain—and it ever has been, and ever will be, the resort of those who are sensible that their works need some factitious recommendation to give them even a temporary popularity.

We have now given a brief summary of what we conceived to be the characteristic merits and defects of our most celebrated American poets. Some names, of which we are not at present aware, equally deserving of notice with those whom we have men-

<sup>74</sup> Richard Alsop (1761-1815), one of the Connecticut Wits.

<sup>75</sup> St. John Honeywood (1763-98).

<sup>76</sup> Robert Treat Paine (1773-1811).

<sup>77</sup> That is, Pope and his followers.

tioned, may have been omitted—some we have passed over, because we were not willing to disturb their passage to that oblivion, towards which, to the honour of our country, they are hastening—and some elegant productions of later date we have not commented on, because we were unwilling to tire our readers with a discussion which they may think already exhausted.

On the whole there seems to be more good taste among those who read, than those who write poetry in our country. With respect to the poets whom we have enumerated, and whose merits we have discussed, we think the judgment pronounced on their works by the public will be found, generally speaking, just. They hold that station in our literature to which they are entitled, and could hardly be admired more than they are, without danger to the taste of the nation. We know of no instance in which great

poetical merit has come forward, and finding its claims unallowed, been obliged to retire to the shade from which it emerged. Whenever splendid talents of this description shall appear, we believe that there will be found a disposition to encourage and reward them. The fondness for literature is fast increasing in our country—and if this were not the case, the patrons of literature have multiplied, of course, and will continue to multiply with the mere growth of our population. The popular English works of the day are reprinted in our country—they are dispersed all over the union—they are to be found in every body's hands—they are made the subject of every body's conversation. What should hinder our native works, if equal in merit, from meeting an equally favourable reception? \* \* \*

## *Lectures on Poetry*

### LECTURE I

#### On the Nature of Poetry <sup>78</sup>

In treating of the subject which has been assigned me, it is obvious that it will be impossible for me to compress into four lectures anything like a complete view of it. I am to speak of one of the most ancient of all arts, of the very earliest and most venerable branch of literature—one which even now exists in many countries that have no other; one, which although it has not in every period been cultivated with the same degree of success, has yet in no age of the world ceased to attract a large degree of the attention of mankind. Not only have the writers of poetry been exceedingly numerous—more so, perhaps, than those of any other class—but poetry has shot forth another branch of literature, her handmaid and satellite, and raised up a large body of authors, who speculate upon what the poets have written, who define the elements and investigate the principles of the art, and fix the degrees of estimation in which its several productions should be held. Not only has the poetry of one age been exceedingly different from that of another, but different styles of

poetry have prevailed at the same time in different nations, different schools of poetry have arisen in the same nation, and different forms of poetical composition have been preferred by the several writers of the same school. So much poetry has been written, and that poetry has been the subject of so much criticism, so much matter for speculation has been collected, and so many reasonings and theories have been framed out of it, that the subject has grown to be one of the most comprehensive in the whole province of literature.

If I were to treat of either of its great subdivisions—if, for example, I were to attempt its history from its earliest origin, through its various stages, to the present time; if I were to analyze the several forms of poetical composition, or to point out the characteristics of the various kinds of poetry that have prevailed at different periods, or to compare the genius of the most illustrious poets—in either case, I could do little more than pass rapidly over the principal topics. The view would be so brief that it would seem like a dry table of the contents of a large work, and would become tedious from its very brevity. I shall, therefore, in the short course of lectures which I have undertaken, attempt no entire view of the subject assigned to me; but shall only endeavor to select a few of the topics which seem to me among the most

<sup>78</sup> This is the first of a series of four lectures which Bryant delivered on the invitation of the Athenæum Society in New York during 1825-26 (but not published until 1884).

interesting, and on which I may imagine that I shall weary you the least.

Of the nature of poetry different ideas have been entertained. The ancient critics<sup>79</sup> seemed to suppose that they did something toward giving a tolerable notion of it by calling it a mimetic or imitative art, and classing it with sculpture and painting. Of its affinity with these arts there can be no doubt; but that affinity seems to me to consist almost wholly in the principles by which they all produce their effect, 10 and not in the manner in which those principles are reduced to practice. There is no propriety in applying to poetry the term *imitative* in a literal and philosophical sense, as there is in applying it to painting and sculpture. The latter speak to the senses; poetry speaks directly to the mind. They reproduce sensible objects, and, by means of these, suggest the feeling or sentiment connected with them; poetry, by the symbols of words, suggests both the sensible 20 object and the association. I should be glad to learn how a poem descriptive of a scene or an event is any more an imitation of that scene or that event than a prose description would be. A prose composition giving an account of the proportions and dimensions of a building, and the materials of which it is constructed, is certainly, so far as mere exactness is concerned, a better imitation of it than the finest poem that could be written about it. Yet who, after all, ever thought of giving such a composition the name of an imitation? The truth is, painting and sculpture 30 are, literally, imitative arts, while poetry is only metaphorically so. The epithet as applied to poetry may be well enough, perhaps, as a figure of speech, but to make a metaphor the foundation of a philosophical classification is putting it to a service in which it is sure to confuse what it professes to make clear.

I would rather call poetry a suggestive art. Its power of affecting the mind by pure suggestion, and employing, instead of a visible or tangible imitation, 40 arbitrary symbols, as unlike as possible to the things with which it deals, is what distinguishes this from its two sister arts. It is owing to its operation by means of suggestion that it affects different minds with such different degrees of force. In a picture or a statue the colors and forms employed by the artist impress the senses with the greatest distinctness. In painting, there is little—in sculpture, there is less—

<sup>79</sup> Such as Aristotle, in his *Poetics*.

for the imagination to supply. It is true that different minds, according to their several degrees of cultivation, will receive different degrees of pleasure from the productions of these arts, and that the moral associations they suggest will be variously felt, and in some instances variously interpreted. Still, the impression made on the senses is in all cases the same; the same figures, the same lights and shades, are seen by all beholders alike. But the creations of Poetry have 10 in themselves nothing of this precision and fixedness of form, and depend greatly for their vividness and clearness of impression upon the mind to which they are presented. Language, the great machine with which her miracles are wrought, is contrived to have an application to all possible things; and wonderful as this contrivance is, and numerous and varied as are its combinations, it is still limited and imperfect, and, in point of comprehensiveness, distinctness, and variety, falls infinitely short of the mighty and diversified world of matter and mind of which it professes to be the representative. It is, however, to the very limitation of this power of language, as it seems to me, that Poetry owes her magic. The most detailed of her descriptions, which, by the way, are not always the most striking, are composed of a few touches; they are glimpses of things thrown into the mind; here and there a trace of the outline; here a gleam of light, and there a dash of shade. But these very touches act like a spell upon the imagination and 20 awaken it to greater activity, and fill it, perhaps, with greater delight than the best defined objects could do. The imagination is the most active and the least susceptible of fatigue of all the faculties of the human mind; its more intense exercise is tremendous, and sometimes unsettles the reason; its repose is only a gentle sort of activity; nor am I certain that it is ever quite unemployed, for even in our sleep it is still awake and busy, and amuses itself with fabricating our dreams. To this restless faculty—which is unsatisfied when the whole of its work is done to its hands, and which is ever wandering from the combination of ideas directly presented to it to other combinations of its own—it is the office of poetry to furnish the exercise in which it delights. Poetry is that art which selects and arranges the symbols of thought in such a manner as to excite it the most powerfully and delightfully. The imagination of the reader is guided, it is true, by the poet, and it is his business to guide it skilfully and agreeably; but the

imagination in the meantime is by no means passive. It pursues the path which the poet only points out, and shapes its visions from the scenes and allusions which he gives. It fills up his sketches of beauty with what suits its own highest conceptions of the beautiful, and completes his outline of grandeur with the noblest images its own stores can furnish. It is obvious that the degree of perfection with which this is done must depend greatly upon the strength and cultivation of that faculty. For example, in the following passage, in which Milton describes the general mother<sup>80</sup> passing to her daily task among the flowers:

With goddess-like demeanor forth she went  
Not unattended, for on her as queen  
A pomp of winning graces waited still.

The coldest imagination, on reading it, will figure to itself, in the person of Eve, the finest forms, attitudes, and movements of female loveliness and dignity, which, after all, are not described, but only hinted at by the poet. A warmer fancy, kindling at the delicate allusions in these lines, will not only bestow these attractions on the principal figure, but will fill the air around her with beauty, and people it with the airy forms of the graces; it will see the delicate proportions of their limbs, the lustre of their flowing hair, and the soft light of their eyes. Take, also, the following passage from the same poet, in which, speaking of Satan, he says:<sup>81</sup>

His face  
Deep scars of thunder had entrenched, and care  
Sat on his faded cheek—but under brows  
Of dauntless courage and considerate pride  
Waiting revenge; cruel his eye but cast  
Signs of remorse and passion to behold  
The fellows of his crime, the followers rather,  
(Far other once beheld in bliss), condemned  
For evermore to have their lot in pain.

The imagination of the reader is stimulated by the hints in this powerful passage to form to itself an idea of the features in which reside this strong expression of malignity and dejection—the brow, the cheek, the eye of the fallen angel, bespeaking courage, pride, the settled purpose of revenge, anxiety, sorrow for the fate of his followers, and fearfully marked with the wrath of the Almighty. There can be no doubt that the picture which this passage calls up in the minds of different individuals will vary

accordingly as the imagination is more or less vivid, or more or less excited in the perusal. It will vary, also, accordingly as the individual is more or less experienced in the visible expression of strong passion, and as he is in the habit of associating the idea of certain emotions with certain configurations of the countenance.

There is no question that one principal office of poetry is to excite the imagination, but this is not its sole, nor perhaps its chief, province; another of its ends is to touch the heart, and, as I expect to show in this lecture, it has something to do with the understanding. I know that some critics have made poetry to consist solely in the exercise of the imagination. They distinguish poetry from pathos. They talk of pure poetry, and by this phrase they mean passages of mere imagery, with the least possible infusion of human emotion. I do not know by what authority these gentlemen take the term poetry from the people, and thus limit its meaning.

In its ordinary acceptance, it has, in all ages and all countries, included something more. When we speak of a poem, we do not mean merely a tissue of striking images. The most beautiful poetry is that which takes the strongest hold of the feelings, and, if it is really the most beautiful, then it is poetry in the highest sense. Poetry is constantly resorting to the language of the passions to heighten the effect of her pictures; and, if this be not enough to entitle that language to the appellation of poetical, I am not aware of the meaning of the term. Is there no poetry in the wrath of Achilles?<sup>82</sup> Is there no poetry in the passage where Lear, in the tent of Cordelia, just recovered from his frenzy, his senses yet infirm and unassured, addresses his daughter as she kneels to ask his blessing?<sup>83</sup>

Pray do not mock me;  
I am a very foolish, fond old man,  
Fourscore and upward:  
Not an hour more or less, and to deal plainly  
I fear I am not in my perfect mind.

Is there no poetry in the remorse of Othello,<sup>84</sup> in the terrible consciousness of guilt which haunts Macbeth,<sup>85</sup> or the lamentations of Antony over the body of his friend, the devoted love of Juliet,<sup>86</sup> and the self-

<sup>80</sup> A reference to *Paradise Lost*, VIII, 59.

<sup>86</sup> See *Romeo and Juliet*, II, ii, 84 ff.

sacrificing affection of Cleopatra?<sup>87</sup> In the immortal work of Milton, is there no poetry in the penitence of Adam,<sup>88</sup> or in the sorrows of Eve<sup>89</sup> at being excluded from Paradise? The truth is, that poetry which does not find its way to the heart is scarcely deserving of the name; it may be brilliant and ingenious, but it soon wearies the attention. The feelings and the imagination, when skilfully touched, act reciprocally on each other. For example, when the poet introduces Ophelia,<sup>90</sup> young, beautiful, and unfortunate, the wildness of frenzy in her eye, dressed with fantastic garlands of wild flowers, and singing snatches of old tunes, there is a picture for the imagination, but it is one which affects the heart. But when, in the midst of her incoherent talk, she utters some simple allusion to her own sorrows, as when she says, "We know what we are, but know not what we may be," this touching sentence, addressed merely to our sympathy, strongly excites the imagination. It sets before us the days when she knew sorrow only by name, before her father was slain by the hand of her lover, and before her lover was estranged, and makes us feel the heaviness of that affliction which crushed a being so gentle and innocent and happy.

Those poems, however, as I have already hinted, which are apparently the most affluent of imagery, are not always those which most kindle the reader's imagination. It is because the ornaments with which they abound are not naturally suggested by the subject, not poured forth from a mind warmed and occupied by it; but a forced fruit of the fancy, produced by labor, without spontaneity or excitement.

The language of passion is naturally figurative, but its figures are only employed to heighten the intensity of the expression; they are never introduced for their own sake. Important, therefore, as may be the office of the imagination in poetry, the great spring of poetry is emotion. It is this power that holds the key of the storehouse where the mind has laid up its images, and that alone can open it without violence. All the forms of fancy stand ever in its sight, ready to execute its bidding. Indeed, I doubt not that most of the offences against good taste in this kind of composition are to be traced to the absence of emotion. A desire to treat agreeably or impressively a subject by which the writer is himself little moved, leads him

into great mistakes about the means of effecting his purpose. This is the origin of cold conceits, of prosing reflections, of the minute painting of uninteresting circumstances, and of the opposite extremes of tameness and extravagance. On the other hand, strong feeling is always a sure guide. It rarely offends against good taste, because it instinctively chooses the most effectual means of communicating itself to others. It gives a variety to the composition it inspires, with which the severest taste is delighted. It may sometimes transgress arbitrary rules, or offend against local associations, but it speaks a language which reaches the heart in all countries and all times. Everywhere are the sentiments of fortitude and magnanimity uttered in strains that brace our own nerves, and the dead mourned in accents that draw our tears.

But poetry not only addresses the passions and the imagination; it appeals to the understanding also. So far as this position relates to the principles of taste which lie at the foundation of all poetry, and by which its merits are tried, I believe its truth will not be doubted. These principles have their origin in the reason of things, and are investigated and applied by the judgment. True it is that they may be observed by one who has never speculated about them, but it is no less true that their observance always gratifies the understanding with the fitness, the symmetry, and the congruity it produces. To write fine poetry requires intellectual faculties of the highest order, and among these, not the least important, is the faculty of reason. Poetry is the worst mask in the world behind which folly and stupidity could attempt to hide their features. Fitter, safer, and more congenial to them is the solemn discussion of unprofitable questions. Any obtuseness of apprehension or incapacity for drawing conclusions, which shows a deficiency or want of cultivation of the reasoning power, is sure to expose the unfortunate poet to contempt and ridicule.

But there is another point of view in which poetry may be said to address the understanding—I mean in the direct lessons of wisdom that it delivers. Remember that it does not concern itself with abstract reasonings, nor with any course of investigation that fatigues the mind. Nor is it merely didactic; but this does not prevent it from teaching truths which the mind instinctively acknowledges. The elements of moral truth are few and simple, but their combinations with human actions are as innumerable and

<sup>87</sup> See *Antony and Cleopatra*, I, iii.

<sup>88</sup> See *Paradise Lost*, XI.

<sup>89</sup> *Ibid.*

<sup>90</sup> See *Hamlet*, IV, v, 42.

diversified as the combinations of language. Thousands of inductions resulting from the application of great principles to human life and conduct lie, as it were, latent in our minds, which we have never drawn for ourselves, but which we admit the moment they are hinted at, and which, though not abstruse, are yet new. Nor are these of less value because they require no laborious research to discover them. The best riches of the earth are produced on its surface, and we need no reasoning to teach us the folly of a 10 people who should leave its harvests ungathered to dig for its ores. The truths of which I have spoken, when possessing any peculiar force or beauty, are properly within the province of the art of which I am treating, and, when recommended by harmony of numbers, become poetry of the highest kind. Accordingly, they abound in the works of the most celebrated poets. When Shakespeare says of mercy,<sup>91</sup>

it is twice blessed—  
It blesses him that gives and him that takes,

does he not utter beautiful poetry as well as unquestionable truth? There are passages also in Milton of the same kind, which sink into the heart like the words of an oracle. For instance:<sup>92</sup>

Evil into the mind of God or man  
May come and go so unapproved, and leave  
No spot or blame behind.

Take, also, the following example from Cowper, in 30 which he bears witness against the guilt and folly of princes:<sup>93</sup>

War is a game which, were their subjects wise,  
Kings should not play at. Nations would do well  
To extort their truncheons from the puny hands  
Of heroes whose infirm and baby minds  
Are gratified with mischief, and who spoil,  
Because men suffer it, their toy—the world.

I call these passages poetry, because the mind instantly acknowledges their truth and feels their force, 40 and is moved and filled and elevated by them. Nor does poetry refuse to carry on a sort of process of reasoning by deducing one truth from another. Her demonstrations differ, however, from ordinary ones by requiring that each step should be in itself beautiful or striking, and that they all should carry the mind

to the final conclusion without the consciousness of labor.

All the ways by which poetry affects the mind are open also to the prose-writer. All that kindles the imagination, all that excites emotion, all those moral truths that find an echo in our bosoms, are his property as well as that of the poet. It is true that in the ornaments of style the poet is allowed a greater license, but there are many excellent poems which are not distinguished by any liberal use of the figures of speech from prose writings composed with the same degree of excitement. What, then, is the ground of the distinction between prose and poetry? This is a question about which there has been much debate,<sup>94</sup> but one which seems to me of easy solution to those who are not too ambitious of distinguishing themselves by profound researches into things already sufficiently clear. I suppose that poetry differs from prose, in the first place, by the employment of metrical 20 harmony. It differs from it, in the next place, by excluding all that disgusts, all that tasks and fatigues the understanding, and all matters which are too trivial and common to excite any emotion whatever. Some of these, verse cannot raise into dignity; to others, verse is an encumbrance: they are, therefore, all unfit for poetry; put them into verse, and they are prose still.

A distinction has been attempted to be made between poetry and eloquence, and I acknowledge that there is one; but it seems to me that it consists solely in metrical arrangement. Eloquence is the poetry of prose; poetry is the eloquence of verse. The maxim that the poet is born and the orator made is a pretty antithesis, but a moment's reflection will convince us that one can become neither without natural gifts improved by cultivation. By eloquence I do not mean mere persuasiveness: there are many processes of argument that are not susceptible of eloquence, because they require close and painful attention. But 30 by eloquence I understand those appeals to our moral perceptions that produce emotion as soon as they are uttered. It is in these that the orator is himself affected with the feelings he would communicate, that his eyes glisten, and his frame seems to dilate, and his voice acquires an unwonted melody, and his sentences arrange themselves into a sort of measure and har-

<sup>91</sup> *Merchant of Venice*, IV, i, 184-5.

<sup>92</sup> *Paradise Lost*, V, 117-9.

<sup>93</sup> William Cowper, *The Task*, V, 187-192.

<sup>94</sup> As in Coleridge's *Biographia Literaria* (1817); see also Wordsworth's remarks in his preface to the second edition of the *Lyrical Ballads* (1800) and Poe's critical essays.

mony, and the listener is chained in involuntary and breathless attention. This is the very enthusiasm that is the parent of poetry. Let the same man go to his closet and clothe in numbers conceptions full of the same fire and spirit, and they will be poetry.

In conclusion, I will observe that the elements of poetry make a part of our natures, and that every individual is more or less a poet. In this "bank-note world," as it has been happily denominated, we sometimes meet with individuals who declare that they have no taste for poetry. But by their leave I will assert they are mistaken; they have it, although they may have never cultivated it. Is there any one among them who will confess himself insensible to the beauty of order or to the pleasure of variety—two principles, the happy mingling of which makes the perfection of poetic numbers? Is there any one whose eye is undelighted with beautiful forms and colors, whose ear is not charmed by sweet sounds, and who sees no loveliness in the returns of light and darkness, 20

and the changes of the seasons? Is there any one for whom the works of Nature have no associations but such as relate to his animal wants? Is there any one to whom her great courses and operations show no majesty, to whom they impart no knowledge, and from whom they hide no secrets? Is there any one who is attached by no ties to his fellow-beings, who has no hopes for the future, and no memory of the past? Have they all forgotten the days and the friends of their childhood, and do they all shut their eyes to the advances of age? Have they nothing to desire and nothing to lament, and are their minds never darkened with the shadows of fear? Is it, in short, for these men that life has no pleasures and no pains, the grave no solemnity, and the world to come no mysteries? All these things are the sources of poetry, and they are not only part of ourselves, but of the universe, and will expire only with the last of the creatures of God.

1884

FROM

*The Right of Workmen to Strike*<sup>95</sup>

Sentence was passed on Saturday on the twenty "men who had determined not to work." The punishment selected, on due consideration, by the judge, was that officers appointed for the purpose should immediately demand from each of the delinquents a sum of money which was named in the sentence of the court. The amount demanded would not have fallen short of the savings of many years. Either the offenders had not parted with these savings, or their brother workmen raised the ransom money for them 30 on the spot. The fine was paid over as required. All is now well; justice has been satisfied. But if the expenses of their families had anticipated the law, and left nothing in their hands, or if friends had not been ready to buy the freedom of their comrades, they would have been sent to prison, and there they would have staid, until their wives and children, besides earning their own bread, had saved enough to redeem the captives from their cells. Such had been their punishment. What was their offence? They had com- 40

mitted the crime of unanimously declining to go to work at the wages offered to them by their masters. They had said to one another, "Let us come out from the meanness and misery of our caste. Let us begin to do what every order more privileged and more honoured is doing everyday. By the means which we believe to be the best let us raise ourselves and our families above the humbleness of our condition. We may be wrong, but we cannot help believing that we might do much if we were true brothers to each other, and would resolve not to sell the only thing which is our own, the cunning of our hands, for less than it is worth." What other things they may have done is nothing to the purpose: it was for this they were condemned; it is for this they are to endure the penalty of the law.

We call upon a candid and generous community to mark that the punishment inflicted upon these twenty "men who had determined not to work" is not directed against the offence of conspiring to prevent others by force from working at low wages, but expressly against the offence of settling by pre-concert the compensation which they thought they were en-

<sup>95</sup> This editorial on the right of workingmen to strike was considered inflammatory when Bryant published it in the *New York Evening Post* on June 13, 1836.

titled to obtain. It is certainly superfluous to repeat, that this journal would be the very last to oppose a law levelled at any attempt to molest the labourer who chooses to work for less than the prices settled by the union. We have said, and to cut off cavil, we say it now again, that a conspiracy to deter, by threats of violence, a fellow workman from arranging his own terms with his employers, is a conspiracy to commit a felony—a conspiracy which, being a crime against liberty, we should be the first to condemn—a conspiracy which no strike should, for its own sake, countenance for a moment—a conspiracy already punishable by the statute, and far easier to reach than the one of which “the twenty” stood accused; but a conspiracy, we must add, that has not a single feature in common with the base and barbarous prohibition under which the offenders were indicted and condemned.

They were condemned because they had determined not to work for the wages that were offered them! Can any thing be imagined more abhorrent to every sentiment of generosity or justice, than the law which arms the rich with the legal right to fix, by assize, the wages of the poor? If this is not SLAVERY, we have forgotten its definition. Strike the right of associating for the sale of labour from the privileges of a freeman, and you may as well at once bind him to a master, or ascribe him to the soil. If it be not in the colour of his skin, and in the poor franchise of naming his own terms in a contract for his work, what advantage has the labourer of the north over the bondman of the south? Punish by human laws a “determination not to work,” make it penal by any other penalty than idleness inflicts, and it matters little whether the task-masters be one or many, an individual or an order, the hateful scheme of slavery will have gained a foothold in the land. And then the meanness of this law, which visits with its malice

those who cling to it for protection, and shelters with all its fences those who are raised above its threats. A late solicitation for its aid against employers, is treated with derision and contempt, but the moment the “masters” invoked its intervention, it came down from its high place with most indecent haste, and has now discharged its fury upon the naked heads of wretches so forlorn, that their worst faults multiply their titles to a liberty which they must learn to win from livelier sensibilities than the barren benevolence of Wealth, or the tardy magnanimity of Power. \* \* \*

“Self-created societies,” says Judge Edwards, “are unknown to the constitution and laws, and will not be permitted to rear their crest and extend their baneful influence over any portion of the community.” If there is any sense in this passage it means that self-created societies are unlawful, and must be put down by the courts. Down then with every literary, every religious, and every charitable association not incorporated! What nonsense is this! Self-created societies *are* known to the constitution and laws, for they are not prohibited, and the laws which allow them will, if justly administered, protect them. But suppose in charity that the reporter has put this absurdity into the mouth of Judge Edwards, and that he meant only those self-created societies which have an effect upon trade and commerce. Gather up then and sweep to the penitentiary all those who are confederated to carry on any business or trade in concert, by fixed rules, and see how many men you would leave at large in this city. The members of every partnership in the place will come under the penalties of the law, and not only these, but every person pursuing any occupation whatever, who governs himself by a mutual understanding with others that follow the same occupation. \* \* \*

### *Freedom of Speech*<sup>96</sup>

A meeting of the people of Cincinnati have proclaimed the right of silencing the expression of un-40 popular opinions by violence. We refer our readers to the proceedings of an anti-abolition meeting lately held in that city. They will be found in another part of this paper.

If the meeting had contented itself with declaring

its disapprobation of the tenets of the abolitionists, we should have had nothing to say. They might have exhausted the resources of rhetoric and of language—they might have indulged in the very extravagance and wantonness of vehement condemnation, for

<sup>96</sup> This editorial, published in the *Post* for August 8, 1836, is characteristic of Bryant's devotion to the cause of human liberty

aught we cared; they would still have been in the exercise of a right which the constitution and the laws secure to them. But when they go further, and declare that they have not only a right to condemn certain opinions in others, but the right to coerce those who hold them to silence, it is time to make an immediate and decided stand, and to meet the threat of coercion with defiance.

The Cincinnati meeting, in the concluding resolution offered by Wilson N. Brown, and adopted with the rest, declare in so many words that if they cannot put down the abolitionist press by fair means they will do it by foul; if they cannot silence it by remonstrance, they will silence it by violence; if they cannot persuade it to desist, they will stir up mobs against it, inflame them to madness, and turn their brutal rage against the dwellings, the property, the persons, the lives of the wretched abolitionists and their families. In announcing that they will put them down by force all this is included. Fire, robbery, bloodshed, are the common excesses of an enraged mob. There is no extreme of cruelty and destruction to which in the drunkenness and delirium of its fury it may not proceed. The commotions of the elements can as easily be appeased by appeals to the quality of mercy as these commotions of the human mind; the whirlwind and the lightning might as well be expected to pause and turn aside to spare the helpless and innocent, as an infuriated multitude.

If the abolitionists *must* be put down, and if the community are of that opinion, there is no necessity of violence to effect the object. The community have the power in their own hands; the majority may make a law declaring the discussion of slavery in a certain manner to be a crime, and imposing penalties. The law may then be put in force against the offenders, and their mouths may be gagged in due form, and with all the solemnities of justice.

What is the reason this is not done? The answer is ready. The community are for leaving the liberty of the press untrammelled—there is not a committee that can be raised in any of the State legislatures north of the Potomac who will report in favor of imposing penalties on those who declaim against slavery—there is not a legislature who would sanction such a report—and there is not a single free state the people of which would sustain a legislature in so doing. These are facts, and the advocates of mob law know them to be so.

Who then are the men that issue this invitation to silence the press by violence? Who but an insolent brawling minority, a few noisy fanatics who claim that their own opinions shall be the measure of freedom for the rest of the community, and who undertake to overawe a vast pacific majority by threats of wanton outrage and plunder? These men are for erecting an oligarchy of their own and riding rough shod over the people and the people's rights. They claim a right to repeal the laws established by the majority in favor of the freedom of the press. They make new laws of their own to which they require that the rest of the community shall submit, and in case of a refusal, they threaten to execute them by the ministry of a mob. There is no tyranny or oppression exercised in any part of the world more absolute or more frightful than that which they would establish.

So far as we are concerned we are determined that this despotism shall neither be submitted to nor encouraged. In whatever form it makes its appearance we shall raise our voice against it. We are resolved that the subject of slavery shall be as it ever has been, as free a subject of discussion and argument and declamation, as the difference between whiggism and democracy, or as the difference between the Arminians and the Calvinists. If the press chooses to be silent on the subject it shall be the silence of perfect free will, and not the silence of fear. We hold that this combination of the few to govern the many by the terror of illegal violence, is as wicked and indefensible as a conspiracy to rob on the highway. We hold it to be the duty of good citizens to protest against it whenever and wherever it shows itself, and to resist it if necessary to the death.

One piece of justice must be done to the South. Thousands there are of persons in that quarter of the country who disapprove, as heartily as any citizen of the North can do, the employment of violence against the presses or the preachers of the anti-slavery party. There are great numbers also, as we are well informed, who think that only harm could result from directing the penalties of the law against those who discuss the question of slavery. They are for leaving the mode of discussing this question solely to the calm and considerate good sense of the North, satisfied that the least show of a determination to abridge the liberty of speech in this matter is but throwing oil on the flames.

## WASHINGTON IRVING (1783-1859)

Washington Irving enjoyed the signal honor of becoming the first American author to be widely appreciated abroad. The popular success of *The Sketch Book* in England at precisely the moment when British-American animosity had reached a new high made him doubly dear to Americans who had long waited for a native writer capable of scotching the superciliously contemptuous attitude of English critics toward American productions of the spirit. The honor was all the more phenomenal because it was won on purely literary merit. Intellectually, Irving was a lesser man than the more notable of his predecessors. He lacked the high seriousness of a Mather, the philosophical acumen of an Edwards, the versatility of a Franklin, the statesmanship of a Jefferson, and the profundity of a Dwight. Yet he has overshadowed them all and continues today as a more significant figure in the history of American letters than any of them. Relatively unconcerned with great ideas and lacking in emotional intensity or imaginative power, Irving nevertheless possessed a temperament and a style the combination of which enabled him to vary his tone from sentiment and romance to wit and urbanity in a manner which left no doubt that here at last was an American whose gentlemanly geniality was as authentic as his elegant good taste was instinctive. To be sure, his endowments were not prodigious, but they were sufficient to establish him as a man of parts. Far from being a bumptious provincial, he was a cosmopolite, speaking a language of suavity and gentility universally recognized and understood in polite and cultivated circles.

In the attainment of the graces of living he was naturally conditioned by the circumstances surrounding his earlier years. Born in New York City on April 3, 1783, the favorite and last of eleven children of an austere Presbyterian father and a more genially-minded Anglican mother, young Irving grew up in an atmosphere of indulgence. A disposition toward frailty and sensitivity got for him the best that family competence and brotherly favoritism could supply. After eleven years of elementary schooling, he escaped the regularity of a collegiate education which his father had prescribed for his older sons. But because

it was still customary for a gentleman to have a profession, even though he might not practice it, he read intermittently at the law for a half-dozen years in several law offices of New York, notably in that of Judge Josiah Ogden Hoffman, with whose pretty daughter Mathilda he early fell in love. His "inveterate enemies, the fathers of the law," did not, however, prevent his participation, as a gay young man-about-town, in the social whirl of the city or his hobnobbing with a knot of gay young men, known as the "Nine Worthies of Cockloft Hall," who were bent, like himself, on enjoying life in terms of conviviality, feminine society, theatrical entertainment, and literary amusement. Association with literary-minded young dandies like Peter and Gouverneur Kemble, Henry Brevoort, Henry Ogden, James K. Paulding, and his own brothers, William, Peter, and Ebenezer, led to his writing a series of whimsically satirical essays over the signature of "Jonathan Oldstyle, Gent.," published in Peter Irving's paper, the *Morning Chronicle*, during 1802-03. This youthful playing with the pen was interrupted by several trips up the Hudson, another into Canada in the interest of his health, and during 1804-06, an extended tour of Europe. Although the captain of the ship on which he sailed said, when young Irving first came aboard, "There's a chap who will go overboard before we get across," his health was markedly improved during the two years in Europe, which served also to give his manners a brush, and to fill several notebooks with experiences picked up in a constant round of sight-seeing, flirtatious pleasantries, and frivolous entertainment.

Upon his return to New York, he passed the bar examination late in 1806, "by the grace of God and Josiah Hoffman," the chief examiner, and in the following February he set up as a lawyer, at least to the extent of moving into the office of his brother John, at No. 3 Wall Street. But he argued no more cases than Oliver Wendell Holmes later healed broken bodies. During 1807-08 his chief employment was to collaborate with James K. Paulding and his brother William in the writing of a series of twenty periodical essays, entitled *Salmagundi*. To secure variety, they followed the Addisonian scheme of having the

several subjects dealt with treated by several gentlemen, each reminiscent of the members of the Spectator Club. The department of society was under the direction of Anthony Evergreen, Esq.; that of criticism was the special province of William Wizard, Esq.; poetry came from Pindar Cockloft; and the better to motivate their instructions, the authors presented characters and family relationships reminiscent of Addison's Distaffs. Facetiously posing as "critics, amateurs, dilettanti, and cognoscenti," the editors proceeded, in true *Spectator* fashion, "to instruct the young, reform the old, correct the town, and castigate the age." All was in good humor and fun, for, as they declared, "While we continue to go on, we will go on merrily; if we moralize, it shall be but seldom; and on all occasions, we shall be more solicitous to make our readers laugh than cry; for we are laughing philosophers, and clearly of the opinion that wisdom, true wisdom, is a plump, jolly dame, who sits in her arm-chair, laughs right merrily at the farce of life—and takes the world as it goes." So they proceeded to satirize the ways of the fashionable world, ridiculing the pretensions of political upstarts and social climbers, inserting squibs on the theatre, occasionally mixing a little pointed political satire, waging war against boorishness and mediocrity, "folly and stupidity," while teaching "parents . . . how to govern children, girls how to get husbands, and old maids how to do without them."

*Salmagundi* made an impression, created a stir, and became a mild terror in certain quarters of the town. While the editors were concerned primarily with passing phases of contemporary society, some of the numbers retain significance even today as an index to the social milieu in which young Irving moved so easily. One of the most vital features is the series of nine letters of Mustapha, Captain of a Ketch of Tripolitan prisoners, now waiting in New York to be returned to his country, employing his leisure to observe men and manners in the United States, and reporting his observations to Asem Hacchem, Principal Slave-Driver to His Highness the Bashaw of Tripoli. His commentary on American customs and institutions is all the more pointed, coming as it does from a barbarian; his observations on American democracy and his characterization of leading "republicans" like Paine and Jefferson are edged and barbed. Mustapha descants upon the nature of the American government:

To let thee at once into a secret, which is unknown to these people themselves, their government is a pure unadulterated *logocracy*, or government of words. The whole nation does everything *viva voce*, or by word of mouth; and

in this manner is one of the most military nations in existence. Every man who has what is called the gift of gab, that is, a plentiful stock of verbosity, becomes a soldier outright; and is forever in a militant state. The country is entirely defended *vi et lingua*; that is to say, by force of tongues . . .

In this logocratic country, civil wars of great violence, as Mustapha regards election campaigns, are carried on every so often. One is now reported in progress—"a conspiracy, among the higher classes, to dethrone his highness, the present bashaw, and place another in his stead." A good deal of fun is poked at Jefferson's affection for red breeches, his "enlightened" religious opinions, his philosophical pretensions, and his fondness for a certain "professed antediluvian from the Gallic empire"—Tom Paine, of course—who is said to have illuminated two continents "with his principles—and his nose." Throughout the seven years that the present bashaw has been in office, the entire nation has been kept in a blaze, for every slang-whanger has resorted "to his tongue or his pen" to set the country by the ears. Thus did the young Federalist authors proclaim their inherited dislike of insurgent republicanism. Thus, too, Irving the lawyer (although he continued for a while longer to share his brother's office) fades into the background as Irving the writer emerges directly out of the social milieu of early nineteenth-century New York.

His next book owes its inception to the same love of fun-making and the same social background, except that the materials are not of contemporary Manhattan but of the New Amsterdam of the Dutch regime. Begun as a *jeu d'esprit*, in collaboration with his brother Peter, and intended merely as a parody of Dr. Samuel Mitchell's guide-book to New York City, it was expanded by Washington, after Peter withdrew to Liverpool in the interests of the Irving importing business, into a comic history of the Dutch settlements of New York. Like *Salmagundi*, it embodied a great deal of contemporary personal and political satire, born of youthful exuberance, effrontery, and bravado, and it introduces us to Irving the antiquarian—an impulse that played henceforth an increasingly prominent part in his literary development. Aside from its criticism of Jeffersonian democracy and its whimsical satire on pedantic historians and literary classicists, *Diedrich Knickerbocker's History of New York* is "the first great book of comic literature written by an American."

The composition of the book was interrupted in April of 1809 by the sudden death of Mathilda Hoffman. Grief incapacitated Irving for a while; but in the end the hard work necessary to complete *Knicker-*

bocker, the success of the book upon its appearance in 1809, and his transfer in 1811 to the newer and wider scene of Washington as a lobbyist in the interests of the Irving brothers' hardware importing firm helped relegate his grief to the realm of memory. The sentimental story woven by Pierre M. Irving round his uncle's undying and undivided love for Mathilda Hoffman is overdone. Irving was drawn to attractive women all his life, as much after Mathilda's death as before, and there is a long succession of beautiful women in his life to whom he paid court in cavalier phrases and with gallant address, while steadily refusing to accommodate the romantic match-makers who never gave up hope of marrying off one of the most eligible young bachelors of two continents, until he settled down at Sunnyside to bask in the smiles and under the care of his numerous nieces.

Irving's gallantry was of a piece with his gentlemanly, essentially aristocratic, bearing in all other relations of life. Belonging by birth, rearing, and inclination to the well-to-do and aristocratic circle of New York Federalists, he came to hold, more or less unconsciously, their principles of class privilege, class interests, capitalism, stability, and centrality of governmental power. Disliking money-getting and commercial pursuits, he developed into an urbane New Yorker neither personally nor vitally interested in the economic ideals or the political principles of either party. Mechanics and yokels, tinkers and tradesmen, of whatever party, left him cold; and he had little interest in their so-called Rights, abstract or otherwise. One electioneering experience in city politics, shortly after he hung out his shingle, destroyed his taste for the ruck of practical politics, and he concluded, "Truly this saving one's country is a nauseous piece of business, and if patriotism is such a dirty virtue—prithce, no more of it." A gentleman could not meddle with it without getting his fingers soiled. While he was never disdainful of any rich political plum that might fall into his lap, he could not "run with the hungry pack of office-seekers," and he gave up all ideas of saving his country on a government salary. Subsequently, especially after he was thrown upon his own resources, he repeatedly angled for a good political appointment, and eventually he was rewarded with several good diplomatic assignments. He could have had better posts, including the mayoralty of New York City and a cabinet post under Van Buren, but he was neither politician nor statesman. He was a detached, amused observer of life, of the old gentlemanly school, looking about him with genial eye, resolved to make of

life an art, content to leave to "abler heads" the making of converts in religion or politics. Such matters he professed to find "full of perplexity"; so he stuck to his idea that for himself he could do more good to men by entertaining them and thus "keeping mankind in good humor with one another" than by instructing or lecturing them.

It was this same spirit of geniality which led him to say that as a traveler, when he found it impossible to get a dinner to suit his taste, he endeavored to get a taste to suit his dinner. It was this geniality of temperament more than anything else that enabled him to captivate readers of many countries and to get along famously with men of opposing parties or philosophies. He was less interested in the political issues, of which the embroilments of politicians are only the external signs, than in the thing itself—the Federalist attitude toward life as an ideal of living, so that in spite of his indifference to party, he was really more Federalist than the Federalists themselves. Without comprehending all the implications, he was keenly aware of a change coming over the country under Jeffersonian auspices, and he was plainly disturbed by the rebellious and discontented elements among the common people who, in their determination not to remain common, seemed to him to be losing all respect for their betters. He cast his eyes lovingly back toward the good old days when everybody knew and kept his place, and he viewed with suspicion the tendency to forget the graces of living in the grasping for power and money, privileges and rights. Hence *Salmagundi* is an onslaught upon the vile manners of a mercantile, middle-class seaport town; and *Diedrich Knickerbocker's History of New York*, in its Dutch aspects, is a satire upon their sluggish bourgeois nature, their lack of grace, and the "happy equality" of their earth-creeping minds, while, in its attacks upon the Yankees, it is a satire on their ungainly manners and their odious practices of pilfering and money-grubbing. Similarly, in his next books, *The Sketch Book* (1819–20) and *Bracebridge Hall* (1822), the life of a "gentleman," in the eighteenth-century sense of the word—whether the urbane man-of-parts or the eccentric but worthy country squire—is lovingly idealized; while tradesmen, demagogues, upstarts, innovators, levelers, and dullards alike are ridiculed. In Book IV of *Knickerbocker*, the reign of William Kieft serves admirably for Irving's clever satirization of Jefferson and of Jeffersonian democracy. The same motive animates his sympathetic delineation of Rip Van Winkle in *The Sketch Book*—the picture of Rip and his cronies, humorous, honest, and happy in their lethargic contentment, contrasted

with the cantankerous demagoguery of the shabbily pretentious and slatternly democratic village to which Rip returns after his long sleep. *Bracebridge Hall*, *Tales of a Traveller* (1824), and *The Alhambra* (1832); alike, are tinged with the melancholy nostalgia for a beautiful age that has departed—rich in loyalty, solidity, human worth, instead of human rights, in contrast with the present, given over to innovation, social mediocrity, and material acquisitiveness.

Following *Knickerbocker* in 1809, Irving was for ten years more or less at loose ends. Having been made a profit-sharing but generally inactive partner in his brothers' business, he did a small chore of lobbying in Washington in the interests of the firm, but he was more assiduous in attendance upon the White House levees of Dolly Madison than upon the debates in Congress. During 1812–13 he did some editorial work, notably as editor of the *Analectic Magazine*. He wrote some biographical sketches of popular naval heroes of the War of 1812, and in 1814 he himself did a little soldiering as aide-de-camp to Governor Tompkins; and though he saw no action, he annexed the rank of colonel. The next year he sailed for Europe to aid in the conduct of the Liverpool branch of the Irving firm, which, despite his manifold efforts, went from bad to worse during the depression that followed the war. In 1818 the firm went into bankruptcy, and Irving was, for the first time in his life, thrown upon his own resources to earn a livelihood.

Turning down several lucrative editorial offers, he chose to rely upon his pen. Contact with Scott and most of the literary people of Edinburgh and London, including the stimulating people who frequented Murray's drawing-rooms in London, put him in a mood to resume writing after a ten-year interval. The result was *The Sketch Book*, originally published serially in America and England in 1819–20 and reprinted in book form in 1820. Compounded of some thirty separate essays, sketches, and stories, it is a miscellany. About half of the pieces are based on observations of English life and customs, towns, estates, and places rich in legendary lore and tradition. Six are roughly classifiable as literary essays, four are in the nature of traveling reminiscences. Three others—"Rip Van Winkle," "The Legend of Sleepy Hollow," and "The Spectre Bridegroom"—are short stories. Two deal with the American Indian. The remaining three are so miscellaneous as to defy classification.

One of the most noteworthy essays in *The Sketch Book* is entitled "English Writers on America." It represents the first sane and effective word spoken on

the long and rancorous literary controversy between England and America, and it did much to allay the senseless animosity between the two nations. In it, Irving urged his countrymen to forget their resentments, to overcome their inferiority complex, to rise above petty parochialism, and to start thinking like generous-minded, independent Americans. Carefully avoiding all semblance of truckling obsequiousness, he appealed to the British sense of decency and fair play, reminding the English that all they needed to do to retain American good will was to show a mutual spirit of conciliation. He went on to tell Englishmen that it was of comparatively little importance "whether England does us justice or not; it is, perhaps, of far more importance to herself." And suggesting that in the history of the world's great empires, none has yet been exempt from decline and decay, he pointed out that the future destiny of America is as assured as that of England is insecure, adding that if England persists in her short-sighted policy, she may come to rue the day when she repulsed from her side a young nation that has every wish to be friendly, thus destroying "her only chance for real friendship beyond the boundaries of her own dominions." This was good-natured plain-speaking that John Bull could appreciate.

The three tales in *The Sketch Book* are the first examples of what Poe later called the American short story. They represent Irving's most popular contributions to American literature. Essentially re-workings or transcriptions of old German legends (to which Scott first called his attention), they are as original in treatment as they are old in subject matter; for in transferring Germanic *motifs* to the Sleepy Hollow locale and reinvesting German legendary figures in Knickerbocker characteristics, he unconsciously invented a new genre. The success of *The Sketch Book* was so great that it set him off on a series of travel stages in the hope of exploring and capitalizing more fully upon the traditions to be picked up and reworked in that way. His mind was receptive rather than creative, and he had to rely upon what he came across in his travels or in his reading to set his pen to work. Describing his faculties as "desultory" and lacking command of his talents, he admitted that he had to write when he could, not when he would, adding, "I shall occasionally shift my residence and write whatever is suggested by objects before me . . ." His extensive travels and protracted stays in Germany, Austria, France, Spain, and England were the result; and these in turn explain why his pictures are transcripts rather than conceptions; his characters are such as have lived and moved among men rather than

creatures of his imagination. They are derived from his travels or assimilated from books or from fragments of old legends, and they were built up by the memory and the fancy, which patch or combine rather than create. They are given cogency by certain attributes of his mind, the combination of which enabled him to achieve that delicacy of style by which Irving lives today. On this head may be enumerated (1) an inborn, somewhat incalculable feeling for sentiment and, particularly after *Knickerbocker* (1809), sensibility, (2) an equally natural feeling for the Federalistic attitude toward a gentlemanly way of living—geniality, graciousness, urbanity, tastefulness, (3) a feeling for romanticism, imbibed partly from Scott and German literature, and first markedly apparent in *The Sketch Book* (1819), (4) an inherent love for the method of the literary antiquary, especially from *Knickerbocker* onward, (5) an extraordinary sensitivity for sense impressions from without, and (6) a remarkable facility for form within the limits of short units, especially the essay and the short story.

Whether writing *Knickerbocker* sketches, Moorish legends, banditti stories, or Gothic tales, it was the style that chiefly interested him.

I consider a story merely as a frame on which to stretch my materials. It is the play of thought, and sentiment and language; the weaving in of characters, lightly yet expressively delineated; the familiar and faithful exhibition of scenes in common life; and the half concealed vein of humour that is often playing through the whole—these are among what I aim at, and upon which I felicitate myself in proportion as I think I succeed. . . . I believe the works I have written will be oftener re-read than any novel of the size that I could have written. . . .

I have preferred adopting a mode of sketches & short tales rather than long works, because I chose to take a line of writing peculiar to myself; rather than fall into the manner or school of any other writer: and there is a constant activity of thought and nicety of execution required in writings of this kind, more than the world appears to imagine. . . . In these shorter writings every page must have its merit. The author must be continually piquant—woe to him if he makes an awkward sentence or writes a stupid page; the critics are sure to pounce upon it. Yet if he succeed: the very variety & piquancy of his writings; nay their very brevity; makes them frequently recurred to—and when the mere interest of the story is exhausted, he begins to get credit for his touches of pathos or humour; his points of wit or turns of language. . . .

Indeed, Irving's attempts at the novel were abortive. He lacked the requirements of a good novelist—sustained concentration, searching analysis of character, strict construction of plot, and fine adjustment of numberless details into a continuous fabric. The

best of his original works are brief, and he showed a good deal of acumen when he observed, "If the tales . . . should prove to be bad, they will at least be found short." Even *Knickerbocker* is more an aggregate of tales by chapters than a continuous history; while his biographies, which required a minimum of invention, exhibit no great structural skill. His most successful biography, *The Life of Goldsmith* (1849) is good because, aside from his felicity of style, he is in perfect sympathy with his subject. He was unable himself to write a good play, but was excellent in collaboration, and with John Howard Payne he scored a great hit in the comedy, *Charles II* (1824).

Following *Bracebridge Hall* (1822), a kind of sequel to *The Sketch Book*, Irving spent 1823 in Germany, where he planned a German Sketch Book, which appeared in much-modified form as *Tales of a Traveller* in 1824. After periods in London and Paris, he went to Madrid on the invitation of Alexander H. Everett, minister to Spain, to join the American Legation in a purely nominal capacity, for he intended to devote himself to translating a recent Spanish biography of Columbus. There followed a remarkably fecund period, for the Spanish sojourn furnished him with the materials for *The Life of Columbus* (1828), *The Conquest of Granada* (1829), *The Companions of Columbus* (1831), *The Alhambra* (1832), *The Conquest of Spain* (1835), and eventually *The Life of Mahomet* (1850).

In 1832, having been continuously abroad since 1815, he returned to the United States. Like Cooper, he was very much surprised at the altered social, economic, and political complexion of the country; but more readily adaptable than Cooper, he made up his mind to like what he found. All reports that he had while still in Europe had led him to suspect Jackson and Jacksonianism; but when he met Old Hickory, he took a liking to his "rough chivalry" and accordingly came easily to the position of saying, "The more I see of this old cock of the woods, the more I relish his game qualities." He became known as a mild Jackson man, and he resolved to familiarize himself with the new America, especially with the vast, new frontier. An extended tour of the West resulted in three books on the frontier: *Astoria* (1834), a romanticized account of Astor's fur empire, *A Tour of the Prairies* (1835), and *The Adventures of Captain Bonneville* (1837). Moving easily and agreeably among the prophets of the new day, whether John Jacob Astor or Andrew Jackson, he was readily accepted by them. Eager to make capital of his literary reputation, they courted his favor, urging upon him various offices, all of which he had the good sense to decline until, in

1842, he took the ministership to Spain. Following the distinguished diplomatic service which he rendered his country during the difficult years of 1842-45 in Spain, he returned to New York and soon thereafter settled at Sunnyside, in Sleepy Hollow. Here he was near enough to his beloved city to enjoy the theatre and to participate in literary and social affairs. Here he lived the retired life of a country gentleman, devoting himself to the collection of several volumes of miscellanies, *The Life of Mahomet* (1850), and the five-volume *Life of Washington*, which he just lived to complete in 1859.

Irving was no great man. He was not bursting with big ideas or burning messages. He regarded life not from a philosophic, religious, or political, but from a literary, point of view. He never caught the restlessness of the century, and he embraced no schemes for the reformation of mankind. He was content to be a mere *belles-lettres* writer. As early as 1823 he resolved that he must make his way in the literary world on his own terms:

One must take care not to fall into the commonplace of the day. Scott's manner must likewise be widely avoided. In short, I must strike out some way of my own, suited to my own way of thinking and writing. I wish, in everything I do, to write in such a manner that my productions may have something more than the mere interest of narrative to recommend them, which is very evanescent; something, if I

dare to use the phrase, of classic merit, *i.e.*, depending upon style, etc., which gives a production some chance of duration beyond the mere whim and fashion of the day.

His style became part of himself. He had learned, as a young gentleman of fashion, how to turn a pretty phrase; he continued for the rest of his life to write wittily and gracefully—like a gentleman. And since the world does not willingly forget a stylist if he is fortunate enough to find even a few themes that summon all his powers, Irving has outlived men who were intrinsically greater than he. He very wisely calculated that a Washington Irving who would take sides in public arguments and political controversies was less serviceable than a Washington Irving who would portray for the American and for all people the illuminating life of a Washington or the endearing qualities of a Goldsmith. He believed he could do his countrymen a greater service chronicling Hudson River legends and bringing to them a touch of merry England and of romantic Spain than by misapplying his slender genius and tiring his reader's patience with theological disquisitions. He calculated correctly that as an intermediary between old-world culture and new-world rawness, and as a romancer of the romantic and the picturesque in the sphere of *belles-lettres*, he would write to better purpose than as politician or moralist.

FROM

*Letters of Jonathan Oldstyle, Gent.*LETTER III<sup>1</sup>

Sir,—There is no place of public amusement of which I am so fond as the Theatre.<sup>2</sup> To enjoy this with greater relish, I go but seldom; and I find there is no play, however poor or ridiculous, from which I cannot derive some entertainment.

I was very much taken with a play-bill of last week, announcing, in large capitals, "The Battle of Hexham, or, Days of Old." Here, said I to myself, will be 10 something grand—Days of Old,—my fancy fired at the words. I pictured to myself all the gallantry of chivalry. Here, thought I, will be a display of court manners and true politeness; the play will, no doubt, be garnished with tilts and tournaments; and as to those banditti, whose names make such a formidable appearance on the bills, they will be hung up, every mother's son, for the edification of the gallery.

With such impressions, I took my scat in the pit, and was so impatient that I could hardly attend to 20 the music, though I found it very good.

The curtain rose,—out walked the Queen,<sup>3</sup> with great majesty; she answered my ideas: she was dressed well, she looked well, and she acted well. The Queen was followed by a pretty gentleman, who, from his winking and grinning, I took to be the court-fool; I soon found out my mistake. He was a courtier "high in trust," and either general, colonel, or something of martial dignity. They talked for some time, though I could not understand the drift of their discourse, 30 so I amused myself with eating peanuts.

In one of the scenes I was diverted with the stupidity of a corporal, and his men, who sung a dull song, and talked a great deal about nothing; though I found, by their laughing, there was a great deal of fun in the corporal's remarks. What this scene had to do with the rest of the piece, I could not comprehend; I suspect it was a part of some other play,

<sup>1</sup> This, the third of the nine contributions to the *Morning Chronicle*, a daily newspaper edited by Irving's brother Peter, appeared originally on December 1, 1802. Letters III, IV, and V contain Irving's criticism of the drama and stage in New York City at the time. William Dunlap observed that this early theatrical criticism of Irving's provoked an "excessive irritation" among the actors. The town itself, of course, enjoyed it.

<sup>2</sup> The Park Theatre, which stood opposite the Park, midway between Ann and Beekman streets.

<sup>3</sup> Played by Mrs. Whitlock, a sister of Mrs. Siddons.

thrust in here by accident.

I was then introduced to a cavern, where there were several hard-looking fellows sitting around a table carousing. They told the audience they were banditti. They then sung a gallery song, of which I could understand nothing but two lines:—

The Welshman lik'd to have been chok'd by a mouse,  
But he pull'd him out by the tail.

Just as they had ended this elegant song, their banquet was disturbed by the melodious sound of a horn, and in marched a portly gentleman,<sup>4</sup> who, I found, was their captain. After this worthy gentleman had fumed his hour out, after he had slapped his breast and drawn his sword half a dozen times, the act ended.

In the course of the play, I learnt that there had been, or was, or would be, a battle; but how, or when, or where, I could not understand. The banditti once more made their appearance, and frightened the wife of the portly gentleman, who was dressed in man's clothes, and was seeking her husband. I could not enough admire the dignity of her deportment, the sweetness of her countenance, and the unaffected gracefulness of her action;<sup>5</sup> but who the captain really was, or why he ran away from his spouse, I could not understand. However, they seemed very glad to find one another again; and so at last the play ended, by the falling of the curtain.

I wish the manager would use a drop-scene at the close of the acts; we might then always ascertain the termination of the piece by the green curtain. On this occasion, I was indebted to the polite bows of the actors for this pleasing information. I cannot say that I was entirely satisfied with the play, but I promised myself ample entertainment in the afterpiece, which was called the "Tripolitan Prize." Now, thought I, we shall have some sport for our money; we will, no doubt, see a few of those Tripolitan scoundrels 40 spitted like turkeys for our amusement. Well, sir, the curtain rose—the trees waved in front of the stage, and the sea rolled in the rear; all things looked very

<sup>4</sup> Joseph Hodgkinson, a versatile actor who filled many parts, from Falstaff to a Harlequin.

<sup>5</sup> Mrs. Johnson, said to have been a great favorite with both the public and Irving.

pleasant and smiling. Presently I heard a bustling behind the scenes,—here, thought I, comes a band of fierce Tripolitans, with whiskers as long as my arm. No such thing; they were only a party of village masters and misses taking a walk for exercise,—and very pretty behaved young gentry they were, I assure you; but it was cruel in the manager to dress them in buckram, as it deprived them entirely of the use of their limbs. They arranged themselves very orderly on each side of the stage, and sung something, doubtless very affecting, for they all looked pitiful enough. By and by came up a most tremendous storm: the lightning flashed, the thunder roared, and the rain fell in torrents; however, our pretty rustics stood gaping quietly at one another, until they must have been wet to the skin. I was surprised at their torpidity, till I found they were each one afraid to move first, for fear of being laughed at for their awkwardness. How they got off I do not recollect; but I advise the manager, in a similar case, to furnish each one with a trap-door, through which to make his exit. Yet this would deprive the audience of much amusement; for nothing can be more laughable than to see a body of guards with their spears, or courtiers with their long robes, get across the stage at our theatre.

Scene passed after scene. In vain I strained my eyes to catch a glimpse of a Mahometan phiz. I once heard a great bellowing behind the scenes, and expected to see a strapping Mussulman come bouncing in; but was miserably disappointed, on distinguishing his voice, to find out by his swearing that he was only a Christian. In he came,—an American navy officer,—worsted stockings, olive velvet small-clothes, scarlet vest, pea-jacket, and gold-laced hat—dressed quite in character. I soon found out, by his talk, that he was an American prize-master; that, returning through the Mediterranean with his Tripolitan prize, he was driven by a storm on the coast of England. The honest gentleman seemed, from his actions, to be rather intoxicated; which I could account for in no other way than his having drank a great deal of salt-water, as he swam ashore.

Several following scenes were taken up with hallooing and huzzaing, between the captain, his crew, and the gallery, with several amusing tricks of the captain and his son,—a very funny, mischievous little fellow. Then came the cream of the joke: the captain wanted to put to sea, and the young fellow, who had fallen desperately in love, to stay ashore. Here was a contest between love and honor; such piping of eyes, such

blowing of noses, such slapping of pocket-holes! But Old Junk was inflexible,—What! an American tar desert his duty! (three cheers from the gallery), impossible! American tars forever!! True blue will never stain!! &c. &c. (a continual thundering among the gods.) Here was a scene of distress; here was bathos. The author seemed as much puzzled to know how to dispose of the young tar as Old Junk was. It would not do to leave an American seaman on foreign ground, nor would it do to separate him from his mistress.

Scene the last opened. It seems that another Tripolitan cruiser had bore down on the prize, as she lay about a mile off shore. How a Barbary corsair had got in this part of the world,—whether she had been driven there by the same storm, or whether she was cruising to pick up a few English first-rates, I could not learn. However, here she was. Again were we conducted to the sea-shore, where we found all the village gentry, in their buckram suits, ready assembled to be entertained with the rare show of an American and Tripolitan engaged yard-arm and yard-arm. The battle was conducted with proper decency and decorum, and the Tripolitan very politely gave in,—as it would be indecent to conquer in the face of an American audience.

After the engagement the crew came ashore, joined with the captain and gallery in a few more huzzas, and the curtain fell. How Old Junk, his son, and his son's sweetheart, settled it, I could not discover.

I was somewhat puzzled to understand the meaning and necessity of this engagement between the ships, till an honest old countryman at my elbow said, he supposed this was the Battle of Hexham, as he recollected no fighting in the first piece. With this explanation I was perfectly satisfied.

My remarks upon the audience, I shall postpone to another opportunity.<sup>6</sup>

December 1, 1802

Jonathan Oldstyle.

<sup>6</sup> This promise Irving made good in Letters IV and V, the general tenor of which can be surmised from the last paragraph of the fifth letter:

"I shall conclude with a few words of advice for the benefit of every department . . . I would recommend—

"To the actors—less etiquette, less fustian, less buckram.

"To the orchestra—new music, and more of it.

"To the pit—patience, clean benches, and umbrellas.

"To the boxes—less affectation, less noise, less coxcombs.

"To the gallery—less grog, and better constables;—and,

"To the whole house, inside and out, a total reformation."

"And so much for the Theatre.

"December 11, 1802.

Jonathan Oldstyle."

FROM

*Salmagundi*<sup>7</sup>

FROM NO. I

Saturday, January 24, 1807

As everybody knows, or ought to know, what a SALMAGUND<sup>8</sup> is, we shall spare ourselves the trouble of an explanation; besides, we despise trouble as we do everything low and mean, and hold the man who would incur it unnecessarily as an object worthy our highest pity and contempt. Neither will we puzzle our heads to give an account of ourselves,<sup>9</sup> for two rea- 10  
sons; first, because it is nobody's business; secondly, because if it were, we do not hold ourselves bound to attend to anybody's business but our own; and even *that* we take the liberty of neglecting when it suits our inclination. To these we might add a third, that very few men *can* give a tolerable account of themselves, let them try ever so hard; but this reason, we candidly avow, would not hold good with ourselves.

There are, however, two or three pieces of informa- 20  
tion which we bestow gratis on the public, chiefly because it suits our own pleasure and convenience that they should be known, and partly because we do

<sup>7</sup> The title-page read: SALMAGUNDI; or the Whim-Whams and Opinions of Launcelot Langstaff, & Others. In hoc est hoax, cum quiz et jokesez, / Et smokem, toastem, roastem folksez, / Fe, faw, fum. *Psalmazar*, / With baked, and broiled, and stew'd and toasted, / And fried, and boil'd, and smok'd and roasted, / We treat the town. / New-York: / Published by David Longworth, / At the Shakespeare-Gallery, / 1807.

The text of these selections remains (except for minor verbal changes made by Irving himself in the Paris edition of 1834) that of the work as it was first published by David Longworth, an eccentric theatrical publisher of the day, who, himself a gentleman much given to whim-whams, had a flair for elegant titles and fine books, and who called his shop, in the neighborhood of the old Park Theatre, "The Sentimental Epicure's Ordinary."

<sup>8</sup> A mixed dish, as of chopped meat and pickled herring, with oil, vinegar, pepper, and onions: a miscellany; an olio. *Salmagundi*, the joint production of William Irving, James K. Paulding, and Washington Irving, is so truly a mixed dish that the individual authorship of many of the selections is not easily determined. External evidence is scarce, and internal evidence not always conclusive. In many of the essays all three had a hand. The selections herewith reprinted are mainly by Washington Irving, though Paulding had a hand in both.

<sup>9</sup> Subsequently, however, somewhat lengthy but whimsical sketches of the editors are given: Anthony Everygreen, Esq., in charge of the department of fashionable society; William Wizard, Esq., the territory of theatrical and general literary criticism; Pindar Cockloft, the poetical effusions; and Launcelot Langstaff, Esq., a sort of "Spectator," who roamed as whim or will dictated from one subject to another.

not wish that there should be any ill will between us at the commencement of our acquaintance.

Our intention is simply to instruct the young, reform the old, correct the town, and castigate the age;<sup>10</sup> this is an arduous task, and therefore we undertake it with confidence. We intend for this purpose to present a striking picture of the town; and as everybody is anxious to see his own phiz on canvas, however stupid or ugly it may be, we have no doubt but the whole town will flock to our exhibition. Our picture will necessarily include a vast variety of figures; and should any gentleman or lady be displeased with the inveterate truth of their likenesses, they may ease their spleen by laughing at those of their neighbors—this being what we understand by *poetical justice*.

Like all true and able editors, we consider ourselves infallible; and therefore, with the customary diffidence of our brethren of the quill, we shall take the liberty of interfering in all matters either of a public or private nature. We are critics, amateurs, dilettanti and cognoscenti; and as we know "by the pricking of our thumbs," that every opinion which we may advance in either of those characters will be correct, we are determined, though it may be questioned, contradicted, or even controverted, yet it shall never be revoked.

We beg the public particularly to understand that we solicit no patronage. We are determined, on the

<sup>10</sup> The parallelism of purpose between the editors of *Salmagundi* and Steele and Addison in the *Tatler* and *Spectator* is obvious. Like their British predecessors, they formed an imaginary club, and the better to motivate their instructions, invented characters and family relationships reminiscent of the Distaff family. The editors assured the reader that they wrote for neither fame nor money, and that "so soon as we get tired of reading our own works, we shall discontinue them without the least remorse, whatever the public may think of it. While we continue to go on, we will go on merrily: if we moralize, it shall be but seldom; and, on all occasions, we shall be more solicitous to make our readers laugh than cry; for we are laughing philosophers, and clearly of opinion that wisdom, true wisdom, is a plump, jolly dame, who sits in her arm-chair, laughs right merrily at the farce of life—and takes the world as it goes." Posing as "critics, amateurs, dilettanti, and cognoscenti," the three editors proceeded merrily through twenty numbers of *Salmagundi*, satirizing the ways of the fashionable world, inserting squibs on the theatre, occasionally mixing a little political satire, waging war against "folly and stupidity," and teaching "parents . . . how to govern their children, girls how to get husbands, and old maids how to do without them."

contrary, that the patronage shall be entirely on our side. We have nothing to do with the pecuniary concerns of the paper; its success will yield us neither pride nor profit—nor will its failure occasion to us either loss or mortification. We advise the public, therefore, to purchase our numbers merely for their own sakes; if they do not, let them settle the affair with their consciences and posterity.

To conclude, we invite all editors of newspapers and literary journals to praise us heartily in advance, as we assure them that we intend to deserve their praises. To our next-door neighbor, "Town," \* we hold out a hand of amity, declaring to him that after ours, his paper will stand the best chance for immortality. We proffer an exchange of civilities: he shall furnish us with notices of epic poems and tobacco; and we, in return, will enrich him with original speculations on all manner of subjects, together with "the rummaging of my grandfather's mahogany chest of drawers," "the life and amours of 20 a mine Uncle John," "anecdotes of the Cockloft family," and learned quotations from that unheard of writer of folios, *Linkum Fidelius*.

FROM NO. VII

Saturday, April 4, 1807

*Letter from Mustapha Rub-a-Dub Keli Khan to Asem Hacchem, Principal Slave-Driver to His Highness the Bashaw of Tripoli*

I promised in a former letter,<sup>11</sup> Good Asem, that I would furnish thee with a few hints respecting the nature of the government by which I am held in durance. Though my inquiries for that purpose have

\* The title of a newspaper published in New York, the columns of which, among other miscellaneous topics, occasionally contained strictures on the performances at the theatres. [Irving's note in the Paris edition of his works of 1834.]

<sup>11</sup> The twenty numbers of *Salmagundi* contain nine letters supposedly written by a Tripolitan prisoner detained in New York, Mustapha Rub-a-Dub Keli Khan, who, addressing himself principally to Asem Hacchem, Principal Slave-Driver to His Highness the Bashaw of Tripoli, recounts his observations and experiences in America. His first letter, in No. III, relates his reception in this "most enlightened nation under the sun," where women have souls,—some of them "soul enough to swear,"—and whose government is in the hands of "a grand and most puissant bashaw, whom they dignify with the title of president."

"He is chosen by persons, who are chosen by an assembly, elected by the people—hence the mob is called the sovereign people—and the country, free; the body politic doubtless resembling a vessel, which is best governed by its tail. The present bashaw is a very plain old gentleman—something they say of

been industrious, yet I am not perfectly satisfied with their results; for thou mayst easily imagine that the vision of a captive is overshadowed by the mists of illusion and prejudice, and the horizon of his speculations must be limited indeed. I find that the people of this country are strangely at a loss to determine the nature and proper character of their government. Even their dervises are extremely in the dark as to this particular, and are continually indulging in the most preposterous disquisitions on the subject; some have insisted that it savors of an aristocracy; others maintain that it is a pure democracy; and a third set of theorists declare absolutely that it is nothing more or less than a mobocracy. The latter, I must confess, though still wide in error, have come nearest to the truth. You of course must understand the meaning of these different words, as they are derived from the ancient Greek language, and bespeak loudly the verbal poverty of these poor infidels, who cannot utter a learned phrase without laying the dead languages under contribution. A man, my dear Asem, who talks good sense in his native tongue, is held in tolerable estimation in this country; but a fool who clothes his feeble ideas in a foreign or antique garb, is bowed down to as a literary prodigy. While I conversed with these people in plain English, I was but little attended to; but the moment I prosed away in Greek, every one looked up to me with veneration as an oracle.

30 Although the dervises differ widely in the particulars above mentioned, yet they all agree in terming their government one of the most pacific in the known world. I cannot help pitying their ignorance, and smiling, at times, to see into what ridiculous errors those nations will wander, who are unenlightened by the precepts of Mahomet, our divine prophet, and uninstructed by the five hundred and forty-nine books of wisdom of the immortal Ibrahim Hassan al Fusti. To call this nation pacific! Most preposterous!

a humorist, as he amuses himself with impaling butterflies and pickling tadpoles; he is rather declining in popularity, having given great offense by wearing red breeches and tying his horse to a post."

These, of course, are allusions to President Jefferson's philosophical and scientific activities and to his several eccentricities, such as his fondness for wearing red breeches and his democratic manner of riding unattended, himself hitching his horse to the handiest post—all of which the young Federalist editors thus slyly poked fun at.

Mustapha concludes this first letter with a promise to write a fuller account of the Americans at the first opportunity. *Salmagundi* No. III brought this promised letter, herewith reproduced.

It reminds me of the title assumed by the sheik of that murderous tribe of wild Arabs that desolate the valleys of Belsaden, who styles himself "Star of Courtesy—Beam of the Mercy-Scat."

The simple truth of the matter is, that these people are totally ignorant of their own true character; for, according to the best of my observation, they are the most warlike, and I must say, the most savage nation that I have as yet discovered among all the barbarians. They are not only at war, in their own way, with almost every nation on earth, but they are at the same time engaged in the most complicated knot of civil wars that ever infested any poor unhappy country on which Allah has denounced his malediction!

To let thee at once into a secret, which is unknown to these people themselves, their government is a pure unadulterated *logocracy*, or government of words. The whole nation does everything *viva voce*, or by word of mouth; and in this manner is one of the most military nations in existence. Every man who has what is here called the gift of the gab, that is, a plentiful stock of verbosity, becomes a soldier outright, and is forever in a militant state. The country is entirely defended *vi et lingua*; that is to say, by force of tongues. The account which I lately wrote to our friend, the snorer, respecting the immense army of six hundred men, makes nothing against this observation; that formidable body being kept up, as I have already observed, only to amuse their fair countrywomen by their splendid appearance and nodding plumes; and are, by way of distinction, denominated the "defenders of the fair."

In a logocracy thou well knowest there is little or no occasion for firearms, or any such destructive weapons. Every offensive or defensive measure is enforced by wordy battle and paper war; he who has the longest tongue or readiest quill is sure to gain the victory—will carry horror, abuse, and ink-shed into the very trenches of the enemy; and, without mercy or remorse, put men, women, and children to the point of the—pen!

There is still preserved in this country some remains of that Gothic spirit of knight-errantry which so much annoyed the faithful in the middle ages of the Hegira. As, notwithstanding their martial disposition, they are a people much given to commerce and agriculture, and must necessarily at certain seasons be engaged in these employments, they have accom-

modated themselves by appointing knights, or constant warriors, incessant brawlers, similar to those who, in former ages, swore eternal enmity to the followers of our divine prophet. These knights, denominated editors or *slang-whangers*, are appointed in every town, village, or district, to carry on both foreign and internal warfare, and may be said to keep up a constant firing "in words." O my friend, could you but witness the enormities sometimes committed by these tremendous slang-whangers, your very turban would rise with horror and astonishment. I have seen them extend their ravages even into the kitchens of their opponents, and annihilate the very cook with a blast; and I do assure thee, I beheld one of these warriors attack a most venerable bashaw, and at one stroke of his pen lay him open from the waistband of his breeches to his chin!

There has been a civil war carrying on with great violence for some time past, in consequence of a conspiracy among the higher classes to dethrone his highness, the present bashaw, and place another in his stead. I was mistaken when I formerly asserted to thee that this dissatisfaction arose from his wearing red breeches. It is true, the nation have long held that color in great detestation, in consequence of a dispute they had some twenty years since with the barbarians of the British islands. The color, however, is again rising into favor, as the ladies have transferred it to their heads from the bashaw's—body. The true reason, I am told, is that the bashaw absolutely refuses to believe in the deluge, and in the story of Balaam's ass; maintaining that this animal was never yet permitted to talk except in a genuine logocracy; where, it is true, his voice may often be heard, and is listened to with reverence, as "the voice of the sovereign people." Nay, so far did he carry his obstinacy, that he absolutely invited a professed antediluvian from the Gallic empire,<sup>12</sup> who illuminated the whole country with his principles—and his nose. This was enough to set the nation in a blaze—every slang-whanger resorted to his tongue or his pen; and for seven years have they carried on a most inhuman war, in which volumes of words have been expended, oceans of ink have been shed, nor has any mercy been shown to age, sex, or condition. Every day have these slang-whangers made furious attacks on each other and upon their respective adherents; discharging their

<sup>12</sup> Thomas Paine.

heavy artillery, consisting of large sheets loaded with scoundrel! villain! liar! rascal! numskull! nincompoop! dunderhead! wisacre! blockhead! jackass! and I do swear, by my beard, though I know thou wilt scarcely credit me, that in some of these skirmishes the grand bashaw himself has been wofully pelted! yca, most ignominiously pelted! and yet have these talking desperados escaped without the bastinado!

Every now and then a slang-whanger who has a longer head, or rather a longer tongue than the rest, will elevate his piece and discharge a shot quite across the ocean, leveled at the head of the emperor of France, the king of England, or, wouldst thou believe it, O Ascm, even at his sublime highness the bashaw of Tripoli! These long pieces are loaded with single ball, or language, as tyrant! usurper! robber! tiger! monster! and thou mayest well suppose they occasion great distress and dismay in the camps of the enemy, and are marvelously annoying to the crowned heads at which they are directed. The slang-whanger, though perhaps the mere champion of a village, having fired off his shot, struts about with great self-congratulation, chuckling at the prodigious bustle he must have occasioned, and seems to ask of every stranger, "Well, sir, what do they think of me in Europe?" This is sufficient to show you the manner in which these bloody, or rather windy fellows fight; it is the only mode allowable in a logocracy or government of words. I would also observe that their civil wars have a thousand ramifications.

While the fury of the battle rages in the metropolis, every little town and village has a distinct broil, growing like excrescences out of the grand national altercation, or rather agitating within it, like those complicated pieces of mechanism where there is a "wheel within a wheel."

But in nothing is the verbose nature of this government more evident than in its grand national divan, or Congress, where the laws are framed; this is a blustering, windy assembly, where everything is carried by noise, tumult, and debate; for thou must know that the members of this assembly do not meet together to find wisdom in the multitude of counselors, but to wrangle, call each other hard names, and hear themselves talk. When the Congress opens, the bashaw first sends them a long message, i.e., a huge mass of words—*vox et præterea nihil*,<sup>13</sup> all

<sup>13</sup> A voice and nothing more; sound without sense.

meaning nothing; because it only tells them what they perfectly know already. Then the whole assembly are thrown into a ferment and have a long talk about the quantity of words that are to be returned in answer to this message; and here arise many disputes about the correction and alteration of "if so be's" and "how so ever's." A month, perhaps, is spent in thus determining the precise number of words the answer shall contain; and then another, most probably, in concluding whether it shall be carried to the bashaw on foot, on horseback, or in coaches. Having settled this weighty matter, they next fall to work upon the message itself, and hold as much chattering over it as so many magpies over an addled egg. This done, they divide the message into small portions, and deliver them into the hands of little juntoes of talkers, called committees; these juntoes have each a world of talking about their respective paragraphs, and return the results to the grand divan, which forthwith falls to and retalks the matter over more earnestly than ever. Now after all, it is an even chance that the subject of this prodigious arguing, quarreling, and talking is an affair of no importance, and ends entirely in smoke. May it not then be said, the whole nation have been talking to no purpose? The people, in fact, seem to be somewhat conscious of this propensity to talk, by which they are characterized, and have a favorite proverb on the subject, viz., "all talk and no cider"; this is particularly applied when their Congress, or assembly of all the sage chatterers of the nation, have chattered through a whole session in a time of great peril and momentous event, and have done nothing but exhibit the length of their tongues and the emptiness of their heads. This has been the case more than once, my friend; and to let thee into a secret, I have been told in confidence, that there have been absolutely several old women smuggled into Congress from different parts of the empire; who, having once got on the breeches, as thou mayest well imagine, have taken the lead in debate, and overwhelmed the whole assembly with their garrulity; for my part, as times go, I do not see why old women should not be as eligible to public councils as old men who possess their dispositions; they certainly are eminently possessed of the qualifications requisite to govern in a logocracy.

Nothing, as I have repeatedly insisted, can be done in this country without talking; but they take so long

to talk over a measure that by the time they have determined upon adopting it, the period has elapsed which was proper for carrying it into effect. Unhappy nation! thus torn to pieces by intestine talks! never, I fear, will it be restored to tranquillity and silence. Words are but breath; breath is but air; and air put into motion is nothing but wind. This vast empire, therefore, may be compared to nothing more or less than a mighty windmill, and the orators, and the chattering, and the slang-whangers, are the breezes 10 that put it in motion; unluckily, however, they are apt to blow different ways, and their blasts counter-acting each other—the mill is perplexed, the wheels stand still, the grist is unground, and the miller and his family starved.

Everything partakes of the windy nature of the government. In case of any domestic grievance, or an insult from a foreign foe, the people are all in a buzz; town-meetings are immediately held where the quidnuncs of the city repair, each like an Atlas, with 20 the cares of the whole nation upon his shoulders, each resolutely bent upon saving his country, and each swelling and strutting like a turkey-cock; puffed up with words, and wind, and nonsense. After bustling, and buzzing, and bawling for some time, and after each man has shown himself to be indubitably the greatest personage in the meeting, they pass a string of resolutions, i.e., words, which were previously prepared for the purpose; these resolutions are whimsically denominated the sense of the meet- 30 ing, and are sent off for the instruction of the reigning bashaw, who receives them graciously, puts them into his red breeches pocket, forgets to read them—and so the matter ends.

As to his highness, the present bashaw, who is at the very top of the logocracy, never was a dignitary better qualified for his station. He is a man of superlative ventosity, and comparable to nothing but a huge bladder of wind. He talks of vanquishing all opposition by the force of reason and philosophy: 40 throws his gauntlet at all the nations of the earth, and defies them to meet him—on the field of argument! Is the national dignity insulted, a case in which his highness of Tripoli would immediately call forth his forces, the bashaw of America—utters a speech. Does a foreign invader molest the commerce in the very mouth of the harbors, an insult which would induce his highness of Tripoli to order out his fleets, his highness of America—utters a speech. Are

the free citizens of America dragged from on board the vessels of their country, and forcibly detained in the war ships of another—his highness utters a speech. Is a peaceable citizen killed by the marauders of a foreign power, on the very shores of his country—his highness utters a speech. Does an alarming insurrection break out in a distant part of the empire—his highness utters a speech—nay, more, for here he shows his “energies”—he most intrepidly dispatches a courier on horseback and orders him to ride one hundred and twenty miles a day, with a most formidable army of proclamations, i.e., a collection of words, packed up in his saddle-bags. He is instructed to show no favor nor affection; but to charge the thickest ranks of the enemy, and to speechify and batter by words the conspiracy and the conspirators out of existence. Heavens, my friend, what a deal of blustering is here! It reminds me of a dunghill cock in a farmyard, who, having accidentally in his scratchings found a worm, immediately begins a most vociferous cackling—calls around him his hen-hearted companions, who run chattering from all quarters to gobble up the poor little worm that happened to turn under his eye. O, Ascm! Ascm! on what a prodigious great scale is everything in this country!

Thus, then, I conclude my observations. The infidel nations have each a separate characteristic trait, by which they may be distinguished from each other: the Spaniards, for instance, may be said to sleep upon every affair of importance; the Italians to fiddle upon everything; the French to dance upon everything; the Germans to smoke upon everything; the British islanders to cat upon everything; and the windy subjects of the American logocracy to talk upon everything.

For ever thine,

Mustapha <sup>14</sup>

<sup>14</sup> In this logocratic country, where even wars with foreign countries are waged by the grand bashaw's issuing a document or uttering a speech (referring to Jefferson's numerous official proclamations), Mustapha finds himself much discomfited in consequence of his needing a new pair of breeches. Since he is a prisoner of the United States, this need can be supplied only by direct action of Congress, where, after running the gauntlet of the national slang-whangers in the great divan, his request finally founders on the all-important Jeffersonian watch-word “Economy,” so that a benefit at the theatre is resorted to to supply his pressing want. In other letters Mustapha comments upon the American manner of conducting elections, military reviews, and balls.

FROM NO. XIII

Friday, August 14, 1807

*From My Elbow-Chair*

A RETROSPECT; OR, "WHAT YOU WILL"

Lolling in my elbow-chair this fine summer noon, I feel myself insensibly yielding to that genial feeling of indolence the season is so well fitted to inspire. Every one who is blessed with a little of the delicious languor of disposition that delights in repose, must often have sported among the fairy scenes, the golden visions, the voluptuous reveries, that swim before the imagination at such moments, and which so much resemble those blissful sensations a Mussulman enjoys after his favorite indulgence of opium, which Will Wizard declares can be compared to nothing but "swimming in an ocean of peacocks' feathers." In such a mood everybody must be sensible it would be idle and unprofitable for a man to send his wits a gadding on a voyage of discovery into futurity, or even to trouble himself with a laborious investigation of what is actually passing under his eye. We are, at such times, more disposed to resort to the pleasures of memory than to those of the imagination; and like the wayfaring traveller, reclining for a moment on his staff, had rather contemplate the ground we have travelled, than the region which is yet before us.

I could here amuse myself, and stultify my readers, with a most elaborate and ingenious parallel between authors and travellers; but in this balmy season, which makes men stupid and dogs mad, and when, doubtless, many of our most strenuous admirers have great difficulty in keeping awake through the day, it would be cruel to saddle them with the formidable difficulty of putting two ideas together and drawing a conclusion, or, in the learned phrase, forging *sylogisms in Baroco*—a terrible undertaking for the dog-days! To say the truth, my observations were only intended to prove that this, of all others, is the most auspicious moment, and my present, the most favorable mood for indulging in a retrospect. Whether, like certain great personages of the day, in attempting to prove one thing, I have exposed another; or whether, like certain other great personages, in attempting to prove a great deal, I have proved nothing at all, I leave to my readers to decide, provided they have the power and inclination so to do; but a RETROSPECT will I take, notwithstanding.

I am perfectly aware that in doing this I shall lay myself open to the charge of imitation, than which a man might be better accused of downright house-breaking; for it has been a standing rule with many of my illustrious predecessors, occasionally, and particularly at the conclusion of a volume,<sup>15</sup> to look over their shoulder, and chuckle at the miracles they had achieved. But, as I before professed, I am determined to hold myself entirely independent of all manner of opinions and criticisms, as the only method of getting on in this world in anything like a straight line. True it is, I may sometimes seem to angle a little for the good opinion of mankind, by giving them some excellent reasons for doing unreasonable things; but this is merely to show them, that although I may occasionally go wrong, it is not for want of knowing how to go right; and here I will lay down a maxim, which will forever entitle me to the gratitude of my inexperienced readers, namely, that a man always gets more credit in the eyes of this naughty world for sinning willfully than for sinning through sheer ignorance.

It will doubtless be insisted by many ingenious cavillers, who will be meddling with what does not at all concern them, that this retrospect should have been taken at the commencement of our second volume; it is usual, I know: moreover it is natural. So soon as a writer has once accomplished a volume, he forthwith becomes wonderfully increased in altitude! he steps upon his book as upon a pedestal, and is elevated in proportion to its magnitude. A duodecimo makes him one inch taller—an octavo, three inches—a quarto, six; but he who has made out to swell a folio looks down upon his fellow creatures from such a fearful height that, ten to one, the poor man's head is turned forever afterward. From such a lofty situation, therefore, it is natural an author should cast his eyes behind, and having reached the first landing-place on the stairs of immortality, may reasonably be allowed to plead his privilege to look back over the height he has ascended. I have deviated a little from this venerable custom, merely that our retrospect might fall in the dog days—of all days in the year most congenial to the indulgence of a little self-

<sup>15</sup> During Washington Irving's absence from New York (lobbying in Washington and attending the trial of Aaron Burr in Richmond), Paulding had concluded the first volume of *Salmagundi* at No. X, dated May 16, 1807, thus affording the editors a splendid opportunity to review their work; hence the "Retrospect."

sufficiency, inasmuch as people have then little to do but to retire within the sphere of self, and make the most of what they find there.

Let it not be supposed, however, that we think ourselves a whit the wiser or better since we have finished our volume than we were before; on the contrary, we seriously assure our readers that we were fully possessed of all the wisdom and morality it contains at the moment we commenced writing. It is the world which has grown wiser,—not us; we have <sup>10</sup> thrown our mite into the common stock of knowledge, we have shared our morsel with the ignorant multitude; and so far from elevating ourselves above the world, our sole endeavor has been to raise the world to our own level, and make it as wise as we, its disinterested benefactors.

To a moral writer like myself, who, next to his own comfort and entertainment, has the good of his fellow citizens at heart, a retrospect is but a sorry amusement. Like the industrious husbandman, he often <sup>20</sup> contemplates in silent disappointment his labors wasted on a barren soil, or the seeds he has carefully sown, choked by a redundancy of worthless weeds. I expected long ere this to have seen a complete reformation in manners and morals, achieved by our united efforts. My fancy echoed to the applauding voices of a retrieved generation; I anticipated, with proud satisfaction, the period, not far distant, when our work would be introduced into the academies with which every lane and alley of our cities abounds; <sup>30</sup> when our precepts would be gently inducted into every unlucky urchin by force of birch, and my iron-bound physiognomy, as taken by Will Wizard, be as notorious as that of Noah Webster,<sup>16</sup> junr. Esq. or his no less renowned predecessor, the illustrious Dilworth of spelling-book immortality.<sup>17</sup> But, well-a-day! to let my readers into a profound secret—the expectations of man are like the varied hues that tinge the distant prospect; never to be realized, never to be enjoyed but in perspective. Luckless Launcelot, that the humblest <sup>40</sup>

of the many air castles thou hast erected should prove a “baseless fabric!” Much does it grieve me to confess, that after all our lectures, precepts, and excellent admonitions, the people of New York are nearly as much given to backsliding and ill-nature as ever; they are just as much abandoned to dancing<sup>18</sup> and tea-drinking; and as to scandal, Will Wizard informs me that, by a rough computation, since the last cargo of gunpowder-tea from Canton, no less than eighteen characters have been blown up, besides a number of others that have been woefully shattered.<sup>19</sup>

The ladies still labor under the same scarcity of muslins,<sup>20</sup> and delight in flesh-colored silk stockings; it is evident, however, that our advice has had very considerable effect on them, as they endeavor to act as opposite to it as possible; this being what Evergreen calls female independence. As to Straddles,<sup>21</sup> they abound as much as ever in Broadway, particularly on Sundays; and Wizard roundly asserts that he supped in company with a knot of them a few evenings since, when they liquidated a whole Birmingham consignment, in a batch of imperial champagne. I have, furthermore, in the course of a month past, detected no less than three Giblet<sup>22</sup> families making their first onset toward style and gentility in the very manner we have heretofore reprobated. Nor have our utmost efforts been able to check the progress of that alarming epidemic, the rage for punning,<sup>23</sup> which, though doubtless originally intended merely to ornament and enliven conversation by little sports of fancy, threatens to overrun and poison the whole, like the baneful ivy which destroys the useful plant it first embellished. Now I look upon a habitual punster as a depredator upon conversation; and I have remarked sometimes one of these offenders, sitting silent on the watch for an hour together, until some luckless wight, unfortunately for the ease and quiet of the company, dropped a phrase susceptible of a double

<sup>16</sup> Noah Webster (1758–1843), American lexicographer and “Schoolmaster to America.”

<sup>17</sup> Dr. John Francis, in his remarks on the life and character of Washington Irving, before the New York Historical Society, alludes to this conflict of spelling books at the school in which he and Irving were both instructed. “There was a curious conflict existing in the school between the principal and his assistant instructor; the former a legitimate burgher of the city, the latter a New England pedagogue. So far as I can remember, something depended on the choice of the boy’s parents in the selection of his studies; but if not expressed otherwise, the principal stuck earnestly to Dilworth, while the assistant, for his section of instruction, held to Noah Webster.”

<sup>18</sup> Dancing, particularly the waltz, is often burlesqued, as in No. VII. No. XX, containing an account of the City Assembly from the pen of Mustapha, is a take-off on a fashionable New York ball.

<sup>19</sup> Scandal and gossip are as often and as cleverly satirized as they are in the *Tutler* and the *Spectator*.

<sup>20</sup> A reference to Anthony Evergreen’s strictures on “nudity being all the rage,” in his essay on “Fashions,” in No. III.

<sup>21</sup> A reference to Tom Straddle, a “gemmen” just arrived from Birmingham, England, in an importation of hardware—half beau, half button-maker—whose shoddy social pretensions and foppish Anglomania are objects of satire in No. XII.

<sup>22</sup> A reference to William Wizard’s satire in No. VIII on the family of old Timothy Giblet, typical social climbers of the day.

<sup>23</sup> Punning is frequently the object of attack, particularly in No. X.

meaning:—when—pop, our punster would dart out like a veteran mouser from her covert, seize the unlucky word, and after worrying and mumbling at it until it was capable of no further marring, relapse again into silent watchfulness, and lie in wait for another opportunity. Even this might be borne with, by the aid of a little philosophy; but the worst of it is, they are not content to manufacture puns and laugh heartily at them themselves; but they expect we should laugh with them, which I consider as an intolerable hardship, and a flagrant imposition on good nature. Let those gentlemen fritter away conversation with impunity, and deal out their wits in sixpenny bits if they please; but I beg I may have the choice of refusing currency to their small change. I am seriously afraid, however, that our junto is not quite free from the infection—nay, that it has even approached so near as to menace the tranquillity of my elbow-chair; for, Will Wizard, as we were in caucus the other night, absolutely electrified Pindar and myself with a most palpable and perplexing pun; had it been a torpedo, it could not have more discomposed the fraternity. Sentence of banishment was unanimously decreed; but on his confessing that, like many celebrated wits, he was merely retailing other men's wares on commission, he was for that once forgiven on condition of refraining from such diabolical practices in future. Pindar is particularly outrageous against punsters; and quite astonished and put me to a non-plus a day or two since, by asking abruptly "whether I thought a punster could be a good Christian?" He followed up his question triumphantly by offering to prove, by sound logic and historical fact, that the Roman Empire owed its decline and fall to a pun; and that nothing tended so much to demoralize the French nation, as their abominable rage for *jeux de mots*.

But what, above everything else, has caused me much vexation of spirit, and displeased me most with this stiff-necked nation is, that in spite of all the serious and profound censures of the sage Mustapha, in his various letters—they *will talk!*—they will still wag their tongues, and chatter like very slang-whangers! This is a degree of obstinacy incomprehensible in the extreme; and is another proof how alarming is the force of habit, and how difficult it is to reduce beings, accustomed to talk, to that state of silence which is the very acme of human wisdom.

We can only account for these disappointments

in our moderate and reasonable expectations, by supposing the world so deeply sunk in the mire of delinquency, that not even Hercules, were he to put his shoulder to the axletree, would be able to extricate it. We comfort ourselves, however, by the reflection that there are at least three good men left in this degenerate age to benefit the world by example, should precept ultimately fail. And borrowing, for once, an example from certain sleepy writers who, after the first emotions of surprise at finding their invaluable effusions neglected or despised, console themselves with the idea that 'tis a stupid age, and look forward to posterity for redress—we bequeath our volume to future generations—and much good may it do them. Heaven grant they may be able to read it! for, if our fashionable mode of education continues to improve, as of late, I am under serious apprehensions that the period is not far distant when the discipline of the dancing-master will supersede that of the grammarian: crotchets and quavers supplant the alphabet: and the heels, by an antipodean manoeuvre, obtain entire preëminence over the head. How does my heart yearn for poor, dear posterity when this work shall become unintelligible to our grandchildren as it seems to be to their grandfathers and grandmothers.

In fact—for I love to be candid—we begin to suspect that many people read our numbers merely for their amusement, without paying any attention to the serious truths conveyed in every page. Unpardonable want of penetration! not that we wish to restrict our readers in the article of laughing, which we consider as one of the dearest prerogatives of man, and the distinguishing characteristic which raises him above all other animals: let them laugh, therefore, if they will, provided they profit at the same time, and do not mistake our object. It is one of our indisputable facts that it is easier to laugh ten follies out of countenance than to coax, reason, or flog a man out of one. In this odd, singular, and indescribable age—which is neither the age of gold, silver, iron, brass, chivalry, or *pills*, as Sir John Carr<sup>24</sup> asserts—a grave writer who attempts to attack folly with the heavy artillery of moral reasoning, will fare like Smollett's honest pedant, who clearly demonstrated by angles, etc., after the manner of Euclid, that it was wrong to do evil—and was laughed at for his pains.

<sup>24</sup> John Carr, Esq., of the Honorable Society of the Middle Temple, wrote several slipshod travel books, one of which, *The Stranger in Ireland, a Tour in 1805*, seems to have been popular in America, where it reached a third edition in 1807.

Take my word for it, a little well-applied ridicule, like Hannibal's application of vinegar to rocks, will do more with certain hard heads and obdurate hearts, than all the logic or demonstrations in Longinus or Euclid. But the people of Gotham, wise souls! are so much accustomed to see morality approach them clothed in formidable wigs and sable garbs, "with leaden eye that loves the ground," that they can never recognize her when, drest in gay attire, she comes tripping toward them with smiles and sunshine in her countenance.—Well, let the rogues remain in happy ignorance, for "ignorance is bliss," as the poet says—and I put as implicit faith in poetry as I do in the almanac or the newspaper. We will improve them, without their being the wiser for it, and they shall become better in spite of their teeth, and without their having the least suspicion of the reformation working within them.

Among all our manifold grievances, however, still some small but vivid rays of sunshine occasionally brighten along our path; cheering our steps, and inviting us to persevere.

The public have paid some little regard to a few articles of our advice; they have purchased our numbers freely—so much the better for our publisher; they have read them attentively—so much the better for themselves. The melancholy fate of my dear aunt Charity<sup>25</sup> has had a wonderful effect; and I have now before me a letter from a gentleman who lives opposite to a couple of old ladies, remarkable for the interest they took in his affairs; his apartments were absolutely in a state of blockade, and he was on the point of changing his lodgings, or capitulating, until the appearance of our ninth number, which he immediately sent over with his compliments. The good ladies took the hint, and have scarcely appeared at their window since. As to the wooden gentlemen, our friend, Miss Sparkle,<sup>26</sup> assures me, they are wonder-

<sup>25</sup> Aunt Charity Cockloft, we are told in No. IX, "died of a Frenchman," *i.e.*, in consequence of her inability to satisfy her curiosity regarding "a little, meagre, weazel-faced Frenchman" who moved into a house across the street from the Cockloft mansion. Her failure "to get at the bottom" of "what he could possibly do with so much baggage, and particularly with his parrots and monkeys, or how so small a carcass could have occasion for so many trunks of clothes" so frustrated her scandal-mongering curiosity that she left her window, drooped daily, and in "one little month" died, being "the seventh Cockloft that has died of a whim-wham."

<sup>26</sup> The wooden gentlemen, because of their social gaucherie, were the particular aversion of Miss Sophie Sparkle, the name under which the editors often paid tribute to Mary Fairlie, one of the belles of the day on whom Irving lavished his courtly attention.

fully improved by our criticisms, and sometimes venture to make a remark, or attempt a pun in company, to the great edification of all who happen to understand them. As to the red shawls, they are entirely discarded from the fair shoulders of our ladies—ever since the last importation of finery—nor has any lady, since the cold weather, ventured to expose her elbows to the admiring gaze of scrutinizing passengers. But there is one victory we have achieved which has given us more pleasure than to have written down the whole administration: I am assured, from unquestionable authority, that our young ladies—doubtless in consequence of our weighty admonitions—have not once indulged in that intoxicating, inflammatory, and whirligig dance, the waltz—ever since hot weather commenced. True it is, I understand, an attempt was made to exhibit it by some of the sable fair ones at the last African ball, but it was highly disapproved of by all the respectable elderly ladies present.

These are sweet sources of comfort to atone for the many wrongs and misrepresentations heaped upon us by the world—for even we have experienced its ill-nature. How often have we heard ourselves reproached for the insidious applications of the uncharitable!—how often have we been accused of emotions which never found an entrance into our bosoms!—how often have our sportive effusions been wrested to serve the purposes of particular enmity and bitterness!—Meddlesome spirits! little do they know our disposition; we "lack gall" to wound the feelings of a single innocent individual; we can even forgive them from the very bottom of our souls; may they meet as ready a forgiveness from their own consciences! Like true and independent bachelors, having no domestic cares to interfere with our general benevolence, we consider it incumbent upon us to watch over the welfare of society; and although we are indebted to the world for little else than left-handed favors, yet we feel a proud satisfaction in requiting evil with good, and the sneer of illiberality with the unfeigned smile of good humor. With these mingled motives of selfishness and philanthropy we commenced our work, and if we cannot solace ourselves with the consciousness of having done much good, yet there is still one pleasing consolation left, which the world can neither give nor take away. There are moments—lingering moments of listless indifference and heavy-hearted despondency—when

our best hopes and affections slipping, as they sometimes will, from their hold on those objects to which they usually cling for support, seem abandoned on the wide waste of cheerless existence, without a place to cast anchor; without a shore in view to excite a single wish, or to give a momentary interest to contemplation. We look back with delight upon many of these moments of mental gloom, whiled away by the cheerful exercise of our pen, and consider every such triumph over the spleen as retarding the furrow-<sup>10</sup>

ing hand of time in its insidious encroachments on our brows. If, in addition to our own amusements, we have, as we jogged carelessly laughing along, brushed away one tear of dejection and called forth a smile in its place—if we have brightened the pale countenance of a child of sorrow—we shall feel almost as much joy and rejoicing as a slang-whanger does when he bathes his pen in the heart's blood of a patron and benefactor, or sacrifices one more illustrious victim on the altar of party animosity.

## FROM

*Diedrich Knickerbocker's History of New York*<sup>27</sup>The Author's Apology<sup>28</sup>

The following work, in which, at the outset, nothing more was contemplated than a temporary jeu d'esprit, was commenced in company with my brother, the late Peter Irving, Esq. Our idea was, to parody a small hand-book which had recently appeared, entitled "A Picture of New York." Like that, our work was to begin with an historical sketch; to be followed by notices of the customs, manners, and<sup>20</sup> institutions of the city; written in a serio-comic vein, and treating local errors, follies, and abuses with good-humored satire.

To burlesque the pedantic lore displayed in certain American works, our historical sketch was to commence with the creation of the world; and we laid all kinds of works under contribution for trite citations, relevant, or irrelevant, to give it the proper air of learned research. Before this crude mass of mock<sup>30</sup> erudition could be digested into form, my brother

departed for Europe, and I was left to prosecute the enterprise alone.

I now altered the plan of the work. Discarding all idea of a parody on the Picture of New York, I determined that what had been originally intended as an introductory sketch, should comprise the whole work, and form a comic history of the city. I accordingly moulded the mass of citations and disquisitions into introductory chapters forming the first book; but it soon became evident to me that, like Robinson Crusoe with his boat, I had begun on too large a scale, and that, to launch my history successfully, I must reduce its proportions. I accordingly resolved to confine it to the period of the Dutch domination, which, in its rise, progress, and decline, presented that unity of subject required by classic rule. It was a period, also, at that time almost a terra incognita in history. In fact, I was surprised to find how few of my fellow-citizens were aware that New York had ever<sup>40</sup> been called New Amsterdam, or had heard of the names of its early Dutch governors, or cared a straw about their ancient Dutch progenitors.

This, then, broke upon me as the poetic age of our city; poetic from its very obscurity; and open, like the early and obscure days of ancient Rome, to all embellishments of heroic fiction. I hailed my native city, as fortunate above all other American cities, in having an antiquity thus extending back into the regions of doubt and fable; neither did I conceive I was committing any grievous historical sin in helping out the few facts I could collect in this remote and forgotten region with figments of my own brain, or in giving characteristic attributes to the few names

<sup>27</sup> Printed in Philadelphia and published simultaneously on December 6, 1809, in New York, Philadelphia, Boston, Baltimore, and Charleston. The full title read: "A History of New York, from the Beginning of the World to the End of the Dutch Dynasty. Containing among many Surprising and Curious Matters, the Unutterable Ponderings of Walter the Doubter, the Disastrous Projects of William the Testy, and the Chivalric Achievements of Peter the Headstrong, the three Dutch Governors of New Amsterdam; being the only Authentic History of the Times that ever hath been, or ever will be Published. By Diedrich Knickerbocker."

Irving made numerous changes in subsequent editions, notably in those of 1812 and 1848. All the selections here given follow the text of the "author's revised edition." For a verbatim reprint of the 1809 text, see the edition prepared by Stanley T. Williams and Tremaine McDowell (New York, 1927).

<sup>28</sup> The Author's Apology was prepared for the edition of 1848.

connected with it which I might dig up from oblivion. . . .

I will say this in further apology for my work: that if it has taken unwarrantable liberty with our early provincial history, it has at least turned attention to that history and provoked research. It is only since this work appeared that the forgotten archives of the province have been rummaged, and the facts and personages of the olden time rescued from the dust of oblivion and elevated into whatever importance they may virtually possess.

The main object of my work, in fact, had a bearing wide from the sober aim of history; but one which, I trust, will meet with some indulgence from poetic minds. It was to embody the traditions of our city in amusing form; to illustrate its local humors, customs, and peculiarities; to clothe some scenes and places and familiar names with those imaginative and whimsical associations so seldom met with in our new country, but which live like charms and spells over the cities of the old world, binding the heart of the native inhabitant to his home.

In this I have reason to believe I had in some measure succeeded. Before the appearance of my work the popular traditions of our city were unrecorded; the peculiar and racy customs and usages derived from our Dutch progenitors were unnoticed or regarded with indifference, or adverted to with a sneer. Now they form a convivial currency, and are brought forward on all occasions; they link our whole community together in good humor and good fellowship; they are the rallying points of home feeling; the seasoning of our civic festivities; the staple of local tales and local plesantries; and are so harped upon by writers of popular fiction, that I find myself almost crowded off the legendary ground which I was the first to explore, by the host who have followed in my footsteps.

I dwell on this head because, at the first appearance of my work, its aim and drift were misapprehended by some of the descendants of the Dutch worthies; and because I understand that now and then one may still be found to regard it with captious eye. The far greater part, however, I have reason to flatter myself, receive my good-humored picturings in the same temper in which they were executed; and when I find, after a lapse of nearly forty years, this hap-hazard production of my youth still cherished among them; when I find its very name a "household word" and

used to give the home stamp to every thing recommended for popular acceptance, such as Knickerbocker societies; Knickerbocker insurance companies; Knickerbocker steamboats; Knickerbocker omnibuses; Knickerbocker bread, and Knickerbocker ice; and when I find New Yorkers of Dutch descent priding themselves upon being "genuine Knickerbockers," I please myself with the persuasion that I have struck the right chord; that my dealings with the good old Dutch times, and the customs and usages derived from them, are in harmony with the feelings and humors of my townsmen; that I have opened a vein of pleasant associations and quaint characteristics peculiar to my native place, and which its inhabitants will not willingly suffer to pass away; and that though other histories of New York may appear of higher claims to learned acceptance, and may take their dignified and appropriate rank in the family library; Knickerbocker history will still be received with good-humored indulgence, and be thumbed and chuckled over by the family fireside.

Sunnyside, 1848

W. I.

#### FROM BOOK III <sup>29</sup>

#### In Which Is Recorded the Golden Reign of Wouter Van Twiller

#### CHAPTER I

Of the Renowned Wouter Van Twiller, His Unparalleled Virtues—As Likewise His Unutterable Wisdom in the Law Case of Wandle Schoonhoven and Baront Bleecker—and the Great Admiration of the Public Thereat

Grievous and very much to be commiserated is the task of the feeling historian, who writes the history of his native land. If it fall to his lot to be the

<sup>29</sup> Book I, as Irving's "Apology" indicates, is a mock-serious history of the world prior to the founding of New Amsterdam. Book II relates the founding of the province, Book III records the Golden Reign of Wouter Van Twiller, Book IV covers the reign of William the Testy, and Book V relates the first, Book VI, the second, and Book VII, the third, part of the reign of Peter Stuyvesant.

Aside from the expressed aim and purpose of Irving, as recorded in the "Apology," *Knickerbocker's History* had for the readers of Irving's generation particular and pointed political connotations which are often lost to readers of a later day. In Books I and II he merely burlesques the pedantic methods of historians, but beginning with Book III his satire began to take on pointed political and social significance. Book III contains some half-concealed allusions to President Adams' administration. Book IV is a palpable and very clever burlesque on Jefferson and Jeffersonianism—his person, his pursuits, his policies and prac-

recorder of calamity or crime, the mournful page is watered with his tears—nor can he recall the most prosperous and blissful era, without a melancholy sigh at the reflection, that it has passed away for ever! I know not whether it be owing to an immoderate love for the simplicity of former times, or to that certain tenderness of heart incident to all sentimental historians; but I candidly confess that I cannot look back on the happier days of our city, which I now describe, without great dejection of spirit. With faltering hand do I withdraw the curtain of oblivion, that veils the modest merit of our venerable ancestors, and as their figures rise to my mental vision, humble myself before their mighty shades.

Such are my feelings when I revisit the family mansion of the Knickerbockers, and spend a lonely hour in the chamber where hang the portraits of my forefathers, shrouded in dust, like the forms they represent. With pious reverence do I gaze on the countenances of those renowned burghers, who have preceded me in the steady march of existence—whose sober and temperate blood now meanders through my veins, flowing slower and slower in its feeble conduits, until its current shall soon be stopped for ever!

These, I say to myself, are but frail memorials of the mighty men who flourished in the days of the patriarchs; but who, alas, have long since mouldered in that tomb, towards which my steps are insensibly and irresistibly hastening! As I pace the darkened chamber and lose myself in melancholy musings, the shadowy images around me almost seem to steal once more into existence—their countenances to assume the animation of life—their eyes to pursue me in every movement! Carried away by the delusions of fancy, I almost imagine myself surrounded by the shades of the departed, and holding sweet converse with the worthies of antiquity! Ah, hapless Diedrich! born in a degenerate age, abandoned to the buffetings of fortune—a stranger and a weary pilgrim in thy native land—blest with no weeping wife, nor family of helpless children; but doomed to wander neglected

through those crowded streets, and elbowed by foreign upstarts from those fair abodes where once thine ancestors held sovereign empire!

Let me not, however, lose the historian in the man, nor suffer the doting recollections of age to overcome me, while dwelling with fond garrulity on the virtuous days of the patriarchs—on those sweet days of simplicity and ease, which never more will dawn on the lovely island of Manna-hata.

These melancholy reflections have been forced from me by the growing wealth and importance of New Amsterdam, which, I plainly perceive, are to involve it in all kinds of perils and disasters. Already, as I observed at the close of my last book, they had awakened the attentions of the mother country. The usual mark of protection shown by mother countries to wealthy colonies was forthwith manifested; a governor being sent out to rule over the province and squeeze out of it as much revenue as possible. The arrival of a governor of course put an end to the protectorate of Oloffe the Dreamer. He appears, however, to have dreamt to some purpose during his sway, as we find him afterwards living as a patroon on a great landed estate on the banks of the Hudson; having virtually forfeited all right to his ancient appellation of Kortlandt or Lackland.

It was in the year of our Lord 1629<sup>30</sup> that Mynheer Wouter Van Twiller was appointed governor of the province of Nieuw Nederlandts, under the commission and control of their High Mightinesses the Lords States General of the United Netherlands, and the privileged West India Company.

This renowned old gentleman arrived at New Amsterdam in the merry month of June, the sweetest month in all the year; when Dan Apollo seems to dance up the transparent firmament—when the robin, the thrush, and a thousand other wanton songsters make the woods to resound with amorous ditties, and the luxurious little boblincon revels among the clover blossoms of the meadows—all which happy coincidence persuaded the old dames of New Amsterdam, who were skilled in the art of foretelling events, that this was to be a happy and prosperous administration.

The renowned Wouter (or Walter) Van Twiller, was descended from a long line of Dutch burgo-masters, who had successively dozed away their lives,

tices, and his followers—all arch-enemies of Federalists and Federalism; and the following three books, on the reign of Peter Stuyvesant, contain veiled allusions to Madison, who succeeded Jefferson. For details of the political satire in Books III–VII, see Henry A. Pochmann's edition of Irving in the American Writers Series (New York, 1934), 379–383, and the Williams and McDowell edition, in the American Authors Series, of *Knickerbocker's History* (New York, 1927), esp. lxi–lxvi. The student familiar with the political history of the period will enjoy discovering these political meanings for himself.

<sup>30</sup> Van Twiller arrived in 1633, and was in reality the fifth governor of the province, not the first, as Irving intimates.

and grown fat upon the bench of magistracy in Rotterdam; and who had comported themselves with such singular wisdom and propriety, that they were never either heard or talked of—which, next to being universally applauded, should be the object of ambition of all magistrates and rulers. There are two opposite ways by which some men make a figure in the world; one by talking faster than they think; and the other by holding their tongues and not thinking at all. By the first, many a smatterer acquires the reputation of a man of quick parts; by the other, many a dunderpate, like the owl, the stupidest of birds, comes to be considered the very type of wisdom. This, by the way, is a casual remark, which I would not, for the universe, have it thought I apply to Governor Van Twiller. It is true he was a man shut up within himself, like an oyster, and rarely spoke except in monosyllables; but then it was allowed he seldom said a foolish thing. So invincible was his gravity that he was never known to laugh or even to smile through the whole course of a long and prosperous life. Nay if a joke were uttered in his presence, that set light minded hearers in a roar, it was observed to throw him into a state of perplexity. Sometimes he would deign to inquire into the matter, and when, after much explanation, the joke was made as plain as a pike-staff, he would continue to smoke his pipe in silence, and at length, knocking out the ashes would exclaim, "Well! I see nothing in all that to laugh about."

With all his reflective habits, he never made up his mind on a subject. His adherents accounted for this by the astonishing magnitude of his ideas. He conceived every subject on so grand a scale that he had not room in his head to turn it over and examine both sides of it. Certain it is that if any matter were propounded to him on which ordinary mortals would rashly determine at first glance, he would put on a vague, mysterious look; shake his capacious head; smoke some time in profound silence, and at length observe that "he had his doubts about the matter;" which gained him the reputation of a man slow of belief and not easily imposed upon. What is more, it gained him a lasting name: for to this habit of the mind has been attributed his surname of Twiller; which is said to be a corruption of the original *Twijfeler*, or, in plain English, *Doubter*.

The person of this illustrious old gentleman was formed and proportioned, as though it had been

moulded by the hands of some cunning Dutch statuary, as a model of majesty and lordly grandeur. He was exactly five feet six inches in height, and six feet five inches in circumference. His head was a perfect sphere, and of such stupendous dimensions, that dame Nature, with all her sex's ingenuity, would have been puzzled to construct a neck capable of supporting it; wherefore she wisely declined the attempt, and settled it firmly on the top of his back bone, just between the shoulders. His body was oblong and particularly capacious at bottom; which was wisely ordered by Providence, seeing that he was a man of sedentary habits, and very averse to the idle labor of walking. His legs were short, but sturdy in proportion to the weight they had to sustain; so that when erect he had not a little the appearance of a beer barrel on skids. His face, that infallible index of the mind, presented a vast expanse, unfurrowed by any of those lines and angles which disfigure the human countenance with what is termed expression. Two small grey eyes twinkled feebly in the midst, like two stars of lesser magnitude in a hazy firmament; and his full-fed cheeks, which seemed to have taken toll of every thing that went into his mouth, were curiously mottled and streaked with dusky red, like a spitzenberg apple.

His habits were as regular as his person. He daily took his four stated meals, appropriating exactly an hour to each; he smoked and doubted eight hours, and he slept the remaining twelve of the four and twenty. Such was the renowned Wouter Van Twiller—a true philosopher, for his mind was either elevated above, or tranquilly settled below, the cares and perplexities of this world. He had lived in it for years, without feeling the least curiosity to know whether the sun revolved round it, or it round the sun; and he had watched, for at least half a century, the smoke curling from his pipe to the ceiling, without once troubling his head with any of those numerous theories, by which a philosopher would have perplexed his brain, in accounting for its rising above the surrounding atmosphere.

In his council he presided with great state and solemnity. He sat in a huge chair of solid oak, hewn in the celebrated forest of the Hague, fabricated by an experienced timmerman of Amsterdam, and curiously carved about the arms and feet, into exact imitations of gigantic eagle's claws. Instead of a sceptre he swayed a long Turkish pipe, wrought with jasmin

and amber, which had been presented to a stadtholder of Holland, at the conclusion of a treaty with one of the petty Barbary powers. In this stately chair would he sit, and this magnificent pipe would he smoke, shaking his right knee with a constant motion, and fixing his eye for hours together upon a little print of Amsterdam, which hung in a black frame against the opposite wall of the council chamber. Nay, it has even been said, that when any deliberation of extraordinary length and intricacy was on the carpet, the renowned Wouter would shut his eyes for full two hours at a time, that he might not be disturbed by external objects—and at such times the internal commotion of his mind was evinced by certain regular guttural sounds, which his admirers declared were merely the noise of conflict, made by his contending doubts and opinions.

It is with infinite difficulty I have been enabled to collect these biographical anecdotes of the great man under consideration. The facts respecting him were so scattered and vague, and divers of them so questionable in point of authenticity, that I have had to give up the search after many, and decline the admission of still more, which would have tended to heighten the coloring of his portrait.

I have been the more anxious to delineate fully the person and habits of Wouter Van Twiller, from the consideration that he was not only the first, but also the best governor that ever presided over this ancient and respectable province; and so tranquil and benevolent was his reign, that I do not find throughout the whole of it, a single instance of any offender being brought to punishment—a most indubitable sign of a merciful governor, and a case unparalleled, excepting in the reign of the illustrious King Log, from whom, it is hinted, the renowned Van Twiller was a lineal descendant.

The very outset of the career of this excellent magistrate was distinguished by an example of legal acumen, that gave flattering presage of a wise and equitable administration. The morning after he had been installed in office, and at the moment that he was making his breakfast from a prodigious earthen dish, filled with milk and Indian pudding, he was interrupted by the appearance of Wandle Schoonhoven, a very important old burgher of New Amsterdam, who complained bitterly of one Barent Bleecker, inasmuch as he refused to come to a settlement of accounts, seeing that there was a heavy balance in

favor of the said Wandle. Governor Van Twiller, as I have already observed, was a man of few words; he was likewise a mortal enemy to multiplying writings—or being disturbed at his breakfast. Having listened attentively to the statement of Wandle Schoonhoven, giving an occasional grunt, as he shovelled a spoonful of Indian pudding into his mouth—either as a sign that he relished the dish, or comprehended the story—he called unto him his constable, and pulling out of his breeches pocket a huge jack-knife, dispatched it after the defendant as a summons, accompanied by his tobacco-box as a warrant.

This summary process was as effectual in those simple days as was the seal ring of the great Haroun Alraschid among the true believers. The two parties being confronted before him, each produced a book of accounts, written in a language and character that would have puzzled any but a High Dutch commentator, or a learned decipherer of Egyptian obelisks. The sage Wouter took them one after the other, and having poised them in his hands, and attentively counted over the number of leaves, fell straightway into a very great doubt, and smoked for half an hour without saying a word; at length, laying his finger beside his nose, and shutting his eyes for a moment, with the air of a man who has just caught a subtle idea by the tail, he slowly took his pipe from his mouth, puffed forth a column of tobacco smoke, and with marvellous gravity and solemnity pronounced—that having carefully counted over the leaves and weighed the books, it was found, that one was just as thick and as heavy as the other—therefore it was the final opinion of the court that the accounts were equally balanced—therefore Wandle should give Barent a receipt, and Barent should give Wandle a receipt—and the constable should pay the costs.

This decision being straightway made known, diffused general joy throughout New Amsterdam, for the people immediately perceived, that they had a very wise and equitable magistrate to rule over them. But its happiest effect was, that not another lawsuit took place throughout the whole of his administration—and the office of constable fell into such decay, that there was not one of those losel scouts known in the province for many years. I am the more particular in dwelling on this transaction, not only because I deem it one of the most sage and righteous judgments on record, and well worthy the attention of modern magistrates; but because it was a miraculous event in

the history of the renowned Wouter—being the only time he was ever known to come to a decision in the whole course of his life.

#### CHAPTER IV

Containing Further Particulars of the Golden Age, and What Constituted a Fine Lady and Gentleman in the Days of Walter the Doubter

In this dulcet period of my history, when the beautiful island of Manna-hata presented a scene, the very counterpart of those glowing pictures drawn of the golden reign of Saturn, there was, as I have before observed, a happy ignorance, an honest simplicity prevalent among its inhabitants, which, were I even able to depict, would be but little understood by the degenerate age for which I am doomed to write. Even the female sex, those arch innovators upon the tranquillity, the honesty, and gray-beard customs of society, seemed for a while to conduct themselves with incredible sobriety and comeliness.

Their hair, untortured by the abominations of art, was scrupulously pomatumed back from their foreheads with a candle, and covered with a little cap of quilted calico, which fitted exactly to their heads. Their petticoats of linsey-woolsey were striped with a variety of gorgeous dyes—though I must confess these gallant garments were rather short, scarce reaching below the knee; but then they made up in the number, which generally equalled that of the gentleman's small clothes; and what is still more praiseworthy, they were all of their own manufacture—of which circumstance, as may well be supposed, they were not a little vain.

These were the honest days in which every woman staid at home, read the Bible, and wore pockets—ay, and that too of a goodly size, fashioned with patchwork into many curious devices, and ostentatiously worn on the outside. These, in fact, were convenient receptacles, where all good housewives carefully stored away such things as they wished to have at hand; by which means they often came to be incredibly crammed—and I remember there was a story current when I was a boy that the Lady of Wouter Van Twiller once had occasion to empty her right pocket in search of a wooden ladle, when the contents filled a couple of corn baskets, and the utensil was discovered lying among some rubbish in one corner—but we must not give too much faith to all these stories;

the anecdotes of those remote periods being very subject to exaggeration.

Besides these notable pockets, they likewise wore scissors and pincushions suspended from their girdles by red ribands, or among the more opulent and showy classes, by brass, and even silver chains—indubitable tokens of thrifty housewives and industrious spinsters. I cannot say much in vindication of the shortness of the petticoats; it doubtless was introduced for the purpose of giving the stockings a chance to be seen, which were generally of blue worsted with magnificent red clocks—or perhaps to display a well-turned ankle, and a neat, though serviceable foot, set off by a high-heeled leathern shoe, with a large and splendid silver buckle. Thus we find that the gentle sex in all ages have shown the same disposition to infringe a little upon the laws of decorum, in order to betray a lurking beauty, or gratify an innocent love of finery.

From the sketch here given, it will be seen that our good grandmothers differed considerably in their ideas of a fine figure from their scantily dressed descendants of the present day. A fine lady, in those times, waddled under more clothes, even on a fair summer's day, than would have clad the whole bevy of a modern ball-room. Nor were they the less admired by the gentlemen in consequence thereof. On the contrary, the greatness of a lover's passion seemed to increase in proportion to the magnitude of its object—and a voluminous damsel arrayed in a dozen of petticoats, was declared by a Low Dutch sonneteer of the province to be radiant as a sunflower, and luxuriant as a full-blown cabbage. Certain it is, that in those days the heart of a lover could not contain more than one lady at a time; whereas the heart of a modern gallant has often room enough to accommodate half a dozen. The reason of which I conclude to be, that either the hearts of the gentlemen have grown larger, or the persons of the ladies smaller—this, however, is a question for physiologists to determine.

But there was a secret charm in these petticoats, which, no doubt, entered into the consideration of the prudent gallants. The wardrobe of a lady was in those days her only fortune; and she who had a good stock of petticoats and stockings, was as absolutely an heiress as is a Kamschatka damsel with a store of bearskins, or a Lapland belle with a plenty of reindeer. The ladies, therefore, were very anxious to display

these powerful attractions to the greatest advantage; and the best rooms in the house, instead of being adorned with caricatures of dame Nature, in water colors and needle work, were always hung round with abundance of homespun garments, the manufacture and the property of the females—a piece of laudable ostentation that still prevails among the heiresses of our Dutch villages.

The gentlemen, in fact, who figured in the circles of the gay world in these ancient times, corresponded, in most particulars, with the beauteous damsels whose smiles they were ambitious to deserve. True it is, their merits would make but a very inconsiderable impression upon the heart of a modern fair; they neither drove their carriages, nor sported their tandems, for as yet those gaudy vehicles were not even dreamt of—neither did they distinguish themselves by their brilliancy at the table, and their consequent rencontres with watchmen, for our forefathers were of too pacific a disposition to need those guardians of the night, every soul throughout the town being sound asleep before nine o'clock. Neither did they establish their claims to gentility at the expense of their tailors—for as yet those offenders against the pockets of society, and the tranquillity of all aspiring young gentlemen, were unknown in New Amsterdam; every good housewife made the clothes of her husband and family, and even the *goede vrouw* of Van Twiller himself thought it no disparagement to cut out her husband's linsey-woolsey galligaskins.

Not but what there were some two or three youngsters who manifested the first dawning of what is called fire and spirit; who held all labor in contempt; skulked about docks and market-places; loitered in the sunshine, squandered what little money they could procure at hustle-cap and chuck-farthing; swore, boxed, fought cocks, and raced their neighbor's horses—in short, who promised to be the wonder, the talk, and abomination of the town, had not their stylish career been unfortunately cut short by an affair of honor with a whipping-post.

Far other, however, was the truly fashionable gentleman of those days—his dress, which served for both morning and evening, street and drawing-room, was a linsey-woolsey coat, made, perhaps, by the fair hands of the mistress of his affections, and gallantly bedecked with abundance of large brass buttons—half a score of breeches heightened the proportions of his figure—his shoes were decorated by enormous

copper buckles—a low-crowned broad-rimmed hat overshadowed his burly visage, and his hair dangled down his back in a prodigious queue of eelskin.

Thus equipped, he would manfully sally forth with pipe in mouth to besiege some fair damsel's obdurate heart—not such a pipe, good reader, as that which Acis did sweetly tune in praise of his Galatea, but one of true Delft manufacture, and furnished with a charge of fragrant tobacco. With this would he resolutely set himself down before the fortress, and rarely failed, in the process of time, to smoke the fair enemy into a surrender, upon honorable terms.

Such was the happy reign of Wouter Van Twiller, celebrated in many a long forgotten song as the real golden age, the rest being nothing but counterfeit copper-washed coin. In that delightful period, a sweet and holy calm reigned over the whole province. The burgomaster smoked his pipe in peace—the substantial solace of his domestic cares, after her daily toils were done, sat soberly at the door, with her arms crossed over her apron of snowy white, without being insulted with ribald street walkers or vagabond boys—those unlucky urchins who do so infest our streets, displaying, under the roses of youth, the thorns and briars of iniquity. Then it was that the lover with ten breeches, and the damsel with petticoats of half a score, indulged in all the innocent endearments of virtuous love without fear and without reproach; for what had that virtue to fear, which was defended by a shield of good linsey-woolseys, equal at least to the seven bull hides of the invincible Ajax?

Ah blissful, and never to be forgotten age! when every thing was better than it has ever been since, or ever will be again—when Buttermilk Channel was quite dry at low water—when the shad in the Hudson were all salmon, and when the moon shone with a pure and resplendent whiteness, instead of that melancholy yellow light which is the consequence of her sickening at the abominations she every night witnesses in this degenerate city!

Happy would it have been for New Amsterdam could it always have existed in this state of blissful ignorance and lowly simplicity, but alas! the days of childhood are too sweet to last! Cities, like men, grow out of them in time, and are doomed alike to grow into the bustle, the cares, and miseries of the world. Let no man congratulate himself, when he beholds the child of his bosom or the city of his birth increasing in magnitude and importance—let the history of

his own life teach him the dangers of the one, and this excellent little history of Manna-hata convince him of the calamities of the other.

FROM BOOK IV

Containing the Chronicles of the Reign  
of William the Testy<sup>31</sup>

CHAPTER I

Showing the Nature of History in General, Containing Farthermore the Universal Acquirements of William the Testy, and how a Man May Learn so Much as to Render Himself Good for Nothing

When the lofty Thucydides<sup>32</sup> is about to enter upon his description of the plague<sup>33</sup> that desolated Athens, one of his modern commentators assures the reader, that the history is now going to be exceeding solemn, serious, and pathetic; and hints, with that air of chuckling gratulation with which a good dame<sup>20</sup> draws forth a choice morsel from a cupboard to regale a favorite, that this plague will give his history a most agreeable variety.

In like manner did my heart leap within me, when I came to the dolorous dilemma of Fort Goed Hoop,<sup>34</sup> which I at once perceived to be the fore-runner of a series of great events and entertaining disasters. Such are the true subjects for the historic pen. For what is history, in fact, but a kind of Newgate calendar,<sup>35</sup> a register of the crimes and miseries<sup>30</sup> that man has inflicted on his fellow-man? It is a huge libel on human nature, to which we industriously add page after page, volume after volume, as if we were building up a monument to the honor, rather than the infamy of our species. If we turn over the pages of these chronicles that man has written of himself, what are the characters dignified by the appellation of great, and held up to the admiration of posterity? Tyrants, robbers, conquerors, renowned only for the magnitude of their misdeeds, and the stupendous<sup>40</sup> wrongs and miseries they have inflicted on mankind—warriors, who have hired themselves to the trade of blood, not from motives of virtuous patriotism, or

to protect the injured and defenceless, but merely to gain the vaunted glory of being adroit and successful in massacring their fellow-beings! What are the great events that constitute a glorious era?—The fall of empires—the desolation of happy countries—splendid cities smoking in their ruins—the proudest works of art tumbled in the dust—the shrieks and groans of whole nations ascending unto heaven!

It is thus the historian may be said to thrive on the<sup>10</sup> miseries of mankind, like birds of prey which hover over the field of battle, to fatten on the mighty dead. It was observed by a great projector<sup>36</sup> of inland lock navigation, that rivers, lakes, and oceans, were only formed to feed canals.—In like manner I am tempted to believe, that plots, conspiracies, wars, victories, and massacres, are ordained by Providence only as food for the historian.

It is a source of great delight to the philosopher, in studying the wonderful economy of nature, to trace the mutual dependencies of things, how they are created reciprocally for each other, and how the most noxious and apparently unnecessary animal has its uses. Thus those swarms of flies, which are so often execrated as useless vermin, are created for the sustenance of spiders—and spiders, on the other hand, are evidently made to devour flies. So those heroes who have been such scourges to the world, were bounteously provided as themes for the poet and historian, while the poet and the historian were destined to record the achievements of heroes!

These, and many similar reflections, naturally arose in my mind, as I took up my pen to commence the reign of William Kieft: for now the stream of our history, which hitherto has rolled in a tranquil current, is about to depart forever from its peaceful haunts, and brawl through many a turbulent and rugged scene.

As some sleek ox, sunk in the rich repose of a clover-field, dozing and chewing the cud, will bear repeated blows before it raises itself, so the province of Nieuw Nederlandts, having waxed fat under the drowsy reign of the Doubter, needed cuffs and kicks to rouse it into action. The reader will now witness the manner in which a peaceful community advances towards a state of war; which is apt to be like the approach of a horse to a drum, with much prancing and little progress, and too often with the wrong end foremost.

<sup>36</sup> Promoter.

<sup>31</sup> That is, William Kieft (1602–47), actually the fifth director-general of New Netherland.

<sup>32</sup> Thucydides (460?–400 B.C.), Greek historian.

<sup>33</sup> The description of the plague occurs in Book II of Thucydides' history of the Peloponnesian War.

<sup>34</sup> A Dutch outpost established in 1633 near the present city of Hartford, Connecticut.

<sup>35</sup> A record of famous English crimes and criminals.

Wilhelmus Kieft, who, in 1634,<sup>37</sup> ascended the gubernatorial chair (to borrow a favorite though clumsy appellation of modern phrascologists), was of a lofty descent, his father being inspector of wind-mills in the ancient town of Saardam,<sup>38</sup> and our hero, we are told, when a boy, made very curious investigations into the nature and operation of these machines, which was one reason why he afterwards came to be so ingenious a governor. His name, according to the most authentic etymologists, was a corruption of *Kyver*; that is to say, a *wrangler* or *scolder*; and expressed the characteristic of his family, which, for nearly two centuries, had kept the windy town of Saardam in hot water, and produced more tartars and brimstones than any ten families in the place; and so truly did he inherit this family peculiarity, that he had not been a year in the government of the province, before he was universally denominated William the Testy. His appearance answered to his name. He was a brisk, wiry, waspish little old gentleman, <sup>20</sup> such a one as may now and then be seen stumping about our city in a broad-skirted coat with huge buttons, a cocked hat stuck on the back of his head, and a cane as high as his chin. His face was broad, but his features were sharp, his cheeks were scorched into a dusky red, by two fiery little gray eyes; his nose turned up, and the corners of his mouth turned down, pretty much like the muzzle of an irritable pug-dog.

I have heard it observed by a profound adept in <sup>30</sup> human physiology, that if a woman waxes fat with the progress of years, her tenure of life is somewhat precarious, but if haply she withers as she grows old, she lives forever. Such promised to be the case with William the Testy, who grew tough in proportion as he dried. He had withered, in fact, not through the process of years, but through the tropical fervor of his soul, which burnt like a vehement rush-light in his bosom, inciting him to incessant broils and bickerings. Ancient traditions speak much of his <sup>40</sup> learning, and of the gallant inroads he had made into the dead languages, in which he had made captive a host of Greek nouns and Latin verbs, and brought off rich booty in ancient saws and apothegms; which he was wont to parade in his public harangues, as a triumphant general of yore, his *spolia opima*.<sup>39</sup>

<sup>37</sup> Although the date is disputed, 1638 is probably the correct one.

<sup>38</sup> Modern Zaandam, near Amsterdam in northern Holland.

<sup>39</sup> The richest spoils.

Of metaphysics, he knew enough to confound all hearers and himself into the bargain. In logic, he knew the whole family of syllogisms and dilemmas, and was so proud of his skill that he never suffered even a self-evident fact to pass unargued. It was observed, however, that he seldom got into an argument without getting into a perplexity, and then into a passion with his adversary for not being convinced gratis.

He had, moreover, skirmished smartly on the frontiers of several of the sciences, was fond of experimental philosophy, and prided himself upon inventions of all kinds. His abode, which he had fixed at a Bowerie<sup>40</sup> or country-seat at a short distance from the city, just at what is now called Dutch-street, soon abounded with proofs of his ingenuity: patent smokejacks<sup>41</sup> that required a horse to work them; Dutch ovens that roasted meat without fire; caits that went before the horses, weathercocks that turned against the wind, and other wrong-headed contrivances that astonished and confounded all beholders. The house, too, was beset with paralytic cats and dogs, the subjects of his experimental philosophy; and the yelling and yelping of the latter unhappy victims of science, while aiding in the pursuit of knowledge, soon gained for the place the name of "Dog's Misery," by which it continues to be known even at the present day.

It is in knowledge as in swimming; he who flounders and splashes on the surface, makes more noise, and attracts more attention, than the pearl-diver who quietly dives in quest of treasures to the bottom. The vast acquirements of the new governor were the theme of marvel among the simple burghers of New Amsterdam; he figured about the place as learned a man as a Bonze<sup>42</sup> at Peking, who has mastered one half of the Chinese alphabet, and was unanimously pronounced a "universal genius!"

I have known in my time many a genius of this stamp; but, to speak my mind freely, I never knew one who, for the ordinary purposes of life, was worth his weight in straw. In this respect, a little sound judgment and plain common sense is worth all the sparkling genius that ever wrote poetry or invented

<sup>40</sup> A street paralleling Broadway on the east in lower New York City.

<sup>41</sup> Spits for roasting meat, made to be rotated in the fireplace. This account of his inventive zeal is a "dig" at Jefferson, who also indulged his inventive ingenuity.

<sup>42</sup> A Buddhist priest.

theories. Let us see how the universal acquirements of William the Testy aided him in the affairs of government

## CHAPTER II

### How William the Testy Undertook to Conquer by Proclamation—How He Was a Great Man Abroad, But a Little Man in His Own House

No sooner had this bustling little potentate been blown by a whiff of fortune into the seat of government than he called his council together to make them a speech on the state of affairs

Caius Gracchus,<sup>43</sup> it is said, when he harangued the Roman populace, modulated his tone by an oratorical flute or pitchpipe, Wilhelmus Kieft, not having such an instrument at hand, availed himself of that musical organ or trump which nature has implanted in the midst of a man's face, in other words, he preluded his address by a sonorous blast of the nose; a preliminary flourish<sup>44</sup> much in vogue among public orators.

He then commenced by expressing his humble sense of his utter unworthiness of the high post to which he had been appointed; which made some of the simple burghers wonder why he undertook it, not knowing that it is a point of etiquette with a public orator never to enter upon office without declaring himself unworthy to cross the threshold. He then proceeded in a manner highly classic and erudite to speak of government generally, and of the governments of ancient Greece in particular; together with the wars of Rome and Carthage, and the rise and fall of sundry outlandish empires which the worthy burghers had never read nor heard of. Having thus, after the manner of your learned orator, treated of things in general, he came by a natural, roundabout transition, to the matter in hand, namely, the daring aggressions of the Yankees.

As my readers are well aware of the advantage a potentate has of handling his enemies as he pleases in his speeches and bulletins, where he has the talk all on his own side, they may rest assured that William the Testy did not let such an opportunity escape of giving the Yankees what is called "a taste of his quality." In speaking of their inroads into the

territories of their High Mightinesses, he compared them to the Gauls who desolated Rome, the Goths and Vandals who overran the fairest plains of Europe; but when he came to speak of the unparalleled audacity with which they of Weathersfield<sup>45</sup> had advanced their patches up to the very walls of Fort Good Hoop, and threatened to smother the garison in onions, tears of rage started into his eyes, as though he nosed the very offence in question.

Having thus wrought up his tale to a climax, he assumed a most belligerent look, and assured the council that he had devised an instrument, potent in its effects, and which he trusted would soon drive the Yankees from the land. So saying, he thrust his hand into one of the deep pockets of his broad-skirted coat and drew forth, not an infernal machine, but an instrument in writing, which he laid with great emphasis upon the table.

The burghers gazed at it for a time in silent awe, as a wary housewife does at a gun, fearful it may go off half-cocked. The document in question had a sinister look, it is true, it was crabbed in text, and from a broad red ribbon dangled the great seal of the province, about the size of a buckwheat pancake. Still, after all, it was but an instrument in writing. Herein, however, existed the wonder of the invention. The document in question was a PROCLAMATION,<sup>46</sup> ordering the Yankees to depart instantly from the territories of their High Mightinesses under pain of suffering all the forfeitures and punishments in such case made and provided. It was on the moral effect of this formidable instrument that Wilhelmus Kieft calculated; pledging his valor as a governor that, once fulminated against the Yankees, it would, in less than two months, drive every mother's son of them across the borders.

The council broke up in perfect wonder, and nothing was talked of for some time among the old men and women of New Amsterdam but the vast genius of the governor, and his new and cheap mode of fighting by proclamation.

As to Wilhelmus Kieft, having dispatched his proclamation to the frontiers, he put on his cocked hat and corduroy small-clothes, and mounting a tall raw-boned charger, trotted out to his rural retreat of Dog's Misery. Here, like the good Numa, he reposed

<sup>43</sup> Caius Gracchus (159-121 B.C.), Roman statesman and orator.

<sup>44</sup> Probably a satirical reference to Jefferson's first Inaugural Address.

<sup>45</sup> Now Wethersfield, a suburb of Hartford.

<sup>46</sup> A reference to Jefferson's effort to stop the British blockade, to curb Napoleon's "Continental system," and to order European belligerents to cease interfering with American commerce.

from the toils of state, taking lessons in government, not from the nymph Egeria, but from the honored wife of his bosom, who was one of that class of females sent upon the earth a little after the flood, as a punishment for the sins of mankind, and commonly known by the appellation of *knowing women*. In fact, my duty as an historian obliges me to make known a circumstance which was a great secret at the time, and consequently was not a subject of scandal at more than half the tea-tables in New Amsterdam, <sup>10</sup> but which, like many other great secrets, has leaked out in the lapse of years—and this was, that Wilhelmus the Testy, though one of the most potent little men that ever breathed, yet submitted at home to a species of government, neither laid down in Aristotle nor Plato, in short, it partook of the nature of a pure, unmixed tyranny, and is familiarly denominated *petticoat government*—An absolute sway, which, although exceedingly common in these modern days, was very rare among the ancients, if we <sup>20</sup> may judge from the rout made about the domestic economy of honest Socrates, which is the only ancient case on record.

The great Kieft, however, warded off all the sneers and sarcasms of his particular friends, who are ever ready to joke with a man on sore points of the kind, by alleging that it was a government of his own election, to which he submitted through choice, adding at the same time a profound maxim which he had found in an ancient author, that “he who would <sup>30</sup> aspire to *govern*, should first learn to *obey*.”

### CHAPTER III

In Which Are Recorded the Sage Projects of a Ruler of Universal Genius—The Art of Fighting by Proclamation—And How That the Valiant Jacobus Van Curlet Came to Be Foully Dishonored at Fort Goed Hoop

Never was a more comprehensive, a more expeditious, or, what is still better, a more economical measure devised, than this of defeating the Yankees by proclamation—an expedient, likewise, so gentle and humane, there were ten chances to one in favor of its succeeding,—but then there was one chance to ten that it would not succeed—as the ill-natured fates would have it, that single chance carried the day! The proclamation was perfect in all its parts, well constructed, well written, well scaled, and well

published—all that was wanting to insure its effect was, that the Yankees should stand in awe of it, but, provoking to relate, they treated it with the most absolute contempt, applied it to an unseemly purpose, and thus did the first warlike proclamation come to a shameful end—a fate which I am credibly informed has befallen but too many of its successors.

So far from abandoning the country, those varlets continued their encroachments, squatting along the green banks of the Vaische river, and founding Hartford, Stamford, New Haven, and other border towns. I have already shown how the onion patches of Pyquag were an eyesore to Jacobus Van Curlet and his garrison, but now these moss-troopers increased in their atrocities, kidnapping hogs, impounding horses, and sometimes grievously rib-roasting their owners. Our worthy forefathers could scarcely stir abroad without danger of being outjockeyed in horse-flesh, or taken in in bargaining; while, in their absence, some daring Yankee peddler would penetrate to their household, and nearly ruin the good housewives with tin-ware and wooden bowls.

I am well aware of the perils which environ me in this part of my history. While raking, with curious hand but pious heart, among the mouldering remains of former days, anxious to draw therefrom the honey of wisdom, I may fare somewhat like that valiant worthy, Samson, who, in meddling with the carcass of a dead lion, drew a swarm of bees about his ears. Thus, while narrating the many misdeeds of the Yanokie or Yankee race, it is ten chances to one but I offend the morbid sensibilities of certain of their unreasonable descendants, who may fly out and raise such a buzzing about this unlucky head of mine, that I shall need the tough hide of an Achilles, or an Orlando Furioso,<sup>47</sup> to protect me from their stings.

Should such be the case, I should deeply and sincerely lament—not my misfortune in giving offence—but the wrong-headed perverseness of an ill-natured generation, in taking offence at any thing I say. That their ancestors did use my ancestors ill is true, and I am very sorry for it. I would, with all my heart, the fact were otherwise; but as I am recording the sacred events of history, I'd not bate one nail's breadth of the honest truth, though I were sure the whole edition of my work would be bought up

<sup>47</sup> The mad Roland of an epic by that name, by Ariosto (1474–1533), an Italian poet.

and burnt by the common hangman of Connecticut. And in sooth, now that these testy gentlemen have drawn me out, I will make bold to go farther, and observe that this is one of the grand purposes for which we impartial historians are sent into the world—to redress wrongs and render justice on the heads of the guilty. So that, though a powerful nation may wrong its neighbors with temporary impunity, yet sooner or later an historian springs up, who wreaks ample chastisement on it in return.

Thus these moss-troopers of the east little thought, I'll warrant it, while they were harassing the inoffensive province of Nieuw Nederlands, and driving its unhappy governor to his wit's end, that an historian would ever arise, and give them their own, with interest. Since, then, I am but performing my bounden duty as an historian, in avenging the wrongs of our revered ancestors, I shall make no further apology, and, indeed, when it is considered that I have all these ancient borderers of the east in my <sup>20</sup> power, and at the mercy of my pen, I trust that it will be admitted I conduct myself with great humanity and moderation.

It was long before William the Testy could be persuaded that his much vaunted war measure was ineffectual, on the contrary, he flew in a passion whenever it was doubted, swearing that though slow in operating, yet when it once began to work, it would soon purge the land of these invaders. When convinced, at length, of the truth, like a shrewd <sup>30</sup> physician, he attributed the failure to the quantity, not the quality of the medicine, and resolved to double the dose. He fulminated, therefore, a second proclamation more vehement than the first, forbidding all intercourse with these Yankee intruders; ordering the Dutch burghers on the frontiers to buy none of their pacing horses, measly pork, apple sweetmeats, Weathersfield onions, or wooden bowls, and to furnish them with no supplies of gin, gingerbread, or sourkrout.

Another interval elapsed, during which the last proclamation was as little regarded as the first, and the non-intercourse was especially set at naught by the young folks of both sexes, if we may judge by the active bundling which took place along the borders.

At length one day the inhabitants of New Amsterdam were aroused by a furious barking of dogs, great and small, and beheld, to their surprise, the whole

garrison of Fort Goed Hoop straggling into town all tattered and wayworn, with Jacobus Van Culet at their head, bringing the melancholy intelligence of the capture of Fort Goed Hoop by the Yankees.

The fate of this important fortress is an impressive warning to all military commanders. It was neither carried by storm nor famine, nor was it undermined, nor bombarded, nor set on fire by red-hot shot, but was taken by a stratagem no less singular than effective, <sup>10</sup> and which can never fail of success, whenever an opportunity occurs of putting it in practice.

It seems that the Yankees had received intelligence that the garrison of Jacobus Van Culet had been reduced nearly one-eighth by the death of two of his most corpulent soldiers, who had overcaten themselves on fat salmon caught in the Varsche river. A secret expedition was immediately set on foot to surprise the fortress. The crafty enemy knowing the habits of the garrison to sleep soundly after they had eaten their dinners and smoked their pipes, stole upon them at the noontide of a sultry summer's day, and surprised them in the midst of their slumbers.

In an instant the flag of their High Mightinesses was lowered, and the Yankee standard elevated in its stead, being a dried codfish, by way of a spiced eagle. A strong garrison was appointed, of long-sided, hard-fisted Yankees, with Weathersfield onions for cockades and feathers. As to Jacobus Van Culet and his <sup>men</sup>, they were seized by the nape of the neck, conducted to the gate, and one by one dismissed with a kick in the crupper, as Charles XII. dismissed the heavy-bottomed Russians at the battle of Narva, Jacobus Van Culet receiving two kicks in consideration of his official dignity.

#### CHAPTER IV

<sup>40</sup> Containing the Fearful Wrath of William the Testy, and the Alarm of New Amsterdam—How the Governor Did Strongly Fortify the City—Of the Rise of Antony the Trumpeter, and the Windy Addition to the Armorial Bearings of New Amsterdam

Language cannot express the awful ire of William the Testy on hearing of the catastrophe at Fort Goed Hoop. For three good hours his rage was too great for words, or rather the words were too great for him, (being a very small man,) and he was nearly choked by the misshapen, nine-cornered Dutch oaths and

epithets which crowded at once into his gullet. At length his words found vent, and for three days he kept up a constant discharge, anathematizing the Yankees, man, woman, and child, for a set of dieven, schobbejacken, deugenieten, twistzockeren, blaes-kaken, looscn-schalken, kakken-bedden, and a thousand other names, of which, unfortunately for posterity, history does not make mention. Finally, he swore that he would have nothing more to do with such a squatting, bundling, guessing, questioning, swapping, pumpkin-eating, molasses-daubing, shingle-splitting, cider-watering, horse-jockeying, notion-peddling crew—that they might stay at Fort Goed Hoop and rot, before he would dirty his hands by attempting to drive them away, in proof of which he ordered the new-raised troops to be marched forthwith into winter quarters, although it was not as yet quite midsummer. Great despondency now fell upon the city of New Amsterdam. It was feared that the conquerors of Fort Goed Hoop, flushed with victory<sup>20</sup> and apple-brandy, might march on to the capital, take it by storm, and annex the whole province to Connecticut. The name of Yankee became as terrible among the Nieuw Nederlanders as was that of Gaul among the ancient Romans, insomuch that the good wives of the Manhattoes used it as a bugbear wherewith to frighten their unruly children.

Everybody clamored around the governor, imploring him to put the city in a complete posture of defence, and he listened to their clamors. Nobody<sup>30</sup> could accuse William the Testy of being idle in time of danger, or at any other time. He was never idle, but then he was often busy to very little purpose. When a youngling he had been impressed with the words of Solomon, "Go to the ant, thou sluggard, observe her ways and be wise," in conformity to which he had ever been of a restless, ant-like turn, hurrying hither and thither, nobody knew why or wherefore, busying himself about small matters with an air of great importance and anxiety, and toiling<sup>40</sup> at a grain of mustard-seed in the full conviction that he was moving a mountain. In the present instance, he called in all his inventive powers to his aid, and was continually pondering over plans, making diagrams, and worrying about with a troop of workmen and projectors at his heels. At length, after a world of consultation and contrivance, his plans of defence ended in rearing a great flag-staff in the centre of the fort, and perching a wind-mill on each bastion.

These warlike preparations in some measure allayed the public alarm, especially after an additional means of securing the safety of the city had been suggested by the governor's lady. It has already been hinted in this most authentic history, that in the domestic establishment of William the Testy "the gray mare was the better horse;" in other words, that his wife, "ruled the roast," and, in governing the governor, governed the province, which might thus be said to be under petticoat government.

Now it came to pass, that about this time there lived in the Manhattoes a jolly, robustious trumpeter, named Antony Van Corlecar, famous for his long wind; and who, as the story goes, could twang so potently upon his instrument, that the effect upon all within hearing was like that ascribed to the Scotch bagpipe when it sings right lustily i' the nose.

This sounder of brass was moreover a lusty bachelor, with a pleasant, burly visage, a long nose, and huge whiskers. He had his little *bowerie*, or retreat in the country, where he led a roystering life, giving dances to the wives and daughters of the burghers of the Manhattoes, insomuch that he became a prodigious favorite with all the women, young and old. He is said to have been the first to collect that famous toll levied on the fair sex at Kissing Bridge, on the highway to Hellgate.\*

To this sturdy bachelor the eyes of all the women were turned in this time of darkness and peril, as the very man to second and carry out the plans of defence of the governor. A kind of petticoat council was forthwith held at the government house, at which the governor's lady presided, and this lady, as has been hinted, being all potent with the governor, the result of these councils was the elevation of Antony the Trumpeter to the post of commandant of windmills and champion of New Amsterdam.

The city being thus fortified and garrisoned, it would have done one's heart good to see the governor snapping his fingers and fidgeting with delight, as the trumpeter strutted up and down the ramparts twanging defiance to the whole Yankee race, as does a modern editor to all the principalities and powers on the other side of the Atlantic. In the hands of Antony Van Corlecar this windy instrument appeared

\* The bridge here mentioned by Mr. Knickerbocker still exists; but it is said that the toll is seldom collected nowadays, excepting on sleighing-parties, by the descendants of the patriarchs, who still preserve the traditions of the city.

to him as potent as the horn of the paladin Astolpho, or even the more classic horn of Alceto, nay, he had almost the temerity to compare it with the rams' horns celebrated in holy writ, at the very sound of which the walls of Jericho fell down.

Be all this as it may, the apprehensions of hostilities from the east gradually died away. The Yankees made no further invasion, nay, they declared they had only taken possession of Fort Goed Hoop as being erected within their territories. So far from manifesting hostility, they continued to throng to New Amsterdam with the most innocent countenances imaginable, filling the market with their notions, being as ready to trade with the *Nederlanders* as ever—and not a whit more prone to get to the windward of them in a bargain.

The old wives of the Manhattos who took tea with the governor's lady attributed all this affected moderation to the awe inspired by the military preparations of the governor, and the windy prowess of *Antony the Trumpeter*.

There were not wanting illiberal minds, however, who sneered at the governor for thinking to defend his city as he governed it, by mere wind; but William Kieft was not to be jeered out of his wind-mills—he had seen them perched upon the ramparts of his native city of Saardam, and was persuaded they were connected with the great science of defence, nay, so much piqued was he by having them made a matter of ridicule, that he introduced them into the arms of the city, where they remain to this day, quartered with the ancient beaver of the Manhattos, an emblem and memento of his policy.

I must not omit to mention that certain wise old burghers of the Manhattos, skilful in expounding signs and mysteries, after events have come to pass, consider this early intrusion of the wind-mill into the escutcheon of our city, which before had been wholly occupied by the beaver, as portentous of its after fortune, when the quiet Dutchman would be elbowed aside by the enterprising Yankee, and patient industry overtopped by windy speculation.

## CHAPTER VII

### Growing Discontents of New Amsterdam Under the Government of William the Testy

It has been remarked by the observant writer of the *Stuyvesant manuscript*, that under the administration

of William Kieft the disposition of the inhabitants of New Amsterdam experienced an essential change, so that they became very meddling and factious. The unfortunate propensity of the little governor to experiment and innovation, and the frequent exacerbations of his temper, kept his council in a continual worry, and the council being to the people at large what yeast or leaven is to a batch, they threw the whole community in a ferment; and the people at large being to the city what the mind is to the body, the unhappy commotions they underwent operated most disastrously upon New Amsterdam—inasmuch that, in certain of their paroxysms of consternation and perplexity, they begat several of the most crooked, distorted, and abominable streets, lanes, and alleys, with which this metropolis is disfigured.

The fact was, that about this time, the community, like Balaam's ass, began to grow more enlightened than its rider, and to show a disposition for what is called "self government." This restive propensity was first evinced in certain popular meetings, in which the burghers of New Amsterdam met to talk and smoke over the complicated affairs of the province, gradually obfuscating themselves with politics and tobacco-smoke. Hither resorted those idlers and squires of low degree who hang loose on society and are blown about by every wind of doctrine. Cobblers abandoned their stalls to give lessons on political economy; blacksmiths suffered their fires to go out while they stirred up the fires of faction; and even tailors, though said to be the ninth parts of humanity, neglected their own measures to criticize the measures of government.<sup>48</sup>

Strange! that the science of government, which seems to be so generally understood, should invariably be denied to the only one called upon to exercise it. Not one of the politicians in question, but, take his word for it, could have administered affairs ten times better than William the Testy.

Under the instructions of these political oracles the good people of New Amsterdam soon became exceedingly enlightened; and, as a matter of course, exceedingly discontented. They gradually found out the fearful error in which they had indulged, of thinking themselves the happiest people in creation; and were

<sup>48</sup> Irving's Federalism is here discernible in his satirization of the expedients of self-government, political societies, and beclouded democratic opinions which, in his Federalist mind, were associated with Jeffersonian democracy.

convinced that, all circumstances to the contrary notwithstanding, they were a very unhappy, deluded, and consequently ruined people!

We are naturally prone to discontent, and avacious after imaginary causes of lamentation. Like lubberly monks we belabor our own shoulders, and take a vast satisfaction in the music of our own groans. Nor is this said by way of paradox, daily experience shows the truth of these observations. It is almost impossible to elevate the spirits of a man 10 groaning under ideal calamities, but nothing is easier than to render him wretched, though on the pinnacle of felicity, as it would be an Herculean task to hoist a man to the top of a steeple, though the nearest child could topple him off thence.

I must not omit to mention that these popular meetings were generally held at some noted tavern, these public edifices possessing what in modern times are thought the true fountains of political inspiration. The ancient Greeks deliberated upon a matter when 20 drunk, and reconsidered it when sober. Mob politicians in modern times dislike to have two minds upon a subject, so they both deliberate and act when drunk; by this means a world of delay is spared; and as it is universally allowed that a man when drunk sees double, it follows conclusively that he sees twice as well as his sober neighbors.

#### CHAPTER VIII

Of the Edict of William the Testy Against Tobacco 30  
—of the Pipe Plot, and the Rise of Feuds and Parties

Wilhelmus Kieft, as has already been observed, was a great legislator on a small scale, and had a microscopic eye in public affairs. He had been greatly annoyed by the factious meeting of the good people of New Amsterdam, but, observing that on these occasions the pipe was ever in their mouth, he began to think that the pipe was at the bottom of the affair, and that there was some mysterious affinity between 40 politics and tobacco smoke. Determined to strike at the root of the evil, he began, forthwith, to rail at tobacco, as a noxious, nauseous weed; filthy in all its uses; and as to smoking he denounced it as a heavy tax upon the public pocket; a vast consumer of time, a great encourager of idleness, and a deadly bane to the prosperity and morals of the people. Finally he issued an edict, prohibiting the smoking of tobacco throughout the New Netherlands. Ill-fated Kieft! Had

he lived in the present age and attempted to check the unbounded license of the press, he could not have stuck more sorely upon the sensibilities of the million. The pipe, in fact, was the great organ of reflection and deliberation of the New Netherlander. It was his constant companion and solace—was he gay, he smoked, was he sad, he smoked, his pipe was never out of his mouth, it was a part of his physiognomy, without it his best friends would not know him. Take away his pipe? You might as well take away his nose!

The immediate effect of the edict of William the Testy was a popular commotion. A vast multitude armed with pipes and tobacco-boxes, and an immense supply of ammunition, sat themselves down before the governor's house, and fell to smoking with tremendous violence. The testy William issued forth like a wrathful spider, demanding the reason of this lawless fumigation. The sturdy rioters replied by 10 lolling back in their seats, and puffing away with redoubled fury, raising such a murky cloud that the governor was fain to take refuge in the interior of his castle.

A long negotiation ensued through the medium of Antony the Trumpeter. The governor was at first wrathful and unyielding, but was gradually smoked into terms. He concluded by permitting the smoking of tobacco, but he abolished the fair long pipes used in the days of Wouter Van Twiller, denoting ease, 30 tranquillity, and sobriety of deportment; these he condemned as incompatible with the despatch of business, in place whereof he substituted little capacious short pipes, two inches in length, which, he observed, could be stuck in one corner of the mouth, or twisted in the hat-band; and would never be in the way. Thus ended this alarming insurrection, which was long known by the name of The Pipe Plot, and which, it has been somewhat quaintly observed, did end, like most plots and seditions, in 40 mere smoke.

But mark, oh, reader! the deplorable evils which did afterwards result. The smoke of these villainous little pipes, continually ascending in a cloud about the nose, penetrated into and befogged the cerebellum; dried up all the kindly moisture of the brain, and rendered the people who used them as vaporish and testy as the governor himself. Nay, what is worse, from being goodly, burly, sleek-conditioned men, they became, like our Dutch yeomanry who smoke short

pipes, a lantern-jawed, smoke-dried, leathern-lidded race

Nor was this all. From this fatal schism in tobacco pipes we may date the rise of parties in the *Nieuw Nederlands*. The rich and self-important burghers who had made their fortunes, and could afford to be lazy, adhered to the ancient fashion, and formed a kind of aristocracy known as the *Long Pipes*, while the lower order, adopting the reform of William Kieft as more convenient in their handicraft employ-<sup>10</sup>ments, were branded with the plebeian name of *Short Pipes*.

A third party sprang up, headed by the descendants of Robert Chewit, the companion of the great Hudson. These discarded pipes altogether and took to chewing tobacco, hence they were called *Quids*, an appellation since given to those political mongrels, which sometimes spring up between two great parties, as a mule is produced between a horse and an ass.<sup>49</sup>

And here I would note the great benefit of party distinctions in saving the people at large the trouble of thinking. Hesiod divides mankind into three classes, those who think for themselves, those who think as others think, and those who do not think at all. The second class comprises the great mass of society; for most people require a set creed and a file-leader. Hence the origin of party which means a large body of people, some few of whom think, and all the rest talk. The former take the lead and discipline the latter, prescribing what they must say, what they must approve; what they must hoot at, whom they must support, but, above all, whom they must hate, for no one can be a right good partisan, who is not a thorough-going hater.

The enlightened inhabitants of the Manhattoes, therefore, being divided into parties, were enabled to hate each other with great accuracy. And now the great business of politics went bravely on, the long

pipes and short pipes assembling in separate beer-houses, and smoking at each other with implacable vehemence, to the great support of the state and profit of the tavern-keepers. Some, indeed, went so far as to bespatter their adversaries with those odorous little words which smell so strong in the Dutch language; believing, like true politicians, that they served their party, and glorified themselves in proportion as they bewrayed their neighbors. But, however they might differ among themselves, all parties agreed in abusing the governor, seeing that he was not a governor of their choice, but appointed by others to rule over them.

Unhappy William Kieft! exclaims the sage writer of the Stuyvesant manuscript, doomed to contend with enemies too knowing to be entrapped, and to reign over a people too wise to be governed. All his foreign expeditions were baffled and set at naught by the all-pervading Yankees, all his home measures<sup>20</sup> were canvassed and condemned by "numerous and respectable meetings" of pot-house politicians.

In the multitude of counsellors, we are told, there is safety; but the multitude of counsellors was a continual source of perplexity to William Kieft. With a temperament as hot as an old radish, and a mind subject to perpetual whirlwinds and tornadoes, he never failed to get into a passion with every one who undertook to advise him. I have observed, however, that your passionate little men, like small boats with large sails, are easily upset or blown out of their course; so was it with William the Testy, who was prone to be carried away by the last piece of advice blown into his ear. The consequence was, that, though a projector of the first class, yet, by continually changing his projects, he gave none a fair trial; and by endeavoring to do every thing, he in sober truth did nothing.

In the mean time, the sovereign people got into the saddle, showed themselves, as usual, unmerciful riders, spurring on the little governor with harangues and petitions, and thwarting him with memorials and reproaches, in much the same way as holy-day apprentices manage an unlucky devil of a hack-horse—so that Wilhelmus Kieft was kept at a worry or a gallop throughout the whole of his administration.

<sup>49</sup> Out of the "Pipe Plot" (possibly an expansion of the consequences of Kieft's tax on tobacco) grew the three political parties: the Long Pipes (Federalists), the Short Pipes (Anti-Federalists), and the Quids ("political mongrels"), the mob who follow blindly first one, then the other.

The entire episode of the Long and Short Pipes is, of course, an adaptation of Swift's Big- and Little-Endians in *Gulliver's Travels*.

FROM

*The Sketch Book*<sup>50</sup>The Author's Account of Himself<sup>51</sup>

*I am of this mind with Homer, that as the snail that crept out of her shell was turned ere-soon into a toad, and thereby was forced to make a stool to sit on, so the traveller that straggleth from his owne country is in a short time transformed into so monstrous a shape, that he is faine to alter his mansion with his manners, and to live where he cannot where he would.* LYL<sup>y</sup>'S EUPHUES.<sup>52</sup>

I was always fond of visiting new scenes, and observing strange characters and manners. Even when a mere child I began my travels, and made many tours of discovery into foreign parts and unknown regions of my native city, to the frequent alarm of my parents, and the emolument of the town-crier. As I grew into boyhood, I extended the range of my observations. My holiday afternoons were spent in rambles about the surrounding country. I made myself familiar with all its places famous in history or fable. I knew every spot where a murder or robbery had been committed, or a ghost seen. I visited the neighboring vallages, and added greatly to my stock of knowledge, by noting their habits and customs, and conversing with their sages and great men. I even journeyed one long summer's day to the summit of the most distant hill, whence I stretched my eye over many a mile of terra incognita,<sup>53</sup> and was astonished to find how vast a globe I inhabited.

This rambling propensity strengthened with my years. Books of voyages and travels became my passion, and in devouring their contents, I neglected the regular exercises of the school. How wistfully would I wander about the pier-heads in fine weather, and watch the parting ships, bound to distant climes—with what longing eyes would I gaze after their lessening sails, and waft myself in imagination to the ends of the earth!

Further reading and thinking, though they brought

<sup>50</sup> Published originally in seven installments, or numbers, at irregular intervals from May 15, 1819, to September 13, 1820, by C. S. Van Winkle of New York. The first four numbers were reissued, in England, in February, 1820, by John Miller. When Miller failed shortly after, John Murray was induced by Scott to undertake all future publications of the work.

<sup>51</sup> This, after a short "Prospectus," formed the first part of No. I.

<sup>52</sup> From *Euphues and His England* (1580), by John Lyly (1553?-1606).

<sup>53</sup> Unexplored or unknown region.

this vague inclination into more reasonable bounds, only served to make it more decided. I visited various parts of my own country; and had I been merely a lover of fine scenery, I should have felt little desire to seek elsewhere its gratification, for on no country have the charms of nature been more prodigally lavished. Her mighty lakes, like oceans of liquid silver, her mountains, with their bright aerial tints; her valleys, teeming with wild fertility, her tremendous cataracts, thundering in their solitudes; her boundless plains, waving with spontaneous verdure; her broad deep rivers, rolling in solemn silence to the ocean, her trackless forests, where vegetation puts forth all its magnificence, her skies, kindling with the magic of summer clouds and glorious sunshine,—no, never need an American look beyond his own country for the sublime and beautiful of natural scenery.

But Europe held forth the charms of storied and poetical association. There were to be seen the masterpieces of art, the refinements of highly-cultivated society, the quaint peculiarities of ancient and local custom. My native country was full of youthful promise: Europe was rich in the accumulated treasures of age. Her very ruins told the history of times gone by, and every mouldering stone was a chronicle. I longed to wander over the scenes of renowned achievement—to tread, as it were, in the footsteps of antiquity—to loiter about the ruined castle—to meditate on the falling tower—to escape, in short, from the commonplace realities of the present, and lose myself among the shadowy grandeurs of the past.

I had, beside all this, an earnest desire to see the great men of the earth. We have, it is true, our great men in America—not a city but has an ample share of them. I have mingled among them in my time, and been almost withered by the shade into which they cast me; for there is nothing so baleful to a small man as the shade of a great one, particularly the great man of a city. But I was anxious to see the great men of Europe; for I had read in the works of various philosophers, that all animals degenerated in America, and man among the number.<sup>54</sup> A great man of

<sup>54</sup> Several Europeans, among them the Comte de Buffon (1707-85) and Dr. Samuel Johnson (1709-84), had said as much.

Europe, thought I, must therefore be as superior to a great man of America, as a peak of the Alps to a highland of the Hudson, and in this idea I was confirmed, by observing the comparative importance and swelling magnitude of many English travellers among us, who, I was assured, were very little people in their own country. I will visit this land of wonders, thought I, and see the gigantic race from which I am degenerated.

It has been either my good or evil lot to have my 10 roving passion gratified. I have wandered through different countries, and witnessed many of the shifting scenes of life. I cannot say that I have studied them with the eye of a philosopher, but rather with the sauntering gaze with which humble lovers of the picturesque stroll from the window of one print-shop to another, caught sometimes by the delineations of beauty, sometimes by the distortions of caricature, and sometimes by the loveliness of landscape. As it is the fashion for modern tourists to travel pencil in 20 hand, and bring home their portfolios filled with sketches, I am disposed to get up a few for the entertainment of my friends. When, however, I look over the hints and memorandums I have taken down for the purpose, my heart almost fails me at finding how my idle humor has led me aside from the great objects studied by every regular traveller who would make a book. I fear I shall give equal disappointment with an unlucky landscape painter, who had travelled on the continent, but, following the bent of his 30 vagrant inclination, had sketched in nooks, and corners, and by-places. His sketch-book was accordingly crowded with cottages, and landscapes, and obscure ruins; but he had neglected to paint St. Peter's, or the Coliseum, the cascade of Terni,<sup>55</sup> or the bay of Naples; and had not a single glacier or volcano in his whole collection.

<sup>55</sup> Artificial waterfalls in the Apennines.

<sup>56</sup> In a note at the end of this story Irving wrote: "The foregoing tale, one would suspect, had been suggested to Mr. Knickerbocker by a little German superstition about the Emperor Frederick *der Rothbart*, and the Kypphauser [sic] mountain the subjoined note, however, which he had appended to the tale, shows that it is an absolute fact, narrated with his usual fidelity.

"The story of Rip Van Winkle may seem incredible to many, but nevertheless I give it my full belief, for I know the vicinity of our old Dutch settlements to have been very subject to marvellous events and appearances. Indeed, I have heard many stranger stories than this, in the villages along the Hudson; all of which were too well authenticated to admit of a doubt. I have even talked with Rip Van Winkle myself, who, when last I saw him, was a very venerable old man, and so perfectly rational and consistent on every other point, that I think no conscientious person could refuse to take this into the bargain; nay, I have

A POSTHUMOUS WRITING  
OF DIEDRICH KNICKERBOCKER

By Woden, God of Saxons,<sup>57</sup>

From whence comes Wensday, that is Wodensday

Truth is a thing that ever I will keep

Unto thylke day in which I creep into

My sepulchre—

CARTWRIGHT<sup>58</sup>

(The following Tale was found among the papers of the late Diedrich Knickerbocker, an old gentleman of New York, who was very curious in the Dutch history of the province, and the manners of the descendants from its primitive settlers. His historical researches, however, did not lie so much among books as among men, for the former are lamentably scanty on his favorite topics, whereas he found the old burghers, and still more their wives, rich in that legendary lore, so invaluable to true history. Whenever, therefore, he happened upon a genuine Dutch family, snugly shut up in its low-roofed farmhouse, under a spreading sycamore, he looked upon it as a little clasped volume of black-letter, and studied it with the zeal of a book-worm.

The result of all these researches was a history of the province during the reign of the Dutch governors, which he published some years since. There have been various opinions as to the literary character of his work, and, to tell the truth, it is not a whit better than it should be. Its chief merit is its scrupulous accuracy, which indeed was a little questioned on its first appearance, but has since been completely established; and it is now admitted into all historical collections, as a book of unquestionable authority.

The old gentleman died shortly after the publication of his work, and now that he is dead and gone, it cannot do much harm to his memory to say that his time might have been much better employed in weightier labors. He, however, was apt to ride his hobby his own way; and though it did now and then kick up the dust a little in the eyes of his neighbors, and grieve the spirit of some friends, for whom he felt the truest deference and affection, yet his

seen a certificate on the subject taken before a country justice and signed with a cross, in the justice's own handwriting. The story, therefore, is beyond the possibility of doubt. D.K." [Irving's note.]

This is obviously banter. But why Irving should misdirect the reader and refer to the story of Emperor Frederick the Redbeard is not clear, unless he tried to cover up his tracks. This tale is decidedly not the source of "Rip Van Winkle." However, the tale which immediately precedes it (in Otmar's collection of German tales, which Irving knew) is the story which he adapted and in some of its parts merely paraphrased. It is the story of Peter Klaus the Goatherd. This story Irving took over bodily, expanded, reinvested in a Knickerbocker locale, and substituted American characters; and the result is the first American short story. For the details of this adaptation, see Pochmann, Henry A., "Irving's German Sources in *The Sketch Book*," *Studies in Philology*, XXVII, ii (July, 1930), 477-507, notably 489-94, where relevant portions of the two tales are printed in parallel columns to indicate the extent of Irving's indebtedness.

<sup>57</sup> Teutonic god of storms and battles

<sup>58</sup> William Cartwright (1610-43), English poet.

errors and follies are remembered "more in sorrow than in anger," and it begins to be suspected, that he never intended to injure or offend. But however his memory may be appreciated by critics, it is still held dear by many folk, whose good opinion is well worth having, particularly by certain biscuit-bakers, who have gone so far as to imprint his likeness on their new-year cakes; and have thus given him a chance for immortality, almost equal to the being stamped on a Waterloo Medal,<sup>59</sup> or a Queen Anne's Farthing<sup>60</sup>.)

Whoever has made a voyage up the Hudson must remember the Kaatskill mountains. They are a dismembered branch of the great Appalachian family, and are seen away to the west of the river, swelling up to a noble height, and lording it over the surrounding country. Every change of season, every change of weather, indeed, every hour of the day, produces some change in the magical hues and shapes of these mountains, and they are regarded by all the good wives, far and near, as perfect barometers. When the weather is fair and settled, they are clothed in blue and purple, and print their bold outlines on the clear evening sky, but, sometimes, when the rest of the landscape is cloudless, they will gather a hood of gray vapors about their summits, which, in the last rays of the setting sun, will glow and light up like a crown of glory.

At the foot of these fairy mountains, the voyager may have descried the light smoke curling up from a village, whose shingle-roofs gleam among the trees, just where the blue tints of the upland melt away into the fresh green of the nearer landscape. It is a little village, of great antiquity, having been founded by some of the Dutch colonists, in the early times of the province, just about the beginning of the government of the good Peter Stuyvesant. (may he rest in peace!) and there were some of the houses of the original settlers standing within a few years, built of small yellow bricks brought from Holland, having latticed windows and gable fronts, surmounted with weather-cocks.

In that same village, and in one of these very houses (which, to tell the precise truth, was sadly time-worn and weather-beaten), there lived many years since, while the country was yet a province of Great Britain, a simple good-natured fellow, of the name of Rip Van Winkle. He was a descendant of

the Van Winkles who figured so gallantly in the chivalrous days of Peter Stuyvesant, and accompanied him to the siege of Fort Christina. He inherited, however, but little of the martial character of his ancestors. I have observed that he was a simple good-natured man; he was, moreover, a kind neighbor, and an obedient hen-pecked husband. Indeed, to the latter circumstance might be owing that meekness of spirit which gained him such universal popularity; for those men are most apt to be obsequious and conciliating abroad, who are under the discipline of shrews at home. Their tempers, doubtless, are rendered pliant and malleable in the fiery furnace of domestic tribulation, and a certain lecture is worth all the sermons in the world for teaching the virtues of patience and long-suffering. A termagant wife may, therefore, in some respects, be considered a tolerable blessing, and if so, Rip Van Winkle was thrice blessed.

Certain it is, that he was a great favorite among all the good wives of the village, who, as usual, with the amiable sex, took his part in all family squabbles; and never failed, whenever they talked those matters over in their evening gossipings, to lay all the blame on Dame Van Winkle. The children of the village, too, would shout with joy whenever he approached. He assisted at their sports, made their playthings, taught them to fly kites and shoot marbles, and told them long stories of ghosts, witches, and Indians. Whenever he went dodging about the village, he was surrounded by a troop of them, hanging on his skirts, clambering on his back, and playing a thousand tricks on him with impunity, and not a dog would bark at him throughout the neighborhood.

The great error in Rip's composition was an insuperable aversion to all kinds of profitable labor. It could not be from the want of assiduity or perseverance, for he would sit on a wet rock, with a rod as long and heavy as a Tartar's lance, and fish all day without a murmur, even though he should not be encouraged by a single nibble. He would carry a fowling-piece on his shoulder for hours together, trudging through woods and swamps, and up hill and down dale, to shoot a few squirrels or wild pigeons. He would never refuse to assist a neighbor even in the roughest toil, and was a foremost man at all country frolics for husking Indian corn, or building stone-fences; the women of the village, too, used to employ him to run their errands, and to do such little odd

<sup>59</sup> A medal struck off to commemorate the defeat of Napoleon on June 18, 1815.

<sup>60</sup> A copper coin minted during the reign of Queen Anne (1702-14).

jobs as their less obliging husbands would not do for them. In a word Rip was ready to attend to anybody's business but his own, but as to doing family duty, and keeping his farm in order, he found it impossible.

In fact, he declared it was of no use to work on his farm, it was the most pestilent little piece of ground in the whole country, every thing about it went wrong, and would go wrong, in spite of him. His fences were continually falling to pieces, his cow would either go astray, or get among the cabbages, weeds were sure to grow quicker in his fields than anywhere else, the rain always made a point of setting in just as he had some outdoor work to do, so that though his patrimonial estate had dwindled away under his management, acre by acre, until there was little more left than a mere patch of Indian corn and potatoes, yet it was the worst conditioned farm in the neighborhood.

His children, too, were as ragged and wild as if they belonged to nobody. His son Rip, an urchin begotten in his own likeness, promised to inherit the habits, with the old clothes of his father. He was generally seen trooping like a colt at his mother's heels, equipped in a pair of his father's cast-off galligaskins,<sup>61</sup> which he had much ado to hold up with one hand, as a fine lady does her train in bad weather.

Rip Van Winkle, however, was one of those happy mortals, of foolish, well-oiled dispositions, who take the world easy, eat white bread or brown, whichever can be got with least thought or trouble, and would rather starve on a penny than work for a pound. If left to himself, he would have whistled life away in perfect contentment, but his wife kept continually dinning in his ears about his idleness, his carelessness, and the ruin he was bringing on his family. Morning, noon, and night, her tongue was incessantly going, and every thing he said or did was sure to produce a torrent of household eloquence. Rip had but one way of replying to all lectures of the kind, and that, by frequent use, had grown into a habit. He shrugged his shoulders, shook his head, cast up his eyes, but said nothing. This, however, always provoked a fresh volley from his wife; so that he was fain to draw off his forces, and take to the outside of the house—the only side which, in truth, belongs to a hen-pecked husband.

<sup>61</sup> Loose or baggy trousers.

Rip's sole domestic adherent was his dog Wolf, who was as much hen-pecked as his master, for Dame Van Winkle regarded them as companions in idleness, and even looked upon Wolf with an evil eye, as the cause of his master's going so often astray. True it is, in all points of spirit befitting an honorable dog, he was as courageous an animal as ever scoured the woods—but what courage can withstand the enduring and all-besetting terrors of a woman's tongue? The moment Wolf entered the house his crest fell, his tail drooped to the ground, or curled between his legs, he sneaked about with a gallows air, casting many a sidelong glance at Dame Van Winkle, and at the least flourish of a broomstick or ladle, he would fly to the door with yelping precipitation.

Times grew worse and worse with Rip Van Winkle as years of matrimony rolled on, a tart temper never mellows with age, and a sharp tongue is the only edged tool that grows keener with constant use. For a long while he used to console himself, when driven from home, by frequenting a kind of perpetual club of the sages, philosophers, and other idle personages of the village, which held its sessions on a bench before a small inn, designated by a rubicund portrait of His Majesty George the Third. Here they used to sit in the shade through a long lazy summer's day, talking listlessly over village gossip, or telling endless sleepy stories about nothing. But it would have been worth any statesman's money to have heard the profound discussions that sometimes took place, when by chance an old newspaper fell into their hands from some passing traveller. How solemnly they would listen to the contents, as drawled out by Derrick Van Bummel, the schoolmaster, a dapper learned little man, who was not to be daunted by the most gigantic word in the dictionary; and how sagely they would deliberate upon public events some months after they had taken place.

The opinions of this junta were completely controlled by Nicholas Vedder, a patriarch of the village, and landlord of the inn, at the door of which he took his seat from morning till night, just moving sufficiently to avoid the sun and keep in the shade of a large tree, so that the neighbors could tell the hour by his movements as accurately as by a sun-dial. It is true he was rarely heard to speak, but smoked his pipe incessantly. His adherents, however (for every great man has his adherents), perfectly understood him, and knew how to gather his opinions. When

any thing that was read or related displeased him, he was observed to smoke his pipe vehemently, and to send forth short, frequent and angry puffs, but when pleased, he would inhale the smoke slowly and tranquilly, and emit it in light and placid clouds; and sometimes, taking the pipe from his mouth, and letting the fragrant vapor curl about his nose, would gravely nod his head in token of perfect approbation.

From even this stronghold the unlucky Rip was at length routed by his termagant wife, who would suddenly break in upon the tranquillity of the assemblage and call the members all to naught, nor was that august personage, Nicholas Vedder himself, sacred from the daring tongue of this terrible virago, who charged him outright with encouraging her husband in habits of idleness

Poor Rip was at last reduced almost to despair; and his only alternative, to escape from the labor of the farm and clamor of his wife, was to take gun in hand and stroll away into the woods. Here he would sometimes seat himself at the foot of a tree, and share the contents of his wallet with Wolf, with whom he sympathized as a fellow-sufferer in persecution. "Poor Wolf," he would say, "thy mistress leads thee a dog's life of it; but never mind, my lad, whilst I live thou shalt never want a friend to stand by thee!" Wolf would wag his tail, look wistfully in his master's face, and if dogs can feel pity I verily believe he reciprocated the sentiment with all his heart.

In a long ramble of the kind on a fine autumnal day, Rip had unconsciously scrambled to one of the highest parts of the Kaatskill mountains. He was after his favorite sport of squirrel shooting, and the still solitudes had echoed and re-echoed with the reports of his gun. Panting and fatigued, he threw himself, late in the afternoon, on a green knoll, covered with mountain herbage, that crowned the brow of a precipice. From an opening between the trees he could overlook all the lower country for many a mile of rich woodland. He saw at a distance the lordly Hudson, far, far below him, moving on its silent but majestic course, with the reflection of a purple cloud, or the sail of a lagging bark, here and there sleeping on its glassy bosom, and at last losing itself in the blue highlands.

On the other side he looked down into a deep mountain glen, wild, lonely, and shagged, the bottom filled with fragments from the impending cliffs, and scarcely lighted by the reflected rays of the setting

sun. For some time Rip lay musing on this scene, evening was gradually advancing, the mountains began to throw their long blue shadows over the valleys, he saw that it would be dark long before he could reach the village, and he heaved a heavy sigh when he thought of encountering the terrors of Dame Van Winkle.

As he was about to descend, he heard a voice from a distance, hallooing, "Rip Van Winkle! Rip Van Winkle!" He looked round, but could see nothing but a crow winging its solitary flight across the mountain. He thought his fancy must have deceived him, and turned again to descend, when he heard the same cry through the still evening air, "Rip Van Winkle! Rip Van Winkle!"—at the same time Wolf bristled up his back, and giving a low growl, skulked to his master's side, looking fearfully down into the glen. Rip now felt a vague apprehension stealing over him; he looked anxiously in the same direction, and perceived a strange figure slowly toiling up the rocks, and bending under the weight of something he carried on his back. He was surprised to see any human being in this lonely and unfrequented place, but supposing it to be some one of the neighborhood in need of his assistance, he hastened down to yield it.

On nearer approach he was still more surprised at the singularity of the stranger's appearance. He was a short square-built old fellow, with thick bushy hair, and a grizzled beard. His dress was of the antique Dutch fashion—a cloth jerkin stapped round the waist—several pair of breeches, the outer one of ample volume, decorated with rows of buttons down the sides, and bunches at the knees. He bore on his shoulder a stout keg, that seemed full of liquor, and made signs for Rip to approach and assist him with the load. Though rather shy and distrustful of this new acquaintance, Rip complied with his usual alacrity, and mutually relieving one another, they clambered up a narrow gully, apparently the dry bed of a mountain torrent. As they ascended, Rip every now and then heard long rolling peals, like distant thunder, that seemed to issue out of a deep ravine, or rather cleft, between lofty rocks, toward which their rugged path conducted. He paused for an instant, but supposing it to be the muttering of one of those transient thunder-showers which often take place in mountain heights, he proceeded. Passing through the ravine, they came to a hollow, like a small amphitheatre, surrounded by perpendicular precipices, over

the brinks of which impending trees shot their branches, so that you only caught glimpses of the azure sky and the bright evening cloud. During the whole time Rip and his companion had labored on in silence; for though the former marvelled greatly what could be the object of carrying a keg of liquor up this wild mountain, yet there was something strange and incomprehensible about the unknown, that inspired awe and checked familiarity.

On entering the amphitheatre, new objects of wonder presented themselves. On a level spot in the centre was a company of odd-looking personages playing at nine-pins. They were dressed in a quaint outlandish fashion, some wore short doublets, others jerkins, with long knives in their belts, and most of them had enormous breeches, of similar style with that of the guide's. Their visages, too, were peculiar: one had a large beard, broad face, and small piggish eyes: the face of another seemed to consist entirely of nose, and was surmounted by a white sugar-loaf hat, set off with a little red cock's tail. They all had beards, of various shapes and colors. There was one who seemed to be the commander. He was a stout old gentleman, with a weather-beaten countenance; he wore a laced doublet, broad belt and hanger, high crowned hat and feather, red stockings, and high-heeled shoes, with roses<sup>63</sup> in them. The whole group reminded Rip of the figures in an old Flemish painting, in the parlor of Dominie Van Shaick, the village parson, and which had been brought over from Holland at the time of the settlement.

What seemed particularly odd to Rip was, that though these folks were evidently amusing themselves, yet they maintained the gravest faces, the most mysterious silence, and were, withal, the most melancholy party of pleasure he had ever witnessed. Nothing interrupted the stillness of the scene but the noise of the balls, which, whenever they were rolled, echoed along the mountains like rumbling peals of thunder.

As Rip and his companion approached them, they suddenly desisted from their play, and stared at him with such fixed statue-like gaze, and such strange, uncouth, lack-lustre countenances, that his heart turned within him, and his knees smote together. His companion now emptied the contents of the keg into large flagons, and made signs to him to wait upon the company. He obeyed with fear and trem-

bling, they quaffed the liquor in profound silence, and then returned to their game.

By degrees Rip's awe and apprehension subsided. He even ventured, when no eye was fixed upon him, to taste the beverage, which he found had much of the flavor of excellent Hollands.<sup>64</sup> He was naturally a thirsty soul, and was soon tempted to repeat the draught. One taste provoked another, and he reiterated his visits to the flagon so often that at length his senses were overpowered, his eyes swam in his head, his head gradually declined, and he fell into a deep sleep.

On waking, he found himself on the green knoll whence he had first seen the old man of the glen. He rubbed his eyes—it was a bright sunny morning. The birds were hopping and twittering among the bushes, and the eagle was wheeling aloft, and breasting the pure mountain breeze. "Surely," thought Rip, "I have not slept here all night." He recalled the occurrences before he fell asleep. The strange man with a keg of liquor—the mountain ravine—the wild retreat among the rocks—the wobegone party at nine-pins—the flagon—"Oh! that flagon! that wicked flagon!" thought Rip—"what excuse shall I make to Dame Van Winkle!"

He looked round for his gun, but in place of the clean well-oiled fowling-piece, he found an old fire-lock lying by him, the barrel incrustated with rust, the lock falling off, and the stock worm-eaten. He now suspected that the grave roysters<sup>64</sup> of the mountain had put a trick upon him, and, having dosed him with liquor, had robbed him of his gun. Wolf, too, had disappeared, but he might have strayed away after a squirrel or partridge. He whistled after him and shouted his name, but all in vain; the echoes repeated his whistle and shout, but no dog was to be seen.

He determined to revisit the scene of the last evening's gambol, and if he met with any of the party, to demand his dog and gun. As he rose to walk, he found himself stiff in the joints, and wanting in his usual activity. "These mountain beds do not agree with me," thought Rip, "and if this frolic should lay me up with a fit of the rheumatism, I shall have a blessed time with Dame Van Winkle." With some difficulty he got down into the glen: he found the gully up which he and his companion had ascended

<sup>63</sup> Dutch gin.

<sup>64</sup> Roisterers or revelers.

<sup>62</sup> Rosettes.

the preceding evening, but to his astonishment a mountain stream was now foaming down it, leaping from rock to rock, and filling the glen with babbling murmurs. He, however, made shift to scramble up its sides, working his toilsome way through thickets of birch, sassafras, and witch-hazel, and sometimes tripped up or entangled by the wild grapevines that twisted their coils or tendrils from tree to tree, and spread a kind of network in his path.

At length he reached to where the ravine had opened through the cliffs to the amphitheatre; but no traces of such opening remained. The rocks presented a high impenetrable wall over which the torrent came tumbling in a sheet of feathery foam, and fell into a broad deep basin, black from the shadows of the surrounding forest. Here, then, poor Rip was brought to a stand. He again called and whistled after his dog, he was only answered by the cawing of a flock of idle crows, sporting high in air about a dry tree that overhung a sunny precipice, and who, secure in their elevation, seemed to look down and scoff at the poor man's perplexities. What was to be done? the morning was passing away, and Rip felt famished for want of his breakfast. He grieved to give up his dog and gun; he dreaded to meet his wife; but it would not do to starve among the mountains. He shook his head, shouldered the rusty firelock, and, with a heart full of trouble and anxiety, turned his steps homeward.

As he approached the village he met a number of people, but none whom he knew, which somewhat surprised him, for he had thought himself acquainted with every one in the country round. Their dress, too, was of a different fashion from that to which he was accustomed. They all stared at him with equal marks of surprise, and whenever they cast their eyes upon him, invariably stroked their chins. The constant recurrence of this gesture induced Rip, involuntarily, to do the same, when, to his astonishment, he found his beard had grown a foot long!

He had now entered the skirts of the village. A troop of strange children ran at his heels, hooting after him, and pointing at his gray beard. The dogs, too, not one of which he recognized for an old acquaintance, barked at him as he passed. The very village was altered; it was larger and more populous. There were rows of houses which he had never seen before, and those which had been his familiar haunts had disappeared. Strange names were over the doors

—strange faces at the windows—every thing was strange. His mind now misgave him, he began to doubt whether both he and the world around him were not bewitched. Surely this was his native village, which he had left but the day before. There stood the Kaatskill mountains—there ran the silver Hudson at a distance—there was every hill and dale precisely as it had always been—Rip was sorely perplexed—"That flagon last night," thought he, "has addled my poor head sadly!"

It was with some difficulty that he found the way to his own house, which he approached with silent awe, expecting every moment to hear the shrill voice of Dame Van Winkle. He found the house gone to decay—the roof fallen in, the windows shattered, and the doors off the hinges. A half-starved dog that looked like Wolf was skulking about it. Rip called him by name, but the cur snarled, showed his teeth, and passed on. This was an unkind cut indeed—"My very dog," sighed poor Rip, "has forgotten me!"

He entered the house, which, to tell the truth, Dame Van Winkle had always kept in neat order. It was empty, forlorn, and apparently abandoned. This desolateness overcame all his connubial fears—he called loudly for his wife and children—the lonely chambers rang for a moment with his voice, and then all again was silence.

He now hurried forth, and hastened to his old resort, the village inn—but it too was gone. A large rickety wooden building stood in its place, with great gaping windows, some of them broken and mended with old hats and petticoats, and over the door was painted, "the Union Hotel, by Jonathan Doolittle." Instead of the great tree that used to shelter the quiet little Dutch inn of yore, there now was reared a tall naked pole, with something on the top that looked like a red night-cap, and from it was fluttering a flag, on which was a singular assemblage of stars and stripes—all this was strange and incomprehensible. He recognized on the sign, however, the ruby face of King George, under which he had smoked so many a peaceful pipe; but even this was singularly metamorphosed. The red coat was changed for one of blue and buff, a sword was held in the hand instead of a sceptre, the head was decorated with a cocked hat, and underneath was painted in large characters, GENERAL WASHINGTON.

There was, as usual, a crowd of folk about the door, but none that Rip recollected. The very character of

the people seemed changed. There was a busy, bustling, disputatious tone about it, instead of the accustomed phlegm and drowsy tranquillity. He looked in vain for the sage Nicholas Vedder, with his broad face, double chin, and fair long pipe, uttering clouds of tobacco-smoke instead of idle speeches, or Van Bummel, the schoolmaster, doling forth the contents of an ancient newspaper. In place of these, a lean, bilious-looking fellow, with his pockets full of handbills, was haranguing vehemently about rights of citizens—elections—members of congress—liberty—Bunker's Hill—heroes of seventy-six—and other words, which were a perfect Babylonish jargon<sup>65</sup> to the bewildered Van Winkle.

The appearance of Rip, with his long grizzled beard, his rusty fowling-piece, his uncouth dress, and an army of women and children at his heels, soon attracted the attention of the tavern politicians. They crowded round him, eyeing him from head to foot with great curiosity. The orator bustled up to him, and, drawing him partly aside, inquired "on which side he voted?" Rip stared in vacant stupidity. Another short but busy little fellow pulled him by the arm, and, rising on tiptoe, inquired in his ear, "Whether he was Federal or Democrat?" Rip was equally at a loss to comprehend the question, when a knowing, self-important old gentleman, in a sharp cocked hat, made his way through the crowd, putting them to the right and left with his elbows as he passed, and planting himself before Van Winkle, with one arm akimbo, the other resting on his cane, his keen eyes and sharp hat penetrating, as it were, into his very soul, demanded in an austere tone, "what brought him to the election with a gun on his shoulder, and a mob at his heels, and whether he meant to breed a riot in the village?"—"Alas! gentlemen," cried Rip, somewhat dismayed, "I am a poor quiet man, a native of the place, and a loyal subject of the king, God bless him!"

Here a general shout burst from the by-standers—<sup>40</sup> "A tory! a tory! a spy! a refugee! hustle him! away with him!" It was with great difficulty that the self-important man in the cocked hat restored order; and, having assumed a tenfold austerity of brow, demanded again of the unknown culprit, what he came there for, and whom he was seeking? The poor man humbly assured him that he meant no harm, but

<sup>65</sup> An allusion to the confusion of tongues, Genesis 11:1-9; unintelligible jargon.

merely came there in search of some of his neighbors, who used to keep about the tavern.

"Well—who are they?—name them."

Rip bethought himself a moment, and inquired, "Where's Nicholas Vedder?"

There was a silence for a little while, when an old man replied, in a thin piping voice, "Nicholas Vedder! why, he is dead and gone these eighteen years! There was a wooden tombstone in the church-yard that used to tell all about him, but that's rotten and gone too."

"Where's Brom Dutcher?"

"Oh, he went off to the army in the beginning of the war; some say he was killed at the storming of Stony Point—others say he was drowned in a squall at the foot of Antony's Nose. I don't know—he never came back again."

"Where's Van Bummel, the schoolmaster?"

"He went off to the wars too, was a great militia general, and is now in congress."

Rip's heart died away at hearing of these sad changes in his home and friends, and finding himself thus alone in the world. Every answer puzzled him too, by treating of such enormous lapses of time, and of matters which he could not understand. war—congress—Stony Point,—he had no courage to ask after any more friends, but cried out in despair, "Does nobody here know Rip Van Winkle?"

"Oh, Rip Van Winkle!" exclaimed two or three, "Oh, to be sure! that's Rip Van Winkle yonder, leaning against the tree."

Rip looked, and beheld a precise counterpart of himself, as he went up the mountain: apparently as lazy, and certainly as ragged. The poor fellow was now completely confounded. He doubted his own identity, and whether he was himself or another man. In the midst of his bewilderment, the man in the cocked hat demanded who he was, and what was his name?

"God knows," exclaimed he, at his wit's end; "I'm not myself—I'm somebody else—that's me yonder—no—that's somebody else got into my shoes—I was myself last night, but I fell asleep on the mountain, and they've changed my gun, and every thing's changed, and I'm changed, and I can't tell what's my name, or who I am!"

The by-standers began now to look at each other, nod, wink significantly, and tap their fingers against their foreheads. There was a whisper, also, about

securing the gun, and keeping the old fellow from doing mischief, at the very suggestion of which the self-important man in the cocked hat retired with some precipitation. At this critical moment a fresh comely woman pressed through the throng to get a peep at the gray-bearded man. She had a chubby child in her arms, which, frightened at his looks, began to cry. "Hush, Rip," cried she, "hush, you little fool, the old man won't hurt you." The name of the child, the air of the mother, the tone of her voice, all awakened a train of recollections in his mind. "What is your name, my good woman?" asked he.

"Judith Gardenier."

"And your father's name?"

"Ah, poor man, Rip Van Winkle was his name, but it's twenty years since he went away from home with his gun, and never has been heard of since—his dog came home without him, but whether he shot himself, or was carried away by the Indians, nobody can tell. I was then but a little girl."

Rip had but one question more to ask, but he put it with a faltering voice.

"Where's your mother?"

"Oh, she too had died but a short time since; she broke a blood-vessel in a fit of passion at a New-England peddler."

There was a drop of comfort, at least, in this intelligence. The honest man could contain himself no longer. He caught his daughter and her child in his arms. "I am your father!" cried he—"Young Rip Van Winkle once—old Rip Van Winkle now!—Does nobody know poor Rip Van Winkle?"

All stood amazed, until an old woman, tottering out from among the crowd, put her hand to her brow, and peering under it in his face for a moment, exclaimed, "Sure enough! it is Rip Van Winkle—it is himself! Welcome home again, old neighbor—Why, where have you been these twenty long years?"

Rip's story was soon told, for the whole twenty years had been to him but as one night. The neighbors stared when they heard it; some were seen to wink at each other, and put their tongues in their cheeks; and the self-important man in the cocked hat, who, when the alarm was over, had returned to the field, screwed down the corners of his mouth, and shook his head—upon which there was a general shaking of the head throughout the assemblage.

It was determined, however, to take the opinion

of old Peter Vanderdonk, who was seen slowly advancing up the road. He was a descendant of the historian<sup>66</sup> of that name, who wrote one of the earliest accounts of the province. Peter was the most ancient inhabitant of the village, and well versed in all the wonderful events and traditions of the neighborhood. He recollected Rip at once, and corroborated his story in the most satisfactory manner. He assured the company that it was a fact, handed down from his ancestor the historian, that the Kaatskill mountains had always been haunted by strange beings. That it was affirmed that the great Hendrick Hudson, the first discoverer of the river and country, kept a kind of vigil there every twenty years, with his crew of the Half-moon, being permitted in this way to revisit the scenes of his enterprise, and keep a guardian eye upon the river, and the great city called by his name.<sup>67</sup> That his father had once seen them in their old Dutch dresses playing at nine-pins in a hollow of the mountain, and that he himself had heard, one summer afternoon, the sound of their balls, like distant peals of thunder.

To make a long story short, the company broke up, and returned to the more important concerns of the election. Rip's daughter took him home to live with her, she had a snug, well-furnished house, and a stout cheery farmer for a husband, whom Rip recollected for one of the urchins that used to climb upon his back. As to Rip's son and heir, who was the ditto of himself, seen leaning against the tree, he was employed to work on the farm, but evinced an hereditary disposition to attend to any thing else but his business.

Rip now resumed his old walks and habits; he soon found many of his former cronies, though all rather the worse for the wear and tear of time, and preferred making friends among the rising generation, with whom he soon grew into great favor.

Having nothing to do at home, and being arrived at that happy age when a man can be idle with impunity, he took his place once more on the bench at the inn door, and was revered as one of the patriarchs of the village, and a chronicle of the old times "before the war." It was some time before he

<sup>66</sup> Adriaen Van der Donck (1620–55?), author of a description of New Netherland, published in Amsterdam in 1655.

<sup>67</sup> The town of Hudson, on the east bank of the river, across from the Catskills, was a busy shipping center in Irving's time. Henry Hudson, erroneously called Hendrick (?–1611), sailed up the river in 1609.

could get into the regular track of gossip, or could be made to comprehend the strange events that had taken place during his torpor. How that there had been a revolutionary war—that the country had thrown off the yoke of old England—and that, instead of being a subject of His Majesty George the Third, he was now a free citizen of the United States. Rip, in fact, was no politician, the changes of states and empires made but little impression on him; but there was one species of despotism under which he 10 had long groaned, and that was—petticoat government. Happily that was at an end; he had got his neck out of the yoke of matrimony, and could go in and out whenever he pleased, without dreading the tyranny of Dame Van Winkle. Whenever her name was mentioned, however, he shook his head, shrugged his shoulders, and cast up his eyes, which might pass either for an expression of resignation to his fate, or joy at his deliverance.

He used to tell his story to every stranger that 20 arrived at Mr. Doolittle's hotel. He was observed, at first, to vary on some points every time he told it, which was, doubtless, owing to his having so recently awaked. It at last settled down precisely to the tale I have related, and not a man, woman, or child in the neighborhood, but knew it by heart. Some always pretended to doubt the reality of it, and insisted that Rip had been out of his head, and that this was one point on which he always remained flighty. The old Dutch inhabitants, however, almost universally gave 30 it full credit. Even to this day they never hear a thunderstorm of a summer afternoon about the Kaatskill, but they say Hendrick Hudson and his crew are at their game of nine-pins; and it is a common wish of all hen-pecked husbands in the neighborhood, when life hangs heavy on their hands, that they might have a quieting draught out of Rip Van Winkle's flagon.

### English Writers on America

*Methinks I see in my mind a noble and puissant nation, rousing herself like a strong man after sleep, and shaking her invisible locks. methinks I see her as an eagle, mewing her mighty youth, and kindling her endazzled eyes at the full mid-day beam.* MILTON ON THE LIBERTY OF THE PRESS.<sup>68</sup>

It is with feelings of deep regret that I observe the literary animosity daily growing up between England and America. Great curiosity has been awakened of

late with respect to the United States, and the London press has teemed with volumes of travels through the Republic, but they seem intended to diffuse error rather than knowledge, and so successful have they been, that, notwithstanding the constant intercourse between the nations, there is no people concerning whom the great mass of the British public have less pure information, or entertain more numerous prejudices.

English travellers are the best and the worst in the world. Where no motives of pride or interest intervene, none can equal them for profound and philosophical views of society, or faithful and graphical descriptions of external objects, but when either the interest or reputation of their own country comes in collision with that of another, they go to the opposite extreme, and forget their usual probity and candor in the indulgence of splenetic remark and an illiberal spirit of ridicule.

Hence, their travels are more honest and accurate, the more remote the country described. I would place implicit confidence in an Englishman's descriptions of the regions beyond the cataracts of the Nile, of unknown islands in the Yellow Sea; of the interior of India, or of any other tract which other travellers might be apt to picture out with the illusions of their fancies; but I would cautiously receive his account of his immediate neighbors and of those nations with which he is in habits of most frequent intercourse. However I might be disposed to trust his probity, I dare not trust his prejudices.

It has also been the peculiar lot of our country to be visited by the worst kind of English travellers. While men of philosophical spirit and cultivated minds have been sent from England to ransack the poles, to penetrate the deserts, and to study the manners and customs of barbarous nations, with which she can have no permanent intercourse of profit or pleasure; it has been left to the broken-down 40 tradesman, the scheming adventurer, the wandering mechanic, the Manchester and Birmingham agent, to be her oracles respecting America. From such sources she is content to receive her information respecting a country in a singular state of moral and physical development; a country in which one of the greatest political experiments in the history of the world is now performing, and which presents the most profound and momentous studies to the statesman and philosopher.

<sup>68</sup> From Milton's *Areopagitica*, published in 1644.

That such men should give prejudiced accounts of America is not a matter of surprise. The themes it offers for contemplation are too vast and elevated for their capacities. The national character is yet in a state of fermentation: it may have its frothiness and sediment, but its ingredients are sound and wholesome. It has already given proofs of powerful and generous qualities; and the whole promises to settle down into something substantially excellent. But the causes which are operating to strengthen and ennoble it, and its daily indications of admirable properties, are all lost upon these purblind observers, who are only affected by the little asperities incident to its present situation. They are capable of judging only of the surface of things, of those matters which come in contact with their private interests and personal gratifications. They miss some of the snug conveniences and petty comforts which belong to an old, highly finished, and overpopulous state of society, where the ranks of useful labor are crowded, and many earn a painful and servile subsistence by studying the very caprices of appetite and self-indulgence. These minor comforts, however, are all-important in the estimation of narrow minds, which either do not perceive, or will not acknowledge, that they are more than counterbalanced among us by great and generally diffused blessings.

They may, perhaps, have been disappointed in some unreasonable expectation of sudden gain. They may have pictured America to themselves an *El Dorado*, where gold and silver abounded, and the natives were lacking in sagacity; and where they were to become strangely and suddenly rich, in some unforeseen but easy manner. The same weakness of mind that indulges absurd expectations produces petulance in disappointment. Such persons become embittered against the country on finding that there, as everywhere else, a man must sow before he can reap; must win wealth by industry and talent; and must contend with the common difficulties of nature and the shrewdness of an intelligent and enterprising people.

Perhaps, through mistaken, or ill-directed hospitality, or from the prompt disposition to cheer and countenance the stranger, prevalent among my countrymen, they may have been treated with unwonted respect in America, and having been accustomed all their lives to consider themselves below the surface of good society, and brought up in a servile feeling

of inferiority, they become arrogant on the common boon of civility: they attribute to the lowliness of others their own elevation, and underrate a society where there are no artificial distinctions, and where, by any chance, such individuals as themselves can rise to consequence.

One would suppose, however, that information coming from such sources, on a subject where the truth is so desirable, would be received with caution by the censors of the press, that the motives of these men, their veracity, their opportunities of inquiry and observation, and their capacities for judging correctly, would be rigorously scrutinized before their evidence was admitted, in such sweeping extent, against a kindred nation. The very reverse, however, is the case, and it furnishes a striking instance of human inconsistency. Nothing can surpass the vigilance with which English critics will examine the credibility of the traveller who publishes an account of some distant, and comparatively unimportant country. How warily will they compare the measurements of a pyramid or the descriptions of a ruin; and how sternly will they censure any inaccuracy in these contributions of merely curious knowledge: while they will receive, with eagerness and unhesitating faith, the gross misrepresentations of coarse and obscure writers concerning a country with which their own is placed in the most important and delicate relations. Nay, they will even make these apocryphal volumes textbooks, on which to enlarge with a zeal and an ability worthy of a more generous cause.

I shall not, however, dwell on this irksome and hackneyed topic; nor should I have adverted to it, but for the undue interest apparently taken in it by my countrymen, and certain injurious effects which I apprehend it might produce upon the national feeling. We attach too much consequence to these attacks. They cannot do us any essential injury. The tissue of misrepresentations attempted to be woven round us are like cobwebs woven round the limbs of an infant giant. Our country continually outgrows them. One falsehood after another falls off of itself. We have but to live on, and every day we live a whole volume of refutation. All the writers of England united, if we could for a moment suppose their great minds stooping to so unworthy a combination, could not conceal our rapidly growing importance and matchless prosperity. They could not conceal that these are owing, not merely to physical

and local, but also to moral causes—to the political liberty, the general diffusion of knowledge, the prevalence of sound, moral, and religious principles which give force and sustained energy to the character of a people; and which, in fact, have been the acknowledged and wonderful supporters of their own national power, and glory

But why are we so exquisitely alive to the aspersions of England? Why do we suffer ourselves to be so affected by the contumely she has endeavored to cast upon us? It is not in the opinion of England alone that honor lives, and reputation has its being. The world at large is the arbiter of a nation's fame, with its thousand eyes it witnesses a nation's deeds, and from their collective testimony is national glory or national disgrace established

For ourselves, therefore, it is comparatively of but little importance whether England does us justice or not; it is, perhaps, of far more importance to herself. She is instilling anger and resentment into the bosom of a youthful nation, to grow with its growth, and strengthen with its strength. If in America, as some of her writers are laboring to convince her, she is hereafter to find an invidious rival and a gigantic foe, she may thank those very writers for having provoked rivalry and irritated hostility. Everyone knows the all-pervading influence of literature at the present day, and how much the opinions and passions of mankind are under its control. The mere contests of the sword are temporary, their wounds are but in the flesh, and it is the pride of the generous to forgive and forget them; but the slanders of the pen pierce to the heart; they rankle longest in the noblest spirits; they dwell ever present in the mind, and render it morbidly sensitive to the most trifling collision. It is but seldom that any one overt act produces hostilities between two nations; there exists, most commonly, a previous jealousy and ill-will, a predisposition to take offense. Trace these to their cause, and how often will they be found to originate in the mischievous effusions of mercenary writers, who, secure in their closets, and for ignominious bread, concoct and circulate the venom that is to inflame the generous and the brave.

I am not laying too much stress upon this point, for it applies most emphatically to our particular case. Over no nation does the press hold a more absolute control than over the people of America, for the universal education of the poorest classes makes every

individual a reader. There is nothing published in England on the subject of our country, that does not circulate through every part of it. There is not a calumny dropped from an English pen, nor an unworthy sarcasm uttered by an English statesman, that does not go to blight good will and add to the mass of latent resentment. Possessing, then, as England does, the fountain-head from whence the literature of the language flows, how completely is it in her power, and how truly is it her duty, to make it the medium of amiable and magnanimous feeling—a stream where two nations meet together and drink in peace and kindness. Should she, however, persist in turning it to waters of bitterness, the time may come when she may repent her folly. The present friendship of America may be of but little moment to her, but the future destinies of that country do not admit of a doubt, over those of England, there lower some shadows of uncertainty. Should, then, a day of gloom arrive—should these reverses overtake her from which the proudest empires have not been exempt—she may look back with regret at her infatuation in repulsing from her side a nation she might have grappled to her bosom, and thus destroying her only chance for real friendship beyond the boundaries of her own dominions.

There is a general impression in England that the people of the United States are inimical to the parent country. It is one of the errors which have been diligently propagated by designing writers. There is, doubtless, considerable political hostility, and a general soreness at the illiberality of the English press, but, collectively speaking, the prepossessions of the people are strongly in favor of England. Indeed, at one time they amounted, in many parts of the Union, to an absurd degree of bigotry. The bare name of Englishman was a passport to the confidence and hospitality of every family, and too often gave a transient currency to the worthless and the ungrateful. Throughout the country there was something of enthusiasm connected with the idea of England. We looked to it with a hallowed feeling of tenderness and veneration, as the land of our forefathers—the august repository of the monuments and antiquities of our race—the birthplace and mausoleum of the sages and heroes of our paternal history. After our own country, there was none in whose glory we more delighted—none whose good opinion we were more anxious to possess—none towards which our

hearts yearned with such throbbings of warm consanguinity. Even during the late war, whenever there was the least opportunity for kind feelings to spring forth, it was the delight of the generous spirits of our country to show that, in the midst of hostilities, they still kept alive the sparks of future friendship.

Is all this to be at an end? Is this golden band of kindred sympathies, so rare between nations, to be broken for ever?—Perhaps it is for the best—it may dispel an illusion which might have kept us in mental vassalage, which might have interfered occasionally with our true interests, and prevented the growth of proper national pride. But it is hard to give up the kindred tie! and there are feelings dearer than interest—closer to the heart than pride—that will still make us cast back a look of regret, as we wander farther and farther from the paternal roof, and lament the waywardness of the parent that would repel the affections of the child.

Shortsighted and injudicious, however, as the conduct of England may be in this system of aspersion, recrimination on our part would be equally ill-judged. I speak not of a prompt and spirited vindication of our country nor the keenest castigation of her slanderers—but I allude to a disposition to retaliate in kind; to retort sarcasm and inspire prejudice, which seems to be growing widely among our writers. Let us guard particularly against such a temper, for it will redouble the evil instead of redressing the wrong. Nothing is so easy and inviting as the retort of abuse and sarcasm; but it is a paltry and unprofitable contest. It is the alternative of a morbid mind, fretted into petulance rather than warmed into indignation. If England is willing to permit the mean jealousies of trade or the rancorous animosities of politics to deprave the integrity of her press and poison the fountain of public opinion, let us beware of her example. She may deem it her interest to diffuse error and engender antipathy, for the purpose of checking emigration; we have no purpose of the kind to serve. Neither have we any spirit of national jealousy to gratify; for as yet, in all our rivalships with England, we are the rising and the gaining party. There can be no end to answer, therefore, but the gratification of resentment—a mere spirit of retaliation; and even that is impotent. Our retorts are never republished in England, they fall short, therefore, of their aim; but they foster a querulous and peevish temper among our writers, they sour the sweet flow of our early litera-

ture and sow thorns and brambles among its blossoms. What is still worse, they circulate through our own country, and, as far as they have effect, excite virulent national prejudices. This last is the evil most especially to be deprecated. Governed, as we are, entirely by public opinion, the utmost care should be taken to preserve the purity of the public mind. Knowledge is power, and truth is knowledge; whoever, therefore, knowingly propagates a prejudice willfully saps the foundation of his country's strength.

The members of a republic, above all other men, should be candid and dispassionate. They are, individually, portions of the sovereign mind and sovereign will, and should be enabled to come to all questions of national concern with calm and unbiased judgments. From the peculiar nature of our relations with England, we must have more frequent questions of a difficult and delicate character with her than with any other nation—questions that affect the most acute and excitable feelings, and as, in the adjusting of these, our national measures must ultimately be determined by popular sentiment, we cannot be too anxiously attentive to purify it from all latent passion or prepossession.

Opening, too, as we do, an asylum for strangers from every portion of the earth, we should receive all with impartiality. It should be our pride to exhibit an example of one nation, at least, destitute of national antipathies and exercising not merely the overt acts of hospitality, but those more rare and noble courtesies which spring from liberality of opinion.

What have we to do with national prejudices? They are the inveterate diseases of old countries, contracted in rude and ignorant ages, when nations knew but little of each other, and looked beyond their own boundaries with distrust and hostility. We, on the contrary, have sprung into national existence in an enlightened and philosophic age, when the different parts of the habitable world and the various branches of the human family have been indefatigably studied and made known to each other; and we forego the advantages of our birth if we do not shake off the national prejudices, as we would the local superstitions, of the old world.

But above all let us not be influenced by any angry feelings so far as to shut our eyes to the perception of what is really excellent and amiable in the English character. We are a young people, necessarily an imitative one, and must take our examples and

models, in a great degree, from the existing nations of Europe. There is no country more worthy of our study than England. The spirit of her constitution is most analogous to ours. The manners of her people—their intellectual activity—their freedom of opinion—their habits of thinking on those subjects which concern the dearest interests and most sacred charities of private life, are all congenial to the American character, and, in fact, are all intrinsically excellent; for it is in the moral feeling of the people that the deep foundations of British prosperity are laid, and however the superstructure may be timeworn or overrun by abuses, there must be something solid in the basis, admirable in the materials, and stable in the structure of an edifice that so long has towered unshaken amidst the tempests of the world.

Let it be the pride of our writers, therefore, discarding all feelings of irritation, and disdaining to retaliate the illiberality of British authors, to speak of the English nation without prejudice and with determined candor. While they rebuke the indiscriminating bigotry with which some of our countrymen admire and imitate everything English, merely because it is English, let them frankly point out what is really worthy of approbation. We may thus place England before us as a perpetual volume of reference, wherein are recorded sound deductions from ages of experience; and while we avoid the errors and absurdities which may have crept into the page, we may draw thence golden maxims of practical wisdom, wherewith to strengthen and to embellish our national character.

1820

### *Rural Life in England*

*Oh! friendly to the best pursuits of man,  
Friendly to thought, to virtue, and to peace,  
Domestic life in rural pleasures past!*

COWPER

The stranger who would form a correct opinion of the English character must not confine his observations to the metropolis. He must go forth into the country, he must sojourn in villages and hamlets, he must visit castles, villas, farm-houses, cottages; he must wander through parks and gardens; along hedges and green lanes; he must loiter about country churches; attend wakes and fairs, and other rural festivals; and cope with the people in all their conditions, and all their habits and humors.

In some countries the large cities absorb the wealth and fashion of the nation; they are the only fixed abodes of elegant and intelligent society, and the country is inhabited almost entirely by boorish peasantry. In England, on the contrary, the metropolis is a mere gathering-place, or general rendezvous, of the polite classes, where they devote a small portion of the year to a hurry of gayety and dissipation, and, having indulged this kind of carnival, return again to the apparently more congenial habits of rural life. The various orders of society are therefore diffused over the whole surface of the kingdom, and the most retired neighborhoods afford specimens of the different ranks.

The English, in fact, are strongly gifted with the rural feeling. They possess a quick sensibility to the beauties of nature, and a keen relish for the pleasures and employments of the country. This passion seems inherent in them. Even the inhabitants of cities, born and brought up among brick walls and bustling streets, enter with facility into rural habits, and evince a tact for rural occupation. The merchant has his snug retreat in the vicinity of the metropolis, where he often displays as much pride and zeal in the cultivation of his flower-garden, and the maturing of his fruits, as he does in the conduct of his business, and the success of a commercial enterprise. Even those less fortunate individuals, who are doomed to pass their lives in the midst of din and traffic, contrive to have something that shall remind them of the green aspect of nature. In the most dark and dingy quarters of the city, the drawing-room window resembles frequently a bank of flowers, every spot capable of vegetation has its grass-plot and flower-bed; and every square its mimic park, laid out with picturesque taste, and gleaming with refreshing verdure.

Those who see the Englishman only in town are apt to form an unfavorable opinion of his social character. He is either absorbed in business, or distracted by the thousand engagements that dissipate time, thought, and feeling, in this huge metropolis. He has, therefore, too commonly a look of hurry and abstraction. Wherever he happens to be, he is on the point of going somewhere else; at the moment he is talking on one subject, his mind is wandering to another; and while paying a friendly visit, he is calculating how he shall economize time so as to pay the other visits allotted in the morning. An immense metropolis, like London, is calculated to make men selfish and unin-

teresting. In their casual and transient meetings, they can but deal briefly in commonplaces. They present but the cold superficialities of character—its rich and genial qualities have no time to be warmed into a flow.

It is in the country that the Englishman gives scope to his natural feelings. He breaks loose gladly from the cold formalities and negative civilities of town, throws off his habits of shy reserve, and becomes joyous and free-hearted. He manages to collect 10 round him all the conveniences and elegancies of polite life, and to banish its restraints. His country-seat abounds with every requisite, either for studious retirement, tasteful gratification, or rural exercise. Books, paintings, music, horses, dogs, and sporting implements of all kinds, are at hand. He puts no constraint either upon his guests or himself, but in the true spirit of hospitality provides the means of enjoyment, and leaves every one to partake according to his inclination.

The taste of the English in the cultivation of land, and in what is called landscape gardening, is unrivalled. They have studied nature intently, and discover an exquisite sense of her beautiful forms and harmonious combinations. Those charms, which in other countries she lavishes in wild solitudes, are here assembled round the haunts of domestic life. They seem to have caught her coy and furtive graces, and spread them, like witchery, about their rural abodes.

Nothing can be more imposing than the mag- 30 nificence of English park scenery. Vast lawns that extend like sheets of vivid green, with here and there clumps of gigantic trees, heaping up rich piles of foliage; the solemn pomp of groves and woodland glades, with the deer trooping in silent herds across them, the hare, bounding away to the covert; or the pheasant, suddenly bursting upon the wing; the brook, taught to wind in natural meanderings or expand into a glassy lake; the sequestered pool, reflecting the quivering trees, with the yellow leaf sleep- 40 ing on its bosom, and the trout roaming fearlessly about its limpid waters, while some rustic temple or sylvan statue, grown green and dank with age, gives an air of classic sanctity to the seclusion.

These are but a few of the features of park scenery; but what most delights me, is the creative talent with which the English decorate the unostentatious abodes of middle life. The rudest habitation, the most unpromising and scanty portion of land, in the hands

of an Englishman of taste, becomes a little paradise. With a nicely discriminating eye, he seizes at once upon its capabilities, and pictures in his mind the future landscape. The sterile spot grows into loveliness under his hand, and yet the operations of art which produce the effect are scarcely to be perceived. The cherishing and taming of some trees, the cautious pruning of others, the nice distribution of flowers and plants of tender and graceful foliage, the introduction of a green slope of velvet turf, the partial opening to a peep of blue distance, or silver gleam of water: all these are managed with a delicate tact, a pervading yet quiet assiduity, like the magic touchings with which a painter finishes up a favorite picture.

The residence of people of fortune and refinement in the country has diffused a degree of taste and elegance in rural economy, that descends to the lowest class. The very laborer, with his thatched cottage 20 and narrow slip of ground, attends to their embellishment. The trim hedge, the grass-plot before the door, the little flower-bed bordered with snug box, the woodbine trained up against the wall, and hanging its blossoms about the lattice, the pot of flowers in the window, the holly, providently planted about the house, to cheat winter of its dreariness, and to throw in a semblance of green summer to cheer the fireside: all these bespeak the influence of taste, flowing down from high sources, and pervading the lowest levels of the public mind. If ever Love, as poets sing, delights to visit a cottage, it must be the cottage of an English peasant.

The fondness for rural life among the higher classes of the English has had a great and salutary effect upon the national character. I do not know a finer race of men than the English gentlemen. Instead of the softness and effeminacy which characterize the men of rank in most countries, they exhibit a union of elegance and strength, a robustness of frame and freshness of complexion, which I am inclined to attribute to their living so much in the open air, and pursuing so eagerly the invigorating recreations of the country. These hardy exercises produce also a healthful tone of mind and spirits, and a manliness and simplicity of manners, which even the follies and dissipations of the town cannot easily pervert, and can never entirely destroy. In the country, too, the different orders of society seem to approach more freely, to be more disposed to blend and operate

favorably upon each other. The distinctions between them do not appear to be so marked and impassable as in the cities. The manner in which property has been distributed into small estates and farms has established a regular gradation from the nobleman, through the classes of gentry, small landed proprietors, and substantial farmers, down to the laboring peasantry, and while it has thus banded the extremes of society together, has infused into each intermediate rank a spirit of independence. This, it must be confessed, is not so universally the case at present as it was formerly, the larger estates having, in late years of distress, absorbed the smaller, and, in some parts of the country, almost annihilated the sturdy race of small farmers. These, however, I believe, are but casual breaks in the general system I have mentioned.

In rural occupation there is nothing mean and debasing. It leads a man forth among scenes of natural grandeur and beauty; it leaves him to the workings of his own mind, operated upon by the purest and most elevating of external influences. Such a man may be simple and rough, but he cannot be vulgar. The man of refinement, therefore, finds nothing revolting in an intercourse with the lower orders in rural life, as he does when he casually mingles with the lower orders of cities. He lays aside his distance and reserve, and is glad to waive the distinctions of rank, and to enter into the honest, heartfelt enjoyments of common life. Indeed the very amusements of the country bring men more and more together, and the sound of hound and horn blend all feelings into harmony. I believe this is one great reason why the nobility and gentry are more popular among the inferior orders in England than they are in any other country; and why the latter have endured so many excessive pressures and extremities, without repining more generally at the unequal distribution of fortune and privilege.

To this mingling of cultivated and rustic society may also be attributed the rural feeling that runs through British literature, the frequent use of illustrations from rural life; those incomparable descriptions of nature that abound in the British poets, that have continued down from the "Flower and the Leaf" of Chaucer, and have brought into our closets all the freshness and fragrance of the dewy landscape. The pastoral writers of other countries appear as if they had paid nature an occasional visit, and become acquainted with her general charms; but the British

poets have lived and revelled with her—they have wooed her in her most secret haunts—they have watched her minutest caprices. A spray could not tremble in the breeze—a leaf could not rustle to the ground—a diamond-drop could not patter in the stream—a fragrance could not exhale from the humble violet, nor a daisy unfold its crimson tints to the morning, but it has been noticed by these impassioned and delicate observers, and wrought up into some beautiful morality.

The effect of this devotion of elegant minds to rural occupations has been wonderful on the face of the country. A great part of the island is rather level, and would be monotonous, were it not for the charms of culture. but it is studded and gemmed, as it were, with castles and palaces, and embroidered with parks and gardens. It does not abound in grand and sublime prospects, but rather in little home scenes of rural repose and sheltered quiet. Every antique farm-house and moss-grown cottage is a picture. and as the roads are continually winding, and the view is shut in by groves and hedges, the eye is delighted by a continual succession of small landscapes of captivating loveliness.

The great charm, however, of English scenery is the moral feeling that seems to pervade it. It is associated in the mind with ideas of order, of quiet, of sober well-established principles, of hoary usage and reverend custom. Every thing seems to be the growth of ages of regular and peaceful existence. The old church of remote architecture, with its low massive portal, its gothic tower, its windows rich with tracery and painted glass, in scrupulous preservation, its stately monuments of warriors and worthies of the olden time, ancestors of the present lords of the soil; its tombstones, recording successive generations of sturdy yeomanry, whose progeny still plough the same fields, and kneel at the same altar—the parsonage, a quaint irregular pile, partly antiquated, but repaired and altered in the tastes of various ages and occupants—the stile and footpath leading from the churchyard, across pleasant fields, and along shady hedge-rows, according to an immemorial right of way—the neighboring village, with its venerable cottages, its public green sheltered by trees, under which the forefathers of the present race have sported—the antique family mansion, standing apart in some little rural domain, but looking down with a protecting air on the surrounding scene: all these common features of English

landscape evince a calm and settled security, an hereditary transmission of homebred virtues and local attachments, that speak deeply and touchingly for the moral character of the nation

It is a pleasing sight of a Sunday morning, when the bell is sending its sober melody across the quiet fields, to behold the peasantry in their best finery, with ruddy faces and modest cheerfulness, thronging tranquilly along the green lanes to church, but it is still more pleasing to see them in the evenings, <sup>10</sup> gathering about their cottage doors, and appearing to exult in the humble comforts and embellishments which their own hands have spread around them.

It is this sweet home-feeling, this settled repose of affection in the domestic scene, that is, after all, the parent of the steadiest virtues and purest enjoyments, and I cannot close these desultory remarks better, than by quoting the words of a modern English poet, who has depicted it with remarkable felicity

Through each gradation, from the castled hall,  
The city dome, the villa crown'd with shade,  
But chief from modest mansions numberless,  
In town or hamlet, shelt'ring middle life,  
Down to the cottaged vale, and strawroof'd shed;  
This western isle hath long been famed for scenes  
Where bliss domestic finds a dwelling-place;  
Domestic bliss, that, like a harmless dove,  
(Honor and sweet endearment keeping guard,)  
Can center in a little quiet nest  
All that desire would fly for through the earth,  
That can, the world eluding, be itself  
A world enjoy'd; that wants no witnesses  
But its own sharers, and approving heaven,  
That, like a flower deep hid in rocky cleft,  
Smiles, though 'tis looking only at the sky.\*

### *The Legend of Sleepy Hollow* <sup>69</sup>

FOUND AMONG THE PAPERS  
OF THE LATE DIEDRICH KNICKERBOCKER

*A pleasing land of drowsy head it was,  
Of dreams that wave before the half-shut eye;  
And of gay castles in the clouds that pass,  
For ever flushing round a summer sky.*

CASTLE OF INDOLENCE <sup>70</sup>

In the bosom of one of those spacious coves which indent the eastern shore of the Hudson, at that broad

\* From a Poem on the death of the Princess Charlotte, by the Reverend Rann Kennedy, A. M.

<sup>69</sup> For the climactic episode of this story, the pumpkin-throwing episode on Ichabod's midnight ride, Irving adapted a

expansion of the river denominated by the ancient Dutch navigators the Tappan Zee, and where they always prudently shortened sail, and implored the protection of St Nicholas when they crossed, there lies a small market-town or rural port, which by some is called Greensburgh, but which is more generally and properly known by the name of Tarry Town <sup>71</sup> This name was given, we are told, in former days, by the good housewives of the adjacent country, from the inveterate propensity of their husbands to linger about the village tavern on market days. Be that as it may, I do not vouch for the fact, but merely advert to it, for the sake of being precise and authentic. Not far from this village, perhaps about two miles, there is a little valley, or rather lap <sup>72</sup> of land, among high hills, which is one of the quietest places in the whole world. A small brook glides through it, with just murmur enough to lull one to repose, and the occasional whistle of a quail, or tapping of a woodpecker, is <sup>20</sup> almost the only sound that ever breaks in upon the uniform tranquillity.

I recollect that, when a stupling, my first exploit in squirrel-shooting was in a grove of tall walnut-trees that shades one side of the valley. I had wandered into it at noon time, when all nature is peculiarly quiet, and was startled by the roar of my own gun, as it broke the Sabbath stillness around, and was prolonged and reverberated by the angry echoes. If ever I should wish for a retreat, whither I might steal from <sup>30</sup> the world and its distractions, and dream quietly away the remnant of a troubled life, I know of none more promising than this little valley.

From the listless repose of the place, and the peculiar character of its inhabitants, who are descendants from the original Dutch settlers, this sequestered glen has long been known by the name of SLEEPY HOLLOW, and its rustic lads are called the Sleepy Hollow Boys throughout all the neighboring country. A drowsy, dreamy influence seems to hang over the <sup>40</sup> land, and to pervade the very atmosphere. Some say that the place was bewitched by a high German doctor, during the early days of the settlement; others, that an old Indian chief, the prophet or wizard of his tribe, held his powwows there before the country was

similar incident which he found in one of the Rubezahl legends as related in Musäus' collections of German folk tales.

<sup>70</sup> An English poem in imitation of Spenser, by James Thomson (1702-48).

<sup>71</sup> One of the earliest Dutch settlements on the Hudson, Irving's place of residence after 1835, and finally his burial place.

<sup>72</sup> Bosom or surface.

discovered by Master Hendrick Hudson.<sup>73</sup> Certain it is, the place still continues under the sway of some witching power, that holds a spell over the minds of the good people, causing them to walk in a continual reverie. They are given to all kinds of marvellous beliefs; are subject to trances and visions; and frequently see strange sights, and hear music and voices in the air. The whole neighborhood abounds with local tales, haunted spots, and twilight superstitions; stars shoot and meteors glare oftener across the valley<sup>10</sup> than in any other part of the country, and the nightmare, with her whole nine fold,<sup>74</sup> seems to make it the favorite scene of her gambols.

The dominant spirit, however, that haunts this enchanted region, and seems to be commander-in-chief of all the powers of the air, is the apparition of a figure on horseback without a head. It is said by some to be the ghost of a Hessian trooper, whose head had been carried away by a cannon-ball, in some nameless battle during the revolutionary war; and<sup>20</sup> who is ever and anon seen by the country folk, hurrying along in the gloom of night, as if on the wings of the wind. His haunts are not confined to the valley, but extend at times to the adjacent roads, and especially to the vicinity of a church at no great distance. Indeed, certain of the most authentic historians of those parts, who have been careful in collecting and collating the floating facts concerning this spectre, allege that the body of the trooper, having been buried in the church-yard, the ghost rides forth to the<sup>30</sup> scene of battle in nightly quest of his head; and that the rushing speed with which he sometimes passes along the Hollow, like a midnight blast, is owing to his being belated, and in a hurry to get back to the church-yard before daybreak.

Such is the general purport of this legendary superstition, which has furnished materials for many a wild story in that region of shadows; and the spectre is known, at all the country firesides, by the name of the Headless Horseman of Sleepy Hollow.

It is remarkable that the visionary propensity I have mentioned is not confined to the native inhabitants of the valley, but is unconsciously imbibed by every one who resides there for a time. However wide awake they may have been before they entered that sleepy region, they are sure, in a little time, to inhale the witching influence of the air, and begin to grow

imaginative—to dream dreams, and see apparitions.

I mention this peaceful spot with all possible laud, for it is in such little retired Dutch valleys, found here and there embosomed in the great State of New-York, that population, manners, and customs, remain fixed; while the great torrent of migration and improvement, which is making such incessant changes in other parts of this restless country, sweeps by them unobserved. They are like those little nooks of still water which border a rapid stream, where we may see the straw and bubble riding quietly at anchor, or slowly revolving in their mimic harbor, undisturbed by the rush of the passing current. Though many years have elapsed since I trod the drowsy shades of Sleepy Hollow, yet I question whether I should not still find the same trees and the same families vegetating in its sheltered bosom.

In this by-place of nature, there abode, in a remote period of American history, that is to say, some thirty years since, a worthy wight of the name of Ichabod Crane, who sojourned, or, as he expressed it, "tarried," in Sleepy Hollow, for the purpose of instructing the children of the vicinity. He was a native of Connecticut; a State which supplies the Union with pioneers for the mind as well as for the forest, and sends forth yearly its legions of frontier woodsmen and country schoolmasters. The cognomen of Crane was not inapplicable to his person. He was tall, but exceedingly lank, with narrow shoulders, long arms and legs, hands that dangled a mile out of his sleeves, feet that might have served for shovels, and his whole frame most loosely hung together. His head was small, and flat at top, with huge ears, large green glassy eyes, and a long snipe nose, so that it looked like a weather-cock, perched upon his spindle neck, to tell which way the wind blew. To see him striding along the profile of a hill on a windy day, with his clothes bagging and fluttering about him, one might<sup>40</sup> have mistaken him for the genius<sup>75</sup> of famine descending upon the earth, or some scarecrow eloped from a cornfield.

His school-house was a low building of one large room, rudely constructed of logs, the windows partly glazed, and partly patched with leaves of old copy-books. It was most ingeniously secured at vacant hours, by a withe twisted in the handle of the door, and stakes set against the window shutters; so that,

<sup>73</sup> See note 67.

<sup>74</sup> An allusion to *King Lear*, III, iv, 126.

<sup>75</sup> Guiding spirit.

though a thief might get in with perfect ease, he would find some embarrassment in getting out, an idea most probably borrowed by the architect, Yost Van Houten, from the mystery of an eel-pot. The school-house stood in a rather lonely but pleasant situation, just at the foot of a woody hill, with a brook running close by, and a formidable birch tree growing at one end of it. From hence the low murmur of his pupils' voices, conning over their lessons, might be heard in a drowsy summer's day, like the hum of a bee-hive, interrupted now and then by the authoritative voice of the master, in the tone of menace or command, or, peradventure, by the appalling sound of the birch, as he urged some tardy loiterer along the flowery path of knowledge. Truth to say, he was a conscientious man, and ever bore in mind the golden maxim, "Spare the rod and spoil the child."<sup>76</sup> —Ichabod Crane's scholars certainly were not spoiled.

I would not have it imagined, however, that he was one of those cruel potentates of the school, who joy<sup>20</sup> in the smart of their subjects; on the contrary, he administered justice with discrimination rather than severity; taking the burthen off the backs of the weak, and laying it on those of the strong. Your mere puny stripling, that winced at the least flourish of the rod, was passed by with indulgence; but the claims of justice were satisfied by inflicting a double portion on some little, tough, wrong-headed, broad-skirted Dutch urchin, who sulked and swelled and grew dogged and sullen beneath the birch. All this he<sup>30</sup> called "doing his duty by their parents," and he never inflicted a chastisement without following it by the assurance, so consolatory to the smarting urchin, that "he would remember it, and thank him for it the longest day he had to live."

When school hours were over, he was even the companion and playmate of the larger boys; and on holiday afternoons would convoy some of the smaller ones home, who happened to have pretty sisters, or good housewives for mothers, noted for the comforts<sup>40</sup> of the cupboard. Indeed it behooved him to keep on good terms with his pupils. The revenue arising from his school was small, and would have been scarcely sufficient to furnish him with daily bread, for he was a huge feeder, and though lank, had the dilating powers of an anaconda; but to help out his main-

tenance, he was, according to country custom in those parts, boarded and lodged at the houses of the farmers, whose children he instructed. With these he lived successively a week at a time; thus going the rounds of the neighborhood, with all his worldly effects tied up in a cotton handkerchief.

That all this might not be too onerous on the purses of his rustic patrons, who are apt to consider the costs of schooling a grievous burden, and schoolmasters as mere drones, he had various ways of rendering himself both useful and agreeable. He assisted the farmers occasionally in the lighter labors of their farms, helped to make hay; mended the fences, took the horses to water; drove the cows from pasture, and cut wood for the winter fire. He laid aside, too, all the dominant dignity and absolute sway with which he lorded it in his little empire, the school, and became wonderfully gentle and ingratulating. He found favor in the eyes of the mothers, by petting the children, particularly the youngest; and like the lion bold,<sup>77</sup> which whilom so magnanimously the lamb did hold, he would sit with a child on one knee, and rock a cradle with his foot for whole hours together.

In addition to his other vocations, he was the singing-master of the neighborhood, and picked up many bright shillings by instructing the young folks in psalmody. It was a matter of no little vanity to him, on Sundays, to take his station in front of the church gallery, with a band of chosen singers, where, in his own mind, he completely carried away the palm from the parson. Certain it is, his voice resounded far above all the rest of the congregation, and there are peculiar quavers still to be heard in that church, and which may even be heard half a mile off, quite to the opposite side of the mill-pond, on a still Sunday morning, which are said to be legitimately descended from the nose of Ichabod Crane. Thus, by divers little make-shifts in that ingenuous way which is commonly denominated "by hook and by crook,"<sup>78</sup> the worthy pedagogue got on tolerably enough, and was thought, by all who understood nothing of the labor of head-work, to have a wonderfully easy life of it.

The schoolmaster is generally a man of some importance in the female circle of a rural neighborhood; being considered a kind of idle gentlemanlike per-

<sup>76</sup> See Proverbs 13:24. The form here given was first used by Samuel Butler, an English poet (1612-80) in Part II of *Hudibras* (1664).

<sup>77</sup> An allusion to a couplet appearing in the *New England Primer*, edition of 1747.

<sup>78</sup> A phrase from *Colyn Cloute* (1523), by John Skelton (1460?-1529), English poet.

sonage, of vastly superior taste and accomplishments to the rough country swains, and, indeed, inferior in learning only to the parson. His appearance, therefore, is apt to occasion some little stir at the tea-table of a farmhouse, and the addition of a supernumerary dish of cakes or sweetmeats, or peradventure, the parade of a silver tea-pot. Our man of letters, therefore, was peculiarly happy in the smiles of all the country damsels. How he would figure among them in the churchyard, between services on Sundays! <sup>10</sup> gathering grapes for them from the wild vines that overrun the surrounding trees, reciting for their amusement all the epitaphs on the tombstones, or sauntering, with a whole bevy of them, along the banks of the adjacent mill-pond, while the more bashful country bumpkins hung sheepishly back, envying his superior elegance and address.

From his half itinerant life, also, he was a kind of travelling gazette, carrying the whole budget of local gossip from house to house; so that his appearance <sup>20</sup> was always greeted with satisfaction. He was, moreover, esteemed by the women as a man of great erudition, for he had read several books quite through, and was a perfect master of Cotton Mather's history of New England Witchcraft,<sup>79</sup> in which, by the way, he most firmly and potently believed.

He was, in fact, an odd mixture of small shrewdness and simple credulity. His appetite for the marvellous, and his powers of digesting it, were equally extraordinary, and both had been increased by his <sup>30</sup> residence in this spellbound region. No tale was too gross or monstrous for his capacious swallow. It was often his delight, after his school was dismissed in the afternoon, to stretch himself on the rich bed of clover, bordering the little brook that whimpered by his school-house, and there con over old Mather's direful tales, until the gathering dusk of the evening made the printed page a mere mist before his eyes. Then, as he wended his way, by swamp and stream and awful woodland, to the farmhouse where he hap- <sup>40</sup> pened to be quartered, every sound of nature, at that witching hour, fluttered his excited imagination: the moan of the whip-poor-will \* from the hill-side; the boding cry of the tree-toad, that harbinger of storm, the dreary hooting of the screech-owl, or the sudden

rustling in the thicket of birds frightened from their roost. The fire-flies, too, which sparkled most vividly in the darkest places, now and then startled him, as one of uncommon brightness would stream across his path, and if, by chance, a huge blockhead of a beetle came winging his blundering flight against him, the poor varlet was ready to give up the ghost, with the idea that he was struck with a witch's token. His only resource on such occasions, either to drown thought, or drive away evil spirits, was to sing psalm tunes,—and the good people of Sleepy Hollow, as they sat by their doors of an evening, were often filled with awe, at hearing his nasal melody, "in linked sweetness long drawn out," <sup>80</sup> floating from the distant hill, or along the dusky road.

Another of his sources of fearful pleasure was, to pass long winter evenings with the old Dutch wives, as they sat spinning by the fire, with a row of apples roasting and spluttering along the hearth, and listen to their marvellous tales of ghosts and goblins, and haunted fields, and haunted brooks, and haunted bridges, and haunted houses, and particularly of the headless horseman, or galloping Hessian of the Hollow, as they sometimes called him. He would delight them equally by his anecdotes of witchcraft, and of the direful omens and portentous sights and sounds in the air, which prevailed in the earlier times of Connecticut; and would frighten them wofully with speculations upon comets and shooting stars, and with the alarming fact that the world did absolutely turn round, and that they were half the time topsy-turvy!

But if there was a pleasure in all this, while snugly cuddling in the chimney corner of a chamber that was all of a ruddy glow from the crackling wood fire, and where, of course, no spectre dared to show his face, it was dearly purchased by the terrors of his subsequent walk homewards. What fearful shapes and shadows beset his path amidst the dim and ghastly glare of a snowy night!—With what wistful look did he eye every trembling ray of light streaming across the waste fields from some distant window!—How often was he appalled by some shrub covered with snow, which, like a sheeted spectre, beset his very path!—How often did he shrink with curdling awe at the sound of his own steps on the frosty crust beneath his feet; and dread to look over his shoulder, lest he should behold some uncouth being tramping

\* "The whip-poor-will is a bird which is only heard at night. It receives its name from its note, which is thought to resemble those words."

<sup>79</sup> Irving was well read in Cotton Mather.

<sup>80</sup> Quoted from Milton's "L'Allegro," line 140.

close behind him!—and how often was he thrown into complete dismay by some rushing blast, howling among the trees, in the idea that it was the Galloping Hessian on one of his nightly scourings!

All these, however, were mere terrors of the night, phantoms of the mind that walk in darkness; and though he had seen many spectres in his time, and been more than once beset by Satan in divers shapes, in his lonely perambulations, yet daylight put an end to all these evils, and he would have passed a 10 pleasant life of it, in despite of the devil and all his works, if his path had not been crossed by a being that causes more perplexity to mortal man than ghosts, goblins, and the whole race of witches put together, and that was—a woman.

Among the musical disciples who assembled, one evening in each week, to receive his instructions in psalmody, was Katrina Van Tassel, the daughter and only child of a substantial Dutch farmer. She was a blooming lass of fresh eighteen, plump as a partridge; 20 ripe and melting and rosy checked as one of her father's peaches, and universally famed, not merely for her beauty, but her vast expectations. She was withal a little of a coquette, as might be perceived even in her dress, which was a mixture of ancient and modern fashions, as most suited to set off her charms. She wore the ornaments of pure yellow gold, which her great-great-grandmother had brought over from Saardam, the tempting stomacher of the older time, and withal a provokingly short petticoat, to display 30 the prettiest foot and ankle in the country round.

Ichabod Crane had a soft and foolish heart towards the sex; and it is not to be wondered at, that so tempting a morsel soon found favor in his eyes; more especially after he had visited her in her paternal mansion. Old Baltus Van Tassel was a perfect picture of a thriving, contented, liberal-hearted farmer. He seldom, it is true, sent either his eyes or his thoughts beyond the boundaries of his own farm; but within 40 those every thing was snug, happy, and well-conditioned. He was satisfied with his wealth, but not proud of it; and piqued himself upon the hearty abundance, rather than the style in which he lived. His stronghold was situated on the banks of the Hudson, in one of those green, sheltered, fertile nooks, in which the Dutch farmers are so fond of nestling. A great elm-tree spread its broad branches over it, at the foot of which bubbled up a spring of the softest and sweetest water, in a little well, formed

of a bairel, and then stole sparkling away through the grass, to a neighboring brook, that bubbled along among alders and dwarf willows. Hard by the farmhouse was a vast barn, that might have served for a church, every window and crevice of which seemed bursting forth with the treasures of the farm, the flail was busily resounding within it from morning to night, swallows and martins skimmed twittering about the eaves, and rows of pigeons, some with one eye turned up, as if watching the weather, some with their heads under their wings, or buried in their bosoms, and others swelling, and cooing, and bowing about their dames, were enjoying the sunshine on the roof. Sleek unwieldy porkers were grunting in the repose and abundance of their pens, whence sallied forth, now and then, troops of sucking pigs, as if to snuff the air. A stately squadron of snowy geese were riding in an adjoining pond, conveying whole fleets of ducks; regiments of turkeys were gobbling through the farmyard, and guinea fowls fretting about it, like ill-tempered housewives, with their peevish discontented cry. Before the barn door strutted the gallant cock, that pattern of a husband, a warrior, and a fine gentleman, clapping his burnished wings, and crowing in the pride and gladness of his heart—sometimes tearing up the earth with his feet, and then generously calling his ever-hungry family of wives and children to enjoy the rich morsel which he had discovered.

The pedagogue's mouth watered, as he looked upon this sumptuous promise of luxurious winter fare. In his devouring mind's eye, he pictured to himself every roasting-pig running about with a pudding in his belly, and an apple in his mouth; the pigeons were snugly put to bed in a comfortable pie, and tucked in with a coverlet of crust, the geese were swimming in their own gravy; and the ducks pairing cosily in dishes, like snug married couples, with a decent competency of onion sauce. In the porkers he saw carved out the future sleek side of bacon, and juicy relishing ham; not a turkey but he beheld daintily trussed up, with its gizzard under its wing, and, peradventure, a necklacc of savory sausages, and even bright chanticleer himself lay sprawling on his back, in a side-dish, with uplifted claws, as if craving that quarter which his chivalrous spirit disdained to ask while living.

As the enraptured Ichabod fancied all this, and as he rolled his great green eyes over the fat meadowlands, the rich fields of wheat, of rye, of buckwheat,

and Indian corn, and the orchards burthened with ruddy fruit, which surrounded the warm tenement of Van Tassel, his heart yearned after the damsel who was to inherit these domains, and his imagination expanded with the idea, how they might be readily turned into cash, and the money invested in immense tracts of wild land, and shingle palaces in the wilderness. Nay, his busy fancy already realized his hopes, and presented to him the blooming Katrina, with a whole family of children, mounted on the top of a wagon loaded with household trumpery, with pots and kettles dangling beneath; and he beheld himself bestriding a pacing mare, with a colt at her heels, setting out for Kentucky, Tennessee, or the Lord knows where.

When he entered the house the conquest of his heart was complete. It was one of those spacious farmhouses, with high-ridged, but lowly-sloping roofs, built in the style handed down from the first Dutch settlers; the low projecting eaves forming a piazza along the front, capable of being closed up in bad weather. Under this were hung flails, harness, various utensils of husbandry, and nets for fishing in the neighboring river. Benches were built along the sides for summer use; and a great spinning-wheel at one end, and a churn at the other, showed the various uses to which this important porch might be devoted. From this piazza the wondering Ichabod entered the hall, which formed the centre of the mansion and the place of usual residence. Here, rows of resplendent pewter, ranged on a long dresser, dazzled his eyes. In one corner stood a huge bag of wool ready to be spun, in another a quantity of linsey-woolsey just from the loom; ears of Indian corn, and strings of dried apples and peaches, hung in gay festoons along the walls, mingled with the gaud of red peppers; and a door left ajar gave him a peep into the best parlor, where the claw-footed chairs, and dark mahogany tables, shone like mirrors; and irons, with their accompanying shovel and tongs, glistened from their covert of asparagus tops; mock-oranges and conch-shells decorated the mantel-piece; strings of various colored birds' eggs were suspended above it. a great ostrich egg was hung from the centre of the room, and a corner cupboard, knowingly left open, displayed immense treasures of old silver and well-mended china.

From the moment Ichabod laid his eyes upon these regions of delight, the peace of his mind was at an end, and his only study was how to gain the affec-

tions of the peerless daughter of Van Tassel. In this enterprise, however, he had more real difficulties than generally fell to the lot of a knight-errant of yore, who seldom had any thing but giants, enchanters, fiery dragons, and such like easily-conquered adversaries, to contend with, and had to make his way merely through gates of iron and brass, and walls of adamant, to the castle keep, where the lady of his heart was confined, all which he achieved as easily as a man would carve his way to the centre of a Christmas pie; and then the lady gave him her hand as a matter of course. Ichabod, on the contrary, had to win his way to the heart of a country coquette, beset with a labyrinth of whims and caprices, which were for ever presenting new difficulties and impediments, and he had to encounter a host of fearful adversaries of real flesh and blood, the numerous rustic admirers, who beset every portal to her heart; keeping a watchful and angry eye upon each other, but ready to fly out in the common cause against any new competitor.

Among these the most formidable was a burly, roaring, roystering blade, of the name of Abraham, or, according to the Dutch abbreviation, Brom Van Brunt, the hero of the country round, which rang with his feats of strength and hardihood. He was broad-shouldered and double-jointed, with short curly black hair, and a bluff, but not unpleasant countenance, having a mingled air of fun and arrogance. From his Herculean frame and great powers of limb, he had received the nickname of BROM BONES, by which he was universally known. He was famed for great knowledge and skill in horsemanship, being as dexterous on horseback as a Tartar. He was foremost at all races and cock-fights; and, with the ascendancy which bodily strength acquires in rustic life, was the umpire in all disputes, setting his hat on one side, and giving his decisions with an air and tone admitting of no gainsay or appeal. He was always ready for either a fight or a frolic, but had more mischief than ill-will in his composition; and, with all his overbearing roughness, there was a strong dash of waggish good humor at bottom. He had three or four boon companions, who regarded him as their model, and at the head of whom he scoured the country, attending every scene of feud or merriment for miles round. In cold weather he was distinguished by a fur cap, surmounted with a flaunting fox's tail, and when the folks at a country gathering descried this well-known crest at a distance, whisking about among a squad

of hard riders, they always stood by for a squall. Sometimes his crew would be heard dashing along past the farmhouses at midnight, with whoop and halloo, like a troop of Don Cossacks,<sup>81</sup> and the old dames, startled out of their sleep, would listen for a moment till the hurry-scurry had clattered by, and then exclaim, "Ay, there goes Brom Bones and his gang!" The neighbors looked upon him with a mixture of awe, admiration, and good will, and when any mad-cap prank, or rustic brawl, occurred in the vicinity,<sup>10</sup> always shook their heads, and warranted Brom Bones was at the bottom of it.

This rantipole<sup>82</sup> hero had for some time singled out the blooming Katina for the object of his uncouth gallantries, and though his amorous toyings were something like the gentle caresses and endearments of a bear, yet it was whispered that she did not altogether discourage his hopes. Certain it is, his advances were signals for rival candidates to retire, who felt no inclination to cross a lion in his amours,<sup>20</sup> insomuch, that when his horse was seen tied to Van Tassel's paling, on a Sunday night, a sure sign that his master was courting, or, as it is termed, "spark-ing," within, all other suitors passed by in despair, and carried the war into other quarters.

Such was the formidable rival with whom Ichabod Crane had to contend, and, considering all things, a stouter man than he would have shrunk from the competition, and a wiser man would have despaired. He had, however, a happy mixture of pliability and<sup>30</sup> perseverance in his nature, he was in form and spirit like a supple-jack<sup>83</sup>—yielding, but tough; though he bent, he never broke; and though he bowed beneath the slightest pressure, yet, the moment it was away—jerk! he was as erect, and carried his head as high as ever.

To have taken the field openly against his rival would have been madness, for he was not a man to be thwarted in his amours, any more than that stormy lover, Achilles. Ichabod, therefore, made his advances<sup>40</sup> in a quiet and gently-insinuating manner. Under cover of his character of singing-master, he made frequent visits at the farmhouse, not that he had any thing to apprehend from the meddling interference of parents, which is so often a stumbling-block in the path of lovers. Balt Van Tassel was an easy

indulgent soul; he loved his daughter better even than his pipe, and, like a reasonable man and an excellent father, let her have her way in every thing. His notable little wife, too, had enough to do to attend to her housekeeping and manage her poultry, for, as she sagely observed, ducks and geese are foolish things, and must be looked after, but girls can take care of themselves. Thus while the busy dame bustled about the house, or plied her spinning-wheel at one end of the piazza, honest Balt would sit smoking his evening pipe at the other, watching the achievements of a little wooden warrior, who, armed with a sword in each hand, was most valiantly fighting the wind on the pinnacle of the barn. In the mean time, Ichabod would carry on his suit with the daughter by the side of the spring under the great elm, or sauntering along in the twilight, that hour so favorable to the lover's eloquence.

I profess not to know how women's hearts are wooed and won. To me they have always been matters of riddle and admiration. Some seem to have but one vulnerable point, or door of access; while others have a thousand avenues, and may be captured in a thousand different ways. It is a great triumph of skill to gain the former, but a still greater proof of generalship to maintain possession of the latter, for the man must battle for his fortress at every door and window. He who wins a thousand common hearts is therefore entitled to some renown, but he who keeps undisputed sway over the heart of a coquette, is indeed a hero. Certain it is, this was not the case with the redoubtable Brom Bones; and from the moment Ichabod Crane made his advances, the interests of the former evidently declined; his horse was no longer seen tied at the palings on Sunday nights, and a deadly feud gradually arose between him and the preceptor of Sleepy Hollow.

Brom, who had a degree of rough chivalry in his nature, would fain have carried matters to open warfare, and have settled their pretensions to the lady, according to the mode of those most concise and simple reasoners, the knights-errant of yore—by single combat; but Ichabod was too conscious of the superior might of his adversary to enter the lists against him: he had overheard a boast of Bones, that he would "double the schoolmaster up, and lay him on a shelf of his own school-house;" and he was too wary to give him an opportunity. There was something extremely provoking in this obstinately pacific system;

<sup>81</sup> Cossacks of the Don River region of Russia, hard-riding adventurers or fighters.

<sup>82</sup> Reckless, wild.

<sup>83</sup> A walking stick, cut from a climbing vine.

it left Brom no alternative but to draw upon the funds of rustic waggery in his disposition, and to play off boorish practical jokes upon his rival Ichabod became the object of whimsical persecution to Bones, and his gang of rough riders. They harried his hitherto peaceful domains; smoked out his singing school, by stopping up the chimney, broke into the school-house at night, in spite of its formidable fastenings of withc and window stakes, and turned every thing topsy-turvy so that the poor schoolmaster began to think all the witches in the country held their meetings there. But what was still more annoying, Brom took all opportunities of turning him into ridicule in presence of his mistress, and had a scoundrel dog whom he taught to whine in the most ludicrous manner, and introduced as a rival of Ichabod's to instruct her in psalmody.

In this way matters went on for some time, without producing any material effect on the relative situation of the contending powers. On a fine autumnal afternoon, Ichabod, in pensive mood, sat enthroned on the lofty stool whence he usually watched all the concerns of his little literary realm. In his hand he swayed a ferule, that sceptre of despotic power; the birch of justice reposed on three nails, behind the throne, a constant terror to evil doers, while on the desk before him might be seen sundry contraband articles and prohibited weapons, detected upon the persons of idle urchins, such as half-munched apples, popguns, whirligigs, fly-cages, and whole legions of rampant little paper game-cocks. Apparently there had been some appalling act of justice recently inflicted, for his scholars were all busily intent upon their books, or slyly whispering behind them with one eye kept upon the master; and a kind of buzzing stillness reigned throughout the schoolroom. It was suddenly interrupted by the appearance of a negro, in tow-cloth jacket and trowsers, a round-crowned fragment of a hat, like the cap of Mercury,<sup>84</sup> and mounted on the back of a ragged, wild, half-broken colt, which he managed with a rope by way of halter. He came clattering up to the school door with an invitation to Ichabod to attend a merry-making or "quilting frolic," to be held that evening at Mynheer Van Tassel's; and having delivered his message with that air of importance, and effort at fine language, which a negro is apt to display on petty embassies of

the kind, he dashed over the brook, and was seen scampering away up the hollow, full of the importance and hurry of his mission.

All was now bustle and hubbub in the late quiet schoolroom. The scholars were hurried through their lessons, without stopping at trifles, those who were nimble skipped over half with impunity, and those who were tardy, had a smart application now and then in the rear, to quicken their speed, or help them over a tall word. Books were flung aside without being put away on the shelves, inkstands were overturned, benches thrown down, and the whole school was turned loose an hour before the usual time, bursting forth like a legion of young imps, yelping and racketing about the green, in joy at their early emancipation.

The gallant Ichabod now spent at least an extra half hour at his toilet, brushing and furbishing up his best, and indeed only suit of rusty black, and arranging his looks by a bit of broken looking-glass, that hung up in the school-house. That he might make his appearance before his mistress in the true style of a cavalier, he borrowed a horse from the farmer with whom he was domiciliated, a choleric old Dutchman, of the name of Hans Van Ripper, and, thus gallantly mounted, issued forth, like a knight-errant in quest of adventures. But it is meet I should, in the true spirit of romantic story, give some account of the looks and equipments of my hero and his steed. The animal he bestrode was a broken-down plough-horse, that had outlived almost every thing but his viciousness. He was gaunt and shagged, with a ewe neck and a head like a hammer, his rusty mane and tail were tangled and knotted with burrs, one eye had lost its pupil, and was glaring and spectral; but the other had the gleam of a genuine devil in it. Still he must have had fire and mettle in his day, if we may judge from the name he bore of Gunpowder. He had, in fact, been a favorite steed of his master's, the choleric Van Ripper, who was a furious rider, and had infused, very probably, some of his own spirit into the animal; for, old and broken-down as he looked, there was more of the lurking devil in him than in any young filly in the country.

Ichabod was a suitable figure for such a steed. He rode with short stirrups, which brought his knees nearly up to the pommel of the saddle, his sharp elbows stuck out like grasshoppers'; he carried his whip perpendicularly in his hand, like a sceptre, and,

<sup>84</sup> Winged hat, symbol of Mercury's speed as the messenger of the gods.

as his horse jogged on, the motion of his arms was not unlike the flapping of a pair of wings. A small wool hat rested on the top of his nose, for so his scanty strip of forehead might be called; and the skirts of his black coat fluttered out almost to the horse's tail. Such was the appearance of Ichabod and his steed, as they shambled out of the gate of Hans Van Ripper, and it was altogether such an apparition as is seldom to be met with in broad daylight.

It was, as I have said, a fine autumnal day, the sky was clear and serene, and nature wore that rich and golden livery which we always associate with the idea of abundance. The forests had put on their sober brown and yellow, while some trees of the tenderer kind had been nipped by the frosts into brilliant dyes of orange, purple, and scarlet. Streaming flocks of wild ducks began to make their appearance high in the air, the bark of the squirrel might be heard from the groves of beech and hickory nuts, and the pensive whistle of the quail at intervals from the neighboring stubble-field.

The small birds were taking their farewell banquets. In the fulness of their revelry, they fluttered, chirping and frolicking, from bush to bush, and tree to tree, capricious from the very profusion and variety around them. There was the honest cock-robin, the favorite game of stripling sportsmen, with its loud querulous note; and the twittering blackbirds flying in sable clouds, and the golden-winged woodpecker, with his crimson crest, his broad black gorget, and splendid plumage, and the cedar bird, with its red-tipt wings and yellow-tipt tail, and its little monteiro cap<sup>85</sup> of feathers; and the blue jay, that noisy coxcomb, in his gay light-blue coat and white underclothes, screaming and chattering, nodding and bobbing and bowing, and pretending to be on good terms with every songster of the grove.

As Ichabod jogged slowly on his way, his eye, ever open to every symptom of culinary abundance, ranged with delight over the treasures of jolly autumn. On all sides he beheld vast store of apples; some hanging in oppressive opulence on the trees; some gathered into baskets and barrels for the market; others heaped up in rich piles for the cider-press. Farther on he beheld great fields of Indian corn, with its golden ears peeping from their leafy coverts, and holding out the promise of cakes and hasty pudding; and the yellow pumpkins lying beneath them,

<sup>85</sup> A hunting cap with a flap

turning up their fair round bellies to the sun, and giving ample prospects of the most luxurious of pies, and anon he passed the fragrant buckwheat fields, breathing the odor of the bee-hive, and as he beheld them, soft anticipations stole over his mind of dainty slap-jacks, well buttered, and garnished with honey or treacle, by the delicate little dimpled hand of Katrina Van Tassel.

Thus feeding his mind with many sweet thoughts and "sugared suppositions," he journeyed along the sides of a range of hills which look out upon some of the goodliest scenes of the mighty Hudson. The sun gradually wheeled his broad disk down into the west. The wide bosom of the Tappan Zee lay motionless and glassy, excepting that here and there a gentle undulation waved and prolonged the blue shadow of the distant mountain. A few amber clouds floated in the sky, without a breath of air to move them. The horizon was of a fine golden tint, changing gradually into a pure apple green, and from that into the deep blue of the mid-heaven. A slanting ray lingered on the woody crests of the precipices that overhung some parts of the river, giving greater depth to the dark-gray and purple of their rocky sides. A sloop was loitering in the distance, dropping slowly down with the tide, her sail hanging uselessly against the mast; and as the reflection of the sky gleamed along the still water, it seemed as if the vessel was suspended in the air.

It was toward evening that Ichabod arrived at the castle of the Heer Van Tassel, which he found thronged with the pride and flower of the adjacent country. Old farmers, a spare leathern-faced race, in homespun coats and breeches, blue stockings, huge shoes, and magnificent pewter buckles. Their brisk withered little dames, in close crimped caps, long-waisted shortgowns, homespun petticoats, with scissors and pin-cushions, and gay calico pockets hanging on the outside. Buxom lasses, almost as antiquated as their mothers, excepting where a straw hat, a fine ribbon, or perhaps a white frock, gave symptoms of city innovation. The sons, in short square-skirted coats with rows of stupendous brass buttons, and their hair generally queued in the fashion of the times, especially if they could procure an eel-skin for the purpose, it being esteemed, throughout the country, as a potent nourisher and strengthener of the hair.

Brom Bones, however, was the hero of the scene,

having come to the gathering on his favorite steed Daedevil, a creature, like himself, full of mettle and mischief, and which no one but himself could manage. He was, in fact, noted for preferring vicious animals, given to all kinds of tricks, which kept the rider in constant risk of his neck, for he held a tractable well-broken horse as unworthy of a lad of spirit.

Fain would I pause to dwell upon the world of charms that burst upon the enraptured gaze of my hero, as he entered the state parlor of Van Tassel's mansion. Not those of the bevy of buxom lasses, with their luxurious display of red and white; but the ample charms of a genuine Dutch country teatable, in the sumptuous time of autumn. Such heaped-up platters of cakes of various and almost indescribable kinds, known only to experienced Dutch housewives! There was the doughty dough-nut, the tenderer oly koek, and the crisp and crumbling cruller; sweet cakes and short cakes, ginger cakes and honey cakes, and the whole family of cakes. And then there were apple pies and peach pies and pumpkin pies; besides slices of ham and smoked beef; and moreover delectable dishes of preserved plums, and peaches, and pears, and quinces; not to mention broiled shad and roasted chickens; together with bowls of milk and cream, all mingled higgledy-piggledy, pretty much as I have enumerated them, with the motherly tea-pot sending up its clouds of vapor from the midst—Heaven bless the mark! I want breath and time to discuss this banquet as it deserves, and am too eager to get on with my story. Happily, Ichabod Crane was not in so great a hurry as his historian, but did ample justice to every dainty.

He was a kind and thankful creature, whose heart dilated in proportion as his skin was filled with good cheer; and whose spirits rose with eating as some men's do with drink. He could not help, too, rolling his large eyes round him as he ate, and chuckling with the possibility that he might one day be lord of all this scene of almost unimaginable luxury and splendor. Then, he thought, how soon he'd turn his back upon the old school-house; snap his fingers in the face of Hans Van Ripper, and every other niggardly patron, and kick any itinerant pedagogue out of doors that should dare to call him comrade!

Old Baltus Van Tassel moved about among his guests with a face dilated with content and good humor, round and jolly as the harvest moon. His hospitable attentions were brief, but expressive, being

confined to a shake of the hand, a slap on the shoulder, a loud laugh, and a pressing invitation to "fall to, and help themselves."

And now the sound of the music from the common room, or hall, summoned to the dance. The musician was an old grayheaded negro, who had been the itinerant orchestra of the neighborhood for more than half a century. His instrument was as old and battered as himself. The greater part of the time he scraped on two or three strings, accompanying every movement of the bow with a motion of the head; bowing almost to the ground, and stamping with his foot whenever a fresh couple were to start.

Ichabod prided himself upon his dancing as much as upon his vocal powers. Not a limb, not a fibre about him was idle, and to have seen his loosely hung frame in full motion, and clattering about the room, you would have thought Saint Vitus himself, that blessed patron of the dance, was figuring before you in person. He was the admiration of all the negroes, who, having gathered, of all ages and sizes, from the farm and the neighborhood, stood forming a pyramid of shining black faces at every door and window, gazing with delight at the scene, rolling their white eye-balls, and showing grinning rows of ivory from ear to ear. How could the flogger of urchins be otherwise than animated and joyous? the lady of his heart was his partner in the dance, and smiling graciously in reply to all his amorous oglings, while Brom Bones, sorely smitten with love and jealousy, sat brooding by himself in one corner.

When the dance was at an end, Ichabod was attracted to a knot of the sager folks, who, with old Van Tassel, sat smoking at one end of the piazza, gossiping over former times, and drawing out long stories about the war.

This neighborhood, at the time of which I am speaking, was one of those highly-favored places which abound with chronicle and great men. The British and American line had run near it during the war; it had, therefore, been the scene of marauding, and infested with refugees, cow-boys,<sup>88</sup> and all kinds of border chivalry. Just sufficient time had elapsed to enable each story-teller to dress up his tale with a little becoming fiction, and, in the indistinctness of his recollection, to make himself the hero of every exploit.

<sup>88</sup> A band of roistering guerrillas who infested the New York region during the Revolution.

There was the story of Doffue Martling, a large blue-bearded Dutchman, who had nearly taken a British frigate with an old iron nine-pounder from a mud breastwork, only that his gun burst at the sixth discharge. And there was an old gentleman who shall be nameless, being too rich a mynheer to be lightly mentioned, who, in the battle of Whiteplains, being an excellent master of defence, parried a musket ball with a small sword, insomuch that he absolutely felt it whizz round the blade, and glance off at the hilt: in proof of which, he was ready at any time to show the sword, with the hilt a little bent. There were several more that had been equally great in the field, not one of whom but was persuaded that he had a considerable hand in bringing the war to a happy termination.

But all these were nothing to the tales of ghosts and apparitions that succeeded. The neighborhood is rich in legendary treasures of the kind. Local tales and superstitions thrive best in these sheltered long-settled retreats; but are trampled under foot by the shifting throng that forms the population of most of our country places. Besides, there is no encouragement for ghosts in most of our villages, for they have scarcely had time to finish their first nap, and turn themselves in their graves, before their surviving friends have travelled away from the neighborhood; so that when they turn out at night to walk their rounds, they have no acquaintance left to call upon. This is perhaps the reason why we so seldom hear of ghosts except in our long-established Dutch communities.

The immediate cause, however, the prevalence of supernatural stories in these parts, was doubtless owing to the vicinity of Sleepy Hollow. There was a contagion in the very air that blew from that haunted region; it breathed forth an atmosphere of dreams and fancies infecting all the land. Several of the Sleepy Hollow people were present at Van Tassel's, and, as usual, were doling out their wild and wonderful legends. Many dismal tales were told about funeral trains, and mourning cries and wailings heard and seen about the great tree where the unfortunate Major André<sup>87</sup> was taken, and which stood in the neighborhood. Some mention was made also of the woman in white, that haunted the dark glen at Raven Rock, and was often heard to shriek on winter nights before a storm, having perished there in the

snow. The chief part of the stories, however, turned upon the favorite spectre of Sleepy Hollow, the headless horseman, who had been heard several times of late, patrolling the country; and, it was said, tethered his horse nightly among the graves in the churchyard.

The sequestered situation of this church seems always to have made it a favorite haunt of troubled spirits. It stands on a knoll, surrounded by locust-trees and lofty elms, from among which its decent whitewashed walls shine modestly forth, like Christian purity beaming through the shades of retirement. A gentle slope descends from it to a silver sheet of water, bordered by high trees, between which, peeps may be caught at the blue hills of the Hudson. To look upon its grass-grown yard, where the sunbeams seem to sleep so quietly, one would think that there at least the dead might rest in peace. On one side of the church extends a wide woody dell, along which raves a large brook among broken rocks and trunks of fallen trees. Over a deep black part of the stream, not far from the church, was formerly thrown a wooden bridge; the road that led to it, and the bridge itself, were thickly shaded by overhanging trees, which cast a gloom about it, even in the daytime; but occasioned a fearful darkness at night. This was one of the favorite haunts of the headless horseman; and the place where he was most frequently encountered. The tale was told of old Brouwer, a most heretical disbeliever in ghosts, how he met the horseman returning from his foray into Sleepy Hollow, and was obliged to get up behind him, how they galloped over bush and brake, over hill and swamp, until they reached the bridge, when the horseman suddenly turned into a skeleton, threw old Brouwer into the brook, and sprang away over the tree-tops with a clap of thunder.

This story was immediately matched by a thrice marvellous adventure of Brom Bones, who made light of the galloping Hessian as an ardent jockey. He affirmed that, on returning one night from the neighboring village of Sing Sing, he had been overtaken by this midnight trooper; that he had offered to race with him for a bowl of punch, and should have won it too, for Daredevil beat the goblin-horse all hollow, but, just as they came to the church-bridge, the Hessian bolted, and vanished in a flash of fire.

All these tales, told in that drowsy undertone with which men talk in the dark, the countenances of the listeners only now and then receiving a casual gleam

<sup>87</sup> Major André (1751-80), British spy executed at Tappan.

from the glare of a pipe, sank deep in the mind of Ichabod. He repaid them in kind with large extracts from his invaluable author, Cotton Mather, and added many marvellous events that had taken place in his native State of Connecticut, and fearful sights which he had seen in his nightly walks about Sleepy Hollow.

The revel now gradually broke up. The old farmers gathered together their families in their wagons, and were heard for some time rattling along the hollow roads, and over the distant hills. Some of the damsels mounted on pillions behind their favorite swains, and their light-hearted laughter, mingling with the clatter of hoofs, echoed along the silent woodlands, sounding fainter and fainter until they gradually died away—and the late scene of noise and frolic was all silent and deserted. Ichabod only lingered behind, according to the custom of country lovers, to have a tête-à-tête with the heiress, fully convinced that he was now on the high road to success. What passed at this interview I will not pretend to say, for in fact I do not know. Something, however, I fear me, must have gone wrong, for he certainly sallied forth, after no very great interval, with an air quite desolate and chop-fallen.—Oh these women! these women! Could that girl have been playing off any of her coquettish tricks?—Was her encouragement of the poor pedagogue all a mere sham to secure her conquest of his rival?—Heaven only knows, not I!—Let it suffice to say, Ichabod stole forth with the air of one who had been sacking a hen-roost, rather than a fair lady's heart. Without looking to the right or left to notice the scene of rural wealth, on which he had so often gloated, he went straight to the stable, and with several hearty cuffs and kicks, roused his steed most uncourtously from the comfortable quarters in which he was soundly sleeping, dreaming of mountains of corn and oats, and whole valleys of timothy and clover.

It was the very witching time of night that Ichabod, heavy-hearted and crest-fallen, pursued his travel homewards, along the sides of the lofty hills which rise above Tarry Town, and which he had traversed so cheerily in the afternoon. The hour was as dismal as himself. Far below him, the Tappan Zee spread its dusky and indistinct waste of waters, with here and there the tall mast of a sloop, riding quietly at anchor under the land. In the dead hush of midnight, he could even hear the barking of the watch dog from

the opposite shore of the Hudson, but it was so vague and faint as only to give an idea of his distance from this faithful companion of man. Now and then, too, the long-drawn crowing of a cock, accidentally awakened, would sound far, far off, from some farmhouse away among the hills—but it was like a dreaming sound in his ear. No signs of life occurred near him, but occasionally the melancholy chirp of a cricket, or perhaps the guttural twang of a bull-frog, from a neighboring marsh, as if sleeping uncomfortably, and turning suddenly in his bed.

All the stories of ghosts and goblins that he had heard in the afternoon, now came crowding upon his recollection. The night grew darker and darker; the stars seemed to sink deeper in the sky, and driving clouds occasionally hid them from his sight. He had never felt so lonely and dismal. He was, moreover, approaching the very place where many of the scenes of the ghost stories had been laid. In the centre of the road stood an enormous tulip-tree, which towered like a giant above all the other trees of the neighborhood, and formed a kind of landmark. Its limbs were gnarled, and fantastic, large enough to form trunks for ordinary trees, twisting down almost to the earth, and rising again into the air. It was connected with the tragical story of the unfortunate André, who had been taken prisoner hard by, and was universally known by the name of Major André's tree. The common people regarded it with a mixture of respect and superstition, partly out of sympathy for the fate of its ill-starred namesake, and partly from the tales of strange sights and doleful lamentations told concerning it.

As Ichabod approached this fearful tree, he began to whistle—he thought his whistle was answered—it was but a blast sweeping sharply through the dry branches. As he approached a little nearer, he thought he saw something white, hanging in the midst of the tree—he paused and ceased whistling, but on looking more narrowly, perceived that it was a place where the tree had been scathed by lightning, and the white wood laid bare. Suddenly he heard a groan—his teeth chattered and his knees smote against the saddle. It was but the rubbing of one huge bough upon another, as they were swayed about by the breeze. He passed the tree in safety, but new perils lay before him.

About two hundred yards from the tree a small brook crossed the road, and ran into a marshy and thickly-wooded glen, known by the name of Wiley's

swamp A few rough logs, laid side by side, served for a bridge over this stream. On that side of the road where the brook entered the wood, a group of oaks and chestnuts, matted thick with wild grape-vines, threw a cavernous gloom over it To pass this bridge was the severest trial It was at this identical spot that the unfortunate André was captured, and under the covert of those chestnuts and vines were the sturdy yeomen concealed who surprised him. This has ever since been considered a haunted stream, and fearful are the feelings of the schoolboy who has to pass it alone after dark

As he approached the stream his heart began to thump, he summoned up, however, all his resolution, gave his horse half a score of kicks in the ribs, and attempted to dash briskly across the bridge, but instead of starting forward, the perverse old animal made a lateral movement, and ran broadside against the fence. Ichabod, whose fears increased with the delay, jerked the reins on the other side, and kicked 20 lustily with the contrary foot. it was all in vain, his steed started, it is true, but it was only to plunge to the opposite side of the road into a thicket of brambles and alder bushes. The schoolmaster now bestowed both whip and heel upon the starveling ribs of old Gunpowder, who dashed forward, snuffing and snorting, but came to a stand just by the bridge, with a suddenness that had nearly sent his rider sprawling over his head. Just at this moment a plashy tramp by the side of the bridge caught the sensitive 30 ear of Ichabod. In the dark shadow of the grove, on the margin of the brook, he beheld something huge, misshapen, black and towering. It stirred not, but seemed gathered up in the gloom, like some gigantic monster ready to spring upon the traveller.

The hair of the affrighted pedagogue rose upon his head with terror. What was to be done? To turn and fly was now too late; and besides, what chance was there of escaping ghost or goblin, if such it was, which could ride upon the wings of the wind? Summoning up, therefore, a show of courage, he demanded in stammering accents—"Who are you?" He received no reply. He repeated his demand in a still more agitated voice. Still there was no answer. Once more he cudgelled the sides of the inflexible Gunpowder, and, shutting his eyes, broke forth with involuntary fervor into a psalm tune Just then the shadowy object of alarm put itself in motion, and, with a scramble and a bound, stood at once in the

middle of the road. Though the night was dark and dismal, yet the form of the unknown might now in some degree be ascertained He appeared to be a horseman of large dimensions, and mounted on a black horse of powerful frame He made no offer of molestation or sociability, but kept aloof on one side of the road, jogging along on the blind side of old Gunpowder, who had now got over his fright and waywardness.

Ichabod, who had no relish for this strange midnight companion, and bethought himself of the adventure of Brom Bones with the Galloping Hessian, now quickened his steed, in hopes of leaving him behind The stranger, however, quickened his horse to an equal pace. Ichabod pulled up, and fell into a walk, thinking to lag behind—the other did the same His heart began to sink within him, he endeavored to resume his psalm tune, but his parched tongue clove to the roof of his mouth, and he could not utter a stave There was something in the moody and dogged silence of this pertinacious companion, that was mysterious and appalling It was soon fearfully accounted for On mounting a rising ground, which brought the figure of his fellow-traveller in relief against the sky, gigantic in height, and muffled in a cloak, Ichabod was horror-struck, on perceiving that he was headless!—but his horror was still more increased, on observing that the head, which should have rested on his shoulders, was carried before him on the pommel of the saddle his terror rose to desperation; he rained a shower of kicks and blows upon Gunpowder, hoping, by a sudden movement, to give his companion the slip—but the spectre started full jump with him. Away then they dashed, through thick and thin; stones flying, and sparks flashing at every bound Ichabod's flimsy garments fluttered in the air, as he stretched his long lank body away over his horse's head, in the cagerness of his flight.

They had now reached the road which turns off to Sleepy Hollow; but Gunpowder, who seemed possessed with a demon, instead of keeping up it, made an opposite turn, and plunged headlong down hill to the left. This road leads through a sandy hollow, shaded by trees for about a quarter of a mile, where it crosses the bridge famous in goblin story, and just beyond swells the green knoll on which stands the whitewashed church.

As yet the panic of the steed had given his unskilful rider an apparent advantage in the chase; but

just as he had got half way through the hollow, the girths of the saddle gave way, and he felt it slipping from under him. He seized it by the pommel, and endeavored to hold it firm, but in vain, and had just time to save himself by claspings old Gunpowder round the neck, when the saddle fell to the earth, and he heard it trampled under foot by his pursuer. For a moment the terror of Hans Van Ripper's wrath passed across his mind—for it was his Sunday saddle; but this was no time for petty fears; the goblin was 10 hard on his haunches; and (unskilful rider that he was!) he had much ado to maintain his seat, sometimes slipping on one side, sometimes on another, and sometimes jolted on the high ridge of his horse's back-bone, with a violence that he verily feared would cleave him asunder.

An opening in the trees now cheered him with the hopes that the church bridge was at hand. The wavering reflection of a silver star in the bosom of the brook told him that he was not mistaken. He saw 20 the walls of the church dimly glaring under the trees beyond. He recollected the place where Brom Bones's ghostly competitor had disappeared. "If I can but reach that bridge," thought Ichabod, "I am safe." Just then he heard the black steed panting and blowing close behind him; he even fancied that he felt his hot breath. Another convulsive kick in the ribs and old Gunpowder sprang upon the bridge, he thundered over the resounding planks, he gained the opposite side; and now Ichabod cast a look behind to see 30 if his pursuer should vanish, according to rule, in a flash of fire and brimstone. Just then he saw the goblin rising in his stirrups, and in the very act of hurling his head at him. Ichabod endeavored to dodge the horrible missile, but too late. It encountered his cranium with a tremendous crash—he was tumbled headlong into the dust, and Gunpowder, the black steed, and the goblin rider, passed by like a whirlwind.

The next morning the old horse was found without his saddle, and with the bridle under his feet, soberly 40 cropping the grass at his master's gate. Ichabod did not make his appearance at breakfast—dinner-hour came, but no Ichabod. The boys assembled at the school-house, and strolled idly about the banks of the brook; but no schoolmaster. Hans Van Ripper now began to feel some uneasiness about the fate of poor Ichabod, and his saddle. An inquiry was set on foot, and after diligent investigation they came upon his traces. In one part of the road leading to the

church was found the saddle trampled in the dirt, the tracks of horses' hoofs deeply dented in the road, and evidently at furious speed, were traced to the bridge, beyond which, on the bank of a broad part of the brook, where the water ran deep and black, was found the hat of the unfortunate Ichabod, and close beside it a shattered pumpkin.

The brook was searched, but the body of the schoolmaster was not to be discovered. Hans Van Ripper, as executor of his estate, examined the bundle which contained all his worldly effects. They consisted of two shirts and a half, two stocks for the neck; a pair or two of worsted stockings, an old pair of corduroy small-clothes; a rusty razor, a book of psalm tunes, full of dogs' ears, and a broken pitch-pipe. As to the books and furniture of the school-house, they belonged to the community, excepting Cotton Mather's History of Witchcraft, a New England Almanac, and a book of dreams and fortune-telling, in which last was a sheet of foolscap much scribbled and blotted in several fruitless attempts to make a copy of verses in honor of the heiress of Van Tassel. These magic books and the poetic scrawl were forthwith consigned to the flames by Hans Van Ripper; who from that time forward determined to send his children no more to school; observing, that he never knew any good come of this same reading and writing. Whatever money the schoolmaster possessed, and he had received his quarter's pay but a day or two before, he must have had about his person at the time of his disappearance.

The mysterious event caused much speculation at the church on the following Sunday. Knots of gazers and gossips were collected in the churchyard, at the bridge, and at the spot where the hat and pumpkin had been found. The stories of Brouwer, of Bones, and a whole budget of others, were called to mind; and when they had diligently considered them all, and compared them with the symptoms of the present case, they shook their heads, and came to the conclusion that Ichabod had been carried off by the galloping Hessian. As he was a bachelor, and in nobody's debt, nobody troubled his head any more about him. The school was removed to a different quarter of the hollow, and another pedagogue reigned in his stead.

It is true, an old farmer, who had been down to New York on a visit several years after, and from whom this account of the ghostly adventure was re-

ceived, brought home the intelligence that Ichabod Crane was still alive, that he had left the neighborhood, partly through fear of the goblin and Hans Van Ripper, and partly in mortification at having been suddenly dismissed by the heiress, that he had changed his quarters to a distant part of the country, had kept school and studied law at the same time, had been admitted to the bar, turned politician, electioneered, written for the newspapers, and finally had been made a justice of the Ten Pound Court.<sup>88</sup> 10 Brom Bones too, who shortly after his rival's disappearance conducted the blooming Katrina in triumph to the altar, was observed to look exceedingly knowing whenever the story of Ichabod was related, and always burst into a hearty laugh at the mention

<sup>88</sup> A court in which cases involving not more than ten pounds were settled

of the pumpkin, which led some to suspect that he knew more about the matter than he chose to tell.

The old country wives, however, who are the best judges of these matters, maintain to this day that Ichabod was spirited away by supernatural means, and it is a favorite story often told about the neighborhood round the winter evening fire. The bridge became more than ever an object of superstitious awe, and that may be the reason why the road has been altered of late years, so as to approach the church by the border of the mill-pond. The school-house being deserted, soon fell to decay, and was reported to be haunted by the ghost of the unfortunate pedagogue, and the ploughboy, loitering homeward of a still summer evening, has often fancied his voice at a distance, chanting a melancholy psalm tune among the tranquil solitudes of Sleepy Hollow.

The Author

Worthy Reader:

On again taking pen in hand, I would fain make a few observations at the outset, by way of bespeaking a right understanding. The volumes which I have already published have met with a reception far beyond my most sanguine expectations. I would willingly attribute this to their intrinsic merits; but, in spite of the vanity of authorship, I cannot but be sensible that their success has, in a great measure, been owing to a less flattering cause. It has been a matter of marvel, to my European readers, that a 30 man from the wilds of America should express himself in tolerable English. I was looked upon as something new and strange in literature, a kind of demi-savage, with a feather in his hand, instead of on his head; and there was a curiosity to hear what such a being had to say about civilized society.<sup>89</sup>

This novelty is now at an end, and of course the feeling of indulgence which it produced. I must now expect to bear the scrutiny of sterner criticisms, and to be measured by the same standard of contempor- 40 ary writers; and the very favor shown to my previous writings, will cause these to be treated with the great-

<sup>89</sup> This paragraph is in Irving's best style of pleasant raillery

est rigor, as there is nothing for which the world is apt to punish a man more severely, than for having 20 been over-praised. On this head, therefore, I wish to forestall the censoriousness of the reader, and I entreat he will not think the worse of me for the many injudicious things that may have been said in my commendation.

I am aware that I often travel over beaten ground, and treat of subjects that have already been discussed by abler pens. Indeed, various authors have been mentioned as my models, to whom I should feel flattered if I thought I bore the slightest resemblance; but in truth I write after no model that I am conscious of, and I write with no idea of imitation or competition. In venturing occasionally on topics that have already been almost exhausted by English authors, I do it, not with the presumption of challenging a comparison, but with the hope that some new interest may be given to such topics, when discussed by the pen of a stranger.

If, therefore, I should sometimes be found dwelling with fondness on subjects trite and commonplace with the reader, I beg the circumstances under which I write may be kept in recollection. Having been born and brought up in a new country, yet educated from infancy in the literature of an old one, my mind was

early filled with historical and poetical associations, connected with places, and manners, and customs of Europe; but which could rarely be applied to those of my country. To a mind thus peculiarly prepared, the most ordinary objects and scenes, on arriving in Europe, are full of strange matter and interesting novelty. England is as classic ground to an American, as Italy is to an Englishman, and old London teems with as much historical association as mighty Rome.

Indeed, it is difficult to describe the whimsical medley of ideas that throng upon his mind on landing among English scenes. He for the first time sees a world about which he has been reading and thinking in every stage of his existence. The recollected ideas of infancy, youth, and manhood, of the nursery, the school, and the study, come swarming at once upon him, and his attention is distracted between great and little objects; each of which, perhaps, awakens an equally delightful train of remembrances.

But what especially attracts his notice, are these peculiarities which distinguish an old country and an old state of society from a new one. I have never yet grown familiar enough with the crumbling monuments of past ages, to blunt the intense interest with which I at first beheld them. Accustomed always to scenes where history was, in a manner, anticipation; where every thing in art was new and progressive, and pointed to the future rather than to the past; where, in short, the works of man gave no ideas but those of young existence, and prospective improvement; there was something inexpressibly touching in the sight of enormous piles of architecture, gray with antiquity, and sinking in decay. I cannot describe the mute but deep-felt enthusiasm with which I have contemplated a vast monastic ruin, like Tintern Abbey, buried in the bosom of a quiet valley, and shut up from the world, as though it had existed merely for itself; or a warren pile, like Conway Castle, standing in stern loneliness on its rocky height, a mere hollow yet threatening phantom of departed power. They spread a grand, and melancholy, and, to me, an unusual charm over the landscape; I for the first time beheld signs of national old age, and empire's decay, and proofs of the transient and perishing glories of art, amidst the ever-springing and reviving fertility of nature.

But, in fact, to me every thing was full of matter; the footsteps of history were every where to be

traced, and poetry had breathed over and sanctified the land. I experienced the delightful freshness of feeling of a child, to whom every thing is new. I pictured to myself a set of inhabitants and a mode of life for every habitation that I saw, from the aristocratical mansion, amidst the lordly repose of stately groves and solitary parks, to the straw-thatched cottage, with its scanty garden and its cherished woodbine. I thought I never could be sated with the sweetness of a country so completely carpeted with verdure, where every air breathed of the balmy pasture, and the honeysuckled hedge. I was continually coming upon some little document of poetry in the blossomed hawthorn, the daisy, the cowslip, the primrose, or some other simple object that has received a supernatural value from the muse. The first time that I heard the song of a nightingale, I was intoxicated more by the delicious crowd of remembered associations than by the melody of its notes, and I shall never forget the thrill of ecstasy with which I first saw the lark rise, almost from beneath my feet, and wing its musical flight up into the morning sky.

In this way I traversed England, a grown-up child, delighted by every object, great and small, and betraying a wondering ignorance, and simple enjoyment, that provoked many a stare and a smile from my wiser and more experienced fellow-travellers. Such too was the odd confusion of associations that kept breaking upon me as I first approached London. One of my earliest wishes had been to see this great metropolis. I had read so much about it in the earliest books put into my infant hands, and I had heard so much about it from those around me who had come from the "old countries," that I was familiar with the names of its streets and squares, and public places, before I knew those of my native city. It was, to me, the great centre of the world, round which every thing seemed to revolve. I recollect contemplating so wistfully, when a boy, a paltry little print of the Thames, and London Bridge, and St. Paul's, that was in front of an old magazine; and a picture of Kensington Gardens, with gentlemen in three-cornered hats and broad skirts, and ladies in hoops and lappets, that hung up in my bedroom, even the venerable cut of St. John's Gate, that has stood, time out of mind, in front of the Gentleman's Magazine, was not without its charms to me; and I envied the odd-looking little man that appeared to be loitering about its arches.

How then did my heart warm when the towers of Westminster Abbey were pointed out to me, rising above the rich groves of St James's Park, with a thin haze above their gray pinnacles! I could not behold this great mausoleum of what is most illustrious in our paternal history, without feeling my enthusiasm in a glow. With what eagerness did I explore every part of the metropolis! I was not content with those matters which occupy the dignified research of the learned traveller, I delighted to call up all the feelings of childhood, and to seek after those objects which had been the wonders of my infancy. London Bridge, so famous in nursery song, the far-famed monument, Gog and Magog, and the Lions in the Tower, all brought back many a recollection of infantine delight, and of good old beings, now no more, who had gossiped about them to my wondering ear. Nor was it without recurrence to childish interest that I first peeped into Mr. Newberry's shop, in St Paul's Church-yard, that fountain-head of literature. Mr. Newberry was the first that ever filled my infant mind with the idea of a great and good man. He published all the picture-books of the day; and, out of his abundant love for children, he charged "nothing for either papers or print, and only a penny-halfpenny for the binding!"

I have mentioned these circumstances, worthy reader, to show you the whimsical crowd of associations that are apt to beset my mind on mingling among European scenes. I hope they may, in some measure, plead my apology, should I be found harping upon stale and trivial themes, or indulging an over-fondness for anything antique and obsolete. I know it is the humour, not to say cant of the day, to run riot about old times, old books, old customs, and old buildings; with myself, however, as far as I have caught the contagion, the feeling is genuine. To a man from a young country, all old things are in a manner new, and he may surely be excused in being a little curious about antiquities, whose native land, unfortunately, cannot boast a single ruin.

Having been brought up, also, in the comparative simplicity of a republic, I am apt to be struck with even the ordinary circumstances incident to an aristocratical state of society. If, however, I should at any time amuse myself by pointing out some of the eccentricities, and some of the poetical characteristics of the latter, I would not be understood as pretending to decide upon its political merits. My only aim

is to paint characters and manners. I am no politician. The more I have considered the study of politics, the more I have found it full of perplexity, and I have contented myself, as I have in my religion, with the faith in which I was brought up, regulating my own conduct by its precepts, but leaving to abler heads the task of making converts.

I shall continue on, therefore, in the course hitherto pursued, looking at things poetically, rather than politically; describing them as they are, rather than pretending to point out how they should be; and endeavoring to see the world in as pleasant a light as circumstances will permit.

I have always had an opinion that much good might be done by keeping mankind in good-humour with one another. I may be wrong in my philosophy, but I shall continue to practice it until convinced of its fallacy. When I discover the world to be all that it has been represented by sneering cynics and whining poets, I will turn to and abuse it also, in the meanwhile, worthy reader, I hope you will not think lightly of me, because I cannot believe this to be so very bad a world as it is represented.

Thine truly,

Geoffrey Crayon.

### *The Stout Gentleman*

A STAGE-COACH ROMANCE

*I'll cross it, though it blast me!*<sup>90</sup>

HAMLET

It was a rainy Sunday in the gloomy month of November. I had been detained, in the course of a journey, by a slight indisposition, from which I was recovering; but was still feverish, and obliged to keep within doors all day, in an inn of the small town of Derby.<sup>91</sup> A wet Sunday in a country inn!—whoever has had the luck to experience one can alone judge of my situation. The rain pattered against the casements; the bells tolled for church with a melancholy sound. I went to the windows in quest of something to amuse the eye; but it seemed as if I had been placed completely out of the reach of all amusement. The windows of my bedroom looked out among tiled roofs and stacks of chimneys, while those of my sit-

<sup>90</sup> *Hamlet*, I, i, 127.

<sup>91</sup> Town in north central England.

ting-room commanded a full view of the stable-yard I know of nothing more calculated to make a man sick of this world than a stable-yard on a rainy day. The place was littered with wet straw that had been kicked about by travellers and stable-boys. In one corner was a stagnant pool of water, surrounding an island of muck, there were several half-drowned fowls crowded together under a cart, among which was a miserable, crest-fallen cock, drenched out of all life and spirit, his drooping tail matted, as it were, into a single feather, along which the water trickled from his back, near the cart was a half-dozing cow, chewing the cud, and standing patiently to be rained on, with wreaths of vapor rising from her reeking hide; a wall-eyed horse, tired of the loneliness of the stable, was poking his spectral head out of a window, with the rain dripping on it from the eaves; an unhappy cur, chained to a doghouse hard by, uttered something every now and then, between a bark and a yelp; a drab of a kitchen wench tramped backwards and forwards through the yard in pattens, looking as sulky as the weather itself, every thing, in short, was comfortless and forlorn, excepting a crew of hardened ducks, assembled like boon companions round a puddle, and making a riotous noise over their liquor

I was lonely and listless, and wanted amusement. My room soon became insupportable. I abandoned it, and sought what is technically called the travellers'-room. This is a public room set apart at most inns for the accommodation of a class of wayfarers, called travellers, or riders, a kind of commercial knights-errant, who are incessantly scouring the kingdom on gigs, on horseback, or by coach. They are the only successors that I know of at the present day to the knights-errant of yore. They lead the same kind of roving, adventurous life, only changing the lance for a driving-whip, the buckler for a pattern-card, and the coat of mail for an upper Benjamin.<sup>92</sup> Instead of vindicating the charms of peerless beauty, they rove about, spreading the fame and standing of some substantial tradesman, or manufacturer, and are ready at any time to bargain in his name; it being the fashion nowadays to trade, instead of fight, with one another. As the rooms of the hostel, in the good old fighting times, would be hung round at night with the armor of way-worn warriors, such as coats of mail, falchions, and yawning helmets; so the travellers'-room is garnished with the harnessing of their successors, with

box-coats, whips of all kinds, spurs, garters, and oil-cloth covered hats

I was in hopes of finding some of these worthies to talk with, but was disappointed. There were, indeed, two or three in the room, but I could make nothing of them. One was just finishing his breakfast, quarrelling with his bread and butter, and huffing the waiter, another buttoned on a pair of garters, with many execrations at Boots<sup>93</sup> for not having cleaned his shoes well, a third sat drumming on the table with his fingers and looking at the rain as it streamed down the window-glass; they all appeared infected by the weather, and disappeared, one after the other, without exchanging a word.

I sauntered to the window, and stood gazing at the people, picking their way to church, with petticoats hoisted midleg high, and dripping umbrellas. The bell ceased to toll, and the streets became silent. I then amused myself with watching the daughters of a tradesman opposite, who, being confined to the house for fear of wetting their Sunday finery, played off their charms at the front windows, to fascinate the chance tenants of the inn. They at length were summoned away by a vigilant vinegar-faced mother, and I had nothing further from without to amuse me.

What was I to do to pass away the long-lived day? I was sadly nervous and lonely; and every thing about an inn seems calculated to make a dull day ten times duller. Old newspapers, smelling of beer and tobacco smoke, and which I had already read half a dozen times. Good-for-nothing books, that were worse than rainy weather. I bored myself to death with an old volume of the *Lady's Magazine*.<sup>94</sup> I read all the commonplace names of ambitious travellers scrawled on the panes of glass; the eternal families of the Smiths, and the Browns, and the Jacksons, and the Johnsons, and all the other sons, and I deciphered several scraps of fatiguing in-window poetry which I have met with in all parts of the world.

The day continued lowering and gloomy; the slovenly, ragged, spongy clouds drifted heavily along; there was no variety even in the rain: it was one dull, continued, monotonous patter—patter—patter, excepting that now and then I was enlivened by the idea of a brisk shower, from the rattling of the drops upon a passing umbrella.

<sup>93</sup> A servant or boy at an inn or hotel.

<sup>94</sup> Popular eighteenth-century magazine, edited for a time by Oliver Goldsmith.

<sup>92</sup> An overcoat, named after a tailor.

It was quite *refreshing* (if I may be allowed a hackneyed phrase of the day) when, in the course of the morning, a horn blew, and a stage-coach whirled through the street, with outside passengers stuck all over it, cowering under cotton umbrellas, and seethed together, and reeking with the steams of wet box-coats and upper Benjamins.

The sound brought out from their lurking-places a crew of vagabond boys, and vagabond dogs, and the carrot-headed hostler, and that nondescript animal cycloped Boots, and all the other vagabond race that infest the purlieus of an inn; but the bustle was transient, the coach again whirled on its way; and boy and dog, and hostler and Boots, all slunk back again to their holes; the street again became silent, and the rain continued to rain on. In fact, there was no hope of its clearing up; the barometer pointed to rainy weather; mine hostess' tortoise-shell cat sat by the fire washing her face, and rubbing her paws over her ears, and, on referring to the Almanac, I found a <sup>20</sup> direful prediction stretching from the top of the page to the bottom through the whole month, "expect—much—rain—about—this—time!"

I was dreadfully hipped. The hours seemed as if they would never creep by. The very ticking of the clock became irksome. At length the stillness of the house was interrupted by the ringing of a bell. Shortly after I heard the voice of a waiter at the bar: "The stout gentleman in No. 13, wants his breakfast. Tea and bread and butter, with ham and eggs; <sup>30</sup> the eggs not to be too much done."

In such a situation as mine, every incident is of importance. Here was a subject of speculation presented to my mind, and ample exercise for my imagination. I am prone to paint pictures to myself, and on this occasion I had some materials to work upon. Had the guest up stairs been mentioned as Mr. Smith, or Mr. Brown, or Mr. Jackson, or Mr. Johnson, or merely as "the gentleman in No. 13," it would have been a perfect blank to me. I should have <sup>40</sup> thought nothing of it; but "The stout gentleman!"—the very name had something in it of the picturesque. It at once gave the size; it embodied the personage to my mind's eye, and my fancy did the rest.

He was stout, or, as some term it, lusty; in all probability, therefore, he was advanced in life, some people expanding as they grow old. By his breakfasting rather late, and in his own room, he must be a

man accustomed to live at his ease, and above the necessity of early rising, no doubt a round, rosy, lusty old gentleman.

There was another violent ringing. The stout gentleman was impatient for his breakfast. He was evidently a man of importance; "well to do in the world," accustomed to be promptly waited upon; of a keen appetite, and a little cross when hungry; "perhaps," thought I, "he may be some London Alderman; or who knows but he may be a Member of Parliament?"

The breakfast was sent up, and there was a short interval of silence, he was, doubtless, making the tea. Presently there was a violent ringing; and before it could be answered, another ringing still more violent. "Bless me! what a choleric old gentleman!" The waiter came down in a huff. The butter was rancid, the eggs were over-done, the ham was too salt,—the stout gentleman was evidently nice in his eating; one of those who eat and growl, and keep the waiter on the trot, and live in a state militant with the household.

The hostess got into a fume. I should observe that she was a brisk, coquettish woman; a little of a shrew, and something of a slammerkin,<sup>95</sup> but very pretty withal; with a nincompoop<sup>96</sup> for a husband, as shrews are apt to have. She rated the servants roundly for their negligence in sending up so bad a breakfast, but said not a word against the stout gentleman; by which I clearly perceived that he must be a man of consequence, entitled to make a noise and to give trouble at a country inn. Other eggs, and ham, and bread and butter were sent up. They appeared to be more graciously received; at least there was no further complaint.

I had not made many turns about the travellers'-room, when there was another ringing. Shortly afterwards there was a stir and an inquest about the house. The stout gentleman wanted the *Times*<sup>97</sup> or the *Chronicle*<sup>98</sup> newspaper. I set him down, therefore, for a whig; or rather, from his being so absolute and lordly where he had a chance, I suspected him of being a radical. Hunt, I had heard, was a large man; "who knows," thought I, "but it is Hunt himself!"

My curiosity began to be awakened. I inquired of the waiter who was this stout gentleman that was

<sup>95</sup> Slovenly, shabby, untidy woman.

<sup>96</sup> Slang for a silly or stupid person.

<sup>97</sup> *The London Times*.

<sup>98</sup> *The Morning Chronicle* (London).

making all this stir, but I could get no information nobody seemed to know his name. The landlords of bustling inns seldom trouble their heads about the names or occupations of their transient guests. The color of a coat, the shape or size of the person, is enough to suggest a travelling name. It is either the tall gentleman, or the short gentleman, or the gentleman in black, or the gentleman in snuff-color; or, as in the present instance, the stout gentleman. A designation of the kind once hit on answers every <sup>10</sup> purpose, and saves all further inquiry.

Rain—rain—rain! pitiless, ceaseless rain! No such thing as putting a foot out of doors, and no occupation nor amusement within. By and by I heard some one walking over head. It was in the stout gentleman's room. He evidently was a large man by the heaviness of his tread, and an old man from his wearing such creaking solcs. "He is doubtless," thought I, "some rich old square-toes of regular habits, and is now taking exercise after breakfast"

I now read all the advertisement of coaches and hotels that were stuck about the mantelpiece. The Lady's Magazine had become an abomination to me; it was as tedious as the day itself. I wandered out, not knowing what to do, and ascended again to my room. I had not been there long, when there was a squall from a neighboring bedroom. A door opened and slammed violently; a chambermaid, that I had remarked for having a ruddy, good-humored face, went down stairs in a violent flurry. The stout gentleman <sup>30</sup> had been rude to her!

This sent a whole host of my deductions to the deuce in a moment. This unknown personage could not be an old gentleman; for old gentlemen are not apt to be so obstreperous to chambermaids. He could not be a young gentleman; for young gentlemen are not apt to inspire such indignation. He must be a middle-aged man, and confounded ugly into the bargain, or the girl would not have taken the matter in such terrible dudgeon. I confess I was sorely puzzled. <sup>40</sup>

In a few minutes I heard the voice of my landlady. I caught a glance of her as she came tramping up stairs; her face glowing, her cap flaring, her tongue wagging the whole way. "She'd have no such doings in her house, she'd warrant. If gentlemen did spend money freely, it was no rule. She'd have no servant maids of hers treated in that way, when they were about their work, that's what she wouldn't."

As I hate squabbles, particularly with women, and above all with pretty women, I slunk back into my room, and partly closed the door, but my curiosity was too much excited not to listen. The landlady marched intrepidly to the enemy's citadel, and entered it with a storm. the door closed after her. I heard her voice in high windy clamor for a moment or two. Then it gradually subsided, like a gust of wind in a garret; then there was a laugh, then I heard nothing more.

After a little while my landlady came out with an odd smile on her face, adjusting her cap, which was a little on one side. As she went down stairs, I heard the landlord ask her what was the matter; she said, "Nothing at all, only the girl's a fool."—I was more than ever perplexed what to make of this unaccountable personage, who could put a good-natured chambermaid in a passion, and send away a termagant landlady in smiles. He could not be so old, nor cross, <sup>20</sup> nor ugly either.

I had to go to work at his picture again, and to paint him entirely different. I now set him down for one of those stout gentlemen that are frequently met with swaggering about the doors of country inns. Moist, merry fellows, in Belcher handkerchiefs,<sup>99</sup> whose bulk is a little assisted by malt-liquors. Men who have seen the world, and been sworn at Highgate; who are used to tavern life, up to all the tricks of tapsters, and knowing in the ways of sinful publicans. Free-livers on a small scale, who are prodigal within the compass of a guinea, who call all the waiters by name, touzle the maids, gossip with the landlady at the bar, and prose over a pint of port, or a glass of negus,<sup>100</sup> after dinner.

The morning wore away in forming these and similar surmises. As fast as I wove one system of belief, some movement of the unknown would completely overturn it, and throw all my thoughts again into confusion. Such are the solitary operations of a feverish mind. I was, as I have said, extremely nervous, and the continual meditation on the concerns of this invisible personage began to have its effect:—I was getting a fit of the fidgets.

Dinner-time came. I hoped the stout gentleman might dine in the travellers'-room, and that I might

<sup>99</sup> Large blue neckerchiefs.

<sup>100</sup> A drink of wine, hot water, sugar, nutmeg, and lemon juice.

at length get a view of his person, but no—he had dinner served in his own room. What could be the meaning of this solitude and mystery? He could not be a radical, there was something too aristocratical in thus keeping himself apart from the rest of the world, and condemning himself to his own dull company throughout a rainy day. And then, too, he lived too well for a discontented politician. He seemed to expatiate on a variety of dishes, and to sit over his wine like a jolly friend of good living. Indeed, my doubts on this head were soon at an end; for he could not have finished his first bottle before I could faintly hear him humming a tune; and on listening, I found it to be “God save the King.” ’Twas plain, then, he was no radical, but a faithful subject, one who grew loyal over his bottle, and was ready to stand by king and constitution, when he could stand by nothing else. But who could he be? My conjectures began to run wild. Was he not some personage of distinction travelling incog? “God knows!” said I, at my wit’s end; “it may be one of the royal family for aught I know, for they are all stout gentlemen!”

The weather continued rainy. The mysterious unknown kept his room, and, as far as I could judge, his chair, for I did not hear him move. In the meantime, as the day advanced, the travellers’-room began to be frequented. Some, who had just arrived, came in buttoned-up in box-coats; others came home who had been dispersed about the town; some took their dinners, and some their tea. Had I been in a different mood, I should have found entertainment in studying this peculiar class of men. There were two especially, who were regular wags of the road, and up to all the standing jokes of travellers. They had a thousand sly things to say to the waiting-maid, whom they called Louisa, and Ethelinda, and a dozen other fine names, changing the name every time, and chuckling amazingly at their own waggy. My mind, however, had been completely engrossed by the stout gentleman. He had kept my fancy in chase during a long day, and it was not now to be diverted from the scent.

The event gradually wore away. The travellers read the papers two or three times over. Some drew round the fire and told long stories about their horses, about their adventures, their overturns, and breakings down. They discussed the credit of different merchants and different inns; and the two wags told several choice

anecdotes of pretty chambermaids, and kind landladies. All this passed as they were quietly taking what they called their night-caps, that is to say, strong glasses of brandy and water and sugar, or some other mixture of the kind, after which they one after another rang for “Boots” and the chambermaid, and walked off to bed in old shoes cut down into marvelously uncomfortable slippers.

There was now only one man left, a short-legged, long-bodied, plethoric fellow, with a very large, sandy head. He sat by himself, with a glass of port wine negus, and a spoon, sipping and stirring, and meditating and sipping, until nothing was left but the spoon. He gradually fell asleep bolt upright in his chair, with the empty glass standing before him, and the candle seemed to fall asleep too, for the wick grew long, and black, and cabbaged at the end, and dimmed the little light that remained in the chamber. The gloom that now prevailed was contagious. Around hung the shapeless, and almost spectral, box-coats of departed travellers, long since buried in deep sleep. I only heard the ticking of the clock, with the deep-drawn breathings of the sleeping toppers, and the drippings of the rain, drop—drop—drop, from the eaves of the house. The church bells chimed midnight. All at once the stout gentleman began to walk over head, pacing slowly backwards and forwards. There was something extremely awful in all this, especially to one in my state of nerves. These ghastly great-coats, these guttural breathings, and the creaking footsteps of this mysterious being. His steps grew fainter and fainter, and at length died away. I could bear it no longer. I was wound up to the desperation of a hero of romance. “Be he who or what he may,” said I to myself, “I’ll have a sight of him!” I seized a chamber candle, and hurried up to No. 13. The door stood ajar. I hesitated—I entered the room was deserted. There stood a large, broad-bottomed elbow-chair at a table, on which was an empty tumbler, and a “Times” newspaper, and the room smelt powerfully of Stilton cheese.<sup>101</sup>

The mysterious stranger had evidently but just retired. I turned off, sorely disappointed, to my room, which had been changed to the front of the house. As I went along the corridor, I saw a large pair of boots, with dirty, waxed tops, standing at the door of a bedchamber. They doubtless belonged to the un-

<sup>101</sup> One of the principal English cheeses.

known, but it would not do to disturb so redoubtable a personage in his den, he might discharge a pistol, or something worse, at my head. I went to bed, therefore, and lay awake half the night in a terribly nervous state; and even when I fell asleep, I was still haunted in my dreams by the idea of the stout gentleman and his wax-topped boots.

I slept rather late the next morning, and was awakened by some stir and bustle in the house, which I could not at first comprehend, until getting more awake, I found there was a mail coach starting from the door. Suddenly there was a cry from below, "The gentleman has forgot his umbrella! look for the gentleman's umbrella in No. 13!" I heard an imme-

diately scampering of a chambermaid along the passage, and a shrill reply as she ran, "Here it is! here's the gentleman's umbrella!"

The mysterious stranger then was on the point of setting off. This was the only chance I should ever have of knowing him. I sprang out of bed, scrambled to the window, snatched aside the curtains, and just caught a glimpse of the rear of a person getting in at the coach-door. The skirts of a brown coat parted behind, and gave me a full view of the broad disk of a pair of drab breeches. The door closed—"all right!" was the word—the coach whirled off—and that was all I ever saw of the stout gentleman!

1822

FROM

*Tales of a Traveller* <sup>102</sup>

To the Reader

Worthy and Dear Reader!—Hast thou ever been waylaid in the midst of a pleasant tour by some treacherous malady: thy heels tripped up, and thou left to count the tedious minutes as they passed, in the solitude of an inn chamber? If thou hast, thou wilt be able to pity me. Behold me, interrupted in the course of my journeying up the fair banks of the Rhine, and laid up by indisposition in this old frontier town of Mentz. I have worn out every source of amusement. I know the sound of every clock that strikes, and bell that rings, in the place. I know to a second when to listen for the first tap of the Prussian drum, as it summons the garrison to parade, or at what hour to expect the distant sound of the Austrian military band. All these have grown wearisome to me; and even the well-known step of my doctor, as he slowly paces the corridor, with healing in the creak of his shoes, no longer affords an agreeable interruption to the monotony of my apartment.

For a time I attempted to beguile the weary hours, by studying German under the tuition of mine host's pretty little daughter, Katrine; but I soon found even

German had not power to charm a languid ear, and that the conjugating of *ich liebe* might be powerless, however rosy the lips which uttered it.

I tried to read, but my mind would not fix itself. I turned over volume after volume, but threw them by with distaste. "Well, then," said I at length, in despair, "if I cannot read a book, I will write one." Never was there a more lucky idea, it at once gave me occupation and amusement. The writing of a book was considered in old times as an enterprise of toil and difficulty, insomuch that the most trifling lucubration was denominated a "work," and the world talked with awe and reverence of "the labors of the learned"—These matters are better understood nowadays.

Thanks to the improvements in all kind of manufactures, the art of book-making has been made familiar to the meanest capacity. Everybody is an author. The scribbling of a quarto is the mere pastime of the idle; the young gentleman throws off his brace of duodecimos in the intervals of the sporting season, and the young lady produces her set of volumes with the same facility that her great-grandmother worked a set of chair-bottoms.

The idea having struck me, therefore, to write a book, the reader will easily perceive that the execution of it was no difficult matter. I rummaged my portfolio, and cast about, in my recollection, for those floating materials which a man naturally collects in

<sup>102</sup> Published in London by Murray in two parts, August 25, 1824. In New York, it was published in four installments between August 24 and October 9, 1824, the first part consisting of "Strange Stories by a Nervous Gentleman"; the second, of "Buckthorne and His Friends"; the third, of "The Italian Banditti"; and the fourth, of "The Money Diggers."

travelling, and here I have arranged them in this little work

As I know this to be a story-telling and a story-reading age, and that the world is fond of being taught by apologue, I have digested the instruction I would convey into a number of tales. They may not possess the power of amusement, which the tales told by many of my contemporaries possess, but then I value myself on the sound moral which each of them contains.<sup>103</sup> This may not be apparent at first, but the reader will be sure to find it out in the end. I am for curing the world by gentle alternatives, not by violent doses; indeed, the patient should never be conscious that he is taking a dose. I have learnt this much from experience under the hands of the worthy Hippocrates of Mentz.

I am not, therefore, for those barefaced tales which carry their moral on the surface, staring one in the face, they are enough to deter the squeamish reader. On the contrary, I have often hid my moral from sight, and disguised it as much as possible by sweets and spices, so that while the simple reader is listening with open mouth to a ghost or a love story, he may have a bolus of sound morality popped down his throat, and be never the wiser for the fraud.

As the public is apt to be curious about the sources whence an author draws his stories, doubtless that it may know how far to put faith in them, I would observe, that the *Adventure of the German Student*, or rather the latter part of it, is founded on an anecdote related to me as existing somewhere in French; and, indeed, I have been told, since writing it, that an ingenious tale has been founded on it by an English writer; but I have never met with either the former or the latter in print. Some of the circumstances in the *Adventure of the Mysterious Picture*, and in the *Story of the Young Italian*, are vague recollections of anecdotes related to me some years since; but from what source derived, I do not know. The *Adventure of the Young Painter among the banditti* is taken almost entirely from an authentic narrative in manuscript.

As to the other tales contained in this work, and indeed to my tales generally, I can make but one

<sup>103</sup> Many years later Irving had a good laugh out of a flattering review of his works, in which it was asserted: "His most comical pieces have always a serious end in view." "You laugh," said Irving to his nephew, with that air of whimsical significance so natural to him, "but it is true, I have kept that to myself hitherto, but that man has found me out. He has detected the moral of the 'Stout Gentleman.'"

observation, I am an old traveller, I have read somewhat, heard and seen more, and dreamt more than all. My brain is filled, therefore, with all kinds of odds and ends. In travelling, these heterogeneous matters have become shaken up in my mind, as the articles are apt to be in an ill-packed travelling trunk; so that when I attempt to draw forth a fact, I cannot determine whether I have read, heard, or dreamt it; and I am always at a loss to know how much to believe of my own stories.<sup>104</sup>

These matters being premised, fall to, worthy reader, with good appetite, and, above all, with good humor, to what is here set before thee. If the tales I have furnished should prove to be bad, they will at least be found short, so that no one will be wearied long on the same theme. "Variety is charming," as some poet observes.

There is a certain relief in change, even though it be from bad to worse! As I have often found in travelling in a stage-coach, that it is often a comfort to shift one's position, and be bruised in a new place.

Ever thine,

Geoffrey Crayon.

### *Adventure of the German Student*

On a stormy night, in the tempestuous times of the French revolution, a young German was returning to his lodgings, at a late hour, across the old part of Paris. The lightning gleamed, and the loud claps of thunder rattled through the lofty narrow streets—but I should first tell you something about this young German.

Gottfried Wolfgang was a young man of good family. He had studied for some time at Gottingen, but being of a visionary and enthusiastic character, he had wandered into those wild and speculative doctrines which have so often bewildered German students. His secluded life, his intense application, and the singular nature of his studies, had an effect on both mind and body. His health was impaired; his imagination diseased. He had been indulging in fanciful speculations on spiritual essences, until, like Swedenborg, he had an ideal world of his own around

<sup>104</sup> Characteristic of Irving's playful and disarmingly naive approach to any question regarding the sources of his tales.

him. He took up a notion, I do not know from what cause, that there was an evil influence hanging over him, an evil genius or spirit seeking to ensnare him and ensure his perdition. Such an idea working on his melancholy temperament, produced the most gloomy effects. He became haggard and desponding. His friends discovered the mental malady preying upon him, and determined that the best cure was a change of scene; he was sent, therefore, to finish his studies amidst the splendors and gayeties of Paris.

Wolfgang arrived at Paris at the breaking out of the revolution. The popular delirium at first caught his enthusiastic mind, and he was captivated by the political and philosophical theories of the day; but the scenes of blood which followed shocked his sensitive nature, disgusted him with society and the world, and made him more than ever a recluse. He shut himself up in a solitary apartment in the *Pays Latin*,<sup>105</sup> the quarter of students. There, in a gloomy street not far from the monastic walls of the Sorbonne,<sup>106</sup> he pursued his favorite speculations. Sometimes he spent hours together in the great libraries of Paris, those catacombs of departed authors, rummaging among their hoards of dusty and obsolete works in quest of food for his unhealthy appetite. He was, in a manner, a literary ghoul, feeding in the charnel-house of decayed literature.

Wolfgang, though solitary and recluse, was of an ardent temperament, but for a time it operated merely upon his imagination. He was too shy and ignorant of the world to make any advances to the fair, but he was a passionate admirer of female beauty, and in his lonely chamber would often lose himself in reveries on forms and faces which he had seen, and his fancy would deck out images of loveliness far surpassing the reality.

While his mind was in this excited and sublimated state, a dream produced an extraordinary effect upon him. It was of a female face of transcendent beauty. So strong was the impression made, that he dreamt of it again and again. It haunted his thoughts by day, his slumbers by night, in fine, he became passionately enamoured of this shadow of a dream. This lasted so long that it became one of those fixed ideas which haunt the minds of melancholy men, and are at times mistaken for madness.

<sup>105</sup> The Latin quarter in Paris, frequented by students and artists.

<sup>106</sup> Famous university in Paris.

Such was Gottfried Wolfgang, and such his situation at the time I mentioned. He was returning home late one stormy night, through some of the old and gloomy streets of the *Marais*, the ancient part of Paris. The loud claps of thunder rattled among the high houses of the narrow streets. He came to the Place de Grève, the square where public executions are performed. The lightning quivered about the pinnacles of the ancient Hôtel de Ville, and shed flickering gleams over the open space in front. As Wolfgang was crossing the square, he shrank back with horror at finding himself close by the guillotine. It was the height of the reign of terror, when this dreadful instrument of death stood ever ready, and its scaffold was continually running with the blood of the virtuous and the brave. It had that very day been actively employed in the work of carnage, and there it stood in grim array, amidst a silent and sleeping city, waiting for fresh victims.

Wolfgang's heart sickened within him, and he was turning shuddering from the horrible engine, when he beheld a shadowy form, cowering as it were at the foot of the steps which led up to the scaffold. A succession of vivid flashes of lightning revealed it more distinctly. It was a female figure, dressed in black. She was seated on one of the lower steps of the scaffold, leaning forward, her face hid in her lap, and her long dishevelled tresses hanging to the ground, streaming with the rain which fell in torrents. Wolfgang paused. There was something awful in this solitary monument of woe. The female had the appearance of being above the common order. He knew the times to be full of vicissitude, and that many a fair head, which had once been pillowed on down, now wandered houseless. Perhaps this was some poor mourner whom the dreadful axe had rendered desolate, and who sat here heart-broken on the strand of existence, from which all that was dear to her had been launched into eternity.

He approached, and addressed her in the accents of sympathy. She raised her head and gazed wildly at him. What was his astonishment at beholding, by the bright glare of the lightning, the very face which had haunted him in his dreams. It was pale and desolate, but ravishingly beautiful.

Trembling with violent and conflicting emotions, Wolfgang again accosted her. He spoke something of her being exposed at such an hour of the night, and to the fury of such a storm, and offered to conduct

her to her friends. She pointed to the guillotine with a gesture of dreadful signification.

"I have no friend on earth!" said she.

"But you have a home," said Wolfgang.

"Yes—in the grave!"

The heart of the student melted at the words.

"If a stranger dare make an offer," said he, "without danger of being misunderstood, I would offer my humble dwelling as a shelter, myself as a devoted friend. I am friendless myself in Paris, and a stranger in the land; but if my life could be of service, it is at your disposal, and should be sacrificed before harm or indignity should come to you."

There was an honest earnestness in the young man's manner that had its effect. His foreign accent, too, was in his favor; it showed him not to be a hackneyed inhabitant of Paris. Indeed, there is an eloquence in true enthusiasm that is not to be doubted. The homeless stranger confided herself implicitly to the protection of the student.

He supported her faltering steps across the Pont Neuf,<sup>107</sup> and by the place where the statue of Henry the Fourth had been overthrown by the populace. The storm had abated, and the thunder rumbled at a distance. All Paris was quiet; that great volcano of human passion slumbered for a while, to gather fresh strength for the next day's eruption. The student conducted his charge through the ancient streets of the *Pays Latin*, and by the dusky walls of the Sorbonne, to the great dingy hotel which he inhabited. The old portress who admitted them stared with surprise at the unusual sight of the melancholy Wolfgang with a female companion.

On entering his apartment, the student, for the first time, blushed at the scantiness and indifference of his dwelling. He had but one chamber—an old-fashioned saloon—heavily carved, and fantastically furnished with the remains of former magnificence, for it was one of those hotels in the quarter of the Luxembourg palace, which had once belonged to nobility. It was lumbered with books and papers, and all the usual apparatus of a student, and his bed stood in a recess at one end.

When lights were brought, and Wolfgang had a better opportunity of contemplating the stranger, he was more than ever intoxicated by her beauty. Her face was pale, but of a dazzling fairness, set off by a profusion of raven hair that hung clustering about it.

<sup>107</sup> A famous bridge over the Seine in Paris.

Her eyes were large and brilliant, with a singular expression approaching almost to wildness. As far as her black dress permitted her shape to be seen, it was of perfect symmetry. Her whole appearance was highly striking, though she was dressed in the simplest style. The only thing approaching to an ornament which she wore, was a broad black band round her neck, clasped by diamonds.

The perplexity now commenced with the student how to dispose of the helpless being thus thrown upon his protection. He thought of abandoning his chamber to her, and seeking shelter for himself elsewhere. Still he was so fascinated by her charms, there seemed to be such a spell upon his thoughts and senses, that he could not tear himself from her presence. Her manner, too, was singular and unaccountable. She spoke no more of the guillotine. Her grief had abated. The attentions of the student had first won her confidence, and then, apparently, her heart. She was evidently an enthusiast like himself, and enthusiasts soon understood each other.

In the infatuation of the moment, Wolfgang avowed his passion for her. He told her the story of his mysterious dream, and how she had possessed his heart before he had even seen her. She was strangely affected by his recital, and acknowledged to have felt an impulse towards him equally unaccountable. It was the time for wild theory and wild actions. Old prejudices and superstitions were done away, every thing was under the sway of the "Goddess of Reason." Among other rubbish of the old times, the forms and ceremonies of marriage began to be considered superfluous bonds for honorable minds. Social compacts were the vogue. Wolfgang was too much of a theorist not to be tainted by the liberal doctrines of the day.

"Why should we separate?" said he: "our hearts are united, in the eye of reason and honor we are as one. What need is there of sordid forms to bind high souls together?"

The stranger listened with emotion. She had evidently received illumination at the same school.

"You have no home nor family," continued he; "let me be every thing to you, or rather let us be every thing to one another. If form is necessary, form shall be observed—there is my hand. I pledge myself to you for ever."

"For ever?" said the stranger, solemnly.

"For ever!" repeated Wolfgang.

The stranger clasped the hand extended to her "then I am yours," murmured she, and sank upon his bosom.

The next morning the student left his bride sleeping, and sallied forth at an early hour to seek more spacious apartments suitable to the change in his situation. When he returned, he found the stranger lying with her head hanging over the bed, and one arm thrown over it. He spoke to her, but received no reply. He advanced to awaken her from her uncasy posture. On taking her hand, it was cold—there was no pulsation—her face was pallid and ghastly—In a word she was a corpse.

Horrified and frantic, he alarmed the house. A scene of confusion ensued. The police was summoned. As the officer of police entered the room, he started back on beholding the corpse.

"Good heaven!" cried he, "how did this woman come here?"

"Do you know anything about her?" said Wolfgang, eagerly.

"Do I?" exclaimed the officer "she was guillotined yesterday."

He stepped forward, undid the black collar round the neck of the corpse, and the head rolled on the floor!

The student burst into a frenzy. "The fiend! the fiend has gained possession of me!" shrieked he. "I am lost for ever!"

They tried to soothe him, but in vain. He was possessed with the frightful belief that an evil spirit had animated the dead body to ensnare him. He went distracted, and died in a mad-house.

Here the old gentleman with the haunted head finished his narrative.

"And is this really a fact?" said the inquisitive gentleman.

"A fact not to be doubted," replied the other. "I had it from the best authority. The student told it me himself. I saw him in a mad-house in Paris."<sup>108</sup>

FROM

### *The Alhambra*<sup>109</sup>

#### *Legend of the Arabian Astrologer*

In old times, many hundred years ago, there was a Moorish king named Aben Habuz, who reigned over the kingdom of Granada. He was a retired conqueror, that is to say, one who having in his more youthful days led a life of constant foray and depredation, now that he was grown feeble and superannuated, "languished for repose," and desired nothing more than to live at peace with all the world, to husband his laurels, and to enjoy in quiet the possessions he had wrested from his neighbors.

It so happened, however, that this most reasonable and pacific old monarch had young rivals to deal with; princes full of his early passion for fame and fighting, and who were disposed to call him to account for the

scores he had run up with their fathers. Certain distant districts of his own territories, also, which during the days of his vigor he had treated with a high hand, were prone, now that he languished for repose, to rise in rebellion and threaten to invest him in his capital. Thus he had foes on every side; and as Granada is surrounded by wild and craggy mountains, which hide the approach of an enemy, the unfortunate Aben Habuz was kept in a constant state of vigilance and alarm, not knowing in what quarter hostilities might break out.

It was in vain that he built watchtowers on the mountains, and stationed guards at every pass with orders to make fires by night and smoke by day, on the approach of an enemy. His alert foes, baffling every precaution, would break out of some unthought-

<sup>108</sup> This caper at the end of Irving's tales is typical.

<sup>109</sup> Published originally in 1832. In 1851 Irving rearranged and revised the whole as it now stands in the "Author's Revised Edition," which this selection follows.

The Alhambra is a splendid medieval palace of the Moorish kings built on a hill overlooking Granada in southern Spain. Moorish power began to decline in the twelfth century, and toward the end of the fifteenth century the whole of southern

Spain fell into the hands of Ferdinand and Isabella. Irving's residence in the Alhambra from April to July of 1829 enabled him to indulge fully his antiquarian interests. He gathered much legendary and historical material from old manuscripts as well as from verbal sources. *The Alhambra* (1832), his most romantic production, was the result. The "Legend of the Arabian Astrologer" is typical of the arabesque contents of the book.

of defile, ravage his lands beneath his very nose, and then make off with prisoners and booty to the mountains. Was ever peaccable and retued conqueror in a more uncomfortable predicament?

While Aben Habuz was harassed by these perplexities and molestations, an ancient Arabian physician arrived at his court. His gray beard descended to his girdle, and he had every mark of extreme age, yet he had travelled almost the whole way from Egypt on foot, with no other aid than a staff, marked with hieroglyphics. His fame had preceded him. His name was Ibrahim Ebn Abu Ayub, he was said to have lived ever since the days of Mahomet, and to be son of Abu Ayub, the last of the companions of the Prophet. He had, when a child, followed the conquering army of Amur into Egypt, where he had remained many years studying the dark sciences, and particularly magic, among the Egyptian priests.

It was, moreover, said that he had found out the secret of prolonging life, by means of which he had arrived to the great age of upwards of two centuries, though, as he did not discover the secret until well stricken in years, he could only perpetuate his gray hairs and wrinkles.

This wonderful old man was honorably entertained by the king; who, like most superannuated monarchs, began to take physicians into great favor. He would have assigned him an apartment in his palace, but the astrologer preferred a cave in the side of the hill which rises above the city of Granada, being the same on which the Alhambra has since been built. He caused the cave to be enlarged so as to form a spacious and lofty hall, with a circular hole at the top, through which, as through a well, he could see the heavens and behold the stars even at mid-day. The walls of this hall were covered with Egyptian hieroglyphics with cabalistic symbols, and with the figures of the stars in their signs. This hall he furnished with many implements, fabricated under his directions by cunning artificers of Granada, but the occult properties of which were known only to himself.

In a little while the sage Ibrahim became the bosom counsellor of the king, who applied to him for advice in every emergency. Aben Habuz was once inveighing against the injustice of his neighbors, and bemoaning the restless vigilance he had to observe to guard himself against their invasions; when he had finished, the astrologer remained silent for a moment,

and then replied, "Know, O king, that when I was in Egypt I beheld a great marvel devised by a pagan priestess of old. On a mountain, above the city of Borsa, and overlooking the great valley of the Nile, was a figure of a ram, and above it a figure of a cock, both of molten brass, and turning upon a pivot. Whenever the country was threatened with invasion, the ram would turn in the direction of the enemy, and the cock would crow, upon this the inhabitants of the city knew of the danger, and of the quarter from which it was approaching, and could take timely means to guard against it."

"God is great!" exclaimed the pacific Aben Habuz, "what a treasure would be such a ram to keep an eye upon these mountains around me, and then such a cock, to crow in time of danger! Allah Akbar! how securely I might sleep in my palace with such sentinels on the top!"

The astrologer waited until the ecstasies of the king had subsided, and then proceeded

"After the victorious Amru (may he rest in peace!) had finished his conquest of Egypt, I remained among the priests of the land, studying the rites and ceremonies of their idolatrous faith, and seeking to make myself master of the hidden knowledge for which they are renowned. I was one day seated on the banks of the Nile, conversing with an ancient priest, when he pointed to the mighty pyramids which rose like mountains out of the neighboring desert. 'All that we can teach thee,' said he, 'is nothing to the knowledge locked up in those mighty piles. In the centre of the central pyramid is a sepulchral chamber, in which is enclosed the mummy of the high-priest, who aided in rearing that stupendous pile; and with him is buried a wondrous book of knowledge containing all the secrets of magic and art. This book was given to Adam after his fall, and was handed down from generation to generation to King Solomon the wise, and by its aid he built the temple of Jerusalem. How it came into the possession of the builder of the pyramids, is known to him alone who knows all things.'

"When I heard these words of the Egyptian priest, my heart burned to get possession of that book. I could command the services of many of the soldiers of our conquering army, and of a number of the native Egyptians: with these I set to work, and pierced the solid mass of the pyramid, until, after great toil, I came upon one of its interior and hidden passages.

Following this up, and threading a fearful labyrinth, I penetrated into the very heart of the pyramid, even to the sepulchral chamber, where the mummy of the high-priest had lain for ages. I broke through the outer cases of the mummy, unfolded its many wrappers and bandages, and at length found the precious volume on its bosom. I seized it with a trembling hand, and groped my way out of the pyramid, leaving the mummy in its dark and silent sepulchre, there to await the final day of resurrection and judgment."

"Son of Abu Ayub," exclaimed Aben Habuz, "thou hast been a great traveller, and seen marvellous things; but of what avail to me is the secret of the pyramid, and the volume of knowledge of the wise Solomon?"

"This it is, O king! By the study of that book I am instructed in all magic arts, and can command the assistance of genii to accomplish my plans. The mystery of the Talisman of Borsa is therefore familiar to me, and such a talisman can I make; nay, one of greater virtues."

"O wise son of Abu Ayub," cried Aben Habuz, "better were such a talisman, than all the watch-towers on the hills, and sentinels upon the borders. Give me such a safeguard, and the riches of my treasury are at thy command."

The astrologer immediately set to work to gratify the wishes of the monarch. He caused a great tower to be erected upon the top of the royal palace, which stood on the brow of the hill of the Albaycin. The tower was built of stones brought from Egypt, and taken, it is said, from one of the pyramids. In the upper part of the tower was a circular hall, with windows looking towards every point of the compass, and before each window was a table, on which was arranged, as on a chess-board, a mimic army of horse and foot, with the effigy of the potentate that ruled in that direction, all carved of wood. To each of these tables there was a small lance, no bigger than a bodkin, on which were engraved certain Chaldaic characters. This hall was kept constantly closed, by a gate of brass, with a great lock of steel, the key of which was in possession of the king.

On the top of the tower was a bronze figure of a Moonsh horseman, fixed on a pivot, with a shield on one arm, and his lance elevated perpendicularly. The face of this horseman was towards the city, as if keeping guard over it; but if any foe were at hand, the

figure would turn in that direction, and would level the lance as if for action.

When this talisman was finished, Aben Habuz was all impatient to try its virtues, and longed as ardently for an invasion as he had ever sighed after repose. His desire was soon gratified. Tidings were brought, early one morning, by the sentinel appointed to watch the tower, that the face of the bronze horseman was turned towards the mountains of Elvira, and that his lance pointed directly against the Pass of Lope.

"Let the drums and trumpets sound to arms, and all Granada be put on the alert," said Aben Habuz.

"O king," said the astrologer, "let not your city be disquieted, nor your warriors called to arms; we need no aid of force to deliver you from your enemies. Dismiss your attendants, and let us proceed alone to the secret hall of the tower."

The ancient Aben Habuz mounted the staircase of the tower, leaning on the arm of the still more ancient Ibrahim Ebn Abu Ayub. They unlocked the brazen door and entered. The window that looked towards the Pass of Lope was open. "In this direction," said the astrologer, "lies the danger; approach, O king, and behold the mystery of the table."

King Aben Habuz approached the seeming chess-board, on which were arranged the small wooden effigies, when, to his surprise, he perceived that they were all in motion. The horses pranced and curveted, the warriors brandished their weapons, and there was a faint sound of drums and trumpets, and the clang of arms, and neighing of steeds; but all no louder, nor more distinct, than the hum of the bee, or the summer-fly, in the drowsy ear of him who lies at noontide in the shade.

"Behold, O king," said the astrologer, "a proof that thy enemies are even now in the field. They must be advancing through yonder mountains, by the Pass of Lope. Would you produce a panic and confusion amongst them, and cause them to retreat without loss of life, strike these effigies with the butt end of this magic lance; would you cause bloody feud and carnage, strike with the point."

A livid streak passed across the countenance of Aben Habuz; he seized the lance with trembling eagerness, his gray beard wagged with exultation as he tottered toward the table: "Son of Abu Ayub," exclaimed he, in chuckling tone, "I think we will have a little blood!"

So saying, he thrust the magic lance into some of

the pigmy effigies, and belabored others with the butt end, upon which the former fell as dead upon the board, and the rest turning upon each other began, pell-mell, a chance-medley fight.

It was with difficulty the astrologer could stay the hand of the most pacific of monarchs, and prevent him from absolutely exterminating his foes, at length he prevailed upon him to leave the tower, and to send out scouts to the mountains by the Pass of Lope.

They returned with the intelligence, that a Christian army had advanced through the heart of the Sierra, almost within sight of Granada, where a dissension had broken out among them, they had turned their weapons against each other, and after much slaughter had retreated over the border.

Aben Aabuz was transported with joy on thus proving the efficacy of the talisman "At length," said he, "I shall lead a life of tranquillity, and have all my enemies in my power O wise son of Abu Ayub, what can I bestow on thee in reward for such a blessing?"

"The wants of an old man and a philosopher, O king, are few and simple; grant me but the means of fitting up my cave as a suitable hermitage, and I am content."

"How noble is the moderation of the truly wise!" exclaimed Aben Habuz, secretly pleased at the cheapness of the recompense. He summoned his treasurer, and bade him dispense whatever sums might be required by Ibrahim to complete and furnish his hermitage.

The astrologer now gave orders to have various chambers hewn out of the solid rock, so as to form ranges of apartments connected with his astrological hall; these he caused to be furnished with luxurious ottomans and divans, and the walls to be hung with the richest silks of Damascus. "I am an old man," said he, "and can no longer rest my bones on stone couches, and these damp walls require covering"

He had baths too constructed, and provided with all kinds of perfumes and aromatic oils: "For a bath," said he, "is necessary to counteract the rigidity of age, and to restore freshness and suppleness to the frame withered by study."

He caused the apartments to be hung with innumerable silver and crystal lamps, which he filled with a fragrant oil, prepared according to a receipt discovered by him in the tombs of Egypt. This oil was perpetual in its nature, and diffused a soft radiance like the tempered light of day. "The light of the

sun," said he, "is too garish and violent for the eyes of an old man, and the light of the lamp is more congenial to the studies of a philosopher"

The treasurer of king Aben Habuz groaned at the sums daily demanded to fit up this hermitage, and he carried his complaints to the king. The royal word, however, had been given; Aben Habuz shrugged his shoulders. "We must have patience," said he, "this old man has taken his idea of a philosophic retreat from the interior of the pyramids, and of the vast ruins of Egypt; but all things have an end, and so will the furnishing of his cavern"

The king was in the right, the hermitage was at length complete, and formed a sumptuous subterranean palace. The astrologer expressed himself perfectly content, and, shutting himself up, remained for three whole days buried in study. At the end of that time he appeared again before the treasurer "One thing more is necessary," said he, "one trifling solace for the intervals of mental labor."

"O wise Ibrahim, I am bound to furnish every thing necessary for thy solitude; what more dost thou require?"

"I would fain have a few dancing women."

"Dancing women!" echoed the treasurer, with surprise

"Dancing women," replied the sage, gravely; "and let them be young and fair to look upon; for the sight of youth and beauty is refreshing. A few will suffice, for I am a philosopher of simple habits and easily satisfied"

While the philosophic Ibrahim Ebn Abu Ayub passed his time thus sagely in his hermitage, the pacific Aben Habuz carried on furious campaigns in effigy in his tower. It was a glorious thing for an old man, like himself, of quiet habits, to have war made easy, and to be enabled to amuse himself in his chamber by brushing away whole armies like so many swarms of flies.

For a time he rioted in the indulgence of his humors, and even taunted and insulted his neighbors, to induce them to make incursions, but by degrees they grew wary from repeated disasters until no one ventured to invade his territories. For many months the bronze horseman remained on the peace establishment with his lance elevated in the air, and the worthy old monarch began to repine at the want of his accustomed sport, and to grow peevish at his monotonous tranquillity.

At length, one day, the talismanic horseman veered suddenly round, and lowering his lance, made a dead point towards the mountains of Guadix. Aben Habuz hastened to his tower, but the magic table in that direction remained quiet, not a single warrior was in motion. Perplexed at the circumstance, he sent forth a troop of horse to scour the mountains and reconnoitre. They returned after three days' absence.

"We have searched every mountain pass," said they, "but not a helm nor spear was stirring. All that we have found in the course of our foray, was a Christian damsel of surpassing beauty, sleeping at noon-tide beside a fountain, whom we have brought away captive."

"A damsel of surpassing beauty!" exclaimed Aben Habuz, his eyes gleaming with animation; "let her be conducted into my presence."

The beautiful damsel was accordingly conducted into his presence. She was arrayed with all the luxury of ornament that had prevailed among the Gothic Spaniards at the time of the Arabian conquest. Pearls of dazzling whiteness were entwined with her raven tresses; and jewels sparkled on her forehead, rivalling the lustre of her eyes. Around her neck was a golden chain, to which was suspended a silver lyre, which hung by her side.

The flashes of her dark refulgent eye were like sparks of fire on the withered, yet combustible, heart of Aben Habuz; the swimming voluptuousness of her gait made his senses reel. "Fairest of women," cried he, with rapture, "who and what art thou?"

"The daughter of one of the Gothic princes, who but lately ruled over this land. The armies of my father have been destroyed, as if by magic, among these mountains, he has been driven into exile, and his daughter is a captive."

"Beware, O king!" whispered Ibrahim Ebn Abu Ayub, "this may be one of these northern sorceresses of whom we have heard, who assume the most seductive forms to beguile the unwary. Methinks I read witchcraft in her eye, and sorcery in every movement. Doubtless this is the enemy pointed out by the talisman."

"Son of Abu Ayub," replied the king, "thou art a wise man, I grant, a conjuror for aught I know; but thou art little versed in the ways of woman. In that knowledge will I yield to no man; no, not to the wise Solomon himself, notwithstanding the number of his wives and concubines. As to this damsel, I see no

harm in her, she is fair to look upon, and finds favour in my eyes."

"Hearken, O king!" replied the astrologer. "I have given thee many victories by means of my talisman, but have never shared any of the spoil. Give me then this stray captive, to solace me in my solitude with her silver lyre. If she be indeed a sorceress, I have counter spells that set her charms at defiance."

"What! more women!" cried Aben Habuz. "Hast thou not already dancing women enough to solace thee?"

"Dancing women have I, it is true, but no singing women. I would fain have a little minstrelsy to refresh my mind when weary with the toils of study."

"A truce with thy hermit cravings," said the king, impatiently. "This damsel have I marked for my own. I see much comfort in her; even such comfort as David, the father of Solomon the wise, found in the society of Abishag the Shunamite."

Further solicitations and remonstrances of the astrologer only provoked a more peremptory reply from the monarch, and they parted in high displeasure. The sage shut himself up in his hermitage to brood over his disappointment, ere he departed, however, he gave the king one more warning to beware of his dangerous captive. But where is the old man in love that will listen to counsel? Aben Habuz resigned himself to the full sway of his passion. His only study was how to render himself amiable in the eyes of the Gothic beauty. He had not youth to recommend him, it is true, but then he had riches; and when a lover is old, he is generally generous. The Zacatin of Granada was ransacked for the most precious merchandise of the East, silks, jewels, precious gems, exquisite perfumes, all that Asia and Africa yielded of rich and rare, were lavished upon the princess. All kinds of spectacles and festivities were devised for her entertainment: minstrelsy, dancing, tournaments, bull-fights.—Granada for a time was a scene of perpetual pageant. The Gothic princess regarded all this splendor with the air of one accustomed to magnificence. She received every thing as a homage due to her rank, or rather to her beauty; for beauty is more lofty in its exactions even than rank. Nay, she seemed to take a secret pleasure in exciting the monarch to expenses that made his treasury shrink, and then treating his extravagant generosity as a mere matter of course. With all his assiduity and munificence, also, the venerable lover could not flatter himself that he had

made any impression on her heart. She never frowned on him, it is true, but then she never smiled. Whenever he began to plead his passion, she struck her silver lyre. There was a mystic charm in the sound. In an instant the monarch began to nod, a drowsiness stole over him, and he gradually sank into a sleep, from which he awoke wonderfully refreshed, but perfectly cooled for the time of his passion. This was very baffling to his suit, but then these slumbers were accompanied by agreeable dreams, which completely <sup>10</sup> enthralled the senses of the drowsy lover; so he continued to dream on, while all Granada scoffed at his infatuation, and groaned at the treasures lavished for a song.

At length a danger burst on the head of Aben Habuz, against which his talisman yielded him no warning. An insurrection broke out in his very capital, his palace was surrounded by an armed rabble, who menaced his life and the life of his Christian paramour. A spark of his ancient warlike spirit was <sup>20</sup> awakened in the breast of the monarch. At the head of a handful of his guards he sallied forth, put the rebels to flight, and crushed the insurrection in the bud.

When quiet was again restored, he sought the astrologer, who still remained shut up in his hermitage, chewing the bitter cud of resentment.

Aben Habuz approached him with a conciliatory tone. "O wise son of Abu Ayub," said he, "well didst thou predict dangers to me from this captive beauty. <sup>30</sup> Tell me then, thou who art so quick at foreseeing peril, what I should do to avert it."

"Put from thee the infidel damsel who is the cause."

"Sooner would I part with my kingdom," cried Aben Habuz.

"Thou art in danger of losing both," replied the astrologer.

"Be not harsh and angry, O most profound of philosophers; consider the double distress of a monarch and a lover, and devise some means of protecting me from the evils by which I am menaced. I care not for grandeur, I care not for power, I languish only for repose; would that I had some quiet retreat where I might take refuge from the world, and all its cares, and pomps, and troubles, and devote the remainder of my days to tranquillity and love."

The astrologer regarded him for a moment, from under his bushy eyebrows.

"And what wouldst thou give, if I could provide thee such a retreat?"

"Thou shouldst name thy own reward, and whatever it might be, if within the scope of my power, as my soul liveth, it should be thine."

"Thou hast heard, O king, of the garden of Irem, one of the prodigies of Arabia the happy."

"I have heard of that garden; it is recorded in the Koran, even in the chapter entitled 'The Dawn of Day.' I have, moreover, heard marvellous things related of it by pilgrims who had been to Mecca; but I considered them wild fables, such as travellers are wont to tell who have visited remote countries."

"Discredit not, O king, the tales of travellers," rejoined the astrologer, gravely, "for they contain precious rarities of knowledge brought from the ends of the earth. As to the palace and garden of Irem, what is generally told of them is true; I have seen them with mine own eyes—listen to my adventure; <sup>40</sup> for it has a bearing upon the object of your request."

"In my younger days, when a mere Arab of the desert, I tended my father's camels. In traversing the desert of Aden, one of them strayed from the rest, and was lost. I searched after it for several days, but in vain, until, wearied and faint, I laid myself down at noontide, and slept under a palm-tree by the side of a scanty well. When I awoke, I found myself at the gate of a city. I entered, and beheld noble streets, and squares, and market-places, but all were silent and without an inhabitant. I wandered on until I came to a sumptuous palace with a garden adorned with fountains and fishponds, and groves and flowers, and orchards laden with delicious fruit, but still no one was to be seen. Upon which, appalled at this loneliness, I hastened to depart; and, after issuing forth at the gate of the city, I turned to look upon the place, but it was no longer to be seen, nothing but the silent desert extended before my eyes."

"In the neighborhood I met with an aged dervise, learned in the traditions and secrets of the land, and related to him what had befallen me. 'This,' said he, 'is the far-famed garden of Irem, one of the wonders of the desert. It only appears at times to some wanderer like thyself, gladdening him with the sight of towers and palaces and garden walls overhung with richly-laden fruit-trees, and then vanishes, leaving nothing but a lonely desert. And this is the story of it. In old times, when this country was inhabited by the Addites, King Sheddad, the son of Ad, the great

grandson of Noah, founded here a splendid city. When it was finished, and he saw its grandeur, his heart was puffed up with pride and arrogance, and he determined to build a royal palace, with gardens which should rival all related in the Koran of the celestial paradise. But the curse of heaven fell upon him for his presumption. He and his subjects were swept from the earth, and his splendid city, and palace, and gardens, were laid under a perpetual spell, which hides them from human sight, excepting that 10 they are seen at intervals, by way of keeping his sin in perpetual remembrance.

"This story, O king, and the wonders I had seen, ever dwelt in my mind, and in after years, when I had been in Egypt, and was possessed of the book of knowledge of Solomon the wise, I determined to return and revisit the garden of Irem. I did so, and found it revealed to my instructed sight. I took possession of the palace of Sheddad, and passed several days in his mock paradise. The genii who watch over 20 the place, were obedient to my magic power, and revealed to me the spells by which the whole garden had been, as it were, conjured into existence, and by which it was rendered invisible. Such a palace and garden, O king, can I make for thee, even here, on the mountain above thy city. Do I not know all the secret spells? and am I not in possession of the book of knowledge of Solomon the wise?"

"O wise son of Abu Ayub!" exclaimed Aben Habuz, trembling with eagerness, "thou art a traveller indeed, 30 and hast seen and learned marvellous things! Contrive me such a paradise, and ask any reward, even to the half of my kingdom."

"Alas!" replied the other, "thou knowest I am an old man, and a philosopher, and easily satisfied; all the reward I ask is the first beast of burden, with its load, which shall enter the magic portal of the palace."

The monarch gladly agreed to so moderate a stipulation, and the astrologer began his work. On the 40 summit of the hill, immediately above his subterranean hermitage, he caused a great gateway or barbican to be erected, opening through the centre of a strong tower.

There was an outer vestibule or porch, with a lofty arch, and within it a portal secured by massive gates. On the key-stone of the portal the astrologer, with his own hand, wrought the figure of a huge key; and on the key-stone of the outer arch of the vesti-

bule, which was loftier than that of the portal, he carved a gigantic hand. These were potent talismans, over which he repeated many sentences in an unknown tongue.

When this gateway was finished he shut himself up for two days in his astrological hall, engaged in secret incantations; on the third he ascended the hill, and passed the whole day on its summit. At a late hour of the night he came down, and presented himself before Aben Habuz. "At length, O king," said he, "my labor is accomplished. On the summit of the hill stands one of the most delectable palaces that ever the head of man devised, or the heart of man desired. It contains sumptuous halls and galleries, delicious gardens, cool fountains, and fragrant baths; in a word the whole mountain is converted into a paradise. Like the garden of Irem, it is protected by a mighty charm, which hides it from the view and search of mortals, excepting such as possess the secret 10 of its talismans."

"Enough!" cried Aben Habuz, joyfully, "to-morrow morning with the first light we will ascend and take possession." The happy monarch slept but little that night. Scarcely had the rays of the sun begun to play about the snowy summit of the Sierra Nevada, when he mounted his steed, and, accompanied only by a few chosen attendants, ascended a steep and narrow road leading up the hill. Beside him, on a white palfrey, rode the Gothic princess, her whole dress sparkling with jewels, while round her neck was suspended her silver lyre. The astrologer walked on the other side of the king, assisting his steps with his hieroglyphic staff, for he never mounted steed of any kind.

Aben Habuz looked to see the towers of the palace brightening above him, and the imbowered terraces of its gardens stretching along the heights, but as yet nothing of the kind was to be descried. "That is the mystery and safeguard of the place," said the astrologer, "nothing can be discerned until you have passed the spell-bound gateway, and been put in possession of the place."

As they approached the gateway, the astrologer paused, and pointed out to the king the mystic hand and key carved upon the portal of the arch. "These," said he, "are the talismans which guard the entrance to this paradise. Until yonder hand shall reach down and seize that key, neither mortal power nor magic artifice can prevail against the lord of this mountain."

While Aben Habuz was gazing, with open mouth and silent wonder, at these mystic talismans, the palfrey of the princess proceeded, and bore her in at the portal, to the very centre of the barbican.

"Behold," cried the astrologer, "my promised reward, the first animal with its burden which should enter the magic gateway."

Aben Habuz smiled at what he considered a pleasantry of the ancient man, but when he found him to be in earnest, his gray beard trembled with indignation.

"Son of Abu Ayub," said he, sternly, "what equivocation is this? Thou knowest the meaning of my promise: the first beast of burden, with its load, that should enter this portal. Take the strongest mule in my stables, load it with the most precious things of my treasury, and it is thine, but dare not raise thy thoughts to her who is the delight of my heart."

"What need I of wealth," cried the astrologer, scornfully, "have I not the book of knowledge of Solomon the wise, and through it the command of the secret treasures of the earth? The princess is mine by right, thy royal word is pledged, I claim her as my own."

The princess looked down haughtily from her palfrey, and a light smile of scorn curled her rosy lip at this dispute between two gray-beards, for the possession of youth and beauty. The wrath of the monarch got the better of his discretion. "Base son of the desert," cried he, "thou may'st be master of many arts, but know me for thy master, and presume not to juggle with thy king."

"My master! my king!" echoed the astrologer—"The monarch of a mole-hill to claim sway over him who possesses the talismans of Solomon! Farewell, Aben Habuz, reign over thy petty kingdom, and revel in thy paradise of fools; for me, I will laugh at thee in my philosophic retirement."

So saying he seized the bridle of the palfrey, smote the earth with his staff, and sank with the Gothic princess through the centre of the barbican. The earth closed over them, and no trace remained of the opening by which they had descended.

Aben Habuz was struck dumb for a time with astonishment. Recovering himself, he ordered a thousand workmen to dig, with pickaxe and spade, into the ground where the astrologer had disappeared. They digged and digged, but in vain; the flinty bosom

of the hill resisted their implements; or if they did penetrate a little way, the earth filled in again as fast as they threw it out. Aben Habuz sought the mouth of the cavern at the foot of the hill, leading to the subterranean palace of the astrologer, but it was nowhere to be found. Where once had been an entrance, was now a solid surface of primeval rock. With the disappearance of Ibrahim Ebn Abu Ayub ceased the benefit of his talismans. The bronze horseman remained fixed, with his face turned toward the hill, and his spear pointed to the spot where the astrologer had descended, as if there still lurked the deadliest foe of Aben Habuz.

From time to time the sound of music, and the tones of a female voice, could be faintly heard from the bosom of the hill, and a peasant one day brought word to the king, that in the preceding night he had found a fissure in the rock, by which he had crept in, until he looked down into a subterranean hall, in which sat the astrologer, on a magnificent divan, slumbering and nodding to the silver lyre of the princess, which seemed to hold a magic sway over his senses.

Aben Habuz sought the fissure in the rock, but it was again closed. He renewed the attempt to unearth his rival, but all in vain. The spell of the hand and key was too potent to be counteracted by human power. As to the summit of the mountain, the site of the promised palace and garden, it remained a naked waste, either the boasted elysium was hidden from sight by enchantment, or was a mere fable of the astrologer. The world charitably supposed the latter, and some used to call the place "The King's Folly;" while others named it "The Fool's Paradise."

To add to the chagrin of Aben Habuz, the neighbors whom he had defied and taunted, and cut up at his leisure while master of the talismanic horseman, finding him no longer protected by magic spell, made inroads into his territories from all sides, and the remainder of the life of the most pacific of monarchs was a tissue of turmoils.

At length Aben Habuz died, and was buried. Ages have since rolled away. The Alhambra has been built on the eventful mountain, and in some measure realizes the fabled delights of the garden of Irem. The spell-bound gateway still exists entire, protected no doubt by the mystic hand and key, and now forms the Gate of Justice, the grand entrance to the fortress. Under that gateway, it is said, the old astrologer

remains in his subterranean hall, nodding on his divan, lulled by the silver lyre of the princess.

The old invalid sentinels who mount guard at the gate hear the strains occasionally in the summer nights; and, yielding to their soporific power, doze quietly at their posts. Nay, so drowsy an influence pervades the place, that even those who watch by day may generally be seen nodding on the stone benches of the barbican, or sleeping under the neighboring

trées, so that in fact it is the drowsiest military post in all Christendom. All this, say the ancient legends, will endure from age to age. The princess will remain captive to the astrologer; and the astrologer, bound up in magic slumber by the princess, until the last day, unless the mystic hand shall grasp the fated key, and dispel the whole charm of this enchanted mountain.

## NATHANIEL HAWTHORNE (1804-1864)

In spite of his detachment from the tumultuous America of his day, Hawthorne's immersion in the past of his country made him one of the most deeply-rooted of American writers and enabled him to record with singular clarity the subterranean history of American character. Sprung from a long line of Puritans who had lived in Salem without interruption since the founding of the colony, he dwelt with something like the old Puritanic introspection upon the race and place that had bred him. New Englander that he was, he shared fully in the New England provincialism, and until he was fifty never got farther away than Niagara Falls. New England, he said, was as large a lump of earth as his heart could readily take in. Few of his contemporaries studied more intently the pages of Puritan history; none knew more intimately that stern Puritan conscience or the hard Puritan character. He was, at various times, both attracted and repelled by Puritanism, but he never got wholly outside its influence.

A psychologist and a moralist, concerned with human problems and spiritual effects, he probed and analyzed the inner recesses of mind and conscience to illustrate the subtle relations between men and, quite as often, between man and his Maker, or between man and his own humanity. The characters, action, and setting of his stories exist primarily to give body to some allegory, to enforce some moral, or to illustrate some abstraction. The narrative, often satisfactory enough in itself, is never an end in itself, but rather the illustration that a preacher employs to elucidate or enforce his text. Yet his moral, however direct, is never the barefaced preachment; and Poe, who found writers less purposeful than Hawthorne guilty of the "heresy of the didactic," never specifically attacked Hawthorne on this head, though he criticized him for other real or fancied faults, while praising him for his pure style, fine taste, delicate humor, touching pathos, radiant imagination, and consummate ingenuity. What Poe missed in Hawthorne, probably because it did not accord with Poe's own idea of what a short story should be, is Hawthorne's greatest contribution to the genre as Irving had left it: that is, Hawthorne's investiture of the

story with an idea. Thus he gave the American short story carrying power and made of it something more than the mere vehicle of entertainment as Irving had conceived it.

Foremost in importance as explaining the uniquely somber, contemplative cast of Hawthorne was his Puritan descent. In the preface to *The Scarlet Letter* he recalled, with mingled feelings of pride and apprehension, the American founders of his race who were invested by family tradition with "a dim and dusky grandeur." First, there was the "grave, bearded, sable-cloaked and steeple-crowned" Major William Hathorne (the *w* was first added to the family name by Hawthorne himself during his college years), who, as "soldier, legislator, judge, and ruler in the church," had all the Puritanic traits, "both good and evil." Like the first, the second Hathorne stood high in the Puritanic hierarchy. He was Colonel and Judge John Hathorne, and like his father, a good persecutor of Quakers and other dissenters. Mindful of the Biblical text on the sins of the fathers being visited on successive generations of their children, Hawthorne's Puritanic conscience impelled him to write in 1850:

I know not whether these ancestors of mine bethought themselves to repent, and ask pardon of Heaven for their cruelties; or whether they are now groaning under the heavy consequences of them, in another state of being. At all events, I, the present writer, as their representative, hereby take shame upon myself for their sakes, and pray that any curse incurred by them—as I have heard, and as the dreary and unprosperous condition of the race for many a long year back would argue to exist—may be now and henceforth removed.

Closely associated with these family ties was the old town of Salem itself, that remarkable old Puritan hive, where he was born, and where he dwelt all but a few of the first forty years of his life. Years later he testified that though he had been invariably happier elsewhere, he still possessed "a feeling for old Salem," which for lack of a better phrase he had to call "affection." Salem, he said, drew him like a magnet, and remained for him "the inevitable center of the universe." There all the descendants of Major Hathorne had been born, and there they died, to mingle "their

earthly substance with the soil," until, as Hawthorne put it, in typically Hawthornesque terms, "no small portion of it must necessarily be akin to the mortal frame wherewith, for a little while, I walk the streets."

In part, therefore, the attachment which I speak of is the mere sensuous sympathy of dust for dust. Few of my countrymen can know what it is; nor, as frequent transplantation is perhaps better for the stock, need they consider it desirable to know.

This passage, together with the reference to the "dreary and unprosperous condition" of the Hathornes following the two earliest generations, introduces us to another family influence that preyed on Nathaniel Hawthorne's mind. The Hathornes had fallen through the centuries from the position of colonel, priest, and judge to that of sea captain. For many generations they had been sea-faring men, "a gray-headed ship-master, in each generation, retiring from the quarterdeck to the homestead, while a boy of fourteen took the hereditary place before the mast, confronting the salt spray and the gale, which had blustered against his sire and grandsire." Thus, while they still carried on in the vigorous tradition of activity, they had left behind them much of the glory, honor, wealth, and position of the earlier day. Closely associated with this loss of influence was the once large estate in Maine which had slipped through their fingers, until, by Hawthorne's time, only a few acres remained. Given as he was to brooding on family fortunes and the past, he could not but reflect on the grandeur that was gone, and, as might be expected, certain aspects of this loss of estate appear in his stories, notably in *The House of the Seven Gables*, while the attempts of one generation to secure for its progeny earthly wealth and position form a common motif in his short stories as well as in several of the four romances which he left incomplete at his death. It was a recurring and absorbing theme, of which, like so many others, he could make neither head nor tail. The older he grew, the more did he encounter problems of life that seemed unaccountable and irresolvable.

Hawthorne's generation did not suffer actual poverty, but when, in 1808, Mrs. Hathorne's husband died in Dutch Guiana, she was left with very little with which to rear her two daughters and one son, and an uncle had to lend his assistance to give Hawthorne a college education. But here again, Bowdoin College, then a struggling little freshwater college, was the best that was available to him, while the earlier Hathornes had enjoyed the best educational advantages of the land.

These circumstances doubtless encouraged what may have been an innate tendency in Hawthorne to ponder the somberness and transitory nature of life. His mother's retirement from the world upon her husband's death was another formative factor. She affected widow's weeds, dedicated the rest of her life to mourning, and spent weeks on end in her room. During his ninth year Hawthorne was struck on the ankle by a ball. This accident left him lame for several years, and robbed him of the opportunity of indulging in the rough-and-tumble of boyish play during these most impressionable years of a boy's life. The result was to accentuate his tendency toward retirement, introspection, and a generally sedentary life, which naturally sought an outlet in reading. And his reading, since it was done chiefly in allegorical literature like Spenser's *Faerie Queene* and Bunyan's *Pilgrim's Progress*, tended to develop still more this inwardness of temperament. During 1816-18 he spent portions of each year with his uncle Richard Manning, near Lake Sebago at Raymond, Maine, on what was left of the family estate, and during 1818 his mother, partly to live more cheaply, moved her family thither. Here Hawthorne spent a year entirely to his heart's content, running quite wild, hunting and fishing, but reading a good deal, too, especially during the rainy seasons and during the long winter. Years later he told his friend J. T. Fields, "There I lived . . . like a bird of the air, so perfect was the freedom I enjoyed. But it was there I first got my cursed habits of solitude."

In 1819 Mrs. Hathorne returned to Salem to put her children to school. Nathaniel would have preferred his father's calling, but Mrs. Hathorne, having taken an extreme aversion for the sea, insisted that he prepare himself for college. He spent the years from 1821 to 1825 at Bowdoin, where he submitted to the educational process only half-willingly, at all events, unenthusiastically, but he was hail-fellow-well-met among his classmates, and graduated about the middle of his class. Here he formed lasting friendships with Horatio Bridge, Franklin Pierce, and Henry Wadsworth Longfellow.

Already before going to college, the choice of a calling had troubled him, and writing to his mother he admitted that while he was "quite reconciled to going to college," he still considered that "four years of the best part of my life is a great deal to throw away." Knowing very well that his uncles wished him to choose one of the regular professions as the more promising and remunerative, he already found reasons why none of them was altogether acceptable, and ended the letter on this note. "Oh that I was rich enough to live without a profession! What do you

think of my becoming an author, and relying for support upon my pen? Indeed, I think the illegibility of my handwriting is very author-like." Four years later, when he was about to graduate, without having prepared himself for anything in particular, he again wrote:

I do not want to be a doctor and live by man's diseases, nor a minister and live by their sins, nor a lawyer and live by their quarrels. So I don't see that there is anything left but for me to be an author. How would you like to see some day a whole shelf full of books written by your son, with "Hawthorne's Works" printed on the backs?

Thus it was that he returned to Salem ill prepared to add much to the family income. Whatever hopes he had about the money to be made by his writing must have been considerably dashed by the failure of his first novel, entitled *Fanshawe* (1828), which he recognized as a failure the moment it appeared in print, and which accordingly he did his best to withdraw from circulation by buying up all copies that he could find. Nevertheless, he persevered, and during the twelve years that he spent in his "solitary chamber under the eaves," he used up reams upon reams of paper, burning, rewriting, and polishing away at his style. All this was without the least recognition or applause. It was a self-imposed period of rigorous literary discipline during which Hawthorne the writer was born, but during which Hawthorne the man suffered irreparable harm from the virus of solitude, isolation, enervation, and distrust of his own abilities. The lack of wholesome human contacts wore on him. The household to which he had returned in 1825 was drearier than ever, the mother's way of living having been adopted by his sisters also, so that, as he observed, "We do not even live at our house!" He seldom left the house except to go on a solitary ramble in the woods, and during the summer, to enjoy a daily swim early in the morning, before anyone else was astir. Consequently he could write in 1837 that though he had lived in Salem almost all his life, there were not a score of people in the town who so much as suspected his existence. During the twelve years between his graduation from college and the publication of *Twice-Told Tales* in 1837 (arranged for by his friend Bridge), he published twenty-five of his tales and sketches in various periodicals, mainly in *The Token*, an annual edited by S. C. Goodrich; but these were published anonymously. They brought him no fame and almost no financial reward.

The modest title of *Twice-Told Tales*, while appropriate to the tone of the stories, was really a misnomer, for as far as the public was concerned they were entirely new. But their appearance in collected

form over his name in 1837 was an event of no small importance to the life of Hawthorne the writer as well as of Hawthorne the man. The book elicited several appreciative reviews, including a very favorable one by Longfellow in the *North American Review*, and Hawthorne himself admitted, "I was compelled to come out of my owl's nest and lionize in a small way." But, as he went on to admit to Longfellow, he had by now so long secluded himself from society, or rather permitted himself to be carried so far apart from the main current of life, that he found it impossible to get back again.

I have secluded myself from society, and yet I never meant any such thing, nor dreamed what sort of life I was going to lead. I have made a captive of myself, and put me in a dungeon, and now I cannot find the key to let myself out,—and if the door were open, I should be almost afraid to come out. You tell me that you have met with troubles and changes. I know not what these may have been, but I can assure you that trouble is the next best thing to enjoyment, and that there is no fate in this world so horrible as to have no share in either its joys or sorrows. For the past ten years, I have not lived, but only dreamed of living. . . . As to my literary efforts, I do not think much of them. They would have been better, I trust, if written under more favorable circumstances. . . . There has been no warmth of approbation, so that I have written with benumbed fingers. I have another great difficulty in the lack of materials, for I have seen so little of the world that I have nothing but thin air to concoct my stories of, and it is not easy to give a lifelike substance to such shadowy stuff. Sometimes through a peep-hole I have caught a glimpse of the real world, and the two or three articles in which I have portrayed these glimpses please me better than the others.

Hawthorne's latest biographers minimize his hermit-like, retiring existence, emphasizing instead his extrovert, gregarious nature. The truth doubtless lies somewhere between these two views. Both as boy and man, he often showed mental independence and physical vigor. All his life he enjoyed good conversation and convivial companionship, while his talk was characterized by a variety and raciness of speech that does not harmonize with the picture of Hawthorne as a secluded, delicate aesthete, lacking all contact with life. But however much he expanded the scope of his experience after he left Salem, in his writings he seldom got very far outside himself or outside the manner which had become instinctive. The somber tone had become too definitely fastened on his mind to be dispelled. While attempting to write *The Dolliver Romance* he said, "I wish God had given me the faculty of writing a sunshiny book"; and while he was preparing a new edi-

tion of the *Mosses from an Old Manse* in 1854, during the busy period of his consulate in Liverpool, he confessed to his publisher, "I am not quite sure that I entirely comprehend my own meanings, in some of these blasted allegories, but I remember that [when I wrote them] I always had a meaning, or at least thought I had." Four years later, he wrote to Fields, "My own individual taste is for quite another class of works than those which I myself am able to write. If I were to meet with such books as mine, by another writer, I don't believe I should be able to get through them." Shortly after completing *The Marble Faun* (1860), he said, "I will try to write a more genial book; but the Devil himself always seems to get into my inkstand, and I can only exorcise him by pensful at a time." No sunshiny book was to come from his pen; the last four separate attempts that he made at writing a more cheerful romance all turned out to be abortive.

The preface to the *Twice-Told Tales* contains a remarkably accurate piece of self-criticism, indicative of the fact that Hawthorne early learned what he was about stylistically. The stones, he says, have

. . . the pale tint of flowers that blossomed in too retired a shade,—the coolness of a meditative habit, which diffuses itself through the feeling and observation of every sketch. Instead of passion there is sentiment, and, even in what purport to be pictures of actual life, we have allegory, not always so warmly dressed in its habiliments of flesh and blood as to be taken into the reader's mind without a shiver. Whether from lack of power, or an unconquerable reserve, the Author's touches have often an effect of tameness, the merriest man can hardly contrive to laugh at his broadest humor, the tenderest woman, one would suppose, will hardly shed warm tears at his deepest pathos. The book, if you would see anything in it, requires to be read in the clear, brown, twilight atmosphere in which it was written; if opened in the sunshine, it is apt to look exceedingly like a volume of blank pages.

The stories, except for several descriptive sketches, are either searching psychological analyses or illustrations of some abstract or philosophical question of the type that he jotted down in his notebooks for literary elaboration. "A hint for a story,—some incident which should bring on a general war; and the chief character in the incident to have something corresponding to the mischief he had caused." "A well-concerted train of incidents to be thrown into confusion by some misplaced circumstance, unsuspected till the catastrophe, yet exerting its influence from beginning to end." "Cannon transformed into church-bells." "To make one's own reflection in a mirror the subject of a story." "Every individual has

a place to fill in the world, and is important, in some respects, whether he chooses to be so or not." "A snake taken into a man's stomach and nourished there from fifteen to thirty-five, tormenting him most horribly. A type of envy or some other evil passion." "A lament for life's wasted sunshine." "What were the contents of the burden of Christian in the 'Pilgrim's Progress'?" "Trifles to one are matters of life and death to another." "A person to be in possession of something as perfect as mortal man has a right to demand, he tries to make it better and ruins it entirely." "To make a story out of a scarecrow, giving it odd attributes." "Curious to imagine what murmurings and discontent would be excited, if any of the great so-called calamities of human beings were to be abolished,—as, for instance, death."

Following the success of *Twice-Told Tales*, Hawthorne made renewed efforts to break through the walls of his self-imposed prison. Through the instrumentality of Elizabeth Palmer Peabody, an enthusiastic Transcendentalist, who kept an up-to-date bookshop in Boston, he saw something of literary society and came to know the other Peabody girls, who lived in Salem. Mary Peabody was to become the wife of Horace Mann, the educator, and Sophia, an artistically inclined invalid, eventually became Hawthorne's wife. They became engaged in 1838, but the marriage was deferred, at first, presumably because Hawthorne lacked the means and possibly also because of Sophia's ill health. But even after her health improved, Hawthorne still held off. Something is doubtless attributable to the timidity and hesitation of a bachelor who has lived too much to himself. For even after Elizabeth Palmer Peabody had helped him to the post of weigher and gauger at the Boston Custom House, where, during 1839-41, he saved a thousand dollars, instead of marrying Sophia, he took the extraordinary step of investing all his savings in the Brook Farm Association for Agriculture and Education near Roxbury, Massachusetts, a Transcendentalist experiment in communal living designed to combine ideal proportions of physical, intellectual, and artistic endeavor. Considering his inherent distrust of reformers and his lack of enthusiasm for Transcendentalism, no good reason remains but that he hoped to find in Brook Farm a place where he might cultivate his starved sense of sociability, and since he bought two shares of stock, it seems likely that, if he found life congenial at Brook Farm, he planned to bring his bride there.

The *Notebooks*, kept during the six months of 1841 while he lived there, and *The Blithedale Romance*, written a decade later and based on his

experiences in the Roxbury community, record his growing disillusionment with the program of Brook Farm and his disaffection for some of its inmates and visitors. He experienced trouble retrieving his \$1,000 investment in the enterprise, but his good fortune in securing rent-free the Old Manse in Concord doubtless facilitated matters, and in July of 1842 he finally terminated his four-year engagement to Sophia Peabody by marriage.

They were poor but altogether happy in Concord. In the preface to *Mosses from an Old Manse* (1846) Hawthorne wrote an appreciative sketch of the old house that had never been profaned, as he said, by a lay occupant until the memorable summer when he entered it as his home.

A priest had built it, a priest had succeeded to it, other priestly men from time to time had dwelt in it, and children born in its chambers had grown up to assume the priestly character. It was awful to reflect how many sermons must have been written there. There was in the rear of the house the most delightful little nook of a study that ever offered its snug seclusion to a scholar. It was here that Emerson wrote *Nature*, for he was then an inhabitant of the Manse. When I first saw the room its walls were blackened with the smoke of unnumbered years, and made still blacker by the grim prints of Puritan ministers that hung around. These worthies looked strangely like bad angels, or at least like men who had wrestled so sternly with the devil that somewhat of his sooty fierceness had been imparted to their visages.

Here he was free to dream and to write. Here his first child was born—a daughter, whom he named Una in memory of the heroine of the first book of the *Faerie Queene*. Here he got, for the first time in his life, some experience in the intimacy of human contacts, both within his own family and among his neighbors. For Concord during the forties had more to offer than a river, surrounding woods, a lake, and Sleepy Hollow cemetery. There was Emerson, with whose optimistic Transcendentalism he was never fully in accord. “Mr. Emerson,” he wrote in his journal for 1842, “is a great searcher for facts, but they seem to melt away and become insubstantial in his grasp.” He admired Emerson as a poet of “deep beauty and austere tenderness,” but added that he “sought nothing from him as a philosopher.” Emerson, for his part, was attracted to Hawthorne as a person but complained that his books were “not good for any thing.” The two men were diametrically opposed to each other in fundamental point of view. Emerson, the mystic sage, whose optimism led him practically to deny the existence of evil, found little to admire in Hawthorne’s books, preoccupied as they were with

the subject of human iniquities. And Hawthorne, who could not rid himself of his Puritanic prepossessions, wrote “The Celestial Railroad” to satirize the free and easy way to Heaven charted by the Transcendentalists. He preferred the “narrow but earnest cushion-thumper of puritanical times” to the “vaguely liberal clergyman.” He wrote “Earth’s Holocaust” to show that original sin was not a delusion, whereas Emerson, pushing his faith in natural goodness and self-reliance to the extreme, wrote, “If I am the Devil’s child, I will live then from the Devil. No law can be sacred to me but that of my nature.” Hawthorne’s stories, almost as if they had been designed to refute this doctrine, repeatedly present characters who do just that: Ethan Brand, Rappaccini, Chillingworth, Judge Pyncheon, and dozens of others live selfishly—after themselves, and the Devil—until they become diabolical incarnations and end disastrously.

Hawthorne had passed, with the last generation or two of his family, from Calvinism to Unitarianism, but he did not go on to take the next step—to Transcendentalism. He recoiled, rather, back toward Puritanism. He had little respect for clergymen, theological writings, or the visible church. Indeed, his son Julian could not remember ever having seen his father in church. Yet he was by nature religious-minded—insisting, however, like the Unitarians, on his right as an individual to make his own creed. And in the formulation of that creed, he was impelled at numerous points to revert to the Puritanic doctrine in particulars. Unlike the Calvinists, he disclaimed any belief in a system of rewards and punishments as conventionally conceived, and he refused to regard Heaven and Hell as places of eternal bliss or damnation. Instead, he held that on the Judgment Day “man’s only inexorable judge will be himself, and the punishment of his sins . . . the perception of them.” His Day of Doom was not Michael Wigglesworth’s, but simply “all future days, when we shall see ourselves as we are.” Nevertheless, whether he gave them the conviction of his head or not, he continued using the old terms to designate the old religious quantities, such as Original Sin, Predestination, Atonement, and Redemption, lending them the sympathy of his imagination if not of his heart. If it came to choosing between Emerson and Bunyan, he preferred to take his stand with Bunyan.

Another Concord neighbor, that “awful Thoreau,” as some people called him, provided Hawthorne with interesting, if not altogether satisfactory, contacts. While admiring Thoreau’s skill as a boatman and as a naturalist, recognizing his “good sense and moral

truth," and envying his sturdy independence and freedom from conventional restraints, there was something about Henry Thoreau that made him a little "terrific." He put him down as "a healthy and wholesome man to know," but he considered it a limitation in Thoreau that he "despised the world and all that it had to offer," and that he made one feel "ashamed in his presence of having any money, or a home to live in, or so much as two coats to wear, or of having written a book that the public will read."

There were other interesting, if odd, personalities in Concord. William Ellery Channing the younger, W. H. Channing, the volatile Alcott, the ethereal Jones Very, and visitors from Boston and from Brook Farm, some of whom Hawthorne felt he knew better than he cared to. From Margaret Fuller he continued to shy away. He could not bring himself to like her, and considered her typical of "the damned mob of scribbling women"—females who, like his sister-in-law, Elizabeth Palmer Peabody, were too much concerned with reform and masculine pursuits to suit his fancy. Although he did not enjoy equally all his Concord associates, they provided him in large measure with precisely those human contacts, agreeable and disagreeable, which he had missed during his earlier years, and they doubtless did much toward humanizing and maturing the man who was to publish between 1846 and 1852 eight separate volumes.

The first of these, *Mosses from an Old Manse*, appeared in 1846, the year he went back to his birthplace as surveyor of the Salem Custom House. During the three years that he served there he found it impossible to do any writing, so that his falling victim to the spoils system in 1849 was doubtless a good thing so far as his literary productivity goes. He set to writing with a fury. The story of how he was inspired by old records found in the Salem Custom House to write *The Scarlet Letter* (1850) is well known. The subject had long interested him, and the new manuscript materials supplied what was lacking to set his imagination going. Turning upon the deep-seated conflicts between impulse and conscience, between individual desire and the restraints of society, this old story of how sin affects the lives and characters of the chief participants in a triangular love affair enacted in the Salem of old Puritanical days ideally suited his fancy and inspired his best talents.

Before he published his next novel, Hawthorne was thrown much in the company of Herman Melville, during 1850 and 1851, while they found themselves neighbors near Lenox, Massachusetts. Given, as both

of them were, to taking an intellectually skeptical view of the doctrines of human progress rampant at the time, they each drew support from the other. This congenial association between two kindred spirits was especially salutary to Melville, whose *Moby Dick* was then being "broiled in the hell-fire of his brain." After his fruitless wanderings through the deserts of theological and philosophical speculation, Melville found it heartening to discuss his problems with Hawthorne, in whom he recognized one of those "thought-divers" who "compel a man to swim for his life." In Hawthorne he saw that same "deep, dark blackness" pervading him "through and through" that gnawed at his own vitals, and together they sat, often far into the night, talking "about time and eternity, things of this world and of the next, and books, and publishers, and all possible and impossible matters."

Hawthorne's next book, *The House of the Seven Gables*, appeared in 1851. More pictorial than *The Scarlet Letter*, it develops with the same restrained psychological intensity its moral—in this instance, the thesis "that the wrong-doing of one generation lives into the successive ones, and, divesting itself of every temporary advantage, becomes a pure and uncontrollable mischief." Following *A Wonder Book for Boys and Girls* (1851), he published in 1852 *The Snow Image, The Blithedale Romance*, a thinly veiled antireform novel, and a campaign biography of Franklin Pierce. *Tanglewood Tales*, another book for children, followed the next year, and before the year was out his old college-mate Pierce, now the fourteenth President of the United States, appointed him consul to Liverpool.

He resigned the consulship in 1856, but continued resident in England for a year longer, while traveling about a good deal and planning other novels, like *The Ancestral Footstep*, which was destined to remain incomplete. In 1857 he went to Italy, living first in Florence, and later in Rome, where he began *The Marble Faun*, subsequently completed in London and published in 1860, the year of his return to Concord. His European trip came too late to change him or to do him much good. *Our Old Home* appeared in 1863, but his best work was done. Like so many characters in his books, Hawthorne himself, too often, failed to find any proper endings or conclusions to life's problems. During his last years he was torn more than ever by the discords and conflicts that he saw all around him—not the least of which were the horrors of the Civil War. Not knowing in the least what the proper solution of such a catastrophe should, or would, be, he was inclined to be-

lieve that abolition, like every other species of organized or forced reform, was poorly adapted to serve the best ends. He was inclined to look upon slavery as "one of those evils which divine Providence does not leave to be remedied by human contrivances, but which, in its own good time, by some means impossible to be anticipated, but of the simplest and easiest operation, *when all its uses shall have been fulfilled*, it causes to vanish like a dream." His skepticism of human reason, progress, and perfectibility led him to the pessimistic conclusion: "There is no instance, in all history, of the human will and intellect having perfected any great moral reform by methods which it adopted to that end . . . No human effort, on a grand scale, has ever resulted

according to the purpose of its projectors. The advantages are always incidental. Man's accidents are God's purposes." "An abolitionist in feeling" rather than "in principle," he considered the war a horrible mistake, but knew not in the least how to avert it or how to settle its issues in any less costly way. Life, in the end, grew increasingly enigmatical and burdensome for him, and toward the last he felt that he had written himself out, and that, like Melville, he was going to pieces inwardly. His four last attempts to write another romance proved abortive, and Emerson, standing at the grave of his neighbor on May 23, 1864, and hearing the clods of earth falling on the coffin, felt that Hawthorne's untimely death was in the nature of a happy release.

FROM

*American Note-Books*<sup>1</sup>

August 31st [1835]— . . . A hint of a story,—some incident which should bring on a general war; and the chief actor in the incident to have something corresponding to the mischief he had caused.

September 7th — . . . A sketch to be given of a modern reformer,—a type of the extreme doctrines on the subject of slaves, cold water, and other such topics. He goes about the streets haranguing most eloquently, and is on the point of making many converts, when his labors are suddenly interrupted by the appearance of the keeper of a mad-house, whence he has escaped. Much may be made of this idea<sup>2</sup>

A change from a gay young girl to an old woman, the melancholy events, the effects of which have clustered around her character, and gradually imbued it with their influence, till she becomes a lover of sick-chambers, taking pleasure in receiving dying breaths and in laying out the dead, also having her mind full of funeral reminiscences, and possessing more acquaintances beneath the burial turf than above it<sup>3</sup>

A well-concerted train of events to be thrown into confusion by some misplaced circumstance, unsuspected till the catastrophe, yet exerting its influence from beginning to end.

On the common, at dusk, after a salute from two field-pieces, the smoke lay long and heavily on the ground, without much spreading beyond the original space over which it had gushed from the guns. It was about the height of a man. The evening clear, but with an autumnal chill.

The world is so sad and solemn, that things meant in jest are liable, by an overpowering influence, to become dreadful earnest,—gayly dressed fantasies turning to ghostly and black-clad images of themselves

<sup>1</sup> Called *American Note-Books* to distinguish these portions of Hawthorne's journal from his English, Italian and French notebooks. Originally published in 1868 by Mrs. Hawthorne, who severely edited, toned down, or deleted altogether many of Hawthorne's more colorful passages, this version should be compared with Randall Stewart's edition, transcribed from the original manuscript in the Pierpont Morgan Library, published in New Haven, 1932.

<sup>2</sup> Indicative of Hawthorne's distrust and dislike of "soft-headed but hard-handed" reformers who insist upon leading the

A story, the hero of which is to be represented as naturally capable of deep and strong passion, and looking forward to the time when he shall feel passionate love, which is to be the great event of his existence. But it so chances that he never falls in love, and although he gives up the expectation of so doing, and marries calmly, yet it is somewhat sadly, with sentiments merely of esteem for his bride. The lady might be one who had loved him early in life, but whom then, in his expectation of passionate love, he had scorned.

The scene of a story or sketch to be laid within the light of a street-lantern, the time, when the lamp is near going out, and the catastrophe to be simultaneous with the last flickering gleam.

The peculiar weariness and depression of spirits which is felt after a day wasted in turning over a magazine or other light miscellany, different from the state of mind after severe study; because there has been no excitement, no difficulties to be overcome, but the spirits have evaporated insensibly.

To represent the process by which sober truth gradually strips off all the beautiful draperies with which imagination has enveloped a beloved object, till from an angel she turns out to be a merely ordinary woman. This to be done without caricature, perhaps with a quiet humor interlarded, but the prevailing impression to be a sad one. The story might consist of the various alterations in the feelings of the absent lover, caused by successive events that display the true character of his mistress; and the catastrophe should take place at their meeting, when he finds himself equally disappointed in her person; or the whole spirit of the thing may here be reproduced<sup>4</sup>

Last evening, from the opposite shore of the North River, a view of the town mirrored in the water, which was as smooth as glass, with no perceptible

world to the instant millennium according to their particular plan or prescription. Hollingsworth, in *The Blithedale Romance* (1852), is Hawthorne's best caricature of such a monomaniac.

<sup>3</sup> Compare "Edward Fane's Rosebud" in *Twice-Told Tales*, 1837.

<sup>4</sup> Compare "Mrs. Bullfrog" in *Mosses from an Old Manse*, 1846.

tide or agitation, except a trifling swell and reflux on the sand, although the shadow of the moon danced in it. The picture of the town perfect in the water,—towers of churches, houses, with here and there a light gleaming near the shore above, and more faintly glimmering under water,—all perfect, but somewhat more hazy and indistinct than the reality. There were many clouds flitting about the sky; and the picture of each could be traced in the water,—the ghost of what was itself unsubstantial. The rattling of wheels heard long and far through the town. Voices of people talking on the other side of the river, the tones being so distinguishable in all their variations that it seemed as if what was there said might be understood; but it was not so.

Two persons might be bitter enemies through life, and mutually cause the ruin of one another, and of all that were dear to them. Finally, meeting at the funeral of a grandchild, the offspring of a son and daughter married without their consent,—and who, as well as the child, had been victims of their hatred,—they might discover that the supposed ground of the quarrel was altogether a mistake, and then be wofully reconciled.

Two persons, by mutual agreement, to make their wills in each other's favor, then to wait impatiently for one another's death, and both to be informed of the desired event at the same time. Both, in most joyous sorrow, hasten to be present at the funeral, meet, and find themselves both hoaxed.

The story of a man, cold and hard-hearted, and acknowledging no brotherhood with mankind. At his death they might try to dig him a grave, but, at a little space beneath the ground, strike upon a rock, as if the earth refused to receive the unnatural son into her bosom. Then they would put him into an old sepulchre, where the coffins and corpses were all turned to dust, and so he would be alone. Then the body would petrify; and he having died in some characteristic act and expression, he would seem, through endless ages of death, to repel society as in life, and no one would be buried in that tomb forever.<sup>5</sup>

Cannon transformed to church-bells.

<sup>5</sup> Compare "The Man of Adamant" in *The Snow Image and Other Tales*, 1852.

A person, even before middle age, may become musty and faded among the people with whom he has grown up from childhood; but, by migrating to a new place, he appears fresh with the effect of youth, which may be communicated from the impressions of others to his own feelings.

In an old house, a mysterious knocking might be heard on the wall, where had formerly been a doorway, now bricked up.

It might be stated, as the closing circumstance of a tale, that the body of one of the characters had been petrified, and still existed in that state.<sup>6</sup>

A young man to win the love of a girl, without any serious intentions, and to find that in that love, which might have been the greatest blessing of his life, he had conjured up a spirit of mischief which pursued him throughout his whole career,—and this without any revengeful purposes on the part of the deserted girl.

Two lovers, or other persons, on the most private business, to appoint a meeting in what they supposed to be a place of the utmost solitude, and to find it thronged with people.

*October 17th.*—Some of the oaks are now a deep brown red, others are changed to a light green, which, at a little distance, especially in the sunshine, looks like the green of early spring. In some trees, different masses of the foliage show each of these hues. Some of the walnut-trees have a yet more delicate green. Others are of a bright sunny yellow.

Mr. — was married to Miss — last Wednesday. Yesterday Mr. Brazer, preaching on the comet, observed that not one, probably, of all who heard him, would witness its reappearance. Mrs. — shed tears. Poor soul! she would be contented to dwell in earthly love to all eternity!

Some treasure or other things to be buried, and a tree planted directly over the spot, so as to embrace it with its roots.

A tree, tall and venerable, to be said by tradition to have been the staff of some famous man, who happened to thrust it into the ground, where it took root.

<sup>6</sup> The motif is used in "The Man of Adamant."

A fellow without money, having a hundred and seventy miles to go, fastened a chain and padlock to his legs, and lay down to sleep in a field. He was apprehended and carried gratis to a jail in the town whither he desired to go

An old volume in a large library,—every one to be afraid to unclasp and open it, because it was said to be a book of magic

A ghost seen by moonlight, when the moon was out, it would shine and melt through the airy substance of the ghost, as through a cloud

Prideaux, Bishop of Worcester, during the sway of the Parliament, was forced to support himself and his family by selling his household goods. A friend asked him, "How doth your lordship?" "Never better in my life," said the Bishop, "only I have too great a stomach, for I have eaten that little plate which the sequestrators left me I have eaten a great library of excellent books I have eaten a great deal of linen, much of my brass, some of my pewter, and now I am come to eat iron, and what will come next I know not."

A scold and a blockhead,—brimstone and wood,—a good match

To make one's own reflection in a mirror the subject of a story.<sup>7</sup>

In a dream to wander to some place where may be heard the complaints of all the miserable on earth.

Some common quality or circumstance that should bring together people the most unlike in all respects, and make a brotherhood and sisterhood of them,—the rich and the proud finding themselves in the same category with the mean and the despised.<sup>8</sup>

A person to consider himself as the prime mover of certain remarkable events, but to discover that his actions have not contributed in the least thereto. Another person to be the cause, without suspecting it.
